
RACKETS IN INDIA

BY
COLONEL A. R. WINSLOE

PRESS OPINION.

"Colonel Winsloe is well-known as a player and as an enthusiast, wherever rackets is played in India. In 'Rackets in India' he gives a short history of the game in India, notes on the tournaments and Indian Markers and the results of championships and tournaments from their inception in different parts of India. Most important are the chapters devoted to racket balls, rackets and courts, their preservation and the way to look after them. The greatest enemy of the game of rackets is its cost, and Colonel Winsloe gives most practical advice how the price of playing the game may be kept down. The map showing places with racket courts is interesting and, to rackets players visiting or resident in India, of extreme importance. The book is dedicated to Major-General S H Sheppard, C B, C M G, D S O, who has written a foreword to it."

DRAINAGE PROBLEMS OF THE EAST

(In Two Volumes)

BY

C C JAMES.

(SECOND EDITION)

Member of the Institute of Civil Engineers, Fellow of the Royal Meteorological Society, Fellow of the Royal Sanitary Institute, Member of the Incorporated Association of Municipal and County Engineers, Examiner in Sanitary Engineering to the University of Bombay, Author of "Oriental Drainage," "Notes on Sewage Disposal" and "Further Notes on Sewage Disposal" This work is one of the best ever published in India dealing with Drainage problems and as Mr Carkeek James had the unique opportunity of seeing practically all the large drainage schemes carried out in Bombay, this edition is of immense value and is almost certain to win the widespread approval of all engineers dealing with kindred problems anywhere East of Suez

PREFACE

THE Editors have to thank many correspondents who during the past year have sent them suggestions for the improvement of this book. The Indian Year Book is intended above all to be a book of reference, and its completeness and convenience of reference must necessarily depend to a great extent on the part taken in its editing by the members of the public who most use it.

The help extended to the Editors by various officials, and more particularly by the Director of Information and Labour Intelligence, Bombay, and the Indian Commercial Intelligence Department, has again been readily given and is most gratefully acknowledged. Without such help it would be impossible to produce the Year Book with up-to-date statistics.

Suggestions for the improvement or correction of the Year Book may be sent to the Editors at any time, but those which reach them before October have a better chance of being adopted than later suggestions which only reach them after the work of revision has been partly completed.

*The Times of India, Bombay,
January, 1932.*

An Indian Glossary.

ABKARI—Excise of liquors and drugs.

ACHHUT—Untouchable (Hindi), Asuddhar

ACREAGE CONTRIBUTION—Contribution paid by holders of land irrigated by Government

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

$\gamma = \frac{1}{\sqrt{1 - \beta^2}}$

1. The first step is to identify the key components of the system. This involves understanding the hardware and software involved, as well as the data flow and the roles of the various components.

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

The first of these is the fact that the
 Journal of the American Medical Association
 has been the only one of the major
 medical journals to publish a
 Statement of Principles on the
 subject of the physician's
 ethical obligations. This
 statement, which was
 adopted by the American
 Medical Association in
 1954, is a landmark
 document in the history
 of medical ethics. It
 sets out the basic
 principles of medical
 ethics and provides a
 framework for the
 development of
 specific ethical
 guidelines.

[illegible]

1. The first part of the document discusses the importance of maintaining accurate records of all transactions, both incoming and outgoing, to ensure transparency and accountability. It emphasizes the need for regular audits and the use of reliable accounting software to track expenses and income effectively.

1. The first part of the document is a letter from the President of the United States to the Congress, dated January 1, 1865. It is a copy of the original letter, and is signed by Abraham Lincoln. The letter is addressed to the Congress, and is dated January 1, 1865. It is a copy of the original letter, and is signed by Abraham Lincoln.

1. The first of these is the fact that the
2. second of these is the fact that the

SINDHIA.—See under "Gaekwar."

SMRITI—Unrevealed Laws, as opposed to Shruti, revealed Vedas

SOLA—A water-plant with a valuable pith,

ASOCHYNOMENE ASPERA.

SONI, SONAR—Goldsmith

SOWAR—A mounted soldier or constable

SOWKAR—Merchant

SWADESHI.—Lit. Swa=one's own, desh=of country There is actually a shade of difference between the two, the "Swa" Emphasising the preference against everything "par," foreign

SRI or **SHRI**—Lit. fortune, beauty, a Sanskrit term used by Hindus in speaking of a person much respected (never addressed to him, nearly = "Esquire") used also of divinities The two forms of spelling are occasioned by the intermediate sound of the *s* (that of *s* in the German *Stadt*)
SRIJYOT, SURIYOT—Modern Hindu equivalent of "Mr"

STUPA or **tope**—A Buddhist tumulus, usually of brick or stone, and more or less hemispherical, containing relics

SUBAH—(1) A province under Mahomedan rule, (2) the officer in charge of a large tract in Baroda, corresponding to the Collector of a British District, (3) a group of Districts or Division, Hyderabad

SUBAHGAR.—(1) The governor of a province under Mahomedan rule, (2) a native infantry officer in the Indian Army, (3) an official in Hyderabad corresponding to the Commissioner in British territory.

SUB-DIVISION—A portion of a District in charge of a junior officer of the Indian Civil Service or a Deputy Collector

SULTAN—A King

TSINE.—Wild cattle found in Burma and to the southward, **BOS SONDAICUS** syn. *hsaing* and *banteng*.

TUMANDAR.—A Persian word denoting some Office.

ULEMA, (Plural of *Alim*) —Mahomedan learned men.

UMARA.—Term implying the Nobles collectively. Plural of "Amir"

UMBAR—A wild fig—(*FICUS GLOMERATA*)

UMEDWAR.—A hopeful person, one who works, without pay in the hope of gaining a situation, candidate

UNIT—A term in famine administration denoting one person relieved for one day

URDU—Hindustani language as spoken and written by Musalmans opposed to Hindi, spoken and written by Hindus

URIAL—A wild sheep in North-Western India, *OVIS VIGNEI*.

URID, UDID—A pulse, 'black grain' (*PHASEOLUS MUNGO*)

URUS—Mahomedan fete held in connexion with celebration at the tomb of a saint.

USAR—Soil made barren by saline efflorescence, Northern India

USTAD—Master, teacher, one skilled in any art or science

UTHAMNA—Among Hindus, consolation visit paid on second or third day after the death of a person. Among Parsis, a religious ceremony held on the third day after the death of a person.

VAHIVATDAR.—Officer in charge of a revenue sub-division, with both executive and magisterial functions, Baroda, syn *tahsildar*.

VAID or Baldya (Is also a caste in Bengal) —A native doctor practising the Hindu system of medicine

WAKIL.—(1) A class of legal practitioners, (2) an agent generally

VEDA—Revealed sacred books of Hindus

VEDANTA—The philosophy of the Upanishads

VIHARA—A Buddhist monastery

VILLAGE—Usually applied to a certain area demarcated by survey, corresponding roughly to the English parish

VILLAGE UNION—An area in which local affairs are administered by a small committee

WAAZ—Mahomedan sermon.

WADA or WADI—(1) An enclosure with houses built round facing a centre yard, (2) private closed land near a village

WAKF—A Muhammadan religious or charitable endowment

WALI—Like "Sardar" The Governor of Khelat is so termed, whilst the Chiefs of Kabul are both "Wall" and "Mir"

WAO—A step well

WATAN—A word of many senses In Bombay Presidency used mostly of the land or cash allowance enjoyed by the person who performs some service useful for Government or to the village community

WAZIR.—The chief minister at a Mahomedan court.

WET RATE—The rate of revenue for land assured of irrigation

WRITER.—South Indian equivalent of *babu*

YAMA—Hindu god of death

YOGA.—A system of Hindu philosophy. Practice of breath control, etc, said to give supernatural powers

YOGI—A Hindu ascetic who follows the yoga system, a cardinal part of which is that it confers complete control over bodily functions.

YUNANI—Lit Greek, the system of medicine practised by Mahomedans

ZABARDAST—Lit "Upper hand," hence strong, oppressive

ZABARDASTI.—Oppression.

ZAMINDAR.—A landholder.

ZAMINDARI—(1) An estate; (2) the rights of a landholder, *zamindar*, (3) the system of tenure in which land revenue is imposed on an individual or community occupying the position of a landlord

ZANANA—Of women Women's apartment, harem

ZIARAT—Pilgrimage *Ziarat-gah*, any shrine or tomb to which people go in pilgrimage

ZIKR.—Commemorative prayer said at the tomb of the prophet or a Mahomedan saint

ZILA.—A District.

ZOR-TALAN—Tribute paid to Junagadh Darbar by numerous Kathlawar States

ZULM, ZULUM—Tyranny, Oppression.

Manners and Customs.

Next to the complexion of the people, which varies from fair to black, the tourist's attention in India is drawn by their dress and personal decoration. In its simplest form a Hindu's dress consists of a piece of cloth round the loins. Many are a cattle who regard dress as a luxury wear nothing more and he would dispense with even so much if the police allowed him to. The Mahomedan always covers his legs generally with trousers sometimes with a piece of cloth tied round the waist and reaching to the ankles. Hill men and women who at one time wore a few leaves before and behind and were totally innocent of clothing do not appear to-day within the precincts of civilisation and will not meet the tourist's eye. Children, either absolutely nude or with a piece of motal hanging from the waist in front, may be seen in the streets in the most advanced cities and in the homes of the rich. The child Krishna with all the jewels on his person, is nude in his pictures and images.

Dress.—The next stage in the evolution of the Hindu dress brings the loincloth nearly down to the feet. On the Malabar coast, as in Burma, the ends are left loose in front. In the greater part of India, they are tucked up behind—a fashion which is supposed to befit the warrior, or one end is gathered up in folds before and the other tucked up behind. The simplest dress for the trunk is a scarf thrown over the left shoulder, or round both the shoulders like a Roman toga. Under this garment is often worn a coat or a shirt. When an Indian appears in his full indigenous dress, he wears a long robe, reaching at least down to the calves, the sleeves may be wide, or long and sometimes puffed from the wrist to the elbow. Before Europeans introduced buttons, a coat was fastened by ribbons, and the fashion is not obsolete. The Mahomedan prefers to button his coat to the left, the Hindu to the right. A shawl is tied round the waist over the long coat, and serves as a belt, in which one may carry money or a weapon, if allowed. The greatest variety is shown in the head-dress. More than seventy shapes of caps, hats, and turbans, may be seen in the city of Bombay. In the Punjab and the United Provinces, in Bengal, in Burma and in Madras other varieties prevail. Cones and cylinders, domes and truncated pyramids, high and low, with sides at different angles, folded brims, projecting brims, long strips of cloth wound round the head or the cap in all possible ways, ingenuity culminating perhaps in the "parrot's beak" of the Maratha turban—all these fashions have been evolved by different communities and in different places, so that a trained eye can tell from the head-covering whether the wearer is a Hindu, Mahomedan or Parsi, and whether he hails from Poona or Dharwar, Ahmedabad or Bhavnagar.

Fashion Variations.—Fashions often vary with climate and occupation. The Bombay fisherman may wear a short coat and a cap, and may carry a watch in his pocket, yet, as

he must work for long hours in water, he would not cover his legs, but suspend only a coloured kerchief from his waist in front. The Pathan of the cold north-west affects loose baggy trousers, a tall head-dress befitting his stature and covers his ears with its folds as if to keep off cold. The poorer people in Bengal and Madras do not cover their heads, except when they work in the sun or must appear respectable. Many well-to-do Indians wear European dress at the present day, or a compromise between the Indian and European costumes; notably the Indian Christians and Parsis. Most Parsis however have retained their own head-dress, and many have not borrowed the European collar and cuffs. The majority of the people do not use shoes, those who can afford them wear sandals, slippers and shoes, and a few cover their feet with stockings and boots after the European fashion in public.

Women's Costumes.—The usual dress of a woman consists of a long piece of cloth tied round the waist, with folds in front, and one end brought over the shoulder or the head. The folds are sometimes drawn in and tucked up behind. In the greater part of India women wear a bodice on the Malabar coast many do not, but merely throw a piece of cloth over the breast. In some communities petticoats, or drawers, or both are worn. Many Mussalman ladies wear gowns and scarfs over them. The vast majority of Mahomedan women are *goshas* and their dress and persons are hidden by a veil when they appear in public. A few converts from Hinduism have not borrowed the custom. In Northern India Hindu women have generally adopted the Mussalman practice of seclusion. In the Dekhan and in Southern India they have not.

As a rule the hair is daily oiled, combed, parted in the middle of the head, plaited and rolled into a chignon, by most women. Among high caste Hindu widows sometimes shave their heads in imitation of certain ascetics, or monks and nuns. Hindu men do not, as a rule, completely shave their heads, Mahomedans in most cases do. The former generally remove the hair from a part of the head in front, over the temples, and near the neck, and grow it in the centre, the quantity grown depending upon the fancy of the individual. Nowadays many keep the hair cropped in the European fashion, which is also followed by Parsis and Indian Christians. Most Mussalmans grow beards, most Hindus do not, except in Bengal and elsewhere where the Mahomedan influence was paramount in the past. Parsis and Christians follow their individual inclinations. Hindu ascetics, known as Sadhus or Bairagis as distinguished from Sanyasis, do not clip their hair, and generally coil the uncombed hair of the head into a crest, in imitation of the god Shiva.

Hindu women wear more ornaments than others of the corresponding grade in society. Ornaments bedeck the head, the ears, the nose, the neck, the arms, wrists, fingers, the waist—

until motherhood is attained, and by some even later—and the toes Children wear anklets Each community affects its peculiar ornaments, though imitation is not uncommon Serpents with several heads, and flowers, like the lotus, the rose, and the champaka, are among the most popular object of representation is gold or silver.

Caste Marks—Caste marks constitute a mode of personal decoration peculiar to Hindus, especially of the higher castes The simplest mark is a round spot on the forehead It represents prosperity or joy, and is omitted in mourning and on fast-days It may be red, or yellowish as when it is made with ground sandalwood paste The worshippers of Vishnu draw a vertical line across the spot, and as Lakshmi is the goddess of prosperity, it is said to represent her A more elaborate mark on the forehead has the shape of U or V, generally with the central line, sometimes without it, and represents Vishnu's foot The worshippers of Shiva adopt horizontal lines, made with sandalwood paste or ashes Some Vaishnavas stamp their temples, near the corners of the eyes, with figures of Vishnu's conch and disc Other parts of the body are also similarly marked The material used is a kind of yellowish clay To smear the arms and the chest with sandalwood paste is a favourite kind of toilet, especially in the hot season Beads of Tulsi or sacred Basil, and berries of Rudraksha *elacarpus ganitrus*, strung together are worn round their necks by Vaishnavas and Shaivas, respectively The Lingayats, a Shaiva sect, suspend from their necks a metallic casket containing the Linga or phallus of their god Bairagi, ascetics, besides wearing Rudraksha rosaries round their necks and matted hair, smear their bodies with ashes Religious mendicants suspend from their necks figures of the gods in whose name they beg Strings of cowries may also be seen round their necks Muslim dervishes sometimes carry peacock's feathers

Hindu women mark their foreheads with a red spot or horizontal line High caste widows are forbidden to exhibit this sign of happiness, as also to deck themselves with flowers or ornaments Flowers are worn in the chignon Hindu women smear their faces, arms, and feet sometimes with a paste of turmeric, so that they may shine like gold The choice of the same colour for different purposes cannot always be explained in the same way The red liquid with which the evil eye is averted may be a substitute for the blood of the animal slaughtered for the purpose in former times. In many other cases this colour has no such associations The Muslim dervish affects green, the Sikh Akali is fond of blue, the Sanyasi adopts orange for his robe, and no reason can be assigned with any degree of certainty.

Shiva—India is a land of temples, mosques and shrines, and the Hindu finds at every turn some supernatural power to be appeased Shiva has the largest number of worshippers He has three eyes, one in his forehead, a moon's crescent in his matted hair, and at the top of the coil a woman's face representing the river Ganges His abode is the Mount Kailas in the Himalayas, from which the river takes its

source Round his neck and about his ears and limbs are serpents, and he also wears a necklace of skulls In his hands are several weapons, especially a trident, a bow, and a thunderbolt, and also a drum which he sounds while dancing for he is very fond of this exercise He sits on a tiger's skin, and his vehicle is a white bull His wife Parvati and his son Ganesha sit on his thighs An esoteric meaning is attached to every part of his physical personality The three eyes denote an insight into the past, present and future the moon, the serpents, and the skulls denote months, years and cycles, for Shiva is a personification of time, the great destroyer He is also worshipped as a Linga or phallus which represents creative energy

Ganpati—Ganesh or Ganpati, the controller of all powers of evil subject to Shiva, is worshipped by all sects throughout India Every undertaking is begun with a prayer to him He has the head of an elephant, a large abdomen, serpents about his waist and wrists, several weapons in his hands, and a piece of his tusk in one hand He is said to have broken it off when he wanted to attack the moon for ridiculing him The different parts of his body are also esoterically explained His vehicle is a rat

Parvati—Parvati, the female energy of Shiva, is worshipped under various names and forms She is at the head of all female supernatural powers, many of whom are her own manifestations Some are benign and beautiful, others terrible and ugly Kali, the tutelary deity of Kalighat or Calcutta, is one of her fierce manifestations In this form she is black a tongue smeared with blood projects from her gaping mouth besides her weapons, she carries corpses in her hands, and round her neck are skulls, Bombay also takes its name from a goddess, Mumbadevi Gouri, to whom offerings are made in Indian homes at an annual festival, is benign On the other hand the epidemic diseases like the plague and small-pox are caused by certain goddesses or "mothers"

Vishnu, the second member of the Hindu trinity, is the most popular deity next to Shiva. He is worshipped through his several incarnations as well as his original personality His home is the ocean of milk, where he reclines on the coils of a huge, many-headed serpent. At his feet sits Lakshmi, shampooing his legs From his navel issues a lotus, on which is seated Brahma, the third member of the trinity In his hands are the conch, which he blows on the battlefield, and the disc, with which the heads of his enemies are severed. Round his neck are garlands of leaves and flowers, and on his breast are shining jewels As Shiva represents destruction, Vishnu represents protection, and his son is the god of love To carry on the work of protection, he incarnates himself from time to time, and more temples are dedicated nowadays to his most popular incarnations, Rama and Krishna, than to his original personality. Rama is a human figure, with a bow in one of his hands He is always accompanied by his wife Sita, often by his brother Lakshmana, and at his feet, or standing before him with joined hands, is Hanuman, the monkey

Indian Names.

The personal name of most Hindus denotes a material object, colour, or quality, an animal, a relationship, or a deity. The uneducated man, who cannot correctly pronounce long Sanskrit words, is content to call his child, father, brother, uncle, or mother, or sister, as the case may be. This practice survives among the higher classes as well. Appa Sahib, Anna Rao, Babaji, Bapu Lal, Bhaji Shastri, Tatacharya, Jijibhai, are names of this description, with honorific titles added. It is possible that in early society the belief in the re-birth of departed kinsmen lent popularity to this practice. Nothing could be more natural than to call a man white, black, or red, gold or silver, gem, diamond, ruby, pearl, or merely

a stone, small or tall, weak or strong, a lion, a snake, a parrot, or a dog, and to name a woman after a flower or a creeper. Thus, to take a few names from the epics, Pandu means white and so does Arjuna. Krishna black, Bhishma terrible, Natula a mongoose, Shunaka a dog, Shula a parrot, Shrin, a horn. Among the names prevalent at the present day Hira is a diamond, Ratna or Ratan a jewel, Sonu or Chhanna gold, Vell or Belli, in the Dravidian languages, means white metal or silver. Men are often called after the days of the week on which they were born, and hence they bear the names of the seven heavenly bodies concerned. When they begin to assume the names of the Hindu deities, they practically

enter upon a new stage of civilisation. It is doubtful whether the Animists ever venture to assume the names of the dreaded spirits worshipped by them. To pronounce the name of a devil is to invite him to do harm. If the spirits sometimes bear the names of human beings the reason seems to be that they were originally human.

High-caste practices—The high caste Hindu, on the other hand, believes that the more often the name of a deity is on his lips, the more merit he earns. Therefore he deliberately names his children after his gods and goddesses, so that he may have the opportunity of pronouncing the holy names as frequently as possible. These are also sonorous and picturesque. Shiva is happy, Vishnu is a pervader, Govinda is the cowherd, Krishna Keshava has fine hair, Rama is a delighter, Lakshmana is lucky, Narayana produced the first living being on the primeval waters, Ganesha is the Lord of Shiva's hosts, Dinakara is the luminary that makes the day, Subrahmanya is a brother of Ganesha, Sita is a furrow, Savitri a ray of light, Tara a star, Radha prosperity, Rukmini is she of golden ornaments, Bhama of the glowing heart. Shiva and Vishnu has each got at least a thousand names, and they may be freely drawn upon and paraphrased in naming one's children, and the whole Hindu pantheon is as crowded as it is large. When a mother loses several children, she begins to suspect that some evil spirit has conspired against her and in order to make her off-spring unattractive to the powers of darkness, she gives them ugly names, such as Keru, rubbish, or Ukirda, dunghill, or Martoba, the mortal. Women are named after rivers, as Sarasvati, Ganga, Bhagirathi, Godavari, or Kaveri, just as men are sometimes called after mountains. Manu counsels young men not to choose a wife with such a name, perhaps because a river is an emblem of deviousness and inconstancy, as a hill is an emblem of stability. But the names of rivers have not been discarded. The Burmans have a curious custom: if a child is born on a Monday, its name must begin with a guttural, on Tuesday with a palatal, on Thursday with a labial, on Saturday with a dental.

Family names—When a person rises in importance, he adds to his personal name a family or caste name. It was once the rule that the title Sharma might be added to a Brahman's name, Varma to a Kshatriya's, Gupta to a Vaishya's, and Dasa to a Shudra's. This rule is fairly well observed in the case of the first two titles, but the meaning of the other two has changed. Dasa means a slave or servant, and the proudest Brahman cannot disdain to call himself the servant of some god. Thus, although Kalidas, the famous poet, was a Shudra, Ramadas, the famous guru of Shivaji, was a Brahmin. The Vaishnavas have made this fashion of calling oneself a servant of some god exceedingly popular, and in Western India high caste Hindus of this sect very commonly add Das to their names. The Brahmans of Southern India add Aiyer or Aiyangar to their names. Shastri,

Acharya, Bhat, Bhattacharya, Upadhyaya, Mukhopadhyaya, changed in Bengal into Mukerji, are among the titles indicative of the Brahmanical profession of studying and teaching the sacred books. Among warlike classes, like the Rajputs and Sikhs, the title Singh (lion) has become more popular than the ancient Varma. The Sindhi Mal, as in Gidmal, means brave and has the same force. Raja changed into Raya, Rao and Rai was a political title, and is not confined to any caste. The Bengali family names like Bose and Ghose, Dutt and Mitra, Sen and Guha, enable one to identify the caste of their bearers, because the caste of a family or clan cannot be changed. Shet, chief of a guild or a town, becomes Chetty, a Vaishya title, in Southern India. Mudaliyar and Nayudu, meaning leaders, are titles which were assumed by castes of political importance under native rulers. Nayar and Menon are the titles of important castes in Malabar. Ram, Lal, Nand, Chand, are among the additions made to personal names in Northern India. Suffixes like Ji, as in Ramji or Jamshedji, the Kanarese Appa, the Telugu Garu, the feminine Bai or Devi, are honorific. Prefixes like Babu, Baba, Lala, Sodhi, Pandit, Raja, and the Burmese Maung are also honorific.

Professional names—Family names sometimes denote a profession. In some cases they might have been conferred by the old rulers. Mehta, Kulkarni, Deshpande, Chitnavis, Mahanavis are the names of offices held in former times. One family name may mean a flour seller, another a cane-seller, and a third a liquor seller. To insert the father's name between one's personal and the family name is a common practice in Western India. It is rare elsewhere. When a family comes from a certain place, the suffix 'kar' or 'wallah' is added to the name of the place and it makes a family surname in Western India. Thus we may have Chiplunkars and Suratwallahs, or without these affixes we may have Bhavnagris, Malabaris and Billmorias, as among Parsis. Thus Vasudev Pandurang Chiplunkar would be a Hindu, whose personal name is Vasudev's father's name Pandurang, and family name derived from the village of Chiplun, is Chiplunkar. In Southern India the village name precedes the personal name. The evolution of Musalman names follows the same lines as Hindu names. But Muslims have no god or goddesses, and their names are derived from their religious and secular history. These names and titles are often as long and picturesque as Hindu appellations. The agnomens Bakah, Din, Ghulam, Khwaja, Fakir, Kazi, Munshi, Sheikh, Syed, Begum, Bibi and others, as well as honorific additions like Khan, have meanings which throw light on Muslim customs and institutions. The Parsis also have no gods and goddesses, and their personal names are generally borrowed from their sacred and secular history. Their surnames frequently indicate a profession or a place, as in the case of Hindus in Western India. Batliwallah, Readymoney, Contractor, Saklatwallah, Adenwallah and others like them are tell tale names.

Indian Art.

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion. The number of people aged 65 and over is expected to increase from 200 million to 400 million. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion.

Indian Architecture is mainly exemplified by the construction of temples found in Northern India and in the Taper of eastern Persia. The latest (December 1911) and earliest form of the former and the latter and previous to the latter point usual likely to their being derived from wooden structures of an earlier period. The characteristic features of these "temples" are horse shoe openings in the front to admit light, and columns of pillars with richly ornamented caps in the later or halls. Indian Architecture is found in its most highly developed form in the Dillwara temples at Mount Abu. The ground plan consists of a shrine for the god or saint, a porch, and an attended courtyard with niches for images. The characteristic of the style is grace and lightness, with decorative carving covering the whole interior, executed with great elaboration and detail. Constructional methods suggest that original types in wood have been copied in marble.

Brahminical, Chalukyan and Dravidian styles differ little in essential plan, all having a shrine for the god, preceded by pillared porches. The outer forms vary. The northern

The architecture of the Mahomedans in India is a subject of great interest to the student of art and architecture. It is a subject which has attracted the attention of many of our best writers, and has been the subject of many valuable works. The architecture of the Mahomedans in India is a subject which has attracted the attention of many of our best writers, and has been the subject of many valuable works. The architecture of the Mahomedans in India is a subject which has attracted the attention of many of our best writers, and has been the subject of many valuable works.

Sculpture—The use of sculpture and painting in isolated works of art was practically non-existent in India until modern times. One or two relics and certain plastic figures may be quoted as exceptions, but taken generally it may be stated that these arts were employed as the decorative adjuncts of architecture. No civil statuary, such as is now understood by the term, was executed, for no contemporary portrait figures, or busts in marble, or bronze, have come down to us from the ruins of ancient India, as they have from those of Egypt, Greece and Rome. Sculpture has been used exclusively as the handmaid of religion, and to this fact may be attributed the stereotyped forms to which it became bound. The lavish use of sculpture on Indian temples often exceeds good taste, and mars the symmetry

and dignity of their mass and outline, but for exuberance of imagination, industrious elaboration and vivid expression of movement, Indian sculpture is perhaps without its equal elsewhere in the world. The most impressive specimens are the earliest, found in the Buddhist and Brahminical cave temples of Ellora, Ajanta and Elephanta. The great Trimurthi in the last named of these temples ranks for mystery and expressive grandeur with the greatest masterpieces of art. The outstanding characteristics of Hindu sculpture are the power displayed in suggesting movement, the fine sense of decorative arrangements of line and mass, and an overpowering ingenuity in intricate design. Mahomedan sculpture in India, though not exclusively confined to geometric forms as is that of the more severe Arabian school, is very restrained as compared with that of the Hindus. Floral motifs are often used in the ornaments to tombs and palaces, but rarely in those of mosques. Their geometric ornament shows great ingenuity and invention, and wonderful decorative use is made of Persian, Arabic and Urdu lettering in panels, and their borders. The representation of human or animal figures is rarely to be met with. Sculptured and modelled relief is, as a rule, kept very low, and is mainly confined to the decoration of mouldings, architraves, lintels, or the bands of ornament which relieve large exterior wall spaces. Buildings of purely Mahomedan design and workmanship show greater restraint than those upon which Hindu workmen have been employed and are more satisfactory, but at Ahmedabad the two celebrated windows are striking examples of a happy combination of the two styles and Fattehpore Sikri is a magnificent example of the mixed style of Akbar.

Painting—Much of the carved stonework upon ancient Indian buildings was as in ancient Greece and then decorated with colour, but the only paintings, in the modern acceptation of the term, now existing, which were executed prior to the Moghul period, are those upon the walls of the cave temples at Ajanta, Bagh, and in Ceylon. These remarkable works were produced at intervals during the first 600 years of the Christian era. They exhibit all the finer characteristics of the best Indian sculpture, but with an added freedom of expression due to the more tractable vehicle employed. The Ajanta Caves remained hidden in the Deccan jungles for nearly twelve hundred years, until accidentally discovered in 1816. They are painted in a species of tempora, and when first brought to light were well preserved, but they have greatly deteriorated owing to the well meant, but misguided action of copyists, and the neglect of the authorities. The Nizam's Government have in recent years done a great deal towards the preservation and study of these mural paintings. The second period of Indian painting owed its origin to the introduction of Persian artists by the Moghul Emperor Akbar, and the establishment of the indigenous Moghul school was due to the encouragement and fostering care of his successors, Jehangir and Shah Jahan. Unlike the works of the Ajanta painters, which were designed upon a large scale, the pictures of the Moghul school were miniatures. They

were executed in a species of opaque water-colour upon paper or vellum, resembling to some extent the illuminated missals produced by the monks in Europe during the middle ages. Some of the finest of the earlier specimens in India are of a religious character, this phase of development being closely allied to the art of the calligraphist. As its range extended, a remarkable school of portrait painters arose notable for restrained but extremely accurate drawing, keen insight into character, harmonious colour, fine decorative feeling, and extraordinary delicacy and finish in the painting of detail. The artists of a Hindu offshoot of this movement, known as the Rajput school, were less fully endowed with the technical and purely aesthetic qualities than were the Moghul painters, but they brought to their work poetry and sentiment which are not to be found in that of the Mahomedans. The pictures of both branches of the Moghul school, although highly decorative in character, were not intended for exhibition upon the walls of rooms, according to Western practice, and, when not used as illustrations or decorations to manuscript books, were preserved in portfolios. It is very significant that up to the best period of Moghul painting, the reign of Jehangir, European ideas in art, pictures, and prints were extensively patronised by the Emperor. This broad eclecticism of the Moghuls is in marked contrast to the opinions of Mr Havell and his school of critics who have severely criticised the facilities of advanced training in Indian art schools which Bombay in particular has adopted with marked success.

Modern Painting—As the reign of Shah Jahan exhibits the high tide of artistic development in India, so the reign of his successor Aurangzeb marks the period of its rapid decline. The causes of this are attributable to the absence of encouragement by this Emperor, to his long periods of absence from the court at Delhi or Agra, entailed by the continuous wars he waged in his efforts to bring the whole of the Peninsula under his rule, and partly to the fact of the school of Moghul Painting becoming stereotyped in its practice. Foreign designers, painters and craftsmen who had been attracted to India by the great works carried out by Akbar, Jehangir and Shah Jahan left the country, and their places were taken by no successors. The indigenous artists left to themselves in the isolated courts of small Indian princes, or collected in schools in remote districts, employed themselves mainly upon repeating the works of a previous age, instead of seeking new motifs for artistic treatment. At the time when the British East India Company ceased to be only a guild of merchants and became a great administrative power in 1757, very little vitality survived in the ancient art of the country. During the century of its administrative history between the battle of Plassey and the Indian Mutiny, the "Company" was too fully occupied in fighting for its existence, extending its borders and setting the internal economy of its ever increasing territories, to be able to give much attention to conserving any remnant of artistic practice which had survived. Without any deliberate intention of introducing western art into the country, Greek and its derivative styles

of architecture were adopted for public and private buildings in Calcutta, Bombay and Madras because these were found to be more suitable for their purpose than buildings of indigenous pattern. The practical result was the same, for the Indian craftsmen employed upon their erection were confronted with styles affording no scope for the application of their traditional ornament and concerning which they had no knowledge or sympathy. As there were no sculptors in India capable of modelling or carving civil sculpture, the monuments to distinguish public services were all imported from England and the portraits and other paintings which decorated the interior walls of the buildings, were furnished by European painters who visited India or by artists in England. Although a considerable amount of research work of a voluntary nature was done by Archaeologists, no official interest was taken in artistic education until the Government of India was transferred to the British Crown in 1859. In England itself, the first fifty years of the nineteenth century was a period of gross commercialism and artistic degradation, but with the advent of the International Exhibition of 1851 the eyes of the nation were opened to the value of art as applied to industry.

The Schools of Art then instituted throughout England were imitated in a timid and tentative manner in India and were attached to the educational system, which had been previously modelled upon a definitely European basis. The work of the Schools of Art in regard to industrial art is referred to elsewhere, and as several of them have confined their activities almost exclusively to this branch of the subject it is sufficient to mention only the work of the Schools at Calcutta and Bombay in the present article. The Calcutta school, except for occasional experiments in the application of the graphic arts to lithography, engraving and stained glass, has become a school of painting and drawing. That at Bombay covers a wider field, for in addition to classes for modelling, painting and design it possesses a special school of architecture, and a range of technical workshops, in which instruction is given in the applied arts. It is in the principles underlying the instruction in painting that the schools at Calcutta and Bombay have taken almost diametrically opposite roads to reach the end they both have in view, namely, the revival of the art of painting in India by means of an indigenous school of Indian painters. Mr. Havell, who several years ago was the Principal of the Calcutta School, (he left India in 1907) banished from within its walls every vestige of European art, and claimed that the traditional art of India, in its old forms, is not dead, but merely sleeping or smothered by the blanket of European culture laid upon it for the last 150 years, and needed but to be released from this incubus to regain its pristine vigour. Well equipped with literary ability, backed by intense enthusiasm for the views he held, he imposed upon his students an exclusive and severe study of the Moghul and Rajput schools of painting. He was fortunate in finding a willing and equally enthusiastic friend in Mr. Abanindranath Tagore, an artist of imagination and fancy, combined with a serious

devotion to his art. He with other Bengal painters, inspired by Mr. Havell's precepts, founded, about thirty years ago, what has since become known as the Calcutta school of painting. In their early work the painters of this school closely adhered to the conventions of Moghul and Rajput artists, whom they took as their models, and these early examples made a great impression upon all European critics who saw them. They were welcomed as the first sign of a genuine revival of Indian painting, based upon traditional lines, and it was confidently hoped that the movement would meet with the support it merited from Indians of all classes. Interesting as many individual works of the school undoubtedly are the anticipations which greeted its inception have scarcely been fulfilled by the Calcutta school. The painters themselves have never reached the high technical standard of the artists who produced the best works of the Moghul or Rajput schools, and, as time has passed, their outlook appears to have shifted, and, while stemming the flood of western influence, they appear to have drifted into a backwater of Japanese conventions. The Indian public has failed to give the school the support it was hoped they would afford and the movement has had to depend for encouragement mainly upon Europeans in England and India.

Bombay School of Art—The attitude towards the development of art in modern India taken by its successive Principals Messrs. Lockwood Kipling, Griffiths, Greenwood, and Ceeli Burns, was on wider lines than that favoured by Mr. Havell. In general the view this School of Art has taken is that with European literature dominating the system under which the educated classes in India are trained and with European ideas, and science permeating the professional commercial, industrial, and political life of the country, it is not possible for modern Indians now to recapture the spirit which alone gave vitality to the great works of the past, that without this spirit, the conventions the ancient artists adopted are mere dead husks, and that to copy these would be as unprofitable as it would be for the artists of Europe to harness themselves to the conventions of the Greek and Roman sculptors or to those of the mediæval painters, that with European pictures, often of inferior quality illustrating every educational text book, and sold in the shops of every large city, it is essential for the proper education of art students that they should have before them the masterpieces of European art, and that, with the wide adoption of European styles of architecture in India, it is necessary for a school of art to possess the best examples of ornament applicable to the great historic styles, for the purpose of study and reference. There are certain basic principles common to the technique of all great art, such as fine and accurate drawing in its widest sense, composition and design, and the science of colour harmony.

Among the developments during Mr. Burns' administration were the founding of the Architectural School, the extension of drawing classes in the Government Schools, and the appointment of an Inspector of Art Schools on the drawing Pottery

was abolished in 1926 Mr Burns retired in 1918 and was succeeded in 1919 by the present Principal, Mr W E Gladstone Solomon, B.B.C.

The guiding principle with Mr Solomon has been to teach the students to draw and to paint what they see, and further to encourage by all possible means their natural progress in the decorative direction towards which their inherent instinct most obviously urges them. He has always maintained that theory in regard to the training of Indian Art students is in itself unproductive and can only be proven by practice, and as Mr Solomon has now held the post of Principal for many years it is possible to gauge the results achieved by his system of training.

The Life Classes which were organised at the end of 1919 have been pronounced by competent judges as well up to the level of the Life Classes of the European Schools of Art. But proficiency in technique forms only one side of the present system of training, for even in Europe, too much of the study from life is quite capable of negating its own object. In India, where the decorative instinct is inherent, and where the possibilities of freehand drawing are still understood, the danger of overdoing the Life Class is even more palpable. So side by side with these realistic aids to study, and at the same period, a class of Indian Decorative Painting was inaugurated in the Bombay School of Art under the patronage of the Governor of Bombay (Lord Lloyd). As this class specialises in Mural Painting it has long been popularly known as the Class of Mural Painting. This class has executed the decorations for many public and private buildings, and painted the ceiling and panels of a specially constructed Indian Room which was exhibited at Wembley in 1924. A great deal of controversy, which has been characterised by its academic rather than its practical note, has centred round these

new movements in art training in India; but the Bombay School of Art has retained the patronage and support of the public and the increase in the number of its students (who now number over 600 in all sections of the School) has been continuous since it took its present line. It is significant that the widespread revival of public interest in Art in Western India has synchronised with these activities.

The School of Art has of late years enjoyed the patronage of successive Governors of Bombay and, largely due to the efforts of Sir Leslie Wilson, the Government of India inaugurated a competition of Indian Artists in 1927 for the decoration of wall spaces in the new buildings at New Delhi. The result of the Competition was notified in October 1928, when five artists of Bombay, and the students of the Bombay and Lahore Schools of Art were commissioned to paint Mural Decorations in the new Secretariat buildings. The Bombay School undertook the decoration of Committee Room "A" (in the North Block) and the paintings, which were executed in oils on canvas, were finished, and successfully placed in position on the dome and walls by the middle of September 1929. These decorations were original compositions of life size figures, symbolising the main periods of Indian Art, and the different branches of the Fine and Applied Arts. In April 1929, the Government of Bombay converted the Bombay School into a Department independent of the Director of Public Instruction, the Principal (Mr W E Gladstone Solomon) being made Director. In October 1930 the latter organised an exhibition of the work of all Departments of this School of Art in India House, London. The Exhibition was very well patronised by the public and extremely well received by the art critics and the Press. Her Majesty the Queen Empress graciously patronised the exhibition and selected several of the paintings displayed.

Indian Architecture.

The architecture of India has proceeded on lines of its own, and its monuments are unique among those of the nations of the world. An ancient civilization, a natural bent on the part of the people towards religious fervour of the contemplative rather than of the fanatical sort, combined with the richness of the country in the sterner building materials—these are a few of the factors that contributed to making it what it was, while a stirring history gave it both variety and glamour. Indian architecture is a subject which at the best has been studied only imperfectly, and a really comprehensive treatise on it has yet to be written. The subject is a vast and varied one, and it may be such a treatise never will be written in the form of one work at any rate. The spirit of Indian art is foreign to the European and few can entirely understand it, while art criticism and analysis is a branch of study that the Indian

has not as yet developed to its full extent. Hitherto the best authority on the subject has been Fergusson, whose compendious work is that which will find most ready acceptance by the general reader. But Fergusson attempted the nearly impossible task of covering the ground in one volume of moderate dimensions, and it is sometimes held that he was a man of too purely European a culture, albeit wide and eclectic, to admit of sufficient depth of insight in this particular direction. Fergusson's classification by races and religions is, however, the one that has been generally accepted hitherto. He asserts that there is no stone architecture in India of an earlier date than two and a half centuries before the Christian era, and that "India owes the introduction of the use of stone for architectural purposes, as she does that of Buddhism as a state religion, to the great Asoka, who reigned B.C. 272 to 236."

Buddhist Work

Fergusson's first architectural period is then the Buddhist, of which the great tope at Sanchi with its famous Northern gateway is perhaps the most noted example. Then we have the Gandharan topes and monasteries. Perhaps the examples of Buddhist architecture of greatest interest and most ready access to the general student are to be found in the Chaitya halls or rock-cut caves of Karli, Ajanta, Nasik, Ellora, and Kanheri. A point with relation to the Gandhara work may be alluded to in passing. This is the strong European tendency, variously recognized as Roman, Byzantine but most frequently as Greek, to be observed in the details. The foliage seen in the capitals of columns bears strong resemblance to the Greek acanthus, while the sculptures have a distinct trace of Greek influence, particularly in the treatment of drapery, but also of hair and facial expression. From this it has been a fairly common assumption amongst some authorities that Indian art owed much of its best to European influence, an assumption that is strenuously combated by others as will be pointed out later.

The architecture of the Jains comes next in order. Of this rich and beautiful style the most noted examples are perhaps the Dilwara temples near Mount Abu, and the unique "Tower of Victory" at Chittore.

Other Hindu Styles

The Dravidian style is the generic title usually applied to the characteristic work of the Madras Presidency and the South of India. It is seen in many rock-cut temples as at Ellora where the remarkable "Kylas" is an instance of a temple cut out of the solid rock, complete, not only with respect to its interior (as in the case of mere caves) but also as to its exterior. It is, as it were, a life-size model of a complete building or group of buildings, several hundred feet in length, not built, but sculptured in solid stone, an undertaking of vast and, to our modern ideas, unprofitable industry. The Pagoda of Tanjore, the temples at Srirangam, Chidambaram, Vellore, Vijayanagar, &c, and the palaces at Madura and Tanjore are among the best known examples of the style.

The writer finds some difficulty in following Fergusson's two next divisions of classification, the "Chalukyan" of South-central India, and the "Northern or Indo-Aryan style." The differences and the similarities are apparently so intermixed and confusing that he is fain to fall back on the broad generic title of "Hindu"—however unscientific he may there by stand confessed. Amongst a vast number of Hindu temples the following may be mentioned as particularly worthy of study—Those at Mukteswara and Bhuvaneshwar in Orissa at Khajuraho, Bindraban, Udaipur, Benares, Gwalior, &c. The palace of the Hindu Raja Man Singh at Gwalior is among the most beautiful architectural examples in India. So also are the palaces of Amber, Dattiya, Uda, Dig and Udaipur.

Indo-Saracenic

Among all the periods and styles in India the characteristics of none are more easily recognizable than those of what is generally

called the "Indo-Saracenic" which developed after the Mahomedan conquest. Under the new influences now brought to bear on it the architecture of India took on a fresh lease of activity and underwent remarkable modifications. The dome, not entirely an unknown feature hitherto, became a special object of development, while the arch, at no time a favourite constructional form of the Hindu builders, was now forced on their attention by the predilections of the ruling class. The minaret also became a distinctive feature. The requirements of the new religion,—the mosque with its wide spaces to meet the needs of organized congregational acts of worship—gave opportunities for broad and spacious treatments that had hitherto been to some extent denied. The Moslem hatred of idolatry set a taboo on the use of sculptured representations of animate objects in the adornment of the buildings and led to the development of other decorative forms. Great ingenuity came to be displayed in the use of pattern and of geometrical and foliated ornament. This Moslem trait further turned the attention of the builders to a greater extent than before to proportion, scale and mass as means of giving beauty, mere richness of sculptured surface and the æsthetic and symbolic interest of detail being no longer to be depended on to the same degree.

Foreign Influence

There would appear to be a conflict between archæologists as to the extent of the effect on Indian art produced by foreign influence under the Mahomedans. The extreme view on the one hand is to regard all the best of the art as having been due to foreign importation. The Gandharan sculptures with their Greek tendency, the development of new forms and modes of treatment to which allusion has been made, the similarities to be found between the Mahomedan buildings of India and those of North Africa and Europe, the introduction of the minaret and, above all, the historical evidences that exist of the presence in India of Europeans during Mogul times, are cited in support of the theory. On the other hand those of the opposite school hold the foregoing view to be due to the prevailing European preconception that all light and leading must come by way of Europe, and the best things in art by way of Greece. To them the Gandharan sculpture, instead of being the best, is the worst in India even because of its Greek tincture. They find in the truly indigenous work beauties and significances not to be seen in the Greco-Bactrian sculptures, and point to those of Borobuder in Java, the work of Buddhist colonists from India, wonderfully preserved by reason of an immunity from destructive influences given by the insular position, as showing the best examples of the art extant. It is probable that a just estimate of the merits of the controversy, with respect to sculpture at any rate, cannot be formed till time has obliterated some of the differences of taste that exist between East and West.

To the adherents of the newer school the undisputed similarities between Indo-Mahomedan and Hindu buildings outweigh those between Indian and Western Mahomedan

work, especially in the light of the dissimilarities between the latter. They admit the changes produced by the advent of Islam but contend that the art, though modified, yet remained in its essence what it had always been, indigenous Indian. The minaret, the dome, the arch, they contended, though developed under the Moslem influence, were yet, so far as their detailed treatment and craftsmanship are concerned, rendered in a manner distinctively Indian. Fergusson is usually regarded as the leader of the former school while the latter and comparatively recent school has at present found an eager champion in Mr E B Havell, whose works, on the subject are recommended for study side by side with those of the former writer. Mr Havell practically discards Fergusson's racial method of classification into styles in favour of a chronological review of what he regards to a greater extent than did his famous precursor as being one continuous homogeneous Indian mode of architectural expression, though subject to variations from the influences brought to bear upon it and from the varied purposes to which it was applied.

Agra and Delhi

Agra and Delhi may be regarded as the principal centres of the Indo-Saracenic style—the former for the renowned Taj Mahal, for Akbar's deserted capital of Fatehpur Sikri, his tomb at Secundra, the Moti Masjid and palace buildings at the Agra fort. At Delhi we have the great Jumma Masjid, the Fort, the tombs of Humayon, Sufdar Jung, &c, and the unique Quth Minar. Two other great centres may be mentioned, because in each there appeared certain strongly marked individualities that differentiated the varieties of the style there found from the variety seen at Delhi and Agra, as well as that of one from that of the other. These are Ahmedabad in Gujarat and Bijapur on the Dekhan, both in the Bombay Presidency.

Ahmedabad.

At Ahmedabad with its neighbours Sirkhej and Champanir there seems to be less of a departure from the older Hindu forms, a tendency to adhere to the lintel and bracket rather than to have recourse to the arch, while the dome though constantly employed, was there never developed to its full extent as elsewhere, or carried to its logical structural conclusion. The Ahmedabad work is probably most famous for the extraordinary beauty of its stone "jall"—or pierced lattice-work, as in the palm tree windows of the Sidi Sayyid Masjid.

Bijapur

The characteristics of the Bijapur variety of the style are equally striking. They are perhaps more distinctively Mahomedan than those of the Ahmedabad buildings in that here the dome is developed to a remarkable degree, indeed the tomb of Mahmud—the well-known "Gol Gumbaz"—is cited as showing the greatest space of floor in any building in the world roofed by a single dome, not even excepting the Pantheon. The lintel also was here practically discarded in favour of the arch. The Bijapur style shews a bold masculine quality and a largeness of structural conception that is unequalled elsewhere in India though in richness and delicacy it does not attempt to rival the work of the further North. In this we recognize among other influences that of the prevailing material, the hard uncompromising Dekhan basalt. In a similar manner the characteristics of the Ahmedabad work with its greater richness of ornamentation are bound up with the nature of the Gujarat freestone while at Delhi and Agra the freer choice of materials available—the local red and white sandstones, combined with access to marble and other more costly materials—was no doubt largely responsible for the many easily recognizable characteristics of the architecture of these centres.

II. MODERN.

The modern architectural work of India divides itself sharply into two classes. There is first that of the indigenous Indian "Master-builder" to be found chiefly in the Native States, particularly those in Rajputana. Second there is that of British India, or of all those parts of the peninsula wherever Western ideas and methods have most strongly spread their influence, chiefly, in the case of architecture, through the medium of the Department of Public Works. The work of that department has been much unadverted upon as being all that building should not be, but, considering it has been produced by men of whom it was admittedly not the *meiter*, and who were necessarily contending with lack of expert training on the one hand and with departmental methods on the other, it must be conceded that it can shew many notable buildings. Of recent years there has been a tendency on the part of professional architects

to turn their attention to India, and a number of these has even been drafted into the service of Government as the result of a policy initiated in Lord Curzon's Viceroyalty. In time, therefore, and with the growth of the influence of these men, such of the reproach against the building of the British in India as was just and was not merely thoughtlessly maintained as a corollary to the popular jape against everything official, may gradually be removed. If this is so as to Government work progress should be even more assured in the freer atmosphere outside of official life. Already in certain of the greater cities, where the trained modern architect has established himself, in private practice, there are signs that his influence is beginning to be felt. He still complains, however, that the general public of India needs much educating up to a recognition of his value, both in a pecuniary sense and other wise.

Industrial Arts.

The ancient industrial arts of India formed two distinct groups. The first included those allied to, and dependent upon, architecture, the second comprises those applied to articles devoted to religious ritual, military weapons and trappings, domestic accessories and to personal adornment.

The articles of the first group were intended for some fixed and definite position, and the style of their design and the character of their workmanship were dictated by that of the building with which they were incorporated. Those of the second group were movable, and the range of their design was less constricted and their workmanship was more varied. Examples of work in both groups are so numerous, and the arts comprise such a diversity of application, that only a cursory survey can be attempted within the limits of a short review. Although the design and treatment differ in the two groups, the materials used were often the same. These materials cover a very wide range but space only permits of reference to work applied to the four materials upon which the Indian craftsman's skill has been most extensively displayed. These are stone, wood, metal and textiles.

Before dealing separately with each of these materials a few words upon the principal Indian styles are necessary. The two distinctive styles are Hindu and Mahomedan. The former may be termed indigenous, dating as it does from remote antiquity, the latter was a variation of the great Arabian style, which was brought into India in the fourteenth century, and has since developed features essentially Indian in character. The art of both Hindus and Mahomedans is based upon religion and the requirements of religious ritual. The obvious expression of this is shown in the different motifs used for their ornament. In Hindu art all natural forms are accepted and employed for decorative purposes, but in that of the Mahomedans, nearly all natural forms are rejected and forbidden. The basis of Mahomedan decoration is therefore mainly geometrical. In each of them, racial characteristics are strikingly exhibited. The keynote of Hindu work is exuberance, imagination and poetry, that of Mahomedan, reticence, intellect and good taste. The Hindus are lavish, and often indiscriminate in their employment of ornament, the Mahomedans use more restraint. In fact the two styles may be compared, without straining the analogy, to the Gothic and classic styles in Europe. In both styles the fecundity of ideas and invention in design are marvellous, and the craftsmanship often reaches a very high standard. Hindu art had been subjected throughout the ages to many foreign influences, but the artistic instincts of the people have proved so conservative that, whether these alien ideas came from the east or the west, they have often been absorbed, and are now stamped with a definite Indian character. Recognition of this fact should relieve the anxiety of those critics who fear that the penetration of Western art and culture into India at the present time will eventually rob Indian art of its national character.

Stone Work—Carved stone work is the principal form of decoration employed in Hindu temples. In variety and scope it ranges from the massive figures in the Buddhist and Brahminical Cave Temples, and the detached sculpture of the temples of Southern India, to the delicately incised reliefs and elaborately fretted ornament of the Jain temples at Mount Abu. A curious fact in relation to Hindu work is that priority of date appears to have no relation to artistic development. It is not possible to trace, as in the case of Greek, Roman and Mediaeval craftwork, the regular progressive steps from art in its primitive state to its culminating point and its subsequent decay. Styles in India seem to spring into existence fully developed, the earlier examples often exhibiting finer craftsmanship than those of a later date. There can be little doubt that stone carving in India was simply the application of the wood carvers' art to another material. The treatment of stone by the Hindu craftsmen, even in the constructive principles of their buildings, bears a closer resemblance to the practice of the wood-worker than to that of the stone mason. The earlier wooden examples from which the stone buildings and their decorations were derived have long since disappeared, but their influence is apparent. The keynote of Hindu design is rhythmic rather than symmetrical, that of their craftsmanship, vigour rather than refinement. In the carving of the human figure and of animals great power of expressing action is shown, and this spontaneous feeling is preserved despite the greatest elaboration and detail. The industry displayed is amazing, no amount of labour appears to have daunted the Hindu craftsmen in carrying out their huge and intricate schemes of decoration.

The stone carving on Mahomedan buildings except where Hindu carvers have been allowed a free hand, is much more restrained than that on Hindu temples. The fact that geometrical forms were almost exclusively used, dictated lower relief and greater refinement in the carving, while the innate good taste of the designers prompted them to concentrate the ornament upon certain prominent features, where its effect was heightened by the simplicity of the rest of the building. The invention displayed in working out geometrical patterns for work screens, inlay, and other ornamental details appears to be inexhaustible, while wonderful decorative use has been made of Arabic and Persian lettering in panels and their framing. To obtain a rich effect the Hindus relied upon the play of light and shade upon broken surfaces, the Mahomedans to attain the same end used precious materials, veneering the surfaces of their buildings with polished marble which they decorated with patterns of mosaic composed of jade, agate, onyx and other costly stones. Although the art of inlaying and working in hard stones was of Italian origin, it proved to be one eminently suited to the genius of the Indian craftsman, and many wonderful examples of their skill in the form of book rests, tables, thrones, footstools, vases and sword handles are extant to show the height of proficiency they attained. The treatment of precious

the work of the Indian craftsman is not only a work of art but also a work of science. The Indian craftsman has a deep knowledge of the properties of the materials he uses, and he knows how to use them to the best advantage. He knows how to select the best materials, how to prepare them, and how to work them. He knows how to combine different materials, and he knows how to use different tools. He knows how to create a work of art that is both beautiful and useful. He knows how to create a work of art that is both functional and decorative. He knows how to create a work of art that is both practical and artistic. He knows how to create a work of art that is both simple and complex. He knows how to create a work of art that is both traditional and modern. He knows how to create a work of art that is both Indian and world.

Wood Work.—In a few cases of wood work, the Indian craftsman has shown a high degree of skill and artistry. The Indian craftsman has a deep knowledge of the properties of the materials he uses, and he knows how to use them to the best advantage. He knows how to select the best materials, how to prepare them, and how to work them. He knows how to combine different materials, and he knows how to use different tools. He knows how to create a work of art that is both beautiful and useful. He knows how to create a work of art that is both functional and decorative. He knows how to create a work of art that is both practical and artistic. He knows how to create a work of art that is both simple and complex. He knows how to create a work of art that is both traditional and modern. He knows how to create a work of art that is both Indian and world.

Metal Work.—With the exception of weaving, the Indian craftsman has shown his highest achievement in the work of metal. The Indian craftsman has a deep knowledge of the properties of the materials he uses, and he knows how to use them to the best advantage. He knows how to select the best materials, how to prepare them, and how to work them. He knows how to combine different materials, and he knows how to use different tools. He knows how to create a work of art that is both beautiful and useful. He knows how to create a work of art that is both functional and decorative. He knows how to create a work of art that is both practical and artistic. He knows how to create a work of art that is both simple and complex. He knows how to create a work of art that is both traditional and modern. He knows how to create a work of art that is both Indian and world.

Textiles.—The textile industry is the widest in extent in India and is that in which her craftsmen have shown their highest achievements. Other countries, east and west of India have produced work equal at least in stone, wood, and metal, but none has ever matched that of her weavers in cotton and wool, or excelled them in the weaving of silk.

413) of the Gupta dynasty. It is wonderful "to find the Hindus at that age forging a bar of iron larger than any that have been forged even in Europe to a very late date, and not frequently even now." Pillars of later style are found all over the country, especially in the Madras Presidency. No less than twenty exist in the South Kanara District. A particularly elegant example faces a Jaina temple at Mudabidri, not far from Mangalore.

Topes—*Stupas*, known as *dagabas* in Ceylon and commonly called *Topes* in North India, were constructed either for the safe custody of relics hidden in a chamber often near the base or to mark the scene of notable events in Buddhist or Jaina legends. Though we know that the ancient Jains built *stupas*, no specimen of Jaina *stupas* is now extant. A notable structure of this kind which existed until recent times, was the Jaina *stupa* which stood on the Kankali Tila site at Muttra and yielded a large number of Jaina sculptures now deposited in the Provincial Museum at Lucknow. Of those belonging to the Buddhists, the great *Topo* of Sanchi in Bhopal is the most intact and entire of its class. It consists of a low circular drum supporting a hemispherical dome of less diameter. Round the drum is an open passage for circumambulation, and the whole is enclosed by a massive stone railing with lofty gates facing the cardinal points. The gates are essentially wooden in character, and are carved, inside and out, with elaborate sculptures. The original *stupa*, which was of brick and not more than half the present dimensions, was apparently erected by Asoka at the same time as his lion-crowned pillar near the south gate, but as Sir John Marshall's recent explorations have conclusively shown, its outer casing of stone, the railing and the gateways were at least 150 and 200 years later, respectively. Other famous Buddhist *stupas* that have been found are those of Sarnath, Bharhut between Allahabad and Jubbulpore, Amravati in the Madras Presidency, and Piprahwa on the Nepalese frontier. The *topo* proper at Bharhut has entirely disappeared, having been utilised for building villages, and what remained of the rail has been removed to the Calcutta Museum. The bas-reliefs on this rail which contain short inscriptions and thus enable one to identify the scenes sculptured with the *Jatalas* or Birth Stories of the Buddha give it a unique value. The *stupa* at Amravati also no longer exists, and portions of its rail, which is unsurpassed in point of elaboration and artistic merit, are now in the British and Madras Museums. The *stupa* at Piprahwa was opened by Mr W. C. Peppe in 1898, and a steatite or soap-stone reliquary with an inscription on it was unearthed. The inscription according to many scholars speaks of the relics being of the Buddha himself and enshrined by his kinsmen, the Sakyas. If this interpretation is correct, we have here one of the *stupas* that were erected over the ashes of Buddha immediately after his demise.

Caves—Of the rock excavations which are one of the wonders of India, nine-tenths belong to Western India. The most important groups of caves are situated in Bhaja, Bedsa, Karli, Kanheri, Junnar, and Nasik in the Bombay Presidency, Ellora and Ajanta in Nizam's Dominions, Barabar and Nagarjuni 16 miles

north of Gaya, and Udayagiri and Khandagiri 20 miles from Cuttack in Orissa. The caves belong to the three principal sects into which ancient India was divided, viz. the Buddhists, Hindus and Jains. The earliest caves so far discovered are those of Barabar and Nagarjuni which were excavated by Asoka and his grandson Dasaratha, and dedicated to Ajivikas, a naked sect founded by Mankhali putta Gosala. The next earliest caves are those of Bhaja, Pitalkhora and cave No. 9 at Ajanta and No. 19 at Nasik. They have been assigned to 200 B.C. by Fergusson and Dr Burgess. But there is good reason to suppose from Sir John Marshall's recent researches and from epigraphic considerations that they are considerably more modern. The Buddhist caves are of two types—the *chaityas* or chapel caves and *viharas* or monasteries for the residence of monks. The first are with vaulted roofs and horse-shoe shaped windows over the entrance and have interiors consisting of a nave and side aisles with a small *stupa* at the inner circular end. They are thus remarkably similar to Christian basilicas. The second class consist of a hall surrounded by a number of cells. In the later *viharas* there was a sanctum in the centre of the back wall containing a large image of Buddha. Hardly a *chaitya* is found without one or more *viharas* adjoining it. Of the Hindu cave temples that at Elephanta near Bombay is perhaps the most frequented. It is dedicated to Siva and is not earlier than the 7th century A.D. But by far the most renowned cave-temple of the Hindus is that known as Kallasa or Ellora. It is on the model of a complete structural temple but carved out of solid rock. It also is dedicated to Siva and was excavated by the Rashtrakuta king, Krishna I, (A.D. 768), who may still be seen in the paintings in the ceilings of the upper porch of the main shrine. Of the Jaina caves the earliest are at Khandagiri and Udayagiri, those of the medieval type, in Indra Sabha at Ellora, and those of the latest period, at Anka in Nasik. The ceilings of many of these caves were once adorned with fresco paintings. Perhaps, the best preserved among these are those at Ajanta, which were executed at various periods between 350-650 A.D. and have elicited high praise as works of art. Copies were first made by Major Gill, but most of them perished by fire at the Crystal Palace in 1866. The lost ones were again copied by John Griffiths of the Arts School, Bombay, half of whose work was similarly destroyed by a fire at South Kensington. They were last copied by Lady Herringham during 1909-11. Her pictures, which are in full scale, are at present exhibited at the Indian Section of the Victoria and Albert Museum, South Kensington, and have been reproduced in a volume brought out by the India Society. Another group of caves where equally interesting though less well preserved paintings exist is found at Bagh in Gwalior State. These caves form the subject of a monograph issued by the India Society.

Gandhara Monuments—On the north-west frontier of India, anciently known as Gandhara, are found a class of remains, ruined monasteries and buried *stupas*, among which we notice for the first time representations of Buddha and the Buddhist pantheon. The free use of Corinthian capitals, friezes of nude Erotes bearing a long

early Pathan architecture of Delhi was massive and at the same time was characterised by elaborate richness of ornamentation. The Qutb Minar and tombs of Altamsh and Ala-ud-din Khilji are typical examples. Of the Sharqi style we have three mosques in Jaunpur with several tombs. At Mandu in the Dhar State, a third form of Saracenic architecture sprang up, and we have here the Jami Masjid, Hoshang's tomb, Jahaz Mahal and Hindola Mahal as the most notable instances of the secular and ecclesiastical styles of the Malwa Pathans. The Muhammadans of Bengal again developed their own style, and Pandua, Malda, and Gaur teem with the ruins of the buildings of this type, the important of which are the Adina Masjid of Sikandar Shak, the Eklakhi mosque, Kadam Rasul Masjid, and so forth. The Bahmani dynasty of Gulbarga and Bidar were also great builders, and adorned their capitals with important buildings. The most striking of these is the great mosque of Gulbarga, which differs from all mosques in India in having the whole central area covered over so that what in others would be an open court is here roofed by sixty-three small domes. "Of the various forms which the Saracenic architecture assumed," says Fergusson, "that of Ahmedabad may probably be considered to be the most elegant." It is notable for its carved stone work, and the work of the perforated stone windows in Sidi Sayyid's mosque, the carved niches of the minars of many other mosques, the sculptured *Mithras* and domed and panelled roofs is so exquisite that it will rival anything of the sort executed elsewhere at any period. No other style is so essentially Hindu. In complete contrast with this was the form of architecture employed by the Adil Shahi dynasty of Bijapur. There is here relatively little trace of Hindu forms or details. The principal buildings now left at Bijapur are the Jami Masjid, Gagan Mahal, Mihtar Mahal, Ibrahim Rauza and mosque and the Gol Gumbaz. Like their predecessors, the Pathans of Delhi, the Moghuls were a great building race. Their style first began to evolve itself during the reign of Akbar in a combination of Hindu and Muhammadan features. Noteworthy among the emperor's buildings are the tomb of Humayun, and the palaces at Fatehpur Sikri and Agra. Of Jehangir's time his mosque at Lahore and the tomb of Itimad-ud-daula are the most typical structures. "The force and originality of the style gave way under Shah Jahan to a delicate elegance and refinement of detail." And it was during his reign that the most splendid of the Moghul tombs, the Taj Mahal at Agra, the tomb of his wife Mumtaz Mahal, was constructed. The Moti Masjid in Agra Fort is another surprisingly pure and elegant monument of his time.

Archæological Department—As the archæological monuments of India must attract the attention of all intelligent visitors, they would naturally feel desirous to know something of the Archæological Department. The work of this Department is primarily two-fold, conservation, and research and exploration. None but spasmodic efforts appears to have been made by Government in these directions till 1870 when they established the Archæological Survey of

India and entrusted it to General (afterwards Sir) Alexander Cunningham, who was also the first Director-General of Archæology. The next advance was the initiation of the local Surveys in Bombay and Madras three years after. The work of these Surveys, however, was restricted to antiquarian research and description of monuments, and the task of conserving old buildings was left to the fitful efforts of the local Governments, often without expert guidance or control. It was only in 1878 that the Government of India under Lord Lytton awoke to this deplorable condition, and sanctioned a sum of 3½ lakhs to the repair of monuments in United Provinces, and soon after appointed a conservator Major Cole, who did useful work for three years. Then a reaction set in, and his post and that of the Director-General were abolished. The first systematic step towards recognising official responsibility in conservation matters was taken by Lord Curzon's Government, who established seven of the eight Archæological Circles that now obtain, placed them on a permanent footing and united them together under the control of a Director-General, provision being also made for subsidising local Governments out of imperial funds, when necessary. The Ancient Monuments Preservation Act was passed for the protection of historic monuments and relics especially in private possession and also for State control over the excavation of ancient sites and traffic in antiquities. Under the direction of Sir John Marshall, Kt., C.I.E., Director-General of Archæology, a comprehensive and systematic campaign of repair and excavation has been prosecuted, and the result of it is manifest in the present altered conditions of many old and historic buildings and in the scientific excavation of buried sites such as Taxila, Patalliputra, Sanchi in the Bhopal State, Sarnath near Benares, Nalanda in Bihar, Pharrapur in Bengal and Nagarjunikonda in Madras and in the Indus Valley at Harappa in the Punjab and Mohenjodaro in Sind. Of all these works those of most general interest are the Mohenjodaro excavations, for here the Archæological Department have unearthed remains of prehistoric cities dating back to 3000 B.C. and further. The Archæological Survey has devoted considerable attention to the organization and development of museums as centres of research and education. It maintains the archæological section of the Indian Museum at Calcutta, small museums at the Taj, and at the Forts at Agra, Delhi and Lahore, the Central Asian Antiquities Museum at New Delhi and has erected local museums at the excavated sites of Taxila, Sarnath and Nalanda, with the object of keeping the small movable antiquities recovered at these sites in close association with the structural remains to which they belong, so that they may be studied amid their natural surroundings and not lose focus and meaning by being transported to some distant place.

The epigraphical material dealt with by the Archæological Survey has enabled the history and chronology of the various dynasties of India to be established on a firmer basis and in greater detail. The "Epigraphia Indica" is now in the 19th volume, a revised edition of the Asoka inscriptions has been recently published and the companion volume of post Asokan inscription will appear shortly.

Indian Time.

For many years Indian time was in a state of chaotic confusion. What was called Madras or Railway time was kept on all the railways and each great centre of population kept its own local time, which was not based on any common scientific principle and was divorced from the standards of all other countries. It was with a view to remedying this confusion that the Government of India took the matter up in 1904, and addressed to the Local Governments, and through them to all local bodies, a long letter which reviewed the situation and made suggestions for the future. The essential points in this letter are indicated below.

"In India we have already a standard time, which is very generally, though by no means universally, recognised. It is the Madras local time, which is kept on all railway and telegraph lines throughout India and which is 5h 21m. 10s in advance of Greenwich. Similarly, Rangoon local time is used upon the railways and telegraphs of Burma, and is 6h 24m 47s ahead of Greenwich. But neither of these standards bears a simple and easily remembered relation to Greenwich time.

"The Government of India have several times been addressed by scientific Societies, both in India and in England, and urged to fall into line with the rest of the civilised world. And now the Royal Society has once more returned to the attack. The Committee of that Society which advises the Government of India upon matters connected with its observatories, writes—'The Committee think that a change from Madras time to that corresponding to a longitude exactly 5½ hours east of Greenwich would be an improvement upon the existing arrangements, but that for international scientific purposes the hourly zone system, making the time 5 hours in advance of Greenwich in the west, and 0 hours in advance in the east of India, would be preferable.'

"Now if India were connected with Europe by a continuous series of civilised nations with their continuous railway systems all of which had adopted the European hour zone system, it would be imperative upon India to conform and to adopt the second suggestion. But as she is not, and as she is as much isolated by uncivilised States as Cape Colony is by the ocean, it is open to her to follow the example of that and some other similarly situated colonies and to adopt the first suggestion.

"It is believed that this will be the better solution. There are obvious objections to drawing an arbitrary line right across the richest and most populous portions of India, and so as to bisect all the main lines of communication, and keeping the difference by an hour on opposite sides of that line. India has become accustomed to a uniform standard in the Madras time of the railways, and the substitution for it of a double standard would appear to be a retrograde step; while it would, in all probability, be strongly opposed by the railway

authorities. Moreover, it is very desirable that whatever system is adopted should be followed by all Europeans and Indians alike, and it is certain that the double standard would puzzle the latter greatly, while by emphasising the fact that railway differed from local time, it might postpone or even altogether prevent the acceptance of the former instead of the latter by people generally over a large part of India. The one great advantage which the second possesses over the first alternative is, that under the former, the difference between local and standard time can never exceed half an hour, whereas under the latter it will even exceed an hour in the extreme cases of Karachi and Quetta. But this inconvenience is believed to be smaller than that of keeping two different times on the Indian system of railways and telegraphs.

"It is proposed, therefore, to put on all the railway and telegraph clocks in India by 8m 50s. They would then represent a time 6½ hours faster than that of Greenwich, which would be known as Indian Standard Time, and the difference between standard and local time at the places mentioned below would be approximately as follows, the figures representing minutes, and F and S meaning that the standard time is in advance of or behind local time respectively—Dibrugarh 51 S, Shillong 35 S, Calcutta 24 S, Allahabad 2 F, Madras 9 F, Lahore 33 F, Bombay 39 F, Peshawar 44 F, Karachi 62 F, Quetta 62 F.

"This standard time would be as much as 54 and 55 minutes behind local time at Mandalay and Rangoon, respectively, and since the railway system of Burma is not connected with that of India, and already keeps a time of its own, namely, Rangoon local time, it is not suggested that Indian Standard Time should be adopted in Burma. It is proposed, however, that instead of using Rangoon Standard Time as at present, which is 6h 24m 47s in advance of Greenwich, a Burma Standard Time should be adopted on all the Burmese railways and telegraphs, which would be one hour in advance of Indian Standard Time, or 6½ hours ahead of Greenwich time and would correspond with 97°30' E longitude. The change would bring Burma time into simple relation both with European and with Indian time, and would (among other things) simplify telegraphic communication with other countries.

"Standard time will thus have been fixed for railways and telegraphs for the whole of the Indian Empire. It goes without saying that a railway, while only one is established, is a matter which must be left to the local community to decide.

"It is difficult to recall, without a sense of the irony of fate, the reception of this proposal by the various Governments. It seemed now the time that we were to have the Indian Standard Time was adopted as a standard time for the whole of human

error The Government scheme left local bodies to decide whether or not they would adopt it. Calcutta decided to retain its own local time, and to-day Calcutta time is still twenty-four minutes in advance of Standard Time. In Bombay the first reception of the proposal was hostile, but on reconsideration the Chamber of Commerce decided in favour of it and so did the Municipality. Subsequently the opposing element in the Municipality brought in a side resolution, by which the Municipal clocks

were put at Bombay time which is thirty-nine minutes behind Standard Time. On the 1st January 1906 all the railway and telegraph clocks in India were put at Indian Standard Time, in Burma the Burma Standard Time became universal. Calcutta retains its former Calcutta time, but in Bombay local time is retained only in the clocks which are maintained by the Municipality and in the establishments of some orthodox Hindus. Elsewhere Standard Time is universal.

TIDAL CONSTANTS.

The approximate standard time of High Water may be found by adding to, or subtracting from, the time of High Water at London Bridge, given in the calendar, the correction given as below —

PROVING OF WILLS

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immovable properties are usually assessed at 16½ years purchase on the nett Municipal assessment. For estate under Rs 1,000 no probate duty is payable, up to Rs 9,000 in excess of first Rs 1,000 the duty is at 2% between Rs 10,000 and Rs 50,000 the duty payable is at 3% and between Rs 50,000 and 1,00,000 the duty payable is at 4% and over Rs 1,00,000 the duty payable is @ 5%. In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted.

2. The amount of funeral expenses

3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immovable properties have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

1. Debts left by the deceased including mortgage encumbrances.

Coinage, Weights and Measures.

As the currency of India is based upon the rupee, statements with regard to money are generally expressed in rupees, nor has it been found possible in all cases to add a conversion into sterling. Down to about 1873 the gold value of the rupee (containing 165 grains of pure silver) was approximately equal to 2s, or one-tenth of a £, and for that period it is easy to convert rupees into sterling by striking off the final cipher (Rs 1,000=£100). But after 1873 owing to the depreciation of silver as compared with gold throughout the world, there came a serious and progressive fall in the exchange, until at one time the gold value of the rupee dropped as low as 1s. In order to provide a remedy for the heavy loss caused to the Government of India in respect of its gold payments to be made in England, and also to relieve foreign trade and finance from the inconvenience due to constant and unforeseen fluctuations in exchange, it was resolved in 1893 to close the mints to the free coinage of silver, and thus force up the value of the rupee by restricting the circulation. The intention was to raise the exchange value of the rupee to 1s 4d., and then introduce a gold standard at the rate of Rs 15=£1. From 1899 onwards the value of the rupee was maintained, with insignificant fluctuations, at the proposed rate of 1s 4d until February 1920 when the recommendation of the Committee appointed in the previous year that the rupee should be linked with gold and not with sterling at 2s instead of 1s 4d was adopted. This was followed by great fluctuations (See article on Currency System).

Notation.—Another matter in connection with the expression of money statements in terms of rupees requires to be explained. The method of numerical notation in India differs from that which prevails throughout Europe. Large numbers are not punctuated in hundreds of thousands and millions, but in lakhs and crores. A lakh is one hundred thousand (written out as 1,00,000), and a crore is one hundred lakhs or ten millions (written out as 1,00,00,000). Consequently, according to the exchange value of the rupee, a lakh of rupees (Rs 1,00,000) may be read as the equivalent of £10,000 before 1873, and as the equivalent of (about) £6,667 after 1899, while a crore of rupees (Rs 1,00,00,000) may similarly be read as the equivalent of £1,000,000 before 1873, and as the equivalent of (about) £66,667 after 1899. With the rupee at 1s 6d. a lakh is equivalent to £7,500 and a crore is equivalent to £750,000.

Coinage.—Finally, it should be mentioned that the rupee is divided into 16 annas, a fraction commonly used for many purposes by both Indians and Europeans. The anna was formerly reckoned as 1½d. It may now be considered as exactly corresponding to 1d. The anna is again sub-divided into 12 pies.

Weights.—The various systems of weights used in India combine uniformity of scale with immense variations in the weight of units.

The scale used generally throughout Northern India, and less commonly in Madras and Bombay, may be thus expressed one maund=40 seers, one seer=16 chittaks or 80 tolas. The actual weight of a seer varies greatly from district to district, and even from village to village, but in the standard system the tola is 180 grains Troy (the exact weight of the rupee), and the seer thus weighs 2.057 lb., and the maund 82.28 lb. The standard is used in official reports.

Retail.—For calculating retail prices, the universal custom in India is to express them in terms of seers to the rupee. Thus, when prices change what varies is not the amount of money to be paid for the same quantity, but the quantity to be obtained for the same amount of money. In other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down, which is at first slight perplexing to an English reader. It may, however, be mentioned that quantity prices are not altogether unknown in England especially at small shops where pennyworths of many groceries can be bought. Eggs, likewise, are commonly sold at a varying number for the shilling. If it be desired to convert quantity prices from Indian into English denominations without having recourse to money prices (which would often be misleading), the following scale may be adopted—based upon the assumption that a seer is exactly 2 lb., and that the value of the rupee remains constant at 1s 4d, 1 seer per rupee=(about) 3 lb for 2s, 2 seers per rupee=(about) 6 lb for 2s, and so on.

The name of the unit for square measurement in India generally is the *bigha*, which varies greatly in different parts of the country. But areas have been expressed in this work either in square miles or in acres.

Proposed reforms.—Indian weights and measures have never been settled upon an organised basis suitable for commerce and trade characteristic of the modern age. They vary from town to town and village to village in a way that could only work satisfactorily so long as the dealings of towns and villages were self-contained and before roads and railways opened up trade between one and the other. It is pointed out that in England a hog-head of wine contains 63 gallons and a hog-head of beer only 54 gallons, that a bushel of corn weighs 48 lbs in Sunderland and 240 lbs in Cornwall, that the English stone weight represents 14 lbs in popular estimation, but only 5 lbs, if we are weighing glass, and eight for meat, but 6 lbs for cheese. Similar instances are multiplied in India by at least as many times as India is bigger than England. If we take, for instance, the maund denomination of weight common all over India, we shall find that in a given city there are nearly as many maunds as there are articles to weigh. If we consider the maund as between district and district the state of affairs is worse. Thus in the United Provinces a 'seer',

the maund of sugar weighs 48½ seers in Cawnpore, 40 in Muttra, 72½ in Gorakhpur, 40 in Agra, 50 in Moradabad, 48½ in Saharanpur, 50 in Bareilly, 46 in Fyzabad, 48½ in Shah-jehanpur, 51 in Goshangunze. The maund varies throughout all India from the Bengal or railway maund of 82-2/7 lbs. to the Factory maund of 74 lbs. 10 oz 11 drs, the Bombay maund of 28 lbs., which apparently answers to the Forest Department maund in use at the Fuel Depot, and the Madras maund, which some authorities estimate at 25 lbs and others at 24 lbs. and so on

Committees of Inquiry—These are merely typical instances which are multiplied indefinitely. There are variations of every detail of weights and measures in every part of India. The losses to trade arising from the confusion and the trouble which this state of things causes are heavy. Municipal and commercial bodies are continually returning to the problem with a view to devising a practical scheme of reform. The Supreme and Provincial Governments have made various attempts during 40 years past to solve the problem of universal units of weights and measures and commerce and trade have agitated about the question for the past century. The Indian railways and Government departments adopted a standard tola (180 grains), seer (80 tolas) and maund (40 seers) and it was hoped that this would act as a successful "lead" which would gradually be followed by trade throughout the empire, but the expectation has not been realised.

The Government of India considered the whole question in consultation with the provincial Governments in 1890-1894 and various special steps have at different times been taken in different parts of India. The Government of Bombay appointed a committee in 1911 to make proposals for reform for the Bombay Presidency. Their final report has not been published, but they presented in 1912 an *ad interim* report which has been issued for public discussion. In brief, it points out the practical impossibility of proceeding by compulsory measures affecting the whole of India. The Committee stated that over the greater part of the Bombay Presidency a standard of weights and measures would be heartily welcome by the people. They thought that legislation compulsorily applied over large areas subject to many diverse conditions of trade and social life would not result in bringing about the desired reform so successfully as a "lead" supplied by local legislation based on practical experience. The want of coherence, *savoir faire*, or the means of co-operation among the people at large pointed to this conclusion. The Committee pointed out that a good example of the results that will follow a good lead is apparent in the East Khandesh District of the Presidency, where the District Officer, Mr Simcox, gradually, during the course of three years, induced the people to adopt throughout the district uniform weights and measures, the unit of weight in this case being a tola of 180 grains. But the committee abstained from recommending that the same weights and measures should be adopted over the whole Presidency, preferring that a new system started in any area should be as nearly as possible similar to the best system already prevailing there.

Committee of 1913—The whole problem was again brought under special consideration by the Government of India in October, 1913, when the following committee was appointed to inquire into the entire subject anew —

Mr C. A. Sillberrard (*President*)

Mr A. Y. G. Campbell

Mr Rustomji Fardoonji

This Committee reported, in August, 1915 in favour of a uniform system of weights to be adopted in India based on the 180 grain tola. The report says—Of all such systems there is no doubt that the most widespread and best known is that known as the Bengal or Indian Railway weights. The introduction of this system involves a more or less considerable change of system in parts of the United Provinces (Gorakhpur, Bareilly and neighbouring areas), practically the whole of Madras, parts of the Punjab (rural portions of Amritsar and neighbouring districts), of Bombay (South Bombay, Bombay city and Gujarat), and the North-West Frontier Province. Burma has at present a separate system of its own which the committee think it should be permitted to retain. The systems recommended are—

FOR INDIA

| | |
|----------------------|------------|
| 8 khaskhas | = 1 chawal |
| 8 chawals | = 1 ratti |
| 8 rattis | = 1 masha |
| 12 mashes or 4 tanks | = 1 tola |
| 5 tolas | = 1 chatak |
| 16 chataks | = 1 seer |
| 40 seers | = 1 maund |

FOR BURMA

| | |
|-----------------|---------------------|
| 2 small ywes | = 1 large ywe |
| 4 large ywes | = 1 pe |
| 2 pes | = 1 mu |
| 5 pes or 2½ mus | = 1 mat |
| 1 mat | = 1 ngamu |
| 2 ngamus | = 1 tikal |
| 100 tikals | = 1 pelktha or viss |

The tola is the tola of 180 grains, equal to the rupee weight. The viss has recently been fixed at 3 60 lbs or 140 tolas.

Government Action—The Government of India at first approved the principles of the Report and left the Provincial Governments to take action, but they passed more detailed orders in January, 1922. In these they again, for the present and subject to the restrictions imposed by the Government of India Act and the devolution rules, left it entirely to local Governments to take such action as they think advisable to standardise dry and liquid measures of capacity within their provinces. Similarly, they announced their decision not to adopt all India standards of length or area.

As regards weights they decided in favour of the standard mentioned under the heading "Weights", near the commencement of this article, this having been recommended by a majority of the Weights and Measures Committee and having received the unanimous support of the Local Governments. At the same time they provisionally undertook to assist provincial legislation or standardisation and stated that "if subsequently, opinion develops strongly in favour of the Imperial standardisation of weights, the Government of India will be prepared to undertake such legislation, but at present they consider that any such step would be premature."

The History of India in Outline.

No history of India can be proportionate and the briefest summary must suffer from the same defect. Even a wholesale acceptance as history of mythology, tradition, and folklore will not make good, though it makes picturesque, the many gaps that exist in the early history of India. and, though the labours of modern geographers and archaeologists have been amazingly fruitful, it cannot be expected that these gaps will ever be filled to any appreciable extent. Approximate accuracy in chronology and an outline of dynastic facts are all that the student can look for up to the time of Alexander, though the briefest excursion into the by-ways of history will reveal to him many alluring and mysterious fields for speculation. There are, for example, to this day castes that believe they sprang originally from the loins of a being who landed "from an impossible boat on the shores of a highly improbable sea", and the great epic poems contain plentiful statements equally difficult of reconciliation with modern notions of history as a science. But from the Jataka stories and the Puranas, much valuable information is to be obtained, and, for the benefit of those unable to go to these and other original sources, it has been distilled by a number of writers.

The orthodox Hindu begins the political history of India more than 3,000 years before Christ, with the war waged on the banks of the Jumna between the sons of Kuru and the sons of Pandu. Recent excavations by the Archaeological Department in the Indus Valley at Harappa in the Punjab, but more particularly at Mohenjodaro in Sind, carry us back even further. They have uncovered sites of cities bearing the marks and containing the relics of a high civilisation stated by the Department to be Sumerian. The excavations are proceeding under special direction and have excited the greatest interest in scientific circles throughout the world, but the general critic omits several of those remote centuries and takes 600 B.C. or thereabouts as his starting point. At that time much of the country was covered with forest, but the Aryan races, who had entered India from the north, had established in parts a form of civilisation far superior to that of the aboriginal savages and to this day there survive cities, like Benares, founded by those invaders. In like manner the Dravidian invaders from an unknown land, who overran the Deccan and the Southern part of the Peninsula, crushed the aborigines, and at a much later period, were themselves subdued by the Aryans. Of these two civilising forces, the Aryan is the better known, and of the Aryan kingdoms the first of which there is authentic record is that of Magadha, or Bihar, on the Ganges. It was in, or near, this powerful kingdom that Jainism and Buddhism had their origin, and the fifth King of Magadha, Bimbisara by name, was the friend and patron of Gautama Buddha. The King mentioned was a contemporary of Darius, autocrat of Persia (521 to 485 B.C.) who annexed the Indus valley and formed from his conquest an Indian satrapy which paid as tribute the

equivalent of about one million sterling. Detailed history, however, does not become possible until the invasion of Alexander in 326 B.C.

Alexander the Great

That great soldier had crossed the Hindu Kush in the previous year and had captured Aornos, on the Upper Indus. In the spring of 326 he crossed the river at Ohind, received the submission of the King of Taxila, and marched against Porus who ruled the fertile country between the rivers Hydaspes (Jhelum) and Akesines (Chenab). The Macedonian carried all before him, defeating Porus at the battle of the Hydaspes, and crossing the Chenab and Ravi. But at the River Hyphasis (Bias) his weary troops mutinied, and Alexander was forced to turn back and retire to the Jhelum where a fleet to sail down the rivers to the sea was nearly ready. The wonderful story of Alexander's march through Mekran and Persia to Babylon, and of the voyage of Nearchus up the Persian Gulf is the climax to the narrative of the invasion but is not part of the history of India. Alexander had stayed nineteen months in India and left behind him officers to carry on the Government of the kingdoms he had conquered but his death at Babylon, in 323, destroyed the fruits of what has to be regarded as nothing but a brilliant raid, and within two years his successors were obliged to leave the Indian provinces, heavily scarred by war but not hellenized.

The leader of the revolt against Alexander's generals was a young Hindu, Chandragupta, who was an illegitimate member of the Royal Family of Magadha. He dethroned the ruler of that kingdom, and became so powerful that he is said to have been able to place 600,000 troops in the field against Seleucus, to whom Babylon had passed on the death of Alexander. This was too formidable an opposition to be faced, and a treaty of peace was concluded between the Syrian and Indian monarchs which left the latter the first paramount Sovereign of India (321 B.C.) with his capital at Pataliputra, the modern Patna and Bankpore. Of Chandragupta's court and administration a very full account is preserved in the fragments that remain of the history compiled by Megasthenes, the ambassador sent to India by Seleucus. His memorable reign ended in 297 B.C. when he was succeeded by his son Bindusara, who in his turn was succeeded by Asoka (269—231 B.C.) who recorded the events of his reign in numerous inscriptions. This King, in an unusually bloody war, added to his dominions the Kingdom of Kalinga (the Northern Circars) and then becoming a convert to Buddhism, resolved for the future to abstain from conquest by force of arms. The consequences of the conversion of Asoka were amazing. He was not intolerant of other religions, and did not endeavour to force his creed on his children. But he initiated measures for the propagation of his doctrine with the result that Buddhism

which had hitherto been a merely local sect in the valley of the Ganges, was transformed into one of the greatest religions of the world—the greatest, probably, it measured by the number of adherents. This is Asoka's claim to be remembered, this it is which makes his reign an epoch, not only in the history of India, but in that of the world." The wording of his edicts reveal him as a great king as well as a great missionary, and it is to be hoped that the excavations now being carried on in the ruins of his palace may throw yet more light on his character and times. On his death the Maurya kingdom fell to pieces. Even during his reign there had been signs of new forces at work on the borderland of India, where the independent kingdoms of Bactria and Parthia had been formed, and subsequent to it there were frequent Greek raids into India. The Greeks in Bactria, however, could not withstand the overwhelming force of the westward migration of the Yueh-chi horde, which, in the first century A D., also ousted the Indo-Parthian kings from Afghanistan and North-Western India.

The first of these Yueh-chi kings to annex a part of India was Kadphises II (A.D. 85—125), who had been defeated in a war with China, but crossed the Indus and consolidated his power eastward as far as Benares. His son Kanishka (whose date is much disputed) left a name which to Buddhists stands second only to that of Asoka. He greatly extended the boundaries of his empire in the North, and made Peshawar his capital. Under him the power of the Kushan clan of the Yueh-chi reached its zenith and did not begin to decay until the end of the second century, concurrently with the rise in middle India of the Andhra dynasty which constructed the Amaravati stupa, "one of the most elaborate and precious monuments of piety ever raised by man."

The Gupta Dynasty

Early in the fourth century there arose, at Pataliputra, the Gupta dynasty which proved of great importance. Its founder was a local chief, his son Samudragupta, who ruled for some fifty years from A.D. 326, was a king of the greatest distinction. His aim of subduing all India was not indeed fulfilled but he was able to exact tribute from the kingdoms of the South and even from Ceylon, and, in addition to being a warrior, he was a patron of the arts and of Sanskrit literature. The rule of his son, Chandragupta, was equally distinguished and is commemorated in an inscription on the famous iron pillar near Delhi, as well as in the writings of the Chinese pilgrim Fa-hien who pays a great tribute to the equitable administration of the country. It was not until the middle of the fifth century that the fortunes of the Gupta dynasty began to wane—in face of the onset of the White Huns from Central Asia—and by 480 the dynasty had disappeared. The following century all over India was one of great confusion, apparently marked only by the rise and fall of petty kingdoms, until a monarch arose, in A.D. 606 capable of consolidating an Empire. This was the Emperor Harsha who, from Thanasar near Ambala, conquered Northern India and extended his territory South to the Nerbudda

Imitating Asoka in many ways, this Emperor yet "felt no embarrassment in paying adoration in turn to Siva, the Sun, and Buddha at a great public ceremonial." Of his times a graphic picture has been handed down in the work of a Chinese "Master of the Law," Hsuen Tsiang by name. Harsha was the last native paramount sovereign of Northern India, on his death in 648 his throne was usurped by a Minister, whose treacherous conduct towards an embassy from China was quickly avenged, and the kingdom so laboriously established lapsed into a state of internecine strife which lasted for a century and a half.

The Andhras and Rajputs

In the meantime in Southern India the Andhras had attained to great prosperity and carried on a considerable trade with Greece, Egypt and Rome, as well as with the East. Their domination ended in the fifth century A.D. and a number of new dynasties, of which the Pallavas were the most important, began to appear. The Pallavas made way in turn for the Chalukyas, who for two centuries remained the most important Deccan dynasty, one branch uniting with the Cholas. But the fortunes of the Southern dynasties are so involved, and in many cases so little known, that to recount them briefly is impossible. Few names of note stand out from the record except those of Vikramaditya (11th century) and a few of the later Hindu rulers who made a stand against the growing power of Islam, of the rise of which an account is given below. In fact the history of medieval India is singularly devoid of unity. Northern India was in a state of chaos from about 650 to 950 A.D. not unlike that which prevailed in Europe of that time, and materials for the history of these centuries are very scanty. In the absence of any powerful rulers the jungle began to gain back what had been wrested from it; ancient capitals fell into ruins from which in some cases they have not even yet been disturbed, and the aborigines and various foreign tribes began to assert themselves so successfully that the Aryan element was chiefly confined to the Doab and the Eastern Punjab. It is not therefore so much for the political as for the religious and social history of this anarchical period that one must look. And the greatest event—if a slow process may be called an event—of the middle ages was the transition from tribe to caste, the final disappearance of the old four-fold division of Brahmans, Kshatriyas, Vaisyas, and Sudras, and the formation of the new division of pure and impure largely resting upon a classification of occupations. But this social change was only a part of the development of the Hindu religion into a form which would include in its embrace the many barbarians and foreigners in the country who were outside it. The great political event of the period was the rise of the Rajputs as warriors in the place of the Kshatriyas. Their origin is obscure but they appeared in the 8th century and spread, from their two original homes in Rajputana and Oudh, into the Punjab, Kashmir, and the Central Himalayas, assimilating a number of fighting clans and binding them together with a common code. At this time Kashmir was a small king-

dom which exercised an influence on India wholly disproportionate to its size. The only other kingdom of importance was that of Kanauj—in the Doab and Southern Oudh—which still retained some of the power to which it had reached in the days of Harsha, and of which the renown extended to China and Arabia.

With the end of the period of anarchy, the political history of India centres round the Rajputs. One clan founded the kingdom of Gujarat, another held Malwa, another (the Chauhan) founded a kingdom of which Ajmer was the capital, and so on. Kanauj fell into the hands of the Rathors (c. 1040 A.D.) and the dynasty then founded by that branch of the Gaharwars of Benares became one of the most famous in India. Later in the same century the Chauhans were united, and by 1163 one of them could boast that he had conquered all the country from the Vindhya to the Himalayas, including Delhi already a fortress a hundred years old. The son of this conqueror was Prithwi Raj, the champion of the Hindus against the Mahomedans. With his death in battle (1192) ends the golden age of the new civilization that had been evolved out of chaos, and of the greatness of that age there is a splendid memorial in the temples and forts of the Rajput states and in the two great philosophical systems of Sankaracharya (ninth century) and Ramanuja (twelfth century). The triumph of Hinduism had been achieved, it must be added, at the expense of Buddhism, which survived only in Magadha at the time of the Mahomedan conquest and speedily disappeared there before the new faith.

Mahomedan India

The wave of Mahomedan invaders that eventually swept over the country first touched India, in Sind, less than a hundred years after the death of the Prophet in 632. But the first real contact was in the tenth century when a Turkish slave of a Persian ruler founded a kingdom at Ghazni, between Kabul and Kandahar. A descendant of his Mahmud (967-1030) made repeated raids into the heart of India, capturing places so far apart as Multan, Kanauj, Gwalior, and Somnath in Kathiawar, but permanently occupying only a part of the Punjab. Enduring Mahomedan rule was not established until the end of the twelfth century, by which time, from the little territory of Ghor, there had arisen one Mahomed Ghorl capable of carving out a kingdom stretching from Peshawar to the Bay of Bengal. Prithwi Raj, the Chauhan ruler of Delhi and Ajmer, made a brave stand against, and once defeated, one of the armies of this ruler, but was himself defeated in the following year. Mahomed Ghorl was murdered at Lahore (1206) and his vast kingdom, which had been governed by satraps, was split up into what were practically independent sovereignties. Of these satraps, Qutb-ud-din, the slave ruler of Delhi and Lahore, was the most famous, and is remembered by the great mosque he built near the modern Delhi. Between his rule and that of the Mughals, which began in 1526, only a few of the many kings who governed and fought and built beautiful build-

ings stand out with distinction. One of these was Ala-ud-din (1206-1210), whose many expeditions to the south much weakened the Hindu kings, and who proved himself to be a capable administrator. Another was Ekroz Shah, of the house of Tughlaq, whose administration was in many respects admirable, but which ended, on his abdication, in confusion. In the reign of his successor, Mahmud (1398-1413), the kingdom of Delhi went to pieces and India was for seven months at the mercy of the Turkish conqueror Taimur. It was the end of the fifteenth century before the kingdom, under Sikandar Lodi, began to recover. His son, Ibrahim, still further extended the kingdom that had been recreated, but was defeated by Babar, King of Kabul, at Panipat, near Delhi, in 1526, and there was then established in India the Mughal dynasty.

The Mahomedan dynasties that had ruled in capital other than Delhi up to this date were of comparative unimportance, though some great men appeared among them. In Gujarat, for example, Ahmad Shah, the founder of Ahmedabad, showed himself a good ruler and builder as well as a good soldier, though his grandson, Mahmud Shah Begara, was a greater ruler—acquiring fame at sea as well as on land. In the South various kings of the Bahmani dynasty made names for themselves especially in the long wars they waged on the new Hindu kingdom that had arisen which had its capital at Vijayanagar. Of importance also was Adil Khan, a Turk, who founded (1490) the Bijapur dynasty of Adil Shahis. It was one of his successors who crushed the Vijayanagar dynasty, and built the great mosque for which Bijapur is famous.

The Mughal Empire

As one draws near to modern times it becomes impossible to present anything like a coherent and consecutive account of the growth of India as a whole. Detached threads in the story have to be picked up one by one and followed to their ending, and although the sixteenth century saw the first European settlements in India, it will be convenient here to continue the narrative of Mahomedan India almost to the end of the Mughal Empire. How Babar gained Delhi has already been told. His son Humayun, greatly extended his kingdom, but was eventually defeated (1540) and driven into exile by Sher Khan, an Afghan of great capabilities, whose short reign ended in 1545. The Sur dynasty thus founded by Sher Khan lasted another ten years when Humayun, having snatched Kabul from one of his brothers, was strong enough to win back part of his old kingdom. When Humayun died (1556) his eldest son, Akbar, was only 13 years old and was confronted by many rivals. Nor was Akbar well served, but his career of conquest was almost uninterrupted and by 1594 the whole of India North of the Nerbudda had bowed to his authority, and he subsequently entered the Deccan and captured Ahmednagar. This great ruler, who was as remarkable for his religious tolerance as for his military prowess, died in 1605, leaving behind him a record that has been surpassed by few. His son, Jehangir, who married the Persian lady Nur Jahan,

ruled until 1627, bequeathing to an admiring posterity some notable buildings—the tomb of his father at Sikandra, part of the palace of Agra, and the palace and fortress of Lahore. His son, Shahjahan, was for many years occupied with wars in the Deccan, but found time to make his court of incredible magnificence and to build the most famous and beautiful of all tombs, the Taj Mahal, as well as the fort, palace and Juma Masjid at Delhi. The quarrels of his sons led to the deposition of Shahjahan by one of them, Aurangzeb, in 1658. This Emperor's rule was one of constant intrigue and fighting in every direction, the most important of his wars being a twenty-five years' struggle against the Marathas of the Deccan who, under the leadership of Shivaji, became a very powerful faction in Indian politics. His bigoted attitude towards Hinduism made Aurangzeb all the more anxious to establish his Empire on a firm basis in the south, but he was unable to hold his many conquests and on his death (1707) the Empire, for which his three sons were fighting could not be held together. Internal disorder and Maratha encroachments continued during the reigns of his successors, and in 1739 a fresh danger appeared in the person of Nadir Shah, the Persian conqueror, who carried all before him. On his withdrawal, leaving Mahomed Shah on the throne, the old intrigues recommenced and the Marathas began to make the most of the opportunity offered to them by puppet rulers at Delhi and by almost universal discord throughout what had been the Moghal Empire. There is little to add to the history of Mahomedan India. Emperors continued to reign in name at Delhi up to the middle of the 19th century, but their territory and power had long since disappeared, being swallowed up either by the Marathas or by the British.

European Settlements

The voyage of Vasco da Gama to India in 1498 was what turned the thoughts of the Portuguese to the formation of a great Empire in the East. That idea was soon realized, for from 1500 onwards, constant expeditions were sent to India and the first two Viceroy's in India—Almeida and Albuquerque—laid the foundations of a great Empire and of a great trade monopoly. Goa, taken in 1510, became the capital of Portuguese India and remains to this day in the hands of its captors, and the countless ruins of churches and forts on the shores of Western India, as also farther East at Malacca, testify to the zeal with which the Portuguese endeavoured to propagate their religion and to the care they took to defend their settlements. There were great soldiers and great missionaries among them—Albuquerque, da Cunha, da Castro in the former class, St Francis Xavier in the latter. But the glory of Empire loses something of its lustre when it has to be paid for, and the constant drain of men and money from Portugal, necessitated by the attacks made on their possessions in India and Malaya, was found most intolerable. The junction of Portugal with Spain, which lasted from 1580 to 1640, also tended to the downfall of the Eastern Empire and when Portugal became independent again, it was unequal to the task of competing

in the East with the Dutch and English. The Dutch had little difficulty in wresting the greater part of their territory from the Portuguese, but the seventeenth century naval wars with England forced them to relax their hold upon the coast of India, and during the French wars between 1795 and 1811 England took all Holland's Eastern possessions, and the Dutch have left in India but few traces of their civilisation and of the once powerful East India Company of the Netherlands.

The first English attempts to reach India date from 1498 when Cabot tried to find the North-West passage, and these attempts were repeated all through the sixteenth century. The first Englishman to land in India is said to have been one Thomas Stephens (1579) who was followed by a number of merchant adventurers, but trade between the two countries really dates from 1600 when Elizabeth incorporated the East India Company which had been formed in London. Factories in India were founded only after Portuguese and Dutch position had been overcome, notably in the sea fight off Swally (Suvali) in 1612. The first factory, at Surat, was for many years the most important English foothold in the East. Its establishment was followed by others, including Fort St George, Madras, (1640) and Hughli (1651). In the history of these early years of British enterprise in India the cession of Bombay (1661) as part of the dowry of Catherine of Braganza stands out as a landmark, it also illustrates the weakness of the Portuguese at that date, since in return the King of England undertook to protect the Portuguese in India against their foes—the Marathas and the Dutch. Cromwell, by his treaty of 1654, had already obtained from the Portuguese an acknowledgment of England's right to trade in the East, and that right was now threatened, not by the Portuguese, but by Shivaji and by the general disorder prevalent in India. Accordingly in 1686, the Company turned its attention to acquiring territorial power, and announced its intention to establish such a policy of civil and military power, and create and secure such a large revenue as may be the foundation of a large, well-grounded, sure English dominion in India for all time to come. Not much came of this announcement for some time, and no stand could be made in Bengal against the depredations of Aurangzeb. The foundations of Calcutta (1690) could not be laid by Job Charnock until after a humiliating peace had been concluded with that Emperor, and, owing to the difficulties in which the Company found itself in England, there was little chance of any immediate change for the better. The union of the old East India Company with the new one which had been formed in rivalry to it took place in 1708, and for some years peaceful development followed, though Bombay was always exposed by sea to attacks from the pirates, who had many strongholds within easy reach of that port, and on land to attacks from the Marathas. The latter danger was felt also in Calcutta. Internal dangers were numerous and still more to be feared. More than one mutiny took place among the troops sent out from England, and rebellions like that led by

Kelgwin in Bombay threatened to stifle the infant settlements. The public health was bad and the rate of mortality was at times appalling. To cope with such conditions strong men were needed, and the Company was in this respect peculiarly fortunate, the long list of its servants, from Oxenden and Aungler to Hastings and Raffles, contains many names of men who proved themselves good rulers and far-sighted statesmen, the finest Empire-builders the world has known.

Attempts to compete with the English were made of course. But the schemes of the Emperor Charles VI to secure a share of the Indian trade were not much more successful than those made by Scotland, Denmark, Sweden, and Russia. By the French, who founded Pondicherry and Chandernagore towards the end of the 17th century, much more was achieved, as will be seen from the following outline of the development of British rule.

The French Wars

When war broke out between England and France in 1744, the French had acquired a strong position in Southern India, which had become independent of Delhi and was divided into three large States—Hyderabad, Tanjore, and Mysore—and a number of petty states under local chieftains. In the affairs of these States Dupleix, when Governor of Pondicherry, had intervened with success, and when Madras was captured by a French squadron, under La Bourdonnais (1746) Dupleix wished to hand it over to the Nawab of Arcot—a deputy of the Nizam's who ruled in the Carnatic. The French, however, kept Madras, repelling an attack by the disappointed Nawab as well as the British attempts to recapture it. The treaty of Aix-la-Chapelle restored Madras to the English. The fighting had shown the Indian powers the value of European troops, and this was again shown in the next French war (1750-54) when Clive achieved enduring fame by his capture and subsequent defence of Arcot. This war arose from Dupleix supporting candidates for the disputed successions at Arcot and Hyderabad while the English at Madras put forward their own nominees. One of Dupleix's officers, the Marquis de Bussy, persuaded the Nizam to take into his pay the army which had established his power, and in return the Northern Circars, between Orissa and Madras, was granted to the French. This territory, however, was captured by the English in the seven years' war (1756-63). Dupleix had by then been recalled to France. Lally, who had been sent to drive the English out of India, captured Fort St David and invested Madras. But the victory which Colonel (Sir Eyre) Coote won at Wandiwash (1760) and the surrender of Pondicherry and Gingee put an end to the French ambitions of Empire in Southern India. Pondicherry passed more than once from the one nation to the other before settling down to its present existence as a French colony in miniature.

Battle of Plassey

While the English were fighting the third French war in the South they became involved in grave difficulties in Bengal, where Siraj-ud-

Daula had acceded to power. The headquarters of the English at Calcutta were threatened by that ruler who demanded they should surrender a refugee and should cease building fortifications. They refused and he marched against them with a large army. Some of the English took to their ships and made off down the river, the rest surrendered and were cast into the jail known as the "Black Hole." From this small and stifling room 23 persons, out of 146, came out alive the next day. Clive who was at Madras, immediately sailed for Calcutta with Admiral Watson's squadron, recaptured the town (1757), and, as war with the French had been proclaimed, proceeded to take Chandernagore. The Nawab Siraj-ud-Daula then took the side of the French, and Clive, putting forward Mir Jafar as candidate for the Nawab's throne, marched out with an army consisting of 900 Europeans, 2,000 sepoy and 8 pieces of artillery against the Nawab's host of over 50,000. The result was the historic battle of Plassey (June 23) in which Clive, after hesitating on the course to be pursued, routed the Nawab. Mir Jafar was put on the throne at Murshidabad, and the price of this honour was put at £2,340,000 in addition to the grant to the Company of the land round Calcutta now known as the District of the twenty-four Parganas. In the year after Plassey, Clive was appointed Governor of Bengal and in that capacity sent troops against the French in Madras and in person led a force against the Oudh army that was threatening Mir Jafar, in each case with success. From 1760 to 1765 Clive was in England. During his absence the Council at Calcutta deposed Mir Jafar and, for a price, put Mir Kasim in his place. This ruler moved his capital to Monghyr, organized an army, and began to intrigue with the Nawab Wazir of Oudh. He soon found, in a dispute over customs dues, an opportunity of quarrelling with the English and the first shots fired by his followers were the signal for a general rising in Bengal. About 200 Englishmen and a number of sepoys were massacred, but his trained regiments were defeated at Gheria and Oodeynullah, and Mir Kasim sought protection from the Nawab of Oudh. But in 1764, after quelling a sepoy mutiny in his own camp by blowing 24 ring leaders from the guns, Major (Sir Hector) Munro defeated the joint forces of Shah Alam, the Mughal Emperor, and the Nawab of Oudh in the battle of Buxar. In 1765 Clive (now Baron Clive of Plassey) returned as Governor. "Two landmarks stand out in his policy. First, he sought the substance, although not the name, of territorial power, under the fiction of a grant from the Mughal Emperor. Second, he desired to purify the Company's service, by prohibiting illicit gains, and by guaranteeing a reasonable pay from honest sources. In neither respect were his plans carried out by his immediate successors. But our efforts towards a sound administration date from this second Governorship of Clive as our military supremacy dates from his victory at Plassey." Before Clive left India, in 1767, he had readjusted the divisions of Northern India and had set up a system of Government in Bengal by which the English received the revenues and maintained the

army while the criminal jurisdiction was vested in the Nawab. The performance of his second task, the purification of the Company's service, was hotly opposed but carried out. He died in 1774 by his own hand, the House of Commons having in the previous year censured him, though admitting that he did render "great and meritorious services to his country."

Warren Hastings

The dual system of government that Clive had set up proved a failure and Warren Hastings was appointed Governor, in 1772, to carry out the reforms settled by the Court of Directors which were to give them the entire care and administration of the revenues. Thus Hastings had to undertake the administrative organization of India, and, in spite of the factious attitude of Philip Francis, with whom he fought a duel and of other members of his Council, he reorganized the civil service, reformed the system of revenue collection, greatly improved the financial position of the Company, and created courts of justice and some semblance of a police force. From 1772 to 1774 he was Governor of Bengal, and from 1774 to 1775 he was the first Governor-General, nominated under an Act of Parliament passed in the previous year. His financial reforms, and the forced contributions he enacted from the rebellious Chet Singh and the Begam of Oudh, were interpreted in England as acts of oppression and formed, together with his action in the trial of Nuncomar for forgery, the basis of his seven years' trial before the House of Lords which ended in a verdict of not guilty on all the charges. But there is much more for which his administration is justly famous. The recovery of the Marathas from their defeat at Panipat was the cardinal factor that influenced his policy towards the native states. One frontier was closed against Maratha invasion by the loan of a British brigade to the Nawab Wazir of Oudh, for his war against the Rohillas, who were intriguing with the Marathas. In Western India he found himself committed to the two Maratha wars (1775-82) owing to the ambition of the Bombay Government to place its own nominee on the throne of the Peshwa at Poona, and the Bengal troops that he sent over made amends, by the conquest of Gujrat and the capture of Gwalior, for the disgrace of Wadgaon where the Marathas overpowered a Bombay army. In the South—where interference from Madras had already led (1769) to what is known as the first Mysore war, a disastrous campaign against Hyder Ali and the Nizam—he found the Madras Government again in conflict with those two potentates. The Nizam he won over by diplomacy, but against Hyder Ali he had to despatch a Bengal army under Sir Eyre Coote. Hyder Ali died in 1782 and two years later a treaty was made with his son Tipu. It was in these acts of intervention in distant provinces that Hastings showed to best advantage as a great and courageous man, cautious, but swift in action when required. He was succeeded after an interregnum, by Lord Cornwallis (1780-93) who built on the foundations of civil administration laid by Hastings, by entrusting criminal jurisdiction to Europeans and establishing an Appellate Court of Criminal

Judicature at Calcutta. In the Civil Service he separated the functions of the District Collector and Judge and organized the "writers" and "merchants" of the Company into an administrative Civil Service. This system was subsequently extended to Madras and Bombay. Lord Cornwallis is better known for his introduction, on orders from England, of the Permanent Settlement in Bengal. (See article on Land Revenue). A third Mysore war was waged during his tenure of office which ended in the submission of Tipu Sultan. Sir John Shore (Lord Teignmouth), an experienced Civil Servant, succeeded Lord Cornwallis, and, in 1798, was followed by Lord Wellesley, the friend of Pitt, whose projects were to change the map of India.

Lord Wellesley's Policy

The French in general, and "the Corsican" in particular, were the enemy most to be dreaded for a few years before Lord Wellesley took up his duties in India, and he formed the scheme of definitively ending French schemes in Asia by placing himself at the head of a great Indian confederacy. He started by obtaining from the Nawab of Oudh the cession of large tracts of territory in lieu of payment, overdue as subsidies for British troops, he then won over the Nizam to the British side, and, after exposing the intrigues of Tipu Sultan with the French, embarked on the fourth Mysore war which ended (1799) in the fall of Seringapatam and the gallant death of Tipu. Part of Mysore, the Carnatic, and Tanjore roughly constituting the Madras Presidency of to-day then passed to British rule. The five Maratha powers—the Peshwa of Poona; the Gaekwar of Baroda, Sindhia of Gwalior, Holkar of Indore and the Raja of Nagpur—had still to be brought into the British net. The Peshwa, after being defeated by Holkar, fled to British territory and signed the Treaty of Bassein which led to the third Maratha war (1802-04) as it was regarded by Sindhia and the Raja of Nagpur as a betrayal of Maratha independence. In this the most successful of British campaigns in India, Sir Arthur Wellesley (the Duke of Wellington) and General (Lord) Lake carried all before them, the one by his victories of Assaye and Argum and the other at Aligarh and Laswari. Later operations, such as Colonel Monson's retreat through Central India were less fortunate. The great acquisitions of territory made under Lord Wellesley proved so expensive that the Court of Directors, becoming impatient, sent out Lord Cornwallis a second time to make peace at any price. He, however, died soon after his arrival in India, and Sir George Barlow carried on the government (1805-7) until the arrival of a stronger ruler, Lord Minto. He managed to keep the peace in India for six years, and to add to British dominions by the conquest of Java and Mauritius. His foreign policy was marked by another new departure, inasmuch as he opened relations with the Punjab, Persia, and Afghanistan, and concluded a treaty with Ranjit Singh, at Lahore, which made that Sikh ruler the loyal ally of the British for life.

The successor of Lord Minto was Lord Melra, who found himself obliged almost at once to declare war on the Gurkhas of Nepal, who had

Social Policies

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved.

Some of his fiercest attacks, directed on him by the British, and his wilingness of the policy which suggested that he could enter the service of the Company, were not unpopular at the time, but were eclipsed by the criticism for the abolition of Sati or widow burning, and the suggestion with the help of Captain Munro of the professional forestry as a profession in 1817. In 1820 he annexed Cacher, and, two years later, Coorg. The acceptance of the ruler of Mysore forced him to take that State also under British administration—where it remained until 1861. His rule was marked in other ways by the dispatch of the first telegraph if it made the passage from Bombay to Suez, and by his settlement of the long educational controversy in favour of the advocates of instruction in English and the Vernaculars. Lord William Bentinck left India in 1825 with his programme of reforms unfinished. The new Charter Act of 1833 had brought to a close the commercial business of the Company and emphasized their position as rulers of an Indian Empire in trust for the Crown. By it the whole administration, as well as the legislation of the country, was placed in the hands of the Governor-General in

The first of these is the fact that the Government has been unable to secure the necessary funds to carry out its policy. This is due to the fact that the Government has been unable to secure the necessary funds to carry out its policy.

Sikh Wars

Lord Ellenborough's other wars—the conquest of Sind by Sir Charles Napier and the suppression of an outbreak in Gwalior—were followed by his recall, and the appointment of Sir Henry (1st Lord) Hardinge to be Governor-General. A soldier Governor-General was not unacceptable, for it was felt that a trial of strength was imminent between the British and the remaining Hindu power in India, the Sikhs. Ranjit Singh, the founder of the Sikh Kingdom, had died in 1839, loyal to the end to the treaty he had made with Metcalfe thirty

years earlier. He left no son capable of ruling, and the *Khalsa*, or central council of the Sikh army, was burning to measure its strength with the British sepoy. The intrigues of two men, Lal Singh and Fej Singh, to obtain the supreme power led to their crossing the Sutlej and invading British territory. Sir Hugh Gough, the Commander-in-Chief, and the Governor-General hurried to the frontier, and within three weeks four pitched battles were fought—at Mudki, Ferozeshah, Aliwal and Sobraon. The Sikhs were driven across the Sutlej and Lahore surrendered to the British, but the province was not annexed. By the terms of peace the infant Dhuleep Singh was recognized as Rajah, Major Henry Lawrence was appointed Resident, to assist the Sikh Council of Regency, at Lahore, the Jullundur Doab was added to British territory, the Sikh army was limited, and a British force was sent to garrison the Punjab on behalf of the child Rajah. Lord Hardinge returned to England (1848) and was succeeded by Lord Dalhousie, the greatest of Indian proconsuls.

Dalhousie had only been in India a few months when the second Sikh war broke out. In the attack on the Sikh position at Chillianwala the British lost 2,400 officers and men besides four guns and the colours of three regiments, but before reinforcements could arrive from England, bringing Sir Charles Napier as Commander-in-Chief, Lord Gough had restored his reputation by the victory of Gujrat which absolutely destroyed the Sikh army. As a consequence the Punjab was annexed and became a British province (1849), its pacification being so well carried out, under the two Lawrences that on the outbreak of the Mutiny eight years later it remained not only quiet but loyal. In 1852 Lord Dalhousie had again to embark on war, this time in Burma, owing to the ill-treatment of British merchants in Rangoon. The lower valley of the Irawaddy was occupied from Rangoon to Prome and annexed, under the name of Pegu, to those provinces that had been acquired in the first Burmese war. British territories were enlarged in many other directions during Lord Dalhousie's tenure of office. His "doctrine of lapse" by which British rule was substituted for Indian in States where continued misrule or the failure of a dynasty made this change possible, came into practice in the cases of Satara, Jhansi, and Nagpur (which last-named State became the Central Provinces) where the rulers died without leaving male heirs. Oudh was annexed on account of its misrule. Dalhousie left many other marks on India. He reformed the administration from top to bottom, founded the Public Works Department, initiated the railways, telegraphs and postal system, and completed the great Ganges canal. He also detached the Government of Bengal from the charge of the Governor-General, and summoned representatives of the local Governments to the deliberations of the Government of India. Finally, in education he laid down the lines of a department of public instruction and initiated more practical measures than those devised by his predecessors. It was his misfortune that the mutiny, which so swiftly followed his resignation, was by many critics

in England attributed to his passion for change.

Sepoy Mutiny

Dalhousie was succeeded by Lord Canning in 1856, and in the following year the sepoys of the Bengal army mutinied and all the valley of the Ganges from Delhi to Patna rose in rebellion. The causes of this convulsion are difficult to estimate, but are probably to be found in the unrest which followed the progress of English civilisation; in the spreading of false rumours that the whole of India was to be subdued, in the confidence the sepoy troops had acquired in themselves under British leadership, and in the ambition of the educated classes to take a greater share in the government of the country. Added to this, there was in the deposed King of Delhi, Bahadur Shah, a centre of growing disaffection. Finally there was the story—not devoid of truth—that the cartridges for the new Enfield rifle were greased with fat that rendered them unclean for both Hindus and Mahomedans. And when the mutiny did break out it found the Army without many of its best officers who were employed in civil work, and the British troops reduced, in spite of Lord Dalhousie's warnings, below the number he considered essential for safety. On May 10 the sepoys at Meerut rose in mutiny, cut down a few Europeans, and, unchecked by the large European garrison, went off to Delhi where next morning the Mahomedans rose. From that centre the mutiny spread through the North-Western Provinces and Oudh into Lower Bengal. Risings in the Punjab were put down by Sir John Lawrence and his subordinates who armed the Sikhs, and with their help reduced the sepoys, and Lawrence was subsequently able to send a strong body of Sikhs to aid in the siege of Delhi. The native armies of Madras and Bombay remained for the most part true to their colours. In Central India, the contingents of some of the great chiefs joined the rebels, but Hyderabad was kept loyal by the influence of its minister, Sir Salar Jung.

The interest of the war centres round Delhi, Cawnpore and Lucknow, though in other places massacres and fighting occurred. The siege of Delhi began on June 8 when Sir Henry Barnard occupied the Ridge outside the town. Barnard died of cholera early in July, and Thomas Reed, who took his place, was obliged through illness to hand over the command to Archdale Wilson. In August Nicholson arrived with a reinforcement from the Punjab. In the meantime the rebel force in Delhi was constantly added to by the arrival of new bodies of mutineers. Attacks were frequent and the losses heavy. Cholera and sunstroke carried off many victims on the Ridge, and when the final assault was made in September the Delhi army could only parade 4,720 infantry, of whom 1,960 were Europeans. The arrival of siege guns made it possible to advance the batteries on September 8, and by the 13th a breach was made. On the following day three columns were led to the assault, a fourth being held in reserve. Over the ruins of the Kashmir Gate, blown in by Home and Salkeld, Col. Campbell led his men and

Nicholson formed up his troops within the walls. By nightfall the British, with a loss of nearly 1,200 killed and wounded, had only secured a foothold in the city. Six days' street fighting followed and Delhi was won, but the gallant Nicholson was killed at the head of a storming party. Bahadur Shah was taken prisoner, and his two sons were shot by Captain Hudson.

Massacre at Cawnpore

At Cawnpore the sepoys mutinied on June 27 and found in Nana Sahib, the heir of the last Peshwa, a willing leader in spite of his former professions of loyalty. There a European force of 240 with six guns had to protect 870 non-combatants, and held out for 22 days, surrendering only on the guarantee of the Nana that they should have a safe conduct as far as Allahabad. They were embarking on the boats on the Ganges when fire was opened on them, the men being shot or hacked to pieces before the eyes of their wives and children and the women being mutilated and murdered in Cawnpore to which place they were taken back. Their bodies were thrown down a well just before Havelock, having defeated the Nana's forces, arrived to the relief. In Lucknow a small garrison held out in the Residency from July 2 to September 25 against tremendous odds and enduring the most fearful hardships. The relieving force, under Havelock and Outram, was itself invested, and the garrison was not finally delivered until Sir Colin Campbell arrived in November. Fighting continued for 18 months in Oudh, which Sir Colin Campbell finally reduced, and in Central India, where Sir Hugh Rose waged a brilliant campaign against the dismembered Rani of Jhansi—who died at the head of her troops—and Tantia Topi,

Transfer to the Crown

With the end of the mutiny there began a new era in India, strikingly marked at the outset by the Act for the Better Government of India (1858) which transferred the entire administration from the Company to the Crown. By that Act India was to be governed by, and in the name of, the Sovereign through a Secretary of State, assisted by a Council of fifteen members. At the same time the Governor-General received the title of Viceroy. The European troops of the Company, numbering about 24,000 officers and men were—greatly resenting the transfer—amalgamated with the Royal service, and the Indian Navy was abolished. On November 1, 1858, the Viceroy announced in Durbar at Allahabad that Queen Victoria had assumed the Government of India, and proclaimed a policy of justice and religious toleration. A principle already enunciated in the Charter Act of 1833 was reinforced, and all of every race or creed, were to be admitted as far as possible to those offices in the Queen's service for which they might be qualified. The aim of the Government was to be the benefit of all her subjects in India—"In their prosperity will be our strength, in their contentment our security, and in their gratitude our best reward." Peace was proclaimed in July 1859, and in the cold weather Lord Canning went on tour in the northern provinces, to receive the homage of loyal chiefs and to assure them that the "policy of lapse" was at an end. A number of other important reforms marked

the closing years of Canning's Viceroyalty. The India Councils Act (1861) augmented the Governor-General's Council, and the Councils of Madras and Bombay by adding non-official members, European and Indian, for legislative purposes only. By another Act of the same year, High Courts of Judicature were constituted. To deal with the increased debt of India Mr James Wilson was sent from England to be Financial Member of Council, and to him are due the customs system, income tax, license duty, and State paper currency. The cares of office had broken down the Viceroy's health. His successor, Lord Elgin, lived only a few months after his arrival in India, and was succeeded by Sir John (afterwards Lord) Lawrence, the "saviour of the Punjab."

Sir John Lawrence

The chief task that fell to Sir John Lawrence was that of reorganising the Indian military system, and of reconstructing the Indian army. The latter task was carried out on the principle that in the Bengal army the proportion of Europeans to Indians in the infantry and cavalry should be one to two, and in the Madras and Bombay armies one to three; the artillery was to be almost wholly European. The re-organisation was carried out in spite of financial difficulties and the saddling of Indian revenues with the cost of a war in Abyssinia with which India had no direct concern, but operations in Bhutan were all the drain made on the army in India while the re-organising process was being carried on. Two severe famines—in Orissa (1866) and Bundelkhand and Upper Hindustan (1868-9)—occurred, while Sir John Lawrence was Viceroy, and he laid down the principle for the first time in Indian history, that the officers of the Government would be held personally responsible for taking every possible means to avert death by starvation. He also created the Irrigation Department under Col (Sir Richard) Strachey. Two commercial crises of the time have to be noted. One seriously threatened the tea industry in Bengal. The other was the consequence of the wild gambling in shares of every description that took place in Bombay during the years of prosperity for the Indian cotton industry caused by the American Civil War. The "Share Mania," however, did no permanent harm to the trade of Bombay, but was, on the other hand, largely responsible for the series of splendid buildings begun in that city during the Governorship of Sir Bartle Frere. Sir John Lawrence retired in 1869, having passed through every grade of the service, from an Assistant Magistracy to the Viceroyalty. Lord Mayo, who succeeded him, created an Agricultural Department and introduced the system of Provincial Finance, thus fostering the impulse to local self-government. He also laid the foundation for the reform of the salt duties, thereby enabling his successors to abolish the inter-provincial customs lines. Unhappily his vast schemes for the development of the country by extending communications of every kind were not carried out to the full by him, for he was murdered in the settlement of the Andaman Islands. Lord Northbrook (Viceroy 1872) chose his abilities chiefly in finance. A severe famine

Lower Bengal in 1874 was successfully warded off by the organization of State relief and the importation of rice from Burma. The following year was notable for the deposition of the Gaikwar of Baroda for mis-government, and for the tour through India of the Prince of Wales (the late King Edward VII). The visit of the Duke of Edinburgh to India when Lord Mayo was Viceroy had given great pleasure to those with whom he had come in touch, and had established a kind of personal link between India and the Crown. The Prince of Wales' tour aroused unprecedented enthusiasm for and loyalty to the British Raj, and further encouragement was given to the growth of this spirit when, in a durbar of great magnificence held on January 1st, 1877, on the famous Ridge at Delhi, Queen Victoria was proclaimed Empress of India. The Viceroy of that time, Lord Lytton, had, however, to deal with a situation of unusual difficulty. Two successive years of drought produced, in 1877-78, the worst famine India had known. The most strenuous exertions were made to mitigate its effects, and eight crores of rupees were spent in importing grain, but the loss of life was estimated at 5½ millions. At this time also Afghan affairs once more became prominent.

Second Afghan War

The Amir, Sher Ali, was found to be intriguing with Russia and that fact, coupled with his repulse of a British mission led to the second Afghan War. The British forces advanced by three routes—the Khyber, the Kurram, and the Bolan—and gained all the important vantage points of Eastern Afghanistan. Sher Ali fled and a treaty was made with his son Yakub Khan, which was promptly broken by the murder of Sir Louis Cavagnari, who had been sent as English envoy to Kabul. Further operations were thus necessary, and Sir F. (now Lord) Roberts advanced on the capital and defeated the Afghans at Charasia. A rising of the tribes followed, in spite of Sir D. Stewart's victory at Ahmed Kheyl and his advance from Kabul to Kandahar. A pretender, Sirdar Ayub Khan, from Herat prevented the establishment of peace, defeated Gen. Burrows' brigade at Maiwand, and invested Kandahar. He was routed in turn by Sir F. Roberts who made a brilliant march from Kabul to Kandahar. After the British withdrawal fighting continued between Ayub Khan and Abdur Rahman, but the latter was left undisputed Amir of Afghanistan until his death in 1901.

In the meantime Lord Lytton had resigned (1880) and Lord Ripon was appointed Viceroy by the new Liberal Government. Lord Ripon's administration is memorable for the freedom given to the Press by the repeal of the Vernacular Press Act, for his scheme of local self-government which developed municipal institutions, and for the attempt to extend the jurisdiction of the criminal courts in the Districts over European British subjects, independently of the race or nationality of the presiding judge. This attempt, which created a feeling among Europeans in India of great hostility to the Viceroy, ended in a compromise

in 1884. Other reforms were the re-establishment of the Department of Revenue and Agriculture, the appointment of an Education Commission with a view to the spread of popular instruction on a broader basis, and the abolition by the Finance Minister (Sir Evelyn Baring, now Lord Cromer) of a number of customs duties. Lord Dufferin, who succeeded Lord Ripon in 1884, had to give his attention more to external than internal affairs. One of his first acts was to hold a durbar at Rawalpindi for the reception of the Amir of Afghanistan which resulted in the strengthening of British relations with that ruler. In 1885 a third Burmese war became necessary owing to the truculent attitude of King Thibaw, and his intrigues with foreign Powers. The expedition, under General Prendergast, occupied Mandalay without difficulty and King Thibaw was exiled to Ratnagiri, where he died on 16th December 1916. His dominions of Upper Burma were annexed to British India on the 1st of January, 1886.

The Russian Menace

Of greater importance at the time were the measures taken to meet a possible, and as it then appeared a probable, attack on India by Russia. These preparations, which cost over two million sterling, were hurried on because of a collision which occurred between Russian and Afghan troops at Penjdeh, during the delimitation of the Afghan frontier towards Central Asia, and which seemed likely to lead to a declaration of war by Great Britain. War was averted, but the Penjdeh incident had called attention to a menace that was to be felt for nearly a generation more. It had also served to elicit from the Princes of India an unanimous offer of troops and money in case of need. That offer bore fruit under the next Viceroy, Lord Lansdowne, when the present system of Imperial Service Troops was organised. Under Lord Lansdowne's rule also the defences of the North-Western Frontier were strengthened, on the advice of Sir Frederick (now Earl) Roberts, who was then Commander-in-Chief in India. Another form of precautionary measure against the continued aggression of Russia was taken by raising the annual subsidy paid by the Indian Government to the Amir from eight to twelve lakhs.

On the North-Eastern Frontier there occurred (1891) in the small State of Manipur a revolution against the Raja that necessitated an inquiry on the spot by Mr. Quinton, the Chief Commissioner of Assam. Mr. Quinton, the commander of his escort, and others, were treacherously murdered in a conference and the escort ignominiously retreated. This disgrace to British arms led to several attacks on frontier outposts which were brilliantly defeated. Manipur was occupied by British troops and the government of the State was reorganised under a Political Agent. Lord Lansdowne's term of office was distinguished by several other events such as the passing of the Parliamentary Act (Lord Cross's Act, 1892), which increased the size of the Legislative Councils as well as the number of non-officials in them; legislation aimed at social and domestic reform among the Hindus; and the closing of the Indian Mints to the free coinage of silver (1893).

the Secretary of State's Council, and in 1909 a Hindu was appointed for the first time to the Viceroy's Council. The Indian Councils Act of 1909 carried this policy farther by reconstituting the legislative councils and conferring upon them wider powers of discussion. The executive councils of Madras and Bombay were enlarged by the addition of an Indian member.

As regards foreign policy, Lord Minto's Viceroyalty was distinguished by the conclusion (1907) between Great Britain and Russia of an agreement on questions likely to disturb the friendly relations of the two countries in Asia generally, and in Persia, Afghanistan and Tibet in particular. Two expeditions had to be undertaken on the North-West frontier, against the Zakka Khels and the Mohmands, and ships of the East Indies Squadron were frequently engaged off Maskat and in the Persian Gulf in operations designed to check the traffic in arms through Persia and Mekran to the frontier of India.

Visit of the King and Queen

Sir Charles (Lord) Hardinge was appointed to succeed Lord Minto in 1910. His first year in India was marked by the visit to India of the King Emperor and the Queen, who arrived at Bombay on December 2, 1911. From there they proceeded to Delhi where, in the most magnificent durbar ever held in India, the coronation was proclaimed and various boons, including an annual grant of 50 lakhs for popular education, were announced. At the same ceremony His Majesty announced the transfer of the capital of India from Calcutta to Delhi, the reunion of the two Bengals under a Governor-in-Council, the formation of a new Lieutenant-Governorship for Behar, Chota Nagpur and Orissa and the restoration of Assam to the charge of a Chief Commissioner.

In August, 1913, the demolition of a lavatory attached to a mosque in Cawnpore was made the occasion of an agitation among Indian Mahomedans and a riot in Cawnpore led to heavy loss of life. Of those present at the riot, 106 were put on trial but subsequently released by the Viceroy before the case reached the Sessions, and His Excellency was able to settle the mosque difficulty by a compromise that was acceptable to the local and other Mahomedans.

Still more serious trouble occurred in September, 1914, when a riot at Budge-Budge among a number of Sikh emigrants returned from Canada gave a foretaste of the revolutionary plans entertained by those men. The sequel, revealed in two conspiracy trials at Lahore, showed that the "Ghadr" conspiracy was widespread and had been consistently encouraged by Germany.

India after the War

Post-war India has a strange and baffling history. In 1919 Englishmen troubled little about affairs in the East; they were engrossed by the settlement of peace and the refusal of the United States either to ratify the Treaty of Versailles or to join the League of Nations. In 1930, however, the eyes not only of the British Empire but of the entire world were set upon India, when Mr. Gandhi and his followers for the second time attempted to make the non-co-operation movement effective.

Ideas rule the world. India had participated in the "war to end war." It was a war waged in defence of Belgium and it ended in a peace ostensibly proclaiming the sanctity of national aspirations throughout the world. For the sake of nationalism the structure of Europe had been broken into fragments. What then was to be India's share in the spoils of peace? The Montagu-Chelmsford Reforms did not satisfy extremist opinion. They were the result of an agreed policy at home, and an agreed policy meant concessions to reactionary opinion.

The Montagu-Chelmsford Reforms worked, and in some Provinces they worked well. Because they worked well, it was never possible to withhold reforms. Because experience revealed their shortcomings, it was imperative that greater reforms should be made. Lord Morley and Lord Minto expressly denied that their reforms allowed Parliamentary institutions. Yet the logical conclusion of these reforms was the Montagu-Chelmsford Report, which definitely established Parliamentary institutions, and that report prepared the way to Dominion Status. Ten years after the war we find the Viceroy and Mr. Gandhi working by different methods for the same end.

Yet to one living through those fevered years the issues were not always clear. Mahomedan and Hindu aspirations did not always coincide. The evil mischances that persuaded Turkey to associate with the Central Powers in the European War sorely tried Mahomedan loyalty. The Khilafatist movement assumed great proportions, and the consequence was war, for King Amanullah, who had just ascended the throne of Afghanistan, believed that India was in open revolt. He decided, therefore, to invade the country. The Afghan War was unfortunately a prolonged campaign, and increased the sense of post-war exhaustion in this country. A few years later King Amanullah visited India on an errand of peace. His country had entered the comity of nations, and he would tour Europe as an enlightened monarch. In 1928 he returned to his country, which, however, he was destined soon to leave. The pace of his reforms had been too rapid for his country. He abdicated in favour of his brother Inayatullah, who abdicated himself a few hours later. It was not until General Nadir Khan was elected King in the summer of 1929 that peace came to the unhappy land, but the keenness with which India followed the progress of the revolution showed how closely were the fortunes of the two countries associated.

The appointment of Lord Reading to be Viceroy in 1921 was a landmark in Indian history. Throughout his tenure of office there was opposition and disorder. The Duke of Connaught came to open the new council, and the *Swarajists* did their utmost to boycott the visit. The Prince of Wales came a year later on a non-political visit, but his arrival in Bombay was the signal for severe rioting.

Mr. Gandhi's weapons of attack were, boycott and the wearing of *Khaddar*. *Khaddar*, as an Indian cloth, weakened the importation of foreign cloth. The boycott was directed not only against British goods, but against the entire machinery of Government. In 1923 Lord Reading's certification doubled the Salt-Tax,

thus showing that the Legislative Assembly had no real control over finance. The responsibilities of the Assembly were few. Since the Government could override its decisions, its decisions became irresponsible. In the Provinces, however, there was less irresponsibility, and consequently the members of the Legislative Councils were often the allies of Government. But it took time for Indian opinion to realise that the Legislative Councils, however imperfect, were the instruments of order and good government. Some years later, the boycott broke down. Mr O R Das, one of Mr Gandhi's chief lieutenants, decided to associate with the Legislature—ostensibly to destroy the reforms, but actually because he and many others had grown tired of a policy of mere negation. The downfall of non-co-operation was further signalled by the election of a great Swarajist, Mr V J Patel, to be President of the Legislative Assembly—an office which he held until the summer of 1930.

When Lord Irwin succeeded Lord Reading in 1926, the prospects of peace improved. It was ordained by Statute that a Commission should examine the Indian Reforms within ten years of the inception of the Government of India Act. In 1927 both the British Government and the Government of India agreed that the Commission should be appointed as early as possible. Accordingly, in the autumn, it was announced that Sir John Simon and other members of Parliament should be members of a new Statutory Commission. Their appointment was the occasion of a new outburst. Neither Mr Gandhi's followers nor the moderates would support the Commission. It was to be boycotted from the start. The chief complaint was that all the members of the Commission were Europeans. The Congress party, and even the moderates, demanded in its place a Round Table Conference and the promise, if not the immediate offer, of Dominion Status. The boycott, however, was not very effective. One by one the Provincial Councils decided to co-operate with the Simon Commission, the Legislative Assembly, almost alone among the Legislatures, stood consistently for boycott. Yet it is significant that before the Simon Commission had published its report, the Viceroy not only announced that the goal of Government in India was Dominion Status, but invited representatives of India to a Round Table Conference in London. He stood where the moderates and half the Congress had stood two years before. Meanwhile, Congress became still more extremist. In January 1929, Mr Gandhi announced that if India was not given Dominion Status within a year, he would lead the campaign for Independence. He kept his word, and the Lahore Congress of December 1929, under the guidance of Pandit Jawaharlal Nehru rather than Mr Gandhi, voted in favour of Independence.

The new struggle began in earnest in March, 1930. Mr Gandhi first decided to break the Salt Laws. He made an imposing march from Ahmedabad to the coast, where he ceremoniously manufactured salt that could not be taxed. Non-co-operation was in full swing. For a short time Bombay was virtually a Congress City. There were numerous arrests, and before the year closed, there were to be in India no less than fifty thousand people incarcerated for political offences,

The Government of Lord Irwin was assailed on all sides. Some condemned it because it was weak. Others condemned it because it was repressive. Its conduct had a curious reaction upon political opinion in England, which possessed the dubious advantage of a minority Government. At one time the Conservatives were demanding the recall of Lord Irwin. Similarly, Provincial Governors were criticised for alleged inactivity. In the summer few predicted any success for the Round Table Conference. The Simon Commission published a Report that was condemned by practically every party in India. It was practically a still-born Report. Events had moved too rapidly. The Round Table Conference, however, proved to be the culminating point of a world-wide interest in the Indian political struggle. The Princes, at first, assumed the lead. They stood for a Federal Government in which the States and British India should be partners. At once the extremists, who had intended to ignore the Conference, showed the keenest concern. The Conference, despite all evil prognostications, represented the voice of India.

In February 1931 the Round Table Conference delegates returned to India on the understanding that there was to be a second Round Table Conference in London, but that meanwhile certain problems, such as that of separate communal electorates, were to be worked out among themselves in India. The first thing they did on their return was to attempt to persuade Congress to call off the Civil Disobedience Movement and participate in the Conference. Congress, however, were in bitter mood, many local committees even did their best to prevent the decennial census in February from being an accurate index to the state of the population. There were a number of feverish conferences between Lord Irwin, Mr Gandhi, and Sir Tej Bahadur Sapru. Mr Gandhi and other prominent Congress leaders were released from prison specially to confer with Government officials and the conferences were conducted in a friendly and informal fashion. The upshot was the signing of the Irwin-Gandhi Pact at Delhi in March which provided on the one hand for Congress to call off the civil disobedience movement, the no tax campaign, the boycott of British goods, and other cognate activities, and on the other hand for Government to extend an amnesty to political prisoners, to permit the manufacture of salt on the coast, and make a number of similar concessions.

When in April Lord Willingdon arrived in India to take up his duties as Viceroy and Governor-General, Lord Irwin left the country amid many tributes to his statesmanship. Lord Willingdon's first few months were spent in preparing the way for the second Round Table Conference, the opening of which was fixed for November. At first Congress refused to participate, alleging that Government had broken the Irwin-Gandhi agreement, but after much wavering Mr Gandhi set sail for England at the end of August. The Conference almost broke down over the communal problem. Mr Gandhi was frankly dissatisfied and landed in India on December 28 hinting at a renewal of the civil disobedience campaign. Early in January 1932 the struggle began again. Mr Gandhi and the Congress leaders were imprisoned.

The Government of India.

The impulse which drove the British to India was not conquest but trade. The Government of India represents the slow evolution from conditions established to meet trading requirements. On September 24, 1599, a few years before the deaths of Queen Elizabeth and Akbar, the merchants of London formed an association for the purpose of establishing direct trade with the East and were granted a charter of incorporation. The Government of this Company in England was vested in a Governor with a General Court of Proprietors and a Court of Directors. The factories and affairs of the Company on the East and West Coasts of India, and in Bengal, were administered at each of the principal settlements of Madras (Fort St George), Bombay and Calcutta (Fort William), by a President or Governor and a Council consisting of the senior servants of the Company. The three "Presidencies" were independent of each other and subordinate only to the Directors in England.

Territorial Responsibility Assumed

The collapse of government in India consequent on the decay of Moghul power and the intrigues of the French on the East Coast forced the officers of the Company to assume territorial responsibility in spite of their own desires and the insistent orders of the Directors. Step by step the Company became first the dominant, then the paramount power in India. In these changed circumstances the system of government by mutually independent and unwieldy councils of the merchants at the Presidency towns gave rise to grave abuses. Parliament intervened, and under the Regulating Act of 1773, a Governor-General and four councillors were appointed to administer the Presidency of Fort William (Bengal), and the supremacy of that Presidency over Madras and Bombay was for the first time established. The subordinate Presidencies were forbidden to wage war or make treaties without the previous consent of the Governor-General of Bengal in Council, except in cases of imminent necessity. Pitt's Act of 1784, which established the Board of Control in England, vested the administration of each of the three Presidencies in a Governor and three councillors, including the Commander-in-Chief of the Presidency Army. The control of the Governor-General-in-Council was somewhat extended, as it was again by the Charter Act of 1793. Under the Charter Act of 1833 the Company was compelled to close its commercial business

and it became a political and administrative body holding its territories in trust for the Crown. The same Act vested the direction of the entire civil and military administration and sole power of legislation in the Governor-General-in-Council, and defined more clearly the nature and extent of the control to be extended over the subordinate governments. After the Mutiny, there was passed, in 1858, an Act transferring the Government of India from the Company to the Crown. This Act made no important change in the administration in India, but the Governor-General, as representing the Crown, became known as the Viceroy. The Governor-General is the sole representative of the Crown in India; he is assisted by a Council, composed of high officials, each of whom is responsible for a special department of the administration.

Functions of Government

The functions of the Government in India are perhaps the most extensive of any great administration in the world. It claims a share in the produce of the land and in the Punjab and Bombay it has restricted the alienation of land from agriculturists to non-agriculturists. It undertakes the management of landed estates where the proprietor is disqualified. In times of famine it undertakes relief work and other remedial measures on a great scale. It manages a vast forest property and is the principal manufacturer of salt and opium. It owns the bulk of the railways of the country, and directly manages a considerable portion of them; it has constructed and maintains most of the important irrigation works, it owns and manages the post and telegraph systems, it has the monopoly of the Note issue, and it alone can set the mints in motion. It lends money to municipalities, rural boards, and agriculturists and occasionally to owners of historic estates. It controls the sale of liquor and intoxicating drugs and has direct responsibilities in respect to police, education, medical and sanitary operations and ordinary public works of the most intimate character. The Government has also close relations with the Indian States which collectively cover more than one-third of the whole area of India and comprise more than one-fifth of its population. The distribution of these great functions between the Government of India and the provincial administrations has fluctuated and was definitely regulated by the Reform Act of 1919.

THE REFORMS OF 1919.

Great changes were made in the system of government in British India by the Government of India Act, 1919, which, together with the rules framed under it—almost as important in their provisions as the Act itself—came into

general operation in January 1921. The Act was the outcome of an inquiry conducted in India in the winter of 1917-18 by the Secretary of State (Mr. Montagu) and the Viceroy (Lord Chelmsford), the results of which were

The Object—The framers of the Act of 1919 had a twofold object in view. Their primary object was to devise a plan which would render possible the introduction by successive stages of a system of responsible government in British India in modification of the previous system under which the Governments in India both central and provincial, received their mandate from the British Parliament acting through the Secretary of State for India the Cabinet Minister responsible to Parliament for the administration of Indian affairs.

Responsibility—The first steps towards responsibility were to transform the Provincial Legislative Council into a body of sufficient size and with a sufficiently large elected majority (which the Act fixes at 70 per cent as a minimum) to represent adequately public opinion in the province, and to create an electorate. The first franchise rules have given the vote to about 5,000,000 of the adult male population, and have enabled the Legislative Council of any 'Governor's province' to extend the franchise to women. The

following table shows the strength and composition of each of the Provincial Councils—

| Province. | Elected. | Nominated and <i>ex-officio</i> . | | Total. |
|----------------------|----------|-----------------------------------|----------------|--------|
| | | Officials | Non-officials. | |
| Madras .. | 85 | 23 | 6 | 127 |
| Bombay .. | 80 | 20 | 6 | 111 |
| Bengal .. | 113 | 20 | 6 | 139 |
| United Provinces .. | 100 | 18 | 5 | 123 |
| Punjab .. | 71 | 16 | 6 | 93 |
| Bihar and Orissa .. | 76 | 18 | 6 | 103 |
| Central Provinces .. | 58 | 10 | 6 | 68 |
| Assam .. | 39 | 9 | 6 | 53 |
| Burma .. | 78 | 15 | 8 | 101 |

The figures for officials in this table are maxima in every case, and where less than the maximum number of officials is nominated to any Council the number of nominated non-officials must be increased in proportion, *e.g.*, if there are only 16 officials (nominated and *ex-officio*) on the United Provinces Council, there must be seven nominated non-officials. The official members who have seats *ex-officio* are the members of the Executive Council, who are at present four in number, the statutory maximum in Madras, Bombay, and Bengal, three in Bihar and Orissa and two in each of the remaining provinces. These Executive Councils contain an equal

number of Indian and British members except in Bihar and Orissa where two of the three members are British officials.

Electorates.—The electorates in each province are arranged for the most part on a basis which is designed to give separate representation to the various races, communities, and special interests into which the diverse elements of the Indian population naturally range themselves. Although there are minor variations from province to province, a table showing their character in one province (Bengal) will give a sufficiently clear idea of the general position.

| Class of Electorate. | No of Electorates of this Class. | No of Members returnable by Electorates of this Class |
|--|----------------------------------|---|
| Non-Muhammadan | 42 | 46 |
| Muhammadan | 34 | 39 |
| European | 3 | 6 |
| Anglo-Indian (in the technical sense of persons of mixed European and Asiatic descent) | 1 | 2 |
| Landholders | 5 | 5 |
| University | 1 | 1 |
| Commerce and Industry .. | 8 | 15 |
| Total | 94 | 118 |

Of the 94 constituencies in Bengal, all but nine (those representing the University and Commerce and Industry) are arranged on a territorial basis, *i.e.*, each constituency consists of a group of electors, having the prescribed qualifications which entitle them to a vote in a constituency of that class, who inhabit a particular area. The normal area for a "Muhammadan" or "non-Muhammadan" constituency is a district (or where districts are large and populous, half a district) in the case of rural constituencies, and, in the case of urban constituencies, a group of adjacent municipal towns. Some large towns form urban constituencies by themselves, and the City of Calcutta provides eight separate constituencies, six "non-Muhammadan" and two "Muhammadan" the latter, of course, being coterminous with the former.

Throughout the electoral rules there runs a general classification of the various kinds of constituencies into two broad categories, those which are designed to represent special interests such as Landholders, Universities, Plan-

ters or Commerce being described as "special" constituencies, and those which are based on a racial distinction—Muhammadan, European, Sikh, etc.—being known as "general" constituencies.

Voters' Qualifications.—The qualifications for electors (and consequently for candidates) vary in detail from province to province, chiefly on account of variations in the laws and regulations which form the basis of assessment of income or property values. Generally speaking, both in rural and urban areas the franchise is based on a property qualification as measured by the payment of a prescribed minimum of land revenue or of its equivalent, or of income tax, or of municipal taxes, but in all provinces retired, pensioned or discharged officers and men of the regular army are entitled to the vote, irrespective of the amount of their income or property.

Election Results.—A Parliamentary Paper (Cmd. 39221), published in 1931, gives the following summary of election results. This return

relates to the fourth General Election under the Act of 1919. In two cases however, those of the Council of State and the Burma Legislative Council, it relates to the third election under that Act, held in the case of the Council of State in 1930 and in the case of the Burma Council in 1928. These divergences are due to the statutory duration of the Council of State being five instead of three years, and to the fact that the Reforms were introduced in Burma two years later than in other Provinces.

In the ordinary course of events the fourth general election would have been held in 1929 in two Provinces, Bengal and Assam, the elections to the Provincial Legislature were in fact held in that year, since in those provinces the local political situation had led to dissolutions in that year. But in the case of the Legislative Assembly and of the remainder of the Provincial Councils the statutory three

year period was extended under the powers conferred by the Government of India Act in order to postpone the general election until after the publication of the Report of the Indian Statutory Commission in the Summer of 1930. The elections were therefore held in the autumn of 1930

The figures given for the number of electors who voted and the percentages of the number who voted to the number on the electoral roll are, in the case of plural member constituencies, approximate only. In these constituencies, each elector has as many votes as there are seats to be filled, and the figures are calculated on the assumption that each elector used all his votes, that is, the figure given as the number of Electors who voted is the result of dividing the number of votes polled by the number of seats to be filled.

| Class of Constituency | No of Seats | No of Seats filled without Contest | No of Candidates for contested Seats. | Percentage of Votes polled to No of Electors in contested Constituencies | Percentage in 1926 |
|-----------------------|-------------|------------------------------------|---------------------------------------|--|--------------------|
| (1) | (2) | (3) | (4) | (5) | (6) |

* Two candidates withdrew

† These figures are the same as in 1925 as the election was held on the old electoral rolls, prepared in 1925

‡ One candidate retired

POWERS OF PROVINCIAL LEGISLATIVE COUNCILS

Old System—But although the Legislative Councils (which, originally created in two provinces only in addition to the Governor General's Legislative Council, existed in 1919 in nine provinces) had steadily acquired a more and more representative character and a large share of the normal functions of a legislative assembly as generally understood, they still remained in theory up to the passing of the Act of 1919 mere accretions to the Executive Government of the provinces for the purpose of advising on, and

(b) the governor shall have power in cases of emergency to authorise such expenditure as may be in his opinion necessary for the safety or tranquillity of the province, or for the carrying on of any department, and

(c) no proposal for the appropriation of any such revenues or other moneys for any purpose shall be made except on the recommendation of the governor, communicated to the council

(3) Nothing in the foregoing sub-section shall require proposals to be submitted to the council relating to the following heads of expenditure —

(i) Contributions payable by the local government to the Governor-General in Council, and

(ii) Interest and sinking fund charges on loans, and

(iii) Expenditure of which the amount is prescribed by or under any law, and

(iv) Salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council, and

(v) Salaries of judges of the high court of the province and of the advocate-general

If any question arises whether any proposed appropriation of moneys does or does not relate to the above heads of expenditure the decision of the governor shall be final

Executive and Legislature—In the light of these facts it is now possible to explain more exactly the relationship between the provincial executive and the provincial legislature. The dual character of the former has already been mentioned, and the corresponding bifurcation of provincial subjects into "reserved" and "transferred" categories. The rules under the act prescribe a list of 20 subjects which are transferred to the administration of the Governor acting with Ministers, the more important of which are Local Self-Government, Medical Administration, Public Health, Education (with certain reservations), Public Works, Agriculture, Excise, and Development of Industries. The "reserved" subjects comprise all those in the list of "provincial" (as distinct from "central") subjects which are not transferred

Machinery—No change has been made by the Act of 1919 in the machinery and methods of administration by the Governor in Council, decisions are taken at the Council Board, as before, by a majority vote, and the Governor is entitled, as before, to overrule such a vote in certain specified circumstances if he disagrees with it. For such decisions the Governor in Council remains, as before, responsible to the Secretary of State and Parliament, and on questions of legislation and supply he has the power of enforcing them despite opposition by a majority of the Legislative Council. But, the whole spirit of the Act and the existence of a large non-official elected majority in every Provincial Legislative Council is an important factor in determining the policy to be pursued by the official half of the Government in its administration of reserved subjects. A further and not less important factor is the existence in the Government, side by side with the Executive Council, of two or more Ministers appointed from the elected members of the legislature, who, though they are not charged by law with, and in fact are legally absolved from, any responsibility for decisions on matters outside the transferred sphere, will necessarily be able, and in fact are expected, to make their opinions felt by their colleagues in the Executive Council. But

these factors, while they will doubtless lead to constant endeavour on the part of the official half of the Government to accommodate its policy to the wishes of its ministerial colleagues and of the majority of the legislature, and to avoid situations which involve resort to the enforcement of its decisions in the face of popular opposition, are not intended to obscure the responsibility to Parliament in the last resort of the Governor in Council for the administration of reserved subjects and the right of His Majesty's Government, and of the Secretary of State as a member thereof, to lay down and require the observance of any principles which they regard as having the support of Parliament and, in the last resort of the British electorate.

Transfer of Control—With regard to transferred subjects the position is very different. Here there has been an actual transfer of control from the British elector and the British Parliament to the elector and the Legislative Council in the Indian province. The provincial subjects of administration are grouped into portfolios, and just as each member of the Executive Council has charge of a portfolio consisting of a specified list of "reserved" subjects or "departments," so each Minister is directly responsible for the administration of those particular transferred "departments" which are included in his portfolio. But his responsibility lies, not, as in the case of a member of the Executive Council, to the Government of India, the Secretary of State and Parliament, but to the Provincial Legislative Council of which he is an elected member and from which he is selected by the Governor as commanding or likely to command the support of the majority of that body. He holds office during the Governor's pleasure, but his retention of office is contingent on his ability to retain the confidence not only of the Governor, but also of the Legislative Council, upon whose vote he is directly dependent for his salary. Further, the control of the Legislative Council over transferred subjects, both as regards supplies and legislation, is almost entirely free from the restrictions just noticed which necessarily qualify its control over the "reserved" subjects. It is thus within the power of the Provincial Council to insist on the pursuit of a policy of its own choice in the administration of transferred subjects by withdrawing its confidence from a Minister who departs from that policy and bestowing it only on a successor who will follow its mandate and this power is dependent on the provincial elector in virtue of his freedom to control the composition of the Legislative Council by the use which he makes of his vote. No doubt his statement requires some qualification before it can be accepted as literally accurate, for, technically, the authority charged with the administration of transferred subjects is "*the Governor acting with Ministers appointed under this Act,*" not the Ministers acting on their own initiative, and, further the Governor, who is not, of course, subject to removal from office by the Legislative Council, is charged personally with responsibility for the peace and tranquillity of his province, and would be entitled, and indeed bound, to recommend the removal of a department from the transferred list if he found the legislature bent on pursuing a policy in its administration

which, in his judgment, was incompatible with the maintenance of peace and tranquillity, yet the powers of control vested in the Legislative Council over the transferred sphere are undoubtedly great and it was the opinion at all events of the Joint Select Committee that legislature and Ministers should be allowed to exercise them with the greatest possible freedom. "If after hearing all the arguments," observed the Committee, "Ministers should decide not to adopt his advice, then in the opinion of the Committee the Governor should ordinarily allow Ministers to have their way, fixing the responsibility upon them, even if it may subsequently be necessary for him to vote any particular piece of legislation. It is not possible but that in India as in all other countries, mistakes will be made by Ministers acting with the approval of a majority of the Legislative Council, but there is no way of learning except through experience and the realisation of responsibility."

Provision of Funds—The terms of the Act leave the apportionment of the provincial revenues between the two halves of the executive for the financing of reserved and transferred subjects respectively to be settled by rules, merely providing that rules may be made for the allocation of revenues or moneys for the "purpose of such 'administration' i.e., the 'administration of transferred subjects by the Governor acting with Ministers'." Probably the best description available of the method adopted by the rules for the settlement of this matter is the recommendation of the Joint Select Committee whose proposals have been followed with one modification only to enable the Governor to revoke at any time, at the desire of his Council and Ministers an "order of allocation" or to modify it in accordance with their joint wishes. The passage is as follows—

'The Committee have given much attention to the difficult question of the principle on which the provincial revenues and balances should be distributed between the two sides of the provincial governments. They are confident that the problem can readily be solved by the simple process of common sense and reasonable give-and-take, but they are aware that this question might, in certain circumstances, become the cause of much friction

in the provincial government, and they are of opinion that the rules governing the allocation of these revenues and balances should be framed so as to make the existence of such friction impossible. They advise that, if the Governor, in the course of preparing either his first or any subsequent budget, find that there is likely to be a serious or protracted difference of opinion between the Executive Council and his Ministers on this subject he should be empowered at once to make an allocation of revenue and balances between the reserved and transferred subjects which should continue for at least the whole life of the existing Legislative Council. The Committee do not endorse the suggestion that certain sources of revenue should be allocated to reserved and certain sources to transferred subjects but they recommend that the Governor should allocate a definite proportion of the revenue, say, by way of illustration, two-thirds to reserved and one-third to transferred subjects, and similarly a proportion, though not necessarily the same fraction of the balances. If the Governor desires assistance in making the allocation, he should be allowed at his discretion to refer the question to be decided to such authority as the Governor-General shall appoint. Further, the Committee are of opinion that it should be laid down from the first that, until an agreement which both sides of the Government will equally support has been reached, or until an allocation has been made by the Governor, the total provisions of the different expenditure heads in the budget of the province for the preceding financial year shall hold good.

The Committee desire that the relation of the two sides of the Government in this matter as in all others, should be of such mutual sympathy that each will be able to assist and influence for the common good the work of the other, but not to exercise control over it. The budget should not be capable of being used as a means for enabling Ministers or a majority of the Legislative Council to direct the policy of reserved subjects, but on the other hand the Executive Council should be helpful to Ministers in their desire to develop the departments entrusted to their care. On the Governor personally will devolve the task of holding the balance between the legitimate needs of both sets of his advisers."

THE CENTRAL GOVERNMENT.

The structural changes made by the Act of 1919 in the system of government outside the nine "Governor's provinces" are of comparatively minor scope, though the spirit of the Act requires as has already been shown, considerable modification of the relationship hitherto subsisting between the Provincial Governments on the one hand and the Government of India and the Secretary of State in Council on the other. The only concrete changes made in the constitution of the Central Government are the removal of the statutory bar to the appointment of more than six members of the Governor-General's Executive Council (which, however has had the far-reaching consequence that three of the eight members of the Council are now Indians), and the reconstitution in a much more enlarged representative and independent form of the central legisla-

ture. It has already been observed that this body was, in origin, like all other legislative bodies in India, the Governor-General's Executive Council with the addition of certain "additional members" appointed to assist the Executive Council in the formulation of legislation. Despite its steady growth in size and influence, and despite the introduction of the elective system, the existence of "additional members," who of course under Lord Morley's Act greatly preponderated in numbers over the members proper, i.e., the Executive Councillors, still persisted up to the passing of the Act of 1919. That Act, however, has entirely remodelled the "Indian Legislature," as it is now called, which has become like the Legislative Council in a Governor's province a legislature with all the inherent powers ordinarily attributed to such a body save such

as are specifically withheld by the terms of the Act. It consists of two Chambers. The "Council of State" contains 60 members, of whom 34 are elected (including one member to represent Berar, who, though technically nominated, is nominated as the result of elections held in Berar) and 26 nominated, of whom not more than 20 may be officials. The "Legislative Assembly" consists of 144 members, of whom 104 are elected (including in the case of the Council of State, one Berar member who, though actually elected, as technically a nominee). Of the 40 nominated members, 26 are required to be officials. The members of the Governor-General's Executive Council are not *ex-officio* members of either Chamber, but each of them has to be appointed a member of one or other Chamber, and can vote only in the Chamber of which he is a member. Any member of the Executive Council may, however, speak in either Chamber. The President of the Upper Chamber is a nominee of the Governor-General, as also, for the first four years after the constitution of the Chamber, is the President of the Legislative Assembly. But after that period the Lower Chamber is to elect its own President, and it elects its own Deputy-President from the outset. The normal lifetime of each Council of State is five years, and of each Legislative Assembly three years, but either Chamber, or both simultaneously, may be dissolved at any time by the Governor-General.

Election—The method of election for both Chambers is direct, and although the number of electors is considerably smaller than for the Provincial Councils, it is a great advance on the very restricted and for the most part indirect franchise established under the Act of 1909 for the unicameral central legislature which no longer exists. Generally speaking, the electoral scheme for the Lower Chamber is on the same model as that for the Provincial Councils already described except that, *firstly*, the property qualification for voters (and consequently for candidates) is higher in order to obtain manageable constituencies, and past service with the colours is not *per se* a qualification for the franchise, and *secondly*, that the constituencies necessarily cover a considerably larger area than constituencies for the Provincial Council. The distribution of seats in both Chambers, and the arrangement of constituencies, are on a provincial basis, that is a fixed number of the elective seats in each Chamber is assigned to representatives of each province, and these representatives are elected by constituencies covering an assigned area of the province.

The following table shows the allotment of the elective seats—

| | Legislative
Assembly | Council of
State |
|-------------------|-------------------------|---------------------|
| Madras | 16 | 5 |
| Bombay | 16 | 6 |
| Bengal | 17 | 6 |
| United Provinces | 16 | 5 |
| Punjab | 12 | 4 |
| Bihar and Orissa | 12 | 3 |
| Central Provinces | 6 | 2 |
| Assam | 4 | 1 |

| | | | |
|-------|----|-----|----|
| Burma | .. | 4 | 2 |
| Delhi | .. | 1 | — |
| | | 104 | 34 |

Since the area which returns perhaps 80 members to a Provincial Council is the same as the area which returns perhaps 12 members to the Legislative Assembly—namely, the entire province in each case—it follows that on the direct election system this area must be split into constituencies which are much larger than the constituencies for the local Councils, and just as it is generally correct to say that the normal area unit for those rural constituencies for the latter which are arranged on a territorial basis is the district, it may be said that the normal area unit in the case of the Legislative Assembly is the Division (the technical term for the administrative group of districts controlled by a Divisional Commissioner).

The Franchise—The general result of the first franchise arrangements under the Act is thus that there is in each province a body of electors qualified to vote for, and stand for election to, the Provincial Council, and that a selected number of these voters are qualified to vote for and stand for election to those seats in the Legislative Assembly which are assigned to the province. The qualifications for candidature for the Legislative Assembly are the same in each province, *mutatis mutandis*, as for candidature for the Provincial Council, except that in all provinces, so long as the candidate can show that he resides somewhere within the province, no closer connection with his particular constituency is insisted upon.

The franchise for the Council of State differs in character from that for the Provincial Council and the Legislative Assembly. The concern of the framers of the Act and rules was to secure for the membership of this body a character as closely as possible approximating to a "Senate of Elder Statesmen" and thus to constitute a body capable of performing the function of a true revising Chamber. With this object, in addition and as an alternative to a high property qualification—adopted as a rough and ready method of enfranchising only persons with a stake in the country—the rules admit as qualifications certain personal attributes which are likely to connote the possession of some past administrative experience or a high standard of intellectual attainment. Examples of these qualifications are past membership of either Chamber of the Legislature as now constituted or of its predecessor, or of the Provincial Council, the holding of high office in local bodies (district boards, municipalities and corporations), membership of the governing bodies of Universities, and the holding of titles conferred in recognition of Indian classical learning and literature.

Powers—The powers and duties of the Indian legislature differ but little in character within the "central" sphere from those of the provincial Councils within their provincial sphere, and it has acquired the same right of voting supplies for the Central Government. But as no direct attempt has yet been made to introduce responsible government at the centre, the step in that direction having been avowedly confined to the provinces and as consequently

the Executive Government of India remains legally responsible as a whole for the proper fulfilment of its charge to the Secretary of State and Parliament, it follows that the powers conferred on provincial Governors to disregard an adverse vote of the Legislative Council on legislation or

supplies are, as conferred on the Governor-General in his relationship with the Indian Legislature, less restricted in their operation than in the provinces, that is to say, they cover the whole field and are not confined in their application to categories of subjects

THE INDIA OFFICE.

The Act makes no structural changes in the part played by the India Office in the administration of Indian affairs. Slight alterations have been effected in the number and tenure of office of the members of the Secretary of State's Council, and some relaxations have been made in the statutory rigidity which formerly bound their procedure and that of the Office in general. But provisions now exist which will undoubtedly as time goes on have a material effect on the activities of the Office as it is now constituted. A High Commissioner for India has been appointed for the purpose of taking over, as the direct agent of the Government of India, that portion of India Office functions which is of the nature of agency, as distinct from administrative supervision and control. The process of separation of staff and functions for the purpose of this transfer will necessarily be somewhat slow, but a substantial beginning has been made by handing over to the direct control of the High Commissioner the large departments which are concerned with the ordering and supply of stores and stationery in England for Government use in India, with the payment of pensions to retired members of Indian services resident in the United Kingdom, and with the assistance of

Indian students in England. Concurrently with this change, it is now possible to defray from British revenues the salaries of the Secretary of State and of the Parliamentary Under-Secretary, and that portion of the cost of salaries of India Office staff and general maintenance which is attributable to the exercise of its administrative as distinct from purely agency functions.

In due course the apportionment to British estimates will be the cost of the India Office as it exists after the transfer of functions to the High Commissioner has been completely effected, then the salaries of the High Commissioner and his staff will be the only expenses in the United Kingdom chargeable to Indian revenues. Until that time arrives, however, an estimate was the only basis for settlement, and for five years from 1920-21, the cost of the India Office payable from British revenues has been fixed at £30,500^l, which includes the salaries of the Secretary of State and of the Parliamentary Under-Secretary, and a contribution of 40,000^l, which has for some years been made by the Treasury towards Indian expenditure, as the result of the recommendations of the Welby Commission.

PERSONNEL AND PROCEDURE.

The Governor-General and the "Executive" members of his Council are appointed by the Crown. No limit of time is specified for their tenure of office, but custom has fixed it at five years. There are seven Executive Members of Council. These Members hold respectively the portfolios of Education, Health and Land, Home, Finance, Commerce, Industries and Labour, Law. The Viceroy acts as his own member in charge of Foreign affairs. Railways are administered by a Chief Commissioner, with the assistance of a Railway Board, and are for administrative purposes grouped under the aegis of the Commerce Department. The Commander-in-Chief may also be and in practice always is, an "Ordinary" member of the Council. He holds charge of the Army Department. The Governors of Madras, Bombay and Bengal become "extraordinary" members if the Council meets within their Presidencies. The Council may assemble at any place in India which the Governor-General appoints. In practice it meets only in Delhi and Simla.

In regard to his own Department each Member of Council is largely in the position of a Minister of State, and has the final voice in ordinary departmental matters. But any question of special importance, and any matter in which it is proposed to over-rule the views of a Local Government, must ordinarily be referred to the Viceroys. Any matter originating in one department which also affects another must be referred to the latter, and in the event of the Departments not being able to agree, the case is referred to the Viceroy. The Members of Council meet periodically as a Cabinet—ordinarily

once or twice a week—to discuss questions which the Viceroy desires to put before them, or which a member who has been over-ruled by the Viceroy has asked to be referred to Council. If there is a difference of opinion in the Council the decision of the majority ordinarily prevails, but the Viceroy can over-rule a majority if he considers that the matter is of such grave importance as to justify such a step. Each departmental office is in the subordinate charge of a Secretary, whose position corresponds very much to that of a permanent Under-Secretary of State in the United Kingdom, but with these differences—that the Secretary is present though does not speak at Council meetings at which cases under his cognisance are discussed; that he attends on the Viceroy, usually once a week, and discusses with him all matters of importance arising in his Department, that he has the right of bringing to the Viceroy's special notice any case in which he considers that the Viceroy's concurrence should be obtained to action proposed by the Departmental Member of Council, and that his tenure of office is usually limited to three years. The Secretaries have under them Deputy, Under and Assistant Secretaries, together with the ordinary clerical establishments. The Secretaries and Under-Secretaries are often, though by no means exclusively, members of the Indian Civil Service. The Government of India has no Civil Service of its own as distinct from that of the Provincial Governments, and officers serving under the Government of India are borrowed from the Provinces, or, in the case of Specialists, recruited direct by contract.

THE DIVISION OF FUNCTIONS.

The keynote of the scheme is effective provincial autonomy and the establishment of an immediate measure of responsibility in the provinces all of which are raised to the status of Governors in Council. This demanded a sharp division between Imperial and Provincial functions. The following subjects are reserved to the Government of India, with the corollary that all others vest in the Provincial Governments —

1. (a) Defence of India, and all matters connected with His Majesty's Naval, Military, and Air Forces in India, or with His Majesty's Indian Marine Service or with any other force raised in India, other than military and armed police wholly maintained by local Governments

(b) Naval and military works cantonments

2 External relations, including naturalisation and aliens, and pilgrimages beyond India

3 Relations with States in India

4 Political charges

5 Communications to the extent described under the following heads, namely —

(a) railway and extra-municipal tramways in so far as they are not classified as provincial subjects under entry 6 (d) of Part II of this Schedule;

(b) aircraft and all matters connected therewith, and

(c) inland waterways, to an extent to be declared by rule made by the Governor-General in Council or by or under legislation by the Indian legislature.

6. Shipping and navigation, including shipping and navigation on inland waterways in so far as declared to be a central subject in accordance with entry 5 (c)

7 Light-houses (including their approaches) beacons, lightships and buoys

8. Port quarantine and marine hospitals

9 Ports declared to be major ports by rule made by the Governor-General in Council or by or under legislation by the Indian legislature

10. Posts, telegraph and telephones, including wireless installations

11 Customs, cotton excise duties, income-tax, salt, and other sources of all-India revenues

12 Currency and coinage.

13. Public debt of India

14 Savings Banks

15 The Indian Audit Department and excluded Audit Departments, as defined in rules framed under section 96-D (1) of the Act

16 Civil law, including laws regarding status, property, civil rights and liabilities and civil procedure

17. Commerce, including banking and insurance

18. Trading companies and other associations.

19. Control of production, supply and distribution of any articles in respect of which control by a central authority is declared by rule made by the Governor-General in Council or by or under legislation by the Indian legislature to be essential in the public interest

20 Development of industries, in cases where such development by a central authority is declared by order of the Governor-General in Council, made after consultation with the local Government or local Governments concerned expedient in the public interest

21 Control of cultivation and manufacture of opium, and sale of opium for export

22 Stores and stationery, both imported and indigenous, required for Imperial Departments

23. Control of petroleum and explosives.

24 Geological survey

25 Control of mineral development, in so far as such control is reserved to the Governor-General in Council under rules made or sanctioned by the Secretary of State, and regulation of mines

26 Botanical Survey

27. Inventions and designs.

28 Copyright.

29 Emigration from, and immigration into British India, and inter-provincial migration.

30 Criminal law, including criminal procedure

31 Central police organisation

32 Control of arms and ammunition.

33 Central agencies and institutions for research (including observatories), and for professional or technical training or promotion of special studies

34 Ecclesiastical administration including European cemeteries

35. Survey of India

36 Archaeology

37 Zoological Survey.

38 Meteorology.

39 Census and statistics

40 All-India services

41 Legislation in regard to any provincial subject in so far as such subject is in Part II of this Schedule stated to be subject to legislation by the Indian legislature, and any powers relating to such subject reserved by legislation to the Governor-General in Council

42 Territorial changes, other than inter-provincial, and declaration of law in connection therewith.

43 Regulation of ceremonial, titles, orders, precedence, and civil uniform

44 Immovable property acquired by, and maintained at the cost of, the Governor-General in Council

45. The Public Service Commission.

GOVERNMENT OF INDIA.

VICEROY AND GOVERNOR-GENERAL OF INDIA

His Excellency The Right Hon'ble Freeman Freeman-Thomas, Earl of Willingdon, G M S L.

The Imperial Legislatures.

The gradual evolution of the Indian constitution is fully traced in the article on "The Government of India" which precedes this, so also are the great changes made by the Act of 1919. For the purposes of easy reference the powers of the Legislatures, as well as the special powers reserved to the Governor-General for the discharge of his responsibilities which are fully set out in the Act are reproduced below—

21 (1) Every Council of State shall continue for five years, and every Legislative Assembly for three years from its first meeting.

Provided that—

(c) either chamber of the legislature may be sooner dissolved by the Governor-General and

(d) any such period may be extended by the Governor-General if in special circumstances, he so thinks fit, and

(e) after the dissolution of either chamber the Governor-General shall appoint a date not more than six months or with the sanction of the Secretary of State, not more than nine months after the date of dissolution for the next session of that chamber

22 (1) An official shall not be qualified for election as a member of either chamber of the Indian legislature, and, if any non official member of either chamber accepts office in the service of the Crown in India his seat in that chamber shall become vacant

(4) Every member of the Governor-General's Executive Council shall be nominated as a member of one chamber of the Indian legislature, and shall have the right of attending in and addressing the other chamber, but shall not be a member of both chambers

24 (3) If any Bill which has been passed by one chamber is not, within six months after the passage of the Bill by that chamber, passed by the other chamber either without amendments or with such amendments as may be agreed to by the two chambers, the Governor-General may in his discretion refer the matter for decision to a joint sitting of both chambers. Provided that standing orders made under this section may provide for meetings of members of both chambers appointed for the purpose, in order to discuss any difference of opinion which has arisen between the two chambers

(4) Without prejudice to the powers of the Governor-General under section sixty-eight of the principal Act, the Governor-General may where a Bill has been passed by both chambers of the Indian legislature, return the Bill for reconsideration by either chambers

(7) Subject to the rules and standing orders affecting the chamber, there shall be freedom of speech in both chambers of the Indian legislature. No person shall be liable to any proceeding in any court by reason of his speech or vote in either chamber, or by reason of any-

thing contained in any official report of the proceedings of either chamber

25 **INDIAN REPORT**—(1) The estimated annual expenditure and revenue of the Governor-General in Council shall be laid in the form of a statement before both chambers of the Indian legislature in each year

(2) No proposal for the appropriation of any revenue or money for any purpose shall be made except on the recommendation of the Governor-General

(3) The proposals of the Governor-General in Council for the appropriation of revenue or money relating to the following heads of expenditure shall not be submitted to the vote of the legislative assembly, nor shall they be open to discussion by either chamber at the time when the annual statement is under consideration unless the Governor-General otherwise directs—

(i) interest and sinking fund charges on loans and

(ii) expenditure of which the amount is prescribed by or under any law, and

(iii) salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council, and

(iv) salaries of chief commissioners and judicial commissioners, and

(v) expenditure classified by the order of the Governor-General in Council as—

(a) ecclesiastical,

(b) political,

(c) defence

(4) If any question arises whether any proposed appropriation of revenue or money, does or does not relate to the above heads the decision of the Governor-General on the question shall be final

(5) The proposals of the Governor-General in Council for the appropriation of revenue or money relating to heads or expenditure not specified in the above heads shall be submitted to the vote of the legislative assembly in the form of demands for grants

(6) The legislative assembly may assent or refuse its assent to any demand or may reduce the amount referred to in any demand by a reduction of the whole grant

(7) The demands as voted by the legislative assembly shall be submitted to the Governor-General in Council, who shall, if he declares that he is satisfied that any demand which has been refused by the legislative assembly is essential to the discharge of his responsibilities, act as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount therein referred to, by the legislative assembly

(8) Notwithstanding anything in this section the Governor-General shall have power, in cases of emergency, to authorise such expenditure as may, in his opinion, be necessary for the safety or tranquillity of British India or any part thereof

26 EMERGENCY POWERS —(1) Where either chamber of the Indian legislature refuses leave to introduce or fails to pass in a form recommended by the Governor-General any Bill, the Governor-General may certify that the passage of the Bill is essential for the safety, tranquillity or interests of British India or any part thereof, and thereupon—

(a) if the Bill has already been passed by the other chamber, the Bill shall, on signature by the Governor-General, notwithstanding that it has not been consented to by both chambers, forthwith become an Act of the Indian legislature in the form of the Bill as originally introduced or proposed to be introduced in the Indian legislature, or (as the case may be) in the form recommended by the Governor-General, and

(b) if the Bill has not already been so passed, the Bill shall be laid before the other chamber, and, if consented to by that chamber in the form recommended by the Governor-General, shall become an Act as aforesaid on the signification of the Governor-General's assent, or, if not so consented to shall, on signature by the Governor-General, become an Act as aforesaid

(2) Every such Act shall be expressed to be made by the Governor-General and shall, as soon as practicable after being made, be laid before both Houses of Parliament, and shall not have effect until it has received His Majesty's assent, and shall not be presented for His Majesty's assent until copies thereof have been laid before each House of Parliament for not less than eight days on which that House has sat, and upon the signification of such

assent by His Majesty in Council and the notification thereof by the Governor-General, the Act shall have the same force and effect as an Act passed by the Indian legislature and duly assented to

Provided that, where in the opinion of the Governor-General a state of emergency exists which justifies such action, the Governor-General may direct that any such Act shall come into operation forthwith, and thereupon the Act shall have such force and effect as aforesaid, subject, however, to disallowance by His Majesty in Council

27 SUPPLEMENTAL PROVISIONS —(1) In addition to the measures referred to in sub-section (2) of section sixty-seven of the principal Act, as requiring the previous sanction of the Governor-General it shall not be lawful without such previous sanction to introduce at any meeting of either chamber of the Indian legislature any measure—

(a) regulating any provincial subject, or any part of a provincial subject, which has not been declared by rules under the principal Act to be subject to legislation by the Indian legislature,

(b) repealing or amending any Act of a local legislature,

(c) repealing or amending any Act or ordinance made by the Governor-General

(2) Where in either chamber of the Indian legislature any Bill has been introduced or is proposed to be introduced, or any amendment to a Bill is moved, or proposed to be moved, the Governor-General may certify that the Bill or any clause of it, or the amendment affects the safety or tranquillity of British India, or any part thereof, and may direct that no proceedings, or that no further proceedings, shall be taken by the chamber in relation to the Bill, clause, or amendment and effect shall be given to such direction

THE LEGISLATIVE ASSEMBLY.

The Bombay Presidency.

The Bombay Presidency stretches along the west coast of India, from Sind in the North to Kanara in the South. It embraces, with its feudatories and Aden, an area of 187,174 square miles and a population of 30,726,510. Of this total 63,453 square miles are in Native States, with a population of 8,466,533. Geographically included in the Presidency but under the Government of India is the first class Native State of Baroda, with an area of 8,182 square miles and a population of 2,443,007.

With effect from the 10th October 1924 the States in the Cutch, Kathiawar and the Palanpur Agencies have been placed under direct political relations with the Government of India. The three agencies have been combined into one, the Western India States Agency, and placed under a first class Resident and Agent to the Governor General with headquarters at Rajkot. The territories under the rule of Indian Princes and Chiefs who are in direct political relations with the Government of Bombay extend now only to an area of about 28,562 sq miles. The population of these States is 3,997,452 and the revenue nearly 5 crores.

The Presidency embraces a wide diversity of soil, climate and people. In the Presidency Proper are the rich plains of Gujarat, watered by the Nerbudda and the Tapti, whose fertility is so marked that it has long been known as the Garden of India. South of Bombay City the province is divided into two sections by the Western Ghats, a range of hills running parallel to the coast. Above Ghats are the Deccan Districts, south of these come the Karnatic districts. On the sea side of the Ghats is the Konkan, a rice-growing tract, intercepted by creeks which make communication difficult. Then in the far north is Sind, totally different from the Presidency Proper, a land of wide and monotonous desert except where irrigation from the Indus has brought abounding fertility.

The People

The population varies as markedly as soil and climate. In Sind Mahomedans predominate. Gujarat has remained true to Hinduism although long under the dominion of powerful Mahomedan kings. Here there is an amplitude of caste divisions and a people, who although softened by prosperity, are amongst the keenest trading races in the world. The Deccan peasant has been seasoned by adversity, the saying goes that the Deccan expects a famine one year in every three, and gets it, the population is much more homogeneous than in Gujarat, and thirty per cent are Mahrattas. The Karnatic is the land of the Lingavets, a Hindu reforming sect of the twelfth century, and in the Konkan there is a large proportion of Christians. Four main languages are spoken, Sindhi, Gujarati, Marathi and Kanarese, with Urdu a rough *lingua franca* where English has not penetrated. The main castes and tribes number five hundred

Industries.

The principal industry is agriculture, which supports sixty-four per cent of the population. In Sind the soils are wholly alluvial, and under the influence of irrigation produce yearly increasing crops of wheat and cotton. In Gujarat they are of two classes, the black cotton soil, which yields the famous Broach cottons the finest in India and alluvial which under careful cultivation in Ahmedabad and Kaira makes splendid garden land. The dominant soil characteristic of the Deccan is black soil, which produces cotton, wheat, gram and millet, and in certain tracts rich crops of sugarcane. The Konkan is a rice land, grown under the abundant rains of the submontane regions, and in the south the Dharwar cotton vies with Broach as the best in India. There are no great perennial rivers suitable for irrigation, and the harvest is largely dependent upon the seasonal rainfall, supplemented by well irrigation. A chain of irrigation works, consisting of canals fed from great reservoirs in the region of unfailing rainfall in the Ghats, is gradually being completed, and this will ultimately make the Deccan immune to serious drought. More than any other part of India the Presidency has been scourged by famine and plague. The evils have not been unmixed, for tribulation has made the people more self-reliant, and the rise in the values of all produce, synchronising with a certain development of industry, has induced a considerable rise in the standard of living. The land is held on what is known as the ryotwari tenure, that is to say, each cultivator holds his land direct from Government under a moderate assessment, and as long as he pays this assessment he cannot be dispossessed.

Manufactures

Whilst agriculture is the principal industry, others have no inconsiderable place. The mineral wealth of the Presidency is small and is confined to building stone, salt extracted from the sea, and a little manganese. But the handicrafts are widely distributed. The handloom weavers produce bright-coloured saris, and to a diminishing extent the exquisite kincrobs of Ahmedabad and Surat. Bombay silverware has a place of its own, as well as the brass work of Poona and Nasik. But the tendency is to submerge the indigenous handicrafts beneath industry organised on modern lines. Bombay is the great centre in India of the textile trade. This is chiefly found in the headquarter city, Bombay.

| | |
|---|-----------|
| Number of Looms in Bombay Island | 76,697 |
| Number of Spindles in Bombay Island | 34,30,733 |
| Number of hands employed in the Textile Industry in Bombay Island | 1,36,774 |
| Consumption of Cotton by the Mills in Bombay Island (bales) | 4,38,74' |
| (In candles of 784 lbs) | |

subject to confirmation by the High Court. In some of the principal cities Special Magistrates exercise summary jurisdiction (Bombay has six Presidency Magistrates, as well as Honorary Magistrates exercising the functions of English Justices of the Peace) and a Court of Small Causes, corresponding to the English County Courts.

Local Government

Local control over certain branches of the administration is secured by the constitution of local boards and municipalities, the former exercising authority over a District or a Taluka, and the latter over a city or town. These bodies are composed of members either nominated by Government or elected by the people, who are empowered to expend the funds at their disposal on education, sanitation, the construction of roads and tanks, and general improvements. Their funds are derived from cesses on the land revenue, the toll, ferry funds and local taxes. The tendency of recent years has been to increase the elective and reduce the nominated element to allow these bodies to elect their own chairmen, whilst larger grants have been made from the general revenues for water supply and drainage.

The Bombay Municipal Boroughs Act of 1925 works further advance in the matter of local Self-Government in the Presidency. The Act provides more adequate basis for Municipal Administration in the larger cities of the Bombay Presidency. The larger municipalities are now styled as Municipal Boroughs which are now 20 in number. The executives of these Borough Municipalities are invested with larger powers than hitherto exercised. Another important change introduced by the Act was the extension of municipal franchise to occupiers of dwellings or buildings with annual rental values of Rs 12 or with capital value of not less than Rs 200.

Public Works

The Public Works Department is under the control of two Chief Engineers who act as Secretaries to the Government, one for Roads, Buildings, Railways, etc., and the other for Irrigation. Under them are Superintending Engineers in charge of Circles and Executive Engineers in charge of divisions, the Consulting Architect and the Electrical Engineer. The chief irrigation works are in Sind and consist of a chain of canals fed by the annual inundations from the Indus. The Lloyds Barrage and canals project which was inaugurated in 1923 is the greatest Irrigation Scheme in the world and is designed to ensure the vast areas of fertile land in Sind a regular and constant supply of water. It will enable about 6 million acres of crops to be irrigated annually, i.e., about as much area irrigated in Egypt. The scheme is not only vital to the future of Sind but of indirect benefit to the whole of India. The whole scheme is estimated to cost over 15 million sterling or 20 crores of rupees. The formal opening of the Barrage will take place in the middle of January 1932. In the Presidency proper there is a chain of protective irrigation works, originating in reservoirs in the Ghat regions. The principal works are the Nira Canals fed by Lake Whiting impounded by

the Lloyd Dam at Bhatgar, the Pravara Canals fed by Lake Arthur Hill, impounded by Wilson Dam at Bhandardara, the Mutha Canals fed by Lake Fife at Khadakvasla, the Godavari Canals fed by Lake Beale at Nandur Madhmeshwar and the Gokak Canal. The Mutha Canals and the Gokak Canal were completed in 1896-97, the Nira Left Bank Canal in 1905-06, the Godavari Canals in 1915-16 and the Pravara Canals in 1926-27. The Nira Right Bank Canal which has been under construction since 1912 is nearing completion. The Wilson Dam at Bhandardara the second highest yet constructed by Engineers the world over was opened by His Excellency the Governor on 10th December 1926. The Lloyd Dam at Bhatgar which is 5,333 feet in length, 100 feet in height and 124 feet in width was opened by H. E. Sir Leslie Wilson on 27th October 1928. It cost Rs 172 lakhs. It is remarkable as being the largest Dam in volume hitherto constructed and contains 21½ million cubic feet of masonry. The Assuan Dam in Egypt is popularly supposed to be the largest Dam in existence but that contains 19 million cubic feet. It cost also nearly 50 per cent more than the Lloyd Dam. An idea of the magnitude of the Lloyd Dam can be gathered from the fact that if a wall 6 feet high and 15 inches thick were constructed from the masonry in the Dam it would stretch a distance of 520 miles, say from Bombay to Nagpur. These projects will irrigate certain tracts most liable to famine.

Police

The Police Force is divided into 3 categories, viz., District Police, Railway Police and the Bombay City Police. The District and Railway Police in the Presidency proper are for the purpose of control under the Inspector-General of Police who is assisted by three Deputy Inspectors-General of whom two are in charge of Ranges and the third is in charge of the Criminal Investigation Department and the Finger Print Bureau. District and Railway Police in Sind are under the Deputy Inspector-General of Police for Sind, subject to the control of the Commissioner-in-Sind. The executive management of the Police in each district and on Railways in the Presidency proper as well as in Sind is vested in a Superintendent of Police under the general direction of the Magistrate of the District concerned except in the case of the Railway Police. For the purposes of effective supervision over the investigation and prevention of crime, some of the larger districts are divided into one or more sub divisions each under a Sub-Divisional Officer who is either an Assistant Superintendent of Police, or an Inspector of Police, a Deputy Superintendent of Police. Sub-Inspectors are the officers in charge of Police Stations and are primarily responsible under the law, for the investigation of offences reported at their Police Stations. Officers appointed directly to the posts of Assistant Superintendents of Police, Deputy Superintendents of Police, Inspectors and Sub-Inspectors undergo a course of training at the Central Police Training School at Nasik before being posted to Districts for executive duty. The Bombay City Police is a separate force under the Commissioner of Police who is directly responsible to Government.

Education

From 1920 to 1930 the Government of Bombay has made considerable progress in the field of education. The number of primary schools has increased from 1,000 to 1,500 and the number of secondary schools from 100 to 200. The Government has also established a number of colleges and universities. The total expenditure on education has increased from Rs. 10 lakhs in 1920 to Rs. 100 lakhs in 1930. The Government has also made considerable progress in the field of technical education. The number of technical schools has increased from 10 to 20 and the number of students from 1,000 to 2,000. The Government has also established a number of technical colleges and universities.

The Government of Bombay has also made considerable progress in the field of higher education. The number of colleges has increased from 100 to 200 and the number of students from 10,000 to 20,000. The Government has also established a number of universities. The total expenditure on higher education has increased from Rs. 10 lakhs in 1920 to Rs. 100 lakhs in 1930. The Government has also made considerable progress in the field of research. The number of research institutions has increased from 10 to 20 and the number of research workers from 1,000 to 2,000. The Government has also established a number of research colleges and universities. The total expenditure on research has increased from Rs. 10 lakhs in 1920 to Rs. 100 lakhs in 1930. The Government has also made considerable progress in the field of vocational education. The number of vocational schools has increased from 10 to 20 and the number of students from 1,000 to 2,000. The Government has also established a number of vocational colleges and universities. The total expenditure on vocational education has increased from Rs. 10 lakhs in 1920 to Rs. 100 lakhs in 1930.

The quinquennium has been noticeable for the greater recognition given to the educational needs of the backward classes, especially in Primary Education and a very liberal system of scholarships in Secondary Schools and Colleges for these classes has been introduced.

Lack of funds has cramped the activities of Government in the field of Primary Education only. Economy has been the dominating note of the Educational policy throughout the quinquennium. So far from it being possible to provide the funds required for the expansion of Secondary and Higher Education, it has been necessary to exercise retrenchment, and that too in directions in which it could not be applied without educational loss. As one instance only, the Director of Public Instruction mentions the discontinuation of the scheme of Medical Inspection after it had been in existence for a year. Among the chief purposes for which

the Government has required a further provision for 1930-31 in the Budget is the provision for the expansion of the field of education, and the Government has provided a further provision of Rs. 10 lakhs for this purpose. The Government has also provided a further provision of Rs. 10 lakhs for the purpose of providing all the facilities required for the expansion of education. The Government has also provided a further provision of Rs. 10 lakhs for the purpose of providing all the facilities required for the expansion of education. The Government has also provided a further provision of Rs. 10 lakhs for the purpose of providing all the facilities required for the expansion of education.

The total number of institutions increased from 10,000 in 1920 to 15,000 in 1930. The total number of students increased from 1,00,000 in 1920 to 1,50,000 in 1930. The total expenditure on education increased from Rs. 10 lakhs in 1920 to Rs. 100 lakhs in 1930. The Government has also made considerable progress in the field of technical education. The number of technical schools has increased from 10 to 20 and the number of students from 1,000 to 2,000. The Government has also established a number of technical colleges and universities.

The total number of institutions increased from 10,000 in 1920 to 15,000 in 1930. The total number of students increased from 1,00,000 in 1920 to 1,50,000 in 1930. The total expenditure on education increased from Rs. 10 lakhs in 1920 to Rs. 100 lakhs in 1930. The Government has also made considerable progress in the field of technical education. The number of technical schools has increased from 10 to 20 and the number of students from 1,000 to 2,000. The Government has also established a number of technical colleges and universities.

Of a total of 2,517 towns and villages, 1,000 are each with a primary school, 1,000 are each with a secondary school, and 1,000 are each with a high school. The total population of the Province is 1,00,00,000. The total population of the Province is 1,00,00,000. The total population of the Province is 1,00,00,000. The total population of the Province is 1,00,00,000. The total population of the Province is 1,00,00,000.

Hindu pupils in Government Institutions numbered 9,452. Muhammadans 22,932, Indian Christians 7,462, Parsis 17,427, Europeans and Anglo-Indians 6,447. The rest comprised 27,000 Jains, 1,000 Sikhs, and 3,620 Jews and others.

The total expenditure on Public Instruction in 1930-31 was Rs. 492 lakhs, of which 59.7 per cent was met from Government funds, 17.6 per cent from Board funds, 15.6 per cent from fees, and 13.1 per cent from other sources. Primary schools absorbed over Rs. 200 lakhs, exclusive of expenditure on inspection, construction, and repairs.

The Educational Department is administered by a Director, with an Inspector in each Division and a Deputy or Assistant Inspector in each district.

Higher education in the Presidency is controlled by the Bombay University which was established in 1927. The constitution of the University has recently undergone, however, considerable changes in virtue of a new enactment known as the Bombay University Act of 1928. This Act altered the whole constitution of the University so as to make it adequately representative with a view to bringing into closer association with the public the industrial commercial and civic life of the people of the Presidency to enable it to provide greater facilities for higher education in all branches of learning including Technology and to undertake on a larger scale than heretofore post-graduate

teaching and research, while continuing to exercise due control over the teaching given by colleges affiliated to it from time to time. The authorities of the University, as now constituted are chiefly the Chancellor, Vice-Chancellor, the Syndicate, the Academic Council and the Senate. The Senate consisting of fellows is the supreme governing body of the University. The number of fellows is 144 to whom 40 are nominated by the Chancellor and 11 are ex-officio. The Academic Council consisting of educational experts deals with all purely academical questions. This body works in collaboration with the Syndicate which is the principal executive of the University.

The principal educational institutions are —

Government Arts Colleges—

- Elphinstone College, Bombay, Principal, Mr H Hamill, M.A. (on leave), Mr A C Farran (*Officiating*)
- Ismail College, Andheri (Bombay) Principal, Dr M B Rehman, M.A. (Punjab), Ph D (Cambridge)
- Deccan College, Poona Principal, Mr H G Rawlinson, M.A.
- Gujarat College, Ahmedabad, Principal, G Findlay Shirras, M.A., F.S.S. (*Offg*)
- Karnatak College, Dharwar Principal, Mr A. C Farran, B.A. (on deputation)
- Royal Institute of Science, Bombay Principal, Dr Thomas S Wheeler, F.I.C., Ph.D., F.R.C.S.I.

Private Arts Colleges—

- St Xavier's, Bombay (Society of Jesus) Principal, Rev Father Duhr, S.J.
- Wilson College, Bombay (Scottish Mission) Principal, Rev J Mackenzie, M.A.
- Fergusson College, Poona (Deccan Educational Society), Principal, M Mahajani, M.A., B.Sc.
- Baroda College, Baroda (Baroda State) Principal, S G Barrow, B.Sc.
- Samaldas College, Bhavnagar (Bhavnagar State) Principal, Mr T K Shahani, M.A.
- Bahaduddinbhai College, Junagadh State Principal, Mr M. M. Joshi, M.A.
- Sir Parashurambhau College, Poona
- M T B Arts College, Surat
- D J Sind College, Karachi
- Sind National College, Hyderabad
- Gokhale Education Society's H P T Arts College, Nashik
- Willington College, Kupwad (Sangli)

Special Colleges—

Medical

The Medical Department is in the charge of the Surgeon-General who is a member of the I.M.S., and Public Health in that of the Director of Public Health, who is a non I.M.S. Officer. Civil Surgeons stationed at each district headquarters are responsible for the medical work of the district whilst sanitation is entrusted to one of the Assistant Directors of Public Health. Four large hospitals are maintained by the Government in Bombay, and the accommodation in them has been recently increased by 300 beds in one hospital and 140 beds in another hospital. A number of beds in the Bombay City had to be closed during 1931-32 owing to shortage of funds. Well equipped hospitals exist in all important up-country stations. Over 3,814,816 persons including 112,564 in-patients are treated during the year 1930. The Presidency contains 6 Lunatic Asylums and 16 institutions for the treatment of Lepers. Vaccination is carried out by a staff under the direction of the Director of Public Health. Sanitary work has received an immense stimulus from the large grants made by the Government from time to time.

Finance

Under the Reform Scheme of 1919 Provincial Finance entered on a new phase. Before the passing of this Act Provincial finance was incorporated in Imperial Finance. The Provinces had certain heads of revenue of their own and other heads which they divided with the Government of India. By the new constitution a comparatively clean cut was made between the finances of the Government of India and those of the Provinces. Such revenues as they enjoy the Provinces enjoy in full, and in return they make cash contributions to the Government of India, fixed for a term of years. The general principle underlying this settlement is that those contributions shall gradually disappear. These contributions have now been remitted.

The financial situation in the Presidency has been one of the greatest difficulty during the year 1931-32. There has been estimated deficit or nearly two crores during the two years including 1931-32. The difficulties have partly arisen on account of world factors over which Government has no control, but the latter is endeavouring to meet the situation by drastic economies and retrenchment. A proposal to raise extra taxation by imposition of a succession duty was rejected by the Legislative Council.

Estimated Revenue for 1931-32

| DIRECT DEMANDS ON THE REVENUE | | Rs | |

The Madras Presidency.

The Madras Presidency occupies the whole southern portion of the Peninsula, and, excluding the Indian States, all of which have now come under the direct control of the Government of India, has an area of 141,075 square miles. It has on the east, on the Bay of Bengal, a coast line of about 1,200 miles, on the South on the Arabian Sea, a coast line of about 450 miles. In all this extent of coast, however, there is not a single natural harbour of any importance, the ports, with the exception of Madras, and perhaps of Cochin, are merely open roadsteads. A plateau, varying in height above sea-level from about 100 to about 300 feet and stretching northwards from the Nilgiri Hills, occupies the central area of the Presidency, on either side are the Eastern and the Western Ghats, which meet in the Nilgiris. The height of the western mountain-chain has an important effect on the rainfall. Where the chain is high, the intercepted rain-clouds give a heavy fall, which may amount to 150 inches on the seaward side, but comparatively little rain falls on the landward side of the range. Where the chain is low, rain-clouds are not checked in their westward course. In the central table land on the east coast the rainfall is small and the heat in summer excessive. The rivers, which flow from west to east, in their earlier course drain rather than irrigate the country, but the deltas of the Godavari, Kistna and Cauvery are productive of fair crops even in time of drought and are the only portions of the east coast where agriculture is not dependent on a rainfall rarely exceeding 40 inches and apt to be untimely.

Population.

The population of the Presidency was returned at the census of 1921 as 42,794,155, an increase over the figure of 1911 of 2.2 per cent. The tendency has been for the more densely populated portions of the province to increase their numbers while the sparsely inhabited tracts have still further declined in density. Hindus account for 89 per cent of the population, Mahomedans for 7, Christians for 3, Animists for 1. The vast majority of the population is of the Dravidian race and the principal Dravidian languages, Tamil and Telugu, are spoken by 18 and 16 million persons respectively. Of every thousand people, 410 speak Tamil, 377 speak Telugu, 75 Malayalam, 37 Oriya, 35 Canarese and 23 Hindustani.

Government

The Madras Presidency is governed on the system generally similar to that obtaining in Bombay and Bengal. There are associated with the Governor four members of the Executive Council in charge of the Reserved Subjects and three Ministers in charge of the Transferred Subjects. Madras administration differs, however, in some important respects from that of other major provinces. There is no intermediate local authority between the Collector of the District and the authorities at head-

quarters, Commissioners of Divisions being unknown in Madras. Another feature peculiar to the Southern Presidency is the manner of choice of the ministers. Following the practice of the Mother of Parliaments, Madras Governors have, ever since the inception of the Reforms, called upon the leader of the dominant party to form a ministry, giving him freedom to select his colleagues on the ministry. Consequently he enjoys the status of Chief Minister—unknown in other provinces in India.

Agriculture and Industries

The principal occupation of the province in agriculture engaging about 68 per cent of the population. The principal food crops are rice, cholam, ragi and kambu. The Industrial crops are cotton, sugarcane and groundnuts. The agricultural education is rapidly progressing in the Presidency. The activities of the Agriculture Department in matters educational consist in the running of a college at Coimbatore affiliated to the University of Madras, an Agricultural Middle School and three farm labourers' schools and numerous demonstration farms. The present course of middle school education does not seem to satisfy the needs of the ryots. The institution of short practical courses in farm management and allied subjects is under consideration. While paddy, which is the staple food of the population, occupies the largest cultivable area, cotton and sugarcane are by no means inconsiderable crops of the province and are receiving close attention at the hands of the local agricultural authorities. The area under cotton is estimated at 6,21,400 acres and, as in the case of paddy, efforts are being made to produce better strains of cotton suited to different localities by means of both selection and hybridization. Side by side with an increase in the area under cotton, from existing good staple areas, improved varieties have been systematically introduced. A special feature of the agricultural activities in the Presidency is the large industry which the planting community have built up, contributing substantially to the economic development of the province. They have organised themselves as a registered body under the title of "The United Planters' Association of South India," on which are represented Coffee, tea, rubber and a few other minor planting products. The aggregate value of seaborne trade of the Presidency which was Rs 1,14,70,38,699 in 1928-29 has declined to Rs 1,11,43,56,961 in 1929-30. As in other provinces, the forest resources are exploited by Government. These are close upon 19,000 square miles of reserved forests.

There are 24 cotton mills in the Presidency which employ 24,284 operatives. Minor industrial concerns number over 120 and consist of oil mills, rope, tile works, etc. Tanning is one of the principal industries of the Presidency, and there is considerable export trade in skins and hides although hide tanners have not been doing well of late and

suffered from the present commercial depression. The manufacturing activities which are at present under the direction of the Department of Industries are mainly confined to the production of soap. The match making industry is just raising its head in Madras. There are 23 indigenous match factories run on cottage lines. In 1927, the Council complied with a demand made by the minister in charge of Industries for funds for appointing a special officer to conduct an exhaustive survey of the existing and potential cottage industries in the Presidency. The Special Officer has concluded his survey. His reports have been published. The report of the Cottage Industries Committee appointed at the instance of the Legislative Council, to examine the Special Officer's report and to submit proposals to Government for an effective organisation of such of the industries as deserve encouragement has also been published for general information. The recommendations of the Committee were carefully considered by Government but owing to financial stringency they decided that such of the recommendations as involved additional expenditure should be postponed for the present. They have however passed orders on those recommendations which are merely administrative in character and do not involve additional expenditure. The aggregate value of seaborne trade of the Presidency which was Rs 1,14,70,38,699 in 1928-29 has declined to Rs 1,11,48,56,961 in 1929-30. As in other provinces, the forest resources are exploited by Government. There are close upon 19,000 square miles of reserved forests.

Education

The Presidency's record in the sphere of education has been one of continuous progress. There are at present about 56,000 public institutions, ranging from village primary schools to arts and professional colleges, their total strength being about 2,729,000. Special efforts are being made to provide education for boys belonging to the Depressed Classes. The Council passed a resolution in the year 1927 at the instance of a nominated member that poor girls reading in any educational institution in the province—Government, local fund, Municipal or aided—should be exempted from School fees in any Standard up to III Form. The total expenditure of the province on Education is in the neighbourhood of Rs 542 lakhs. The principal educational institutions in the province are the Madras, Andhra and Annamalai Universities, the Presidency College, the Christian College, the Loyola College, the Pachalyappa's College, and the Queen Mary's College for Women, Madras, the St. Joseph's College, Trichinopoly, the Government College, Kumbakonam, the Government College, Rajamundry, the Maharaja's College, Trivandrum, the Agricultural College, Coimbatore, the Medical Colleges at Madras and Vizagapatam and the Engineering College at Madras (Guindy).

Cochin Harbour Scheme

The importance of this project lies in the fact that a good harbour at Cochin would lead to the development of a valuable hinterland and

provide a ready outlet for agricultural and other produce from an area which is at present not adequately served by a convenient or well-equipped harbour. The scheme involves cutting a passage through the bar which hitherto blocked the entrance from the sea to an extensive backwater and by dredging and reclamation, forming a sheltered harbour accessible and giving full protection and facilities at all seasons of the year. An agreement has been reached between the Government of Madras and the Darbars of Travancore and Cochin States indicating how the work is to be carried out and outlining the financial arrangements necessary. A trial cut was made in 1923 and the effects of the monsoon thereon were observed. The results recorded were examined by a Committee of Harbour Engineers in England reported favourably on the prospects of the scheme.

The first cut through the bar 400 feet wide by 32½ feet deep was completed on 30th March 1928. The channel through the outer bar is now 3 miles long by 450 feet wide and has an average depth of 35 feet at low water. The dredging of the mooring area has been completed. Since March 1930 the Harbour has been in constant and regular use by all ships. Vessels up to 30 feet draught and 510 feet in length can moor inside and a berth will shortly be available for taking any ship up to 700 feet long and 30 feet draught.

Proposals are being formulated for the next stage of the works which include the construction of deep water jetties with railway connections, construction of godowns and transit sheds, the installation of rapid handling cranes and other transport facilities. These improvements are to be made on the new reclamation of which 175 acres have been formed already by dredging from the harbour. It is intended to connect this to the main land by a railway bridge across the backwater. Reclamation is still in progress and when completed it will provide sufficient space for about 20 or 30 large vessels to load or unload at the same time. The Shoranur-Ernakulam line is being converted from metre to broad-gauge, and is to be extended to the wharves at the reclamation. The possibility of providing further facilities by carrying the metre-gauge system through to the harbour is under investigation. These developments will enhance the utility of the port to the planting and agricultural areas in that part of the Presidency.

Vizagapatam Harbour Project

Even more pregnant with future possibilities is the scheme for the development of the Vizagapatam harbour. The Vizagapatam Harbour is constructed under the control of the Government of India. Proposals for the development of the port at this place have been under consideration since 1859, but the success of the project is bound up with the construction of direct railway communication between Vizagapatam and the Central Provinces, for the quantity of trade which could be obtained from the littoral itself is insufficient to justify the capital expenditure which would be required. In May 1925 the Government of India declared Vizagapatam a major

port thereby enabling the development of the port under the directions of the Central Government. Preliminary operations commenced in the end of the year and were continued vigorously in 1926 with the aid of dredgers and rock-breakers. It is expected that the construction of the harbour will take four or five years. The surrounding hill-sides and adjacent areas will meanwhile be developed for industrial, trading and residential purposes.

Local Self-Government.

Local bodies in the Madras Presidency are administered under the following Acts —

The Madras City Municipal Act, 1919,

The Madras District Municipalities Act, 1920, as amended by Madras Act X of 1930, and

The Madras Local Boards Act, 1920, as amended by the Madras Act XI of 1930

The amending Acts of 1930, which came into force on the 26th August 1930, provide, *inter alia*, for the abolition of the system of nominations to local bodies, for the inclusion of village panchayats within the scope of the Madras Local Boards Act with a view to making the village the unit of local self government, for direct elections to district boards, for the creation of a municipal local boards service for the Presidency of Madras for the removal of the disqualification of women as such in respect of elections to municipal councils and for the cessation of office of the President or Chairman on a motion of non-confidence being passed against him by a prescribed majority.

2. Local bodies are now enabled under the Madras Local Authorities Entertainments Tax Act, 1926 to levy a tax on entertainments given within their jurisdiction.

Irrigation

In March 1925, the Secretary of State sanctioned the Cauvery Reservoir Project, the estimated cost of which amounted to £ 4½ millions. The project has been framed with two main objects in view. The first is to improve the existing fluctuating water supplies for the Cauvery Delta irrigation of over a million acres, the second is to extend irrigation to a new area of 301,000 acres, which will, it is estimated, add 150,000 tons of rice to the food supply of the country. The scheme which is expected to be completed in 1934 provides for a large dam at Metur on the Cauvery to store 93,500 million cubic feet of water and for a canal nearly 88 miles long with a connected distributary system. Owing to the necessity for providing adequate surplus arrangements to dispose of floods similar to the phenomenal floods of 1924 and to other causes the estimate had to be revised and the revised estimate stands at about £ 5½ millions. Another important project is the Periyar project which is intended not only for irrigation purposes but also for providing water power for generating electricity. Taking its rise in the Western Ghats, the river flows into the Arabian Sea through Travancore State territory. After prolonged negotiations, the Travancore Durbar consented to the water being caught and stored in the

Travancore hills for being diverted towards the East. Some three thousand feet above sea level a concrete and masonry dam has been constructed and nearly 50 feet below the crest-level of the dam a channel through the summit of the range carries the waters into the eastern water-shed where they are led into the river Vaigai. The total quantity of water impounded to crest level is 15,600 million cubic feet. By this work, a river ordained by Nature to flow into the Arabian Sea has been led across the Peninsula into the Bay of Bengal irrigating in its way well over 100,000 acres of land. The irrigable area commanded by the Periyar system is 143,000 acres, while the supply from the lake was sufficient only for 130,000 acres. To make up for this deficit, Government contemplate increasing the effective capacity of the lake by lowering the water-shed cutting. The area already under irrigations in the Madras Presidency totals 7 million acres. Of this, over 3 million acres are served by petty irrigation works numbering about 35,000.

Electric Schemes

The Pykara Hydro Electric Project has been before the Government of Madras for some years. The proposal is to utilise a fall of over 3,000 feet in the Pykara River as it descends the Nilgiri Plateau, for the generation of electrical energy and its transmission for supply to the neighbouring districts viz., the Nilgiris and Coimbatore. At a later date it is hoped to include Madras, Trichunopoly, Madurai, Salem, Calicut, Cochin, Tanjore and other districts. The Chief Engineer for Hydro Electric Development is of opinion that it may be possible to include Madras in the Pykara Supply system.

Originally it seemed that the Pykara Scheme must depend for part of its load on the Railways coming in. But later, it became evident that the scheme would be remunerative even without a demand from the Railways for power. After considerable discussion the Madras Government submitted three alternative schemes to the Government of India, two of which assumed the electrification of certain sections of the South Indian Railway while the third was independent of the electrification of any of the main lines. While these proposals were before the Government of India and the Secretary of State, the Railway Board decided against railway electrification at present. The Secretary of State has therefore sanctioned the third scheme which provides for a small railway load and could be used for the electrification of the Nilgiri Mountain Railway, in addition to the expected demand for Municipal lighting, etc., and for power in industries. Work has been started and the scheme is expected to be completed by the end of 1932.

The total cost of the project is estimated at 1,26,39,900 at the beginning rising to Rs 1,36,00,000 in the tenth year. As at present surveyed the demand for power is estimated at 6,534,000 units in the first year rising to 35,182,000 in the tenth year.

The Glen Morgan Scheme, sanctioned in August 1928, at a cost of about 12 lakhs has been completed and is now in operation. It is auxiliary to the main Pykara scheme and will

The National Central Bank has been established in the capital of the Republic of China, and its functions are to issue and regulate the currency, to manage the government's financial affairs, and to act as a clearing house for the foreign exchange of the country. The National Central Bank is a government-owned institution, and its capital is provided by the government. The National Central Bank is responsible for the stability of the national currency and for the soundness of the financial system. The National Central Bank is also responsible for the management of the government's foreign exchange reserves. The National Central Bank is a key institution in the financial system of the Republic of China.

The Hindu Religious Endowments Act which has for its object the better administration and governance of certain Hindu religious endowments came into force early in 1925. It provides for the appropriation of the surplus funds of the endowments to religious, educational and charitable purposes not inconsistent with the objects of the institutions to which they are attached. The Act has been working satisfactorily. Doubts having been raised to the validity of the Act it was re-enacted and passed into law as Act No. II of 1927. The new Act came into force on 8th February 1927. Another piece of legislation—a non-official Bill—which has raised a heated controversy is the Malabar Tenancy Bill, which aims to confer, subject to certain conditions, occupancy rights on "anomalous" tenants and actual cultivators of the soil. As there was a sharp difference of opinion on the very principles of the Bill, the Governor withheld his assent and a committee was appointed to go into the matter thoroughly, and its findings have been submitted and the same have been published with a view to receive objections and suggestions. The recommendations of the Committee were placed before a Round Table Conference consisting of the representatives of the Jemmies, Tenants and of the Government. The objections and suggestions made by the representatives at the Conference were carefully considered by the

Government and the Government re-drafted the Bill and introduced it in the Council on 6th August 1929. The Bill was passed by the Council on 17th October 1929. His Excellency the Governor-General of India then changes were made in the text of certain clauses of the Bill by the Council and has accordingly introduced part of the Bill to the Legislative Council under Section 81 A (1) of the Government of India Act for re-consideration. The Bill is finally passed by the Legislative Council on 17th March 1930 and received the assent of His Excellency the Governor on the 28th March 1930. The assent of His Excellency the Governor-General to it is awaited. Noteworthy among other efforts at legislation for social reform was the non official resolution passed by the Council recommending to Government to take legislation or to recommend the Government of India to do so to put a stop to the practice of dedicating young women and girls to Hindu temples which as a result resulted in exposing them to immoral purposes under the pretext of caste. Mr. Muthulakshmi Reddi, Ex Deputy President of the Legislative Council introduced a bill in the Legislative Council on 5th September 1929 as to enfranchise or free the lands held by him holding Devadasis on condition of release in Hindu temples from such condition. The bill was passed into law on 1st February 1929. The Act received the assent of the Governor on 12th April 1929 and of the Governor-General on 14th May 1929. Rules have been framed to give effect to the provisions of the Act and the enfranchisement of Devadasis is now in progress. On 24th January 1930 Mrs. Muthulakshmi Reddi introduced another bill in the Legislative Council with the object of putting an end to the dedication of young women and girls not only among him holding Devadasis but among Devadasis as a whole. The bill was discussed in the Council and circulated for elicit opinion. As in the meantime Mrs. Muthulakshmi Reddi resigned her membership in the Council the bill was not proceeded with. Subsequently, the Council also dissolved and the bill lapsed. A bill for the suppression of brothels and of traffic in women and girls was introduced in the Council by Mr. K. R. Venkataraya Ayyar on 5th September 1923 and was passed into law on 31st January 1930. The Act received the assent of the Governor on 24th February 1930 and of the Governor-General on 28th March 1930. It has not however been brought into force yet owing to certain practical difficulties. An amending Act was passed by the Legislative Council on 30th October 1931. It has yet to receive the assent of the Governor and the Governor-General. The amending Act enables the local board to bring the Act into force in selected areas and to extend it gradually to other areas as circumstances permit and also to bring into force such of its provisions as may be practicable in any particular area. It was also resolved to ask Government to fix as their goal local prohibition of drink in the presidency within 20 years. In pursuance of this resolution and of the recommendations of the Excise Advisory Committee thereon, Government have in 1929 sanctioned a scheme of propaganda against the use of alcoholic liquors and intoxicating drinks.

Law and Order

The Superior Court for Civil and Criminal judicial work in the Presidency is the High Court at Madras, which consists of a Chief Justice and thirteen puisne judges. The existing law provides for a maximum of 20 High Court Judges. For the administration of criminal justice there are 26 Sessions Judges in the Mufassal, Additional and Assistant Sessions Judges being provided to assist Courts in which the work is heavy. Then there are the District Magistrates, the Subordinate Magistrates and Honorary Magistrates.

The administration of civil justice is carried on by 26 District Judges, and 45 Subordinate Judges and 154 District Munsiffs. In the Presidency Town there are a City Civil Court consisting of one Judge and Small Causes Court consisting of a Chief Judge and two other Judges. Madras is a litigious province and the records show one suit for every 77 persons. The Police department is under an Inspector-General who has our deputies in four ranges of the Presidency, a Superintendent being stationed at each District. The sanctioned strength of the permanent police force is about 27,700.

The Bengal Presidency.

Manufacture and Trade

The People

Industries

The Bengal Presidency is one of the most important of the British Empire. It is a large and fertile country, with a population of over 70 millions. The climate is generally hot and humid, with a long rainy season. The principal occupations of the people are agriculture and trade. The principal crops are rice, jute, and sugar. The principal trade is in jute, which is exported to other parts of the world. The Bengal Presidency is also a large producer of opium, which is exported to other parts of the world.

The principal trade is in jute, which is exported to other parts of the world. The Bengal Presidency is also a large producer of opium, which is exported to other parts of the world.

Of the population of the Presidency 25,60,000, or 35 per cent are Mohammedans and 2,80,000 Hindus. There are two major religious communities, but 2.77 per cent of the population, Christians, Protestants and Muslims combined, numbered 1,27,000.

There is spoken by nearly two per cent of the population of the Presidency and Hindi and Urdu by 2.8 per cent. The Oriya speaking people number 2,00,000, and Nepali is the tongue of 90,000 persons, principally resident in the Darjeeling and Jalpaiguri districts. The great majority of the speakers of the Munda languages are Santals in West and North Bengal.

According to the returns of the Census of 1921 nearly 37 millions or over 77 per cent of the population derive their support from pasture and agriculture, and of these more than 70 millions are cultivators, and more than 44 millions farm servants and field labourers. The area under jute in 1931 is estimated at 1,613,700 acres against 1,02,300 in 1920. Bengal is the most important rice-producing area in Northern India,

all the important items comprised in this trade. The details of some of the most important items are given below —

During the year under review, although the prices quoted were the lowest ever recorded, the imports of sugar, declined by about 41,000 tons in quantity and by Rs 2,01 40 lakhs in value, the net receipts amounted to 326,683 tons in quantity and Rs 3,58 12 lakhs in value. This falling off was due to the reluctance of dealers to import more than their actual requirements in view of the uncertain position of the trade. Though the imports of salt improved in quantity from 553 30 tons to 602,031 tons, the value, due to lower prices, declined from Rs 1,24 76 lakhs to Rs 01,05 33 lakhs. This rise in the quantity was due largely to increased supplies by Italian East Africa, Egypt (Port Said) and Germany. There was shrinkage in the supplies by Aden, Spain and the United Kingdom, the decline in the case of the last named country being from 76,864 tons to 36,716 tons. A striking feature of this trade was that for the first time a consignment of 29,160 tons of salt was received from Ras Hafum, a port in Africa (Italian Somali Coast) which found a ready market. Imports of tobacco, as a direct result of the boycott movement declined from 4,434,295 lbs valued at Rs 1,20,96 lakhs, to 1,552,674 lbs valued at Rs 53 45 lakhs. The United Kingdom was again the principal participator in this trade by supplying 87 per cent of the total cigarettes imported. Due to a falling off in the imports of kerosene oil from the United States, Persia, and Borneo, and petrol, benzine and benzol from Burma, the total imports of mineral oil contracted from 139,186,361 gallons valued at Rs 8,65,06 lakhs to 122,511,631 gallons valued at Rs 7,23 41 lakhs. In spite of this contraction, supplies of kerosene oil from Azerbaijan improved from 7,631,176 gallons to 13,792,204 gallons, and those of lubricating and batching oil from the United States from 8,913,496 gallons to 13,238,289 gallons. Imports of petroleum, due to the development of motor transport, also improved from 1,433,915 gallons valued at Rs 9 41 lakhs to 3,228,780 gallons valued at Rs 20 09 lakhs. There was also a considerable shrinkage in the value of imports of motor vehicles and parts thereof from Rs 1,62 94 lakhs to Rs 1,14 25 lakhs, and in those of tyres, from Rs 35 86 lakhs, to Rs 27 69 lakhs, and tubes, from Rs 5,85 lakhs to Rs 4 67 lakhs. The decline in the value of motor vehicles, etc., was due to the imports of motor cars (including taxicabs) falling from 3,229 to 3,080. In spite of this falling off, imports of motor cars improved from 578 valued at Rs 10 34 lakhs to 762 valued at Rs 12 99 lakhs. Imports of motor cycles, most of which came as usual from the United Kingdom, also declined from 643 valued at Rs 3 59 lakhs to 4 83 valued at Rs 2 68 lakhs. The trade in drugs, medicines and chemicals did not fare any better, declining under all heads except camphor and bleaching materials, the total value aggregating to about Rs 1,66 78 lakhs as against Rs 1,93,02 lakhs in the previous year. The United Kingdom was, as usual, the principal participator in this trade, her total supplies covering about 51 per cent of the total imports. Imports of all kinds of glassware and earthenware also dropped heavily from Rs 92 16 lakhs to Rs 60 08 lakhs, due mainly to a contraction in the imports of

bangles from Rs 20 87 lakhs to Rs 11 33 lakhs and of beads and false pearls from Rs 12 04 lakhs to Rs 5 28 lakhs. There was also a considerable drop in the value of imports of bottles and phials from Rs 14 01 lakhs to Rs 10,47 lakhs, and of glass parts of lamps from Rs 5 84 lakhs to Rs 3 49 lakhs. Imports of earthenware and porcelain ware also dropped. The decline in machinery and mill work imports was further accelerated during the year. The total imports receded by Rs 1,38 56 lakhs, from Rs 6,60 25 lakhs to Rs 5,30 93 lakhs. While the imports of electrical machinery improved by about Rs 19 78 lakhs, imports of prime movers fell off by Rs 31 78 lakhs and of other industrial machinery by Rs 1,26 31 lakhs. The value of machinery pertaining practically to all the principal industries also declined heavily, the most noticeable amongst them being jute mill machinery, which dropped by about Rs 61 27 lakhs from Rs 1,42 55 lakhs to Rs 81 28 lakhs. Imports of belting also dropped by about Rs 9 14 lakhs. Imports of paper mill and sugar machinery, however, improved from Rs 5 93 lakhs and Rs 5 44 lakhs to Rs 6 82 lakhs and Rs 12 45 lakhs. The United Kingdom was again the principal supplier though her supplies declined by about Rs 1,41 08 lakhs. Owing to high protective duties imports of iron and steel and manufactures thereof declined in value from Rs 6,61 58 lakhs to Rs 3,40 49 lakhs. The United Kingdom was the greatest sufferer, the value of her exports declining from Rs 4,80 31 lakhs to Rs 2,35 73 lakhs. The imports of metals and ores also declined in value from Rs 2,41 26 lakhs to Rs 1,69 85 lakhs. The trade in paper and paste boards also fared badly declining in value from Rs 1,21 10 lakhs to Rs 87 10 lakhs. In this trade too the United Kingdom suffered most, her supplies falling by a drop of 49 323 cwt. Of all the items comprising Bengal's foreign trade, the trade in cotton goods received the greatest set back. The value of the whole trade, which is the lowest on record, amounted to Rs 8,65 08 lakhs only, as against Rs 23,13 89 lakhs in the previous year, Rs 24,10 20 lakhs in 1928-29, and Rs 28,10 81 lakhs in 1927-28. This falling off was due to a heavy decline in the imports of cotton piece goods from Rs 20,19 73 lakhs to Rs 6,80 12 lakhs. This unusual drop in the trade was due directly to the world trade depression and indirectly to the boycott movement in India and the inflated tariff duties. Owing to the boycott movement being directed particularly against British goods, imports from the United Kingdom declined in value from Rs 14,32 05 lakhs to Rs 4,08 51 lakhs. Imports from Japan also fell, though less heavily from Rs 5,31 21 lakhs to Rs 2,56 94 lakhs. Imports of cotton twist and yarns also dropped in value from Rs 1,48 57 lakhs to Rs 92 45 lakhs. This decline in the value was due to a considerable shrinkage in imports, due mainly to the boycott movement of finer counts of yarns from the United Kingdom, whose supplies contracted in value from Rs 57 22 lakhs to Rs 20 65 lakhs. Imports of coarse qualities of yarn from China and Japan, however, improved to some extent. Imports of woollen goods also declined in value from Rs 84 02 lakhs to Rs 56 09 lakhs. In this case too the United Kingdom suffered most, the actual value of her supplies amounted to Rs 12 57 lakhs against

1,366,008 tons, and the value, owing to the prices ruling very low throughout the year shrank still further in proportion, the total aggregating to only Rs 44,30.94 lakhs against a comparatively modest total of last year, viz., Rs. 77,60.93 lakhs. This decline was mainly due to a shrinkage in the exports of raw jute from 4,293,240 bales to 3,361,764 bales in quantity and from Rs 25,78.89 lakhs to Rs 12,46.35 lakhs in value. This sharp decline in the value was due to the prices of jute ruling very low, a bale of first marks fetched on an average Rs 37-1-2 against Rs 59-14-6 in the previous year. But in spite of this low level of the prices imports of raw jute into Calcutta declined to 85.1 lakhs of bales against 90.9 lakhs of bales in the previous year. As a result of this the collection of jute cess for the Calcutta Improvement Trust was seriously affected, the net amount coming up to Rs 10.24 lakhs only as against Rs 13.78 lakhs in the previous year. As a result of this collapse the cultivators were seriously affected. Owing to the low level of the prices they were compelled to sell their produce at a price which, in most of the cases, did not cover even the cost of the production. As regards manufactured goods, shipments of gunny bags declined from 497,700 tons valued at Rs 21,84.69 lakhs to 416,026 tons valued at Rs 14,58.83 lakhs, and those of gunny cloth from 1,050,052,624 yards, valued at Rs 29,68.37 lakhs to 1,270,513,465 yards valued at Rs 16,85.92 lakhs. The decline in both these cases was the direct outcome of less demands from the countries due to the trade depression. As a result of this there was a huge accumulation of stocks in the jute mills and the prices came down in consequence. To ease the situation the jute mills coming under the Indian Jute Mills Association restricted the working of the mills as noted at the outset, but this did not have the desired effect. The trade in dyeing and tanning substances, but for a slight drop in the shipments of myrobalsans, was maintained at the practically same level as in the last year, the total shipments being 22,572 tons against 22,953 tons in the previous year. The United Kingdom improved her purchases under most of the items comprising this trade. Of the articles of minor importance, but for the improvements under manures and paraffin wax, exports declined under all the heads, and most noticeably under woollen manufactures, fruits and vegetables, spices, tobacco and provisions.

Trade of Chittagong—Chittagong is the only other foreign trade port in Bengal. During the year the total value of imports into this port from the foreign trading countries amounted to Rs 1,34.79 lakhs only against Rs 2,00.90 lakhs in the previous year. The exports from this port to those countries also shrank from Rs 6,64.48 lakhs to Rs 5,59.93 lakhs. The decline in both the cases was due to the world trade depression and also in some measure, to the political upheaval in India. The decline on the import side was due mainly to a falling off in the imports under all the principal heads of merchandise and more particularly under metals, from Rs 92.22 lakhs to Rs 45.05 lakhs, machinery, from Rs 54.12 lakhs to Rs 27.98 lakhs, cotton goods from Rs 11.42 lakhs to Rs 4.54 lakhs. The only commodities to show slight improvements were tea chests and salts, the former rising from Rs 8.85 lakhs to Rs 10.37 lakhs, and the latter from Rs 10.58 lakhs

to Rs 11.13 lakhs. On the export side, tea and raw jute were the most affected, the former receding from Rs 4,90.65 lakhs to Rs 4,75.20 lakhs, and the latter from Rs 1,31.14 lakhs to Rs 39.13 lakhs. The United Kingdom was, as usual the principal participant in this trade, and absorbed about 75 per cent of the total.

Coasting Trade of Bengal—The total coasting trade of Calcutta with other maritime provinces and non-British ports also declined considerably in value, from Rs 31,80.18 lakhs to Rs 20,59.02 lakhs. On the import side the decline on the total was from Rs 18,50.39 lakhs to Rs 15,40.02 lakhs. The whole of this loss was borne practically by Burma, and the slight losses, which the non-British Indian ports and other Indian ports sustained were very nearly neutralised by the gains of Bombay, Sind and Madras. On the export side, the total trade amounted, in value, from Rs 13,38.70 lakhs to Rs 11,19.00 lakhs. The decline was mainly the outcome of less exports to all the ports and particularly to Burma, which contracted from Rs 8,03.28 lakhs to Rs 6,76.82 lakhs. The other decreases of note were in the cases of Bombay from Rs 2,30.04 lakhs to Rs 1,06.47 lakhs and of non-British Indian ports from Rs 28.48 lakhs to Rs 17.14 lakhs.

Administration

The present form of administration in Bengal dates from January 1921. In 1912 the Government of the Province underwent an important change, when, in accordance with the Proclamation of His Majesty the King Emperor at Delhi, the Province was raised from the status of a Lieutenant-Governor to that of a Governor-in-Council, thus bringing it into line with the Presidencies of Madras and Bombay. In 1921, under the Reform Scheme, the Local Government was reconstituted, certain of the departments being placed under the control of Ministers appointed from among elected members of the Legislative Council. There are normally four members of the Executive Council who are in charge of the "reserved subjects," and three Ministers, who are in charge of the "transferred subject."

Bengal is administered by five Commissioners, the divisions being those of the Presidency, Burdwan, Rajshahi, Dacca and Chittagong. The unit of administration is the District Magistrate and Collector. As Collector he supervises the gathering of the revenue and is the head of all the Departments connected with it, while as District Magistrate he is responsible for the administration of criminal justice in the district. The immediate superior of the District Magistrate is the Divisional Commissioner. Commissioners are the channels of communication between the local officers and the Government. In certain revenue matters they are, in their turn, subject to the Board of Revenue in Calcutta, in other matters they are under the direct control of Government.

Justice

The administration of Justice is entrusted to the High Court of Calcutta which consists of the Chief Justice who is a Barrister and 16 Palse Judges including one additional judge who

are Barristers, Civilian or Vakils. Below the High Court are the District and Additional Judges, the Small Causes Court and Subordinate Judges and Munsifs. Of these officers, the District and Additional Judges and a certain number of subordinate Judges are also endowed with the powers of a Criminal Court while the remainder have jurisdiction in civil matters only. Criminal Justice is administered by the High Court, the Courts of Session and the Courts of the various classes of Magistrates. On its appellate side, the High Court disposes of appeals from the order of a Court of Session, and it also confirms, modifies or annuls sentences of death passed by Sessions Courts. Calcutta has six stipendiary Presidency Magistrates including one temporary Additional Magistrate in charge of the Traffic Court and the Children Court. It has also two Municipal Magistrates and also a number of Honorary Magistrates and it possesses a Court of Small Causes with Judges who dispose of cases of the class that are usually heard in County Courts in England.

In addition a number of Union Benches and Courts have been established in selected rural areas for the disposal by honorary agency of petty criminal cases and civil disputes.

Local Self-Government

The Bengal Act III of 1884 which regulates municipal bodies in the Interior and its subsequent amendments the powers of Commissioners of municipalities have been increased and the elective franchise has been extended. Municipal expenditure now comprises a large number of objects, including veterinary institutions, employment of Health Officers and Sanitary Inspectors and the training and employment of female medical practitioners. The Commissioners also have large powers in regard to the water supply and the regulation of buildings. The municipal Government of Calcutta is governed by Act III of 1922. This Act, which replaced Act III of 1899, makes the Corporation paramount in matters relating to municipal administration. The Act provides for the appointment of a Mayor, who replaces the Chairman of the old Act, a Deputy Mayor, an Executive Officer, and Deputy Executive Officers, all elected by the Corporation. The appointment of the Chief Executive Officer is subject to the approval of Government. The total number of councillors is 85, with 5 aldermen, elected by the councillors. Ten of the councillors are nominated by Government, and by the general or special constituencies. There are separate constituencies for Mohammedans. In order to improve the insanitary and congested areas of the city, the Calcutta Improvement Trust has been created with extensive powers. In the mofussil, District and Local Boards exercise considerable powers, with regard to Public Works, Education and Medical relief and Union Committees have been formed which deal for the most part with the control of village roads, sanitation and water-supply.

Bengal Act V of 1919 introduced the new system of self government by a creation of village authorities vested with

the power and duties necessary for the management of village affairs and entrusted with powers of self-taxation. The new village authority, called the Union Board, replaces the old Chaulidari *panchayats* and the Union Committee and deal with the village police, village roads, water supply sanitation, primary schools and dispensaries. The Act also empowers Government to create out of the members of the Union Boards, Village Benches and Courts for the trial of petty criminal and civil cases arising within the union. The Act has been extended to all Districts in the Presidency except Midnapur and up to March 1930 over 4,500 Union Boards were sanctioned, of which nearly 4,300 were actually constituted.

Public Works

The Public Works Department consists of P. W. and Railway Departments and is under the charge of Secretary to Government in the Department of Agriculture and Industries.

The P. W. D. deals with questions regarding the construction of public buildings and roads.

The Railway Department deals with questions regarding acquisition of lands required by the several Railways, the alignment of new lines of Railways, and with Tramway projects.

There is a Chief Engineer who is the principal professional adviser of Government.

Marine

The Marine Department deals with questions connected with the welfare of seamen, the administration of the port of Calcutta and inland navigation, including the control and administration of Government launches (except the police launches), and the Government Dockyard, Narayanganj.

Irrigation

The Irrigation Department deals with irrigation, navigation, flood protection by means of embankments and drainage, the latter including relief from congestion of drainage by regulating the available supplies of water to suit the requirements of agriculture combined with the supply of water for irrigation in cases in which a supply is available.

Police

The Bengal Police force comprises the Military Police, the District Police, the Railway Police, and the River Police. The Bengal Police are under the control of the Inspector General of Police, the present Inspector-General being a member of the Imperial Police Service. Under him are Deputy Inspectors General, for the Dacca Range, the Rajshahi range, the Presidency range, the Burdwan range and the Bakarganj range and also one Deputy Inspector-General in charge of the C. I. D. and the Intelligence Branch. Each district is in charge of a Superintendent, and some of the more important districts have an Additional Superintendent. The Railway Police is divided into three distinct charges each under a Superintendent. The River Police is also under a Superintendent. The cadre comprises Assistant Superintendents,

Deputy Superintendents, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, head constables and constables. There is also a Village Police, composed of daffadars and chowkidars, who receive a monthly salary which is collected from the villages or unions by the Panchayat or Union Board. There is a training college and school at Sardah in the district of Rajshahi where newly appointed officers and men of the Bengal police learn their duties. The Calcutta City Police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Commissioner has under him Deputy Commissioners, Assistant Commissioners, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, head constables and constables. A school for the training of recruits for the Calcutta Police force has been established at Calcutta. The annual cost of the Police is over 216 lakhs.

Medical

The head of the Medical Department is the Surgeon-General with the Government of Bengal, and Sanitation is in charge of the Director of Public Health, the former appointment is always held by a member of the Indian Medical Service, while the latter post is not so reserved. There is also a Chief Engineer, Public Health Department, Bengal. In the districts the Civil Surgeons are responsible for medical work. There are 40 hospitals and dispensaries in Calcutta, 10 of which are supported by the Government and 6,38,233 persons were treated at these institutions of whom 51,253 were in-patients. In the mofussil districts there are 1,088 hospitals and dispensaries, the number of patients treated in them as well as in several huts, fairs, melas, subsidised and temporary dispensaries and in various medical centres was 80,47, 802. This includes 76,378 in-patients.

Education

In the Presidency of Bengal education is imparted partly through Government agency and partly through private bodies, assisted to some extent by Government grants-in-aid. Government maintains four Arts Colleges in Calcutta (of which one is a college for women one is for Mahomedans and one the Sanskrit College), one at Hughli, one at Krishnagar, three, including the Islamia Inter Colleges, at Dacca, one at Rajshahi and one at Chittagong. It also maintains two training colleges, one at Calcutta and one at Dacca, for teachers who teach in secondary schools through the medium of English, and 5 normal schools, one in each division, for the training of teachers in secondary schools through the medium of the vernacular, also an engineering college at Sibpur and an engineering school at Dacca, two medical colleges, a veterinary college, a school of art and a commercial school in Calcutta, and a weaving school at Serampore. It also provides at the headquarters of all districts, except Burdwan and Midnapore, and also at certain other mofussil centres, English high schools for the education of boys, while to some Government Arts Colleges high schools are attached. In Calcutta there are five Government high schools for boys, two of

which are attached to the Presidency College and one to the Sanskrit College. Government high schools for girls exist only in the headquarters stations of Calcutta, Dacca, Mymensingh, Comilla and Chittagong. The other secondary schools, with the exception of a few middle schools managed either by Government or by municipal and district boards, are under private control. The administration of primary education in all areas, which are not under municipalities, rests with the district boards, grants being given from provincial revenue to the boards, which contribute only slightly from their own funds. Only in backward localities are such schools either entirely managed, or directly aided, by Government. Apart from the institutions referred to above, 80 institutions called Guru Training Schools are maintained by the Department for the training of primary school teachers. For the education of Mahomedans, there are senior madrasas at Calcutta, Dacca, Chittagong, Hughli, and Rajshahi which are managed by Government. There are also certain Government institutions for technical and industrial education. All institutions for technical and industrial education (except B E College, the Alis nullah School of Engineering, Dacca, the Government Commercial Institute and the Government School of Art, Calcutta) are now under the control of the Director of Industries. A large proportion of educational work of every grade is under the control of various missionary bodies, which are assisted by Government grants-in-aid.

The municipalities are required to expend a certain proportion of their ordinary income on education. They are mainly responsible for primary education within their jurisdiction, but schools in these areas are eligible also for grants from Government. These bodies maintain a high school at Burdwan, a high school at Santipur and a high school at Chittagong.

In 1930-31 there were in the Presidency --

RECOGNISED INSTITUTIONS FOR MALES

| | Institu-
tions | Scholars |
|-----------------------|-------------------|-----------|
| Universities | 2 | 1,835 |
| Arts Colleges | 44 | 17,847 |
| Professional Colleges | 14 | 5,096 |
| High Schools | 1,075 | 257,312 |
| Middle Schools | 1,869 | 164,306 |
| Primary Schools | 42,716 | 1,636,469 |
| Special Schools | 3,118 | 126,110 |

UNRECOGNISED SCHOOLS

| | | |
|---------|-------|--------|
| Males | 1,278 | 51,426 |
| Females | 355 | 10,070 |

The Department is administered by a Director of Public Instruction, assisted by an Assistant Director, an Addl. Asstt. Director appointed temporarily, an Assistant Director for Muhammadan Education and a Director of Physical Education. Each division is in charge of a Divisional Inspector assisted by a certain number of Additional or Second Inspectors and Assistant Inspectors for Mahomedan Education according to the requirements of the several divisions. Similarly the administrative charge of the primary education of each district is in the hands of a District Inspector assisted by Sub-Divisional Inspectors and Sub-Inspectors of Schools, the latter class of officers being in some instances helped by officers of humbler status called Assistant Sub-Inspectors and Inspecting Pandits and Maulvis. Higher education is controlled by the Universities of Calcutta and Dacca established in 1857 and 1921, respectively administered by the Chancellor (the Governor of Bengal), the Vice-Chancellor (appointed by Government) and a number of ex-officio, elected and nominated fellows. The University of Calcutta maintains a Law College, called University Law College, Calcutta. Dacca University also has a Law Department

attached to it. Calcutta University is mainly an examining body, but it has now made itself responsible for advanced teaching for which purpose it employs an agency which is mainly distinct from the staffs of the affiliated colleges.

The percentage of scholars to the total population —

| | Recognised Schools | All Schools |
|---------|--------------------|-------------|
| Males | 8 17 | 8 37 |
| Females | 2 17 | 2 21 |
| Total | 5 29 | 5 41 |

The University at Dacca is of the residential type. There is a Board for Secondary and Intermediate Education at Dacca. It conducts the Matriculation and Intermediate Examinations for the students of institutions at Dacca and also the Islamic Matriculation and Intermediate Examinations.

The education of Europeans is mainly conducted by private agency, assisted by Government grants. Government however maintain a special Inspector, and also a school for boys, a school for girls (both residential) at Kurseong, and attached to the latter a Training College (for women only).

The United Provinces.

The United Provinces of Agra and Oudh lie in practically the centre of Upper India. They are bounded on the north by Tibet, on the north-east by Nepal, on the east and south-east by Bihar, on the south by two of the Chota Nagpur States of the Central India Agency and the Saugor district of the Central Provinces, and on the west by the States of Gwalior, Dholpur, Bharatpur, Sirmoor, and Jubbil, and by the Punjab. Their total area amounts to 106,248 square miles, to which may be added the area of the three Indian States of Rampur, Tehri Garhwal and Benares with an area of 5,943 square miles, giving a total of 112,191 square miles. The total population is 40,614,833.

The Provinces, originally termed the North-Western Provinces and so amalgamated in 1877, receiving their present designation in 1902, include four distinct tracts of country—portions of the Himalayas, including the Kumaon division which consists of three hill districts, two of which are entirely in the hills and one is half in the submontane belt, the sub-Himalayan tract, the great Gangetic plain, and portions of the hill systems of Central India including Bundelkhand. The Gangetic plain is protected by an extensive Canal system, which though somewhat liable to run short of water in extremely dry years, is of great benefit in all ordinary years and years of limited drought. The first two of these tracts are infertile and support a very sparse population and the Central Indian plateau is almost equally infertile, though better populated. The soil of the Gangetic plain, however, possesses an extreme fertility and here the density of population varies from 542 persons per square mile in the west, to 511 in the centre and 753 in the east, which gives the Provinces as a whole a greater population pressure on the soil than any other Province in India. In the south there are low rocky hills, broken spurs of the Vindhyan mountains, covered with stunted trees and jungle, and in the North the lower slopes of the Himalayas, clothed with dense forest, affording excellent big and small game shooting, and rising beyond in a tangled mass of ridges, ever higher and higher, until is reached the line of the eternal snows, but the greater part of the provinces consists of level plain, teeming with highly-cultivated fields and watered by three rivers—the Ganges, Jumna, and Gogra.

The People

The population is mainly Hindu, 84·4 per cent ranking as such whilst Mahomedans number 15 per cent, the total of all other religions being 0·6 per cent composed of Christian (Europeans and Indians), Jains, Sikhs, Parsis, Buddhists and Jews. Included among the Hindus are the Arya Samajists, followers of the Arya Samaj sect, which obtains widely in the Punjab and has extended its influence to the United Provinces. The three main physical types are Dravidian, Aryan and

Mongoloid, the latter being confined to the Himalayan and sub-Himalayan districts and the former to South Mirzapur and Bundelkhand, whilst the high-caste Aryans frequent the Western districts of the Provinces. Most of the people, however show a mixed Arya Dravidian origin. Three languages are spoken by the great majority of the people in the plains—Western Hindi, Eastern Hindi and Bihari, Urdu, or Hindustani is a dialect of Western Hindi, though it contains a large admixture of Persian and Arabic words, which makes it a *lingua franca*.

Industries

The principal industry is agriculture, which supports no less than 76·8 per cent of the population. The soils of the Provinces fall into three groups, the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium, the chief characteristic soil or the Central Indian alluvium is the black soil, with a lighter variant, though here also there are light loams and gravel. The Himalayan soils are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils are sand, clay and loam, the loam being, naturally, the most productive. The soil generally yields excellent crops of rice, millet, maize, linseed, cotton, wheat, sugarcane, pulses, barley and poppy, rice being grown mostly in low-lying, heavy clays. The greater part of the Provinces is highly cultivated, the rainfall varies from 50 to 60 inches in the Hills, to 40 inches in the Benares and Gorakhpur Divisions, whilst the Agra Division receives about 25 to 30 inches annually only. Drought seriously affected Bundelkhand and the Agra Division, in the past, but improved drainage, and irrigation (a protective system of irrigation works exists and is being extended) have enabled a complete recovery to be made. The depression in commodity prices, which took an acute form in 1930 and 1931 has seriously handicapped both cultivators and field labourers who had to part with larger quantities of grain for payment of rent, interest on debts, cloth etc, than ever before. In places where the fall in prices was accompanied with draught the suffering has been acute and the prosperity of the agricultural classes has undoubtedly suffered a rude shock. Land is held mostly on the ryotwari tenure in Bundelkhand and Kumaon, on zamindari tenure in Agra and taluqdari tenure in Oudh. The principal land owners in Oudh are the Taluqdars, some of whom own very large estates. The area held in taluqdari tenure amounts to 54 per cent of the total area in Oudh.

Manufactures

The Provinces are not rich in minerals. Coal exists in Southern Mirzapur, iron and copper are found in the Himalayan

districts and there were many of importance there formerly, but increased difficulty of working them as veins became exhausted resulted in the closure of most of them. Gold is found in minute quantities by washing in some of the rivers in the Hills. Lime stone is found in the Himalayas and in the Ita dhi district, and stone is largely quarried in the Mirzapur district. Cotton is ginned and spun throughout the provinces as a home industry and weaving, by means of hand-loom, is carried on in most districts. According to the census of 1921, 100,993 persons were dependent on cotton spinning, cleaning and pressing, and 820,669 on spinning and weaving. The largest industry is in the Azamgarh district where there are 8,584 looms. Silk spinning is confined almost entirely to the district of Benares where the famous *kumkhat* brocade is made. Linen broderie is manufactured in Lucknow, where the noted *chikan* work of silk on cotton or muslin is produced and in Benares where gold and silver work on velvet, silk, crepe and tussar is obtained. The glass industry is important in some districts. Benares and Meerut are noted for their lacquer bangles and Parikhbad for its calico print and Agra for its cut and polished and other articles of crystal manufactured in Gwalior and other districts are the sole producers of glass bangles. Leather and furs are also manufactured in Gwalior and Jaipur. The chief source of European and Indian textiles is Calcutta which is situated in the most advantageous position on the Ganges. It has access to raw cotton, wool and chemicals, which have a large and ever increasing demand. The Jubbulpore mill is the largest in India. In recent years the Government has established a number of mills and factories, Mirzapur being particularly excellent owing to its proximity to the cotton mills. There is a fine thread factory at Bareilly and Mahabubnagar is well known for its fine thread and cloth.

Including the chief judge are Indians. There are thirty-two posts (twenty four in Agra including two posts temporarily held in abeyance and eight in Oudh) of district and sessions judges of which nine Indians not belonging to the Indian Civil Service as they have been listed to the provincial service and the bar. They have both original and appellate jurisdiction in civil and criminal cases and occasional appellate jurisdiction in rent cases. District Officers and their assistants including tahsildars, preside in criminal courts as magistrates and as collectors and assistant collectors, in rent and revenue courts and dispose of a good deal of the work. Kumaun has been brought under the Civil jurisdiction of the High Court from 1st April 1926. The deputy and assistant commissioners exercise inferior civil powers in this division which has no separate civil courts. In the rest of the provinces there are subordinate judges, judges of small cause courts and munsifs who dispose of a large number of civil suits. In Agra the jurisdiction of a subordinate judge extends to all original suits without pecuniary limit and a munsif can hear cases ordinarily of a value not exceeding Rs 2,000, and if specially empowered up to Rs 5,000. In Oudh the ordinary jurisdiction of a subordinate judge extends to suits valuing not more than Rs 20,000 and the ordinary jurisdiction of a munsif to suits of Rs 2,000 value, provided that in special cases the limit of pecuniary jurisdiction can be removed altogether in the case of a subordinate judge and that of the munsif raised up to Rs 5,000. Appeals from munsif always lie to the district judge while those from the subordinate judges go to the High Court or the Chief Court except in cases of a value of Rs 5,000 or less which are heard by the district judge. Small cause court judges try suits to the value of Rs 500. There are also honorary munsifs limited to Rs 200 suits, and village munsifs whose jurisdiction is fixed at Rs 20.

Local Self-Government

The units of local self-government are the district and municipal boards which, with the exception of four municipal boards, have non-official Chairman. The more important municipal boards have executive officers to whom certain administrative powers are reserved. The administrative functions of the municipal district boards are performed by the chairman and the secretary, but the boards themselves are directly responsible for most of the administration. The district boards obtain 45% of their income from Government grants. The other chief source of income is the local rate levied from the landowners. Some of the boards have recently imposed a tax on circumstance and property. The chief source of municipal income is the octroi or terminal tax and toll which is an octroi in modified form. Local opinion is strongly in favour of indirect as opposed to direct taxation for municipal purposes.

Public Works

The Public Works Department is divided into the Buildings and Roads branch and the Irrigation branch. The Buildings and Roads branch is administered by a Civilian Secretary and the principal administrative officer is a Chief

Engineer. The Irrigation branch is administered by two Secretaries to Government who are also Chief Engineers. The Province is divided into circles and divisions both for buildings and roads and for irrigation purposes. Each circle is in charge of a Superintending Engineer, or a Deputy Chief Engineer and each division is in charge of an Executive Engineer. The whole of the irrigation works constructed or maintained by Government are in charge of the Irrigation branch. All metalled roads maintained from Provincial funds and construction of all buildings costing more than Rs 20,000 are in charge of the Buildings and Roads branch. In the Irrigation branch one of the Chief Engineers is in charge of Eastern Canals comprising the Sarda Canal and canals in Bundelkhand and Mirzapur and the other is in charge of Western Canals comprising Ganges Canals, Eastern Jumna Canal and Agra Canal. The Sarda Canal—a work of the first magnitude was opened in 1928 and has introduced irrigation into most of the districts of Oudh. In connection with the Ganges Canal an important hydro electric scheme the scope of which covers seven western districts of the province is nearing completion. It is capable of further development and will ultimately give a total output of 33,450 kilowatts. The energy is being distributed by means of 882 miles of High Tension lines to provide all towns of 5,000 population and over in the seven districts, with cheap power for lights, fans and minor industries. The energy will also be used for irrigation pumping from rivers, and low level canals as well as from tube and open wells. The total cost of the first stage of the scheme including pumping projects for irrigation is 170 lakhs.

Police

The Police Force is divided into District and Railway Police and is administered by an Inspector-General, with three Deputies and two Assistants, forty-six District Superintendents, three Railway Superintendents, forty-one Assistant Superintendents and sixty Deputy Superintendents. There is a Police Training School at Moradabad. There is a local C I D forming a separate detective department, under a Deputy Inspector-General with three assistants. The armed police used to be armed with the 476 musket and in certain districts to some extent also with the Martini-Henry rifle, but these arms are being replaced by the 410 musket. Two of the three ranges have already been so armed. The administration of the Jail Department is in charge of an Inspector-General of Prisons, who is a member of the Indian Medical Service.

Education

Education is maintained in part by the State and partly by means of grants-in-aid. There are five universities, the four residential universities of Allahabad, Lucknow, Aligarh (Muslim) and Benares (Hindu) and the affiliating University of Agra. The last named was established in 1927 and consists, besides six affiliated colleges situated outside the United Provinces, of the eight colleges formerly associated with Allahabad University on

THE FINANCES OF THE UNITED PROVINCES.

As explained in the chapters on the new constitution of India, under the Reforms Act of 1919 the financial position of the Provinces underwent a remarkable change. The Provinces are, for all practical purposes, financially independent of the Government of India. The contribution payable by the Local Government has been remitted entirely by the Government of India with effect from the year 1928-29. As the finances of the Provinces thus become of greater importance, the position is set out in some detail in the following pages—

ESTIMATED REVENUE FOR 1931-32

| <i>Principal Heads of Revenue.</i> | | <i>Miscellaneous</i> | |
|--|--------------|--|--------------|
| | Rs | | Rs |

SECRETARY TO THE LEGISLATIVE COUNCIL

Babu Surendranath Ghosh

Mr. G S K Hydrie, Bar-at-Law, Supdt

The Punjab.

The Punjab or land of the five rivers, is so called from the five rivers by which it is enclosed, namely, the Jhelum, Chenab, Ravi, Beas and Sutlej. Together with the North-West Frontier Province and the Indian State of Jammu and Kashmir which lie to the north, the Punjab occupies the extreme north-western corner of the Indian Empire, and with the exception of the above-mentioned province comprises all of British India north of Sind and Rajputana and west of the river Jumna. Previous to October 1912, the Punjab with its feudatories embraced an area of 136,330 square miles and a population at the Census of 1911 of 24,187,750 (inclusive of 23,587 trans-frontier Baluchis), that is to say, about one-thirtieth of the area and population of the Indian Empire. But the formation of a separate province of Delhi reduced the area and population of the Punjab by about 450 square miles and 380,000 souls, respectively. The total population of the Province in 1931, including the Baloch tribes on the border of the Dehra Ghazi Khan District was 28,490,857 of whom 4,910,005 were in the Indian States.

Physical Features

The greater part of the Punjab consists of one vast alluvial plain, stretching from the Jumna in the east to the Suleman Range in the west. The north-east is occupied by a section of the Himalayas and the Salt Range forms its north-western angle. A few small spurs of the Aravalli mountain system traverse the extreme south-east and terminate in the Ridge at Delhi. The Punjab may be divided into five natural divisions. The Himalayan tract includes an area of 22,000 square miles, with a scanty population living scattered in tiny mountain hamlets. The Salt Range tract includes the districts of Attock, Rawalpindi and Jhelum and part of Shahpur district. Its physical configuration is broken and confused and the mountainous tracts of Murree and Kahuta approximate closely in characteristics to the Himalayan tract. Except in the hills, the rainfall leaves little margin for protection against distress in unfavourable seasons and irrigation is almost unknown. Skirting the base of the hills and including the low range of the Siwaliks, runs the narrow sub-montane tract. This tract, secure in an ample rainfall, and traversed by streams from the hills, comprises some of the most fertile and thickly populated portions of the province. Its population of over four millions is almost agricultural and pastoral but it includes one large town in Sialkot. Of the plains of the Punjab, the eastern portion covers an area of some 30,000 square miles with a population of 10½ millions. East of Lahore, the rainfall is everywhere so far sufficient that cultivation is possible without irrigation in fairly favourable seasons, but over the greater part of the area the margin is so slight that, except where irrigation is employed, any material reduction

in the rainfall involves distress, if not actual famine. Within the eastern plains lie the large cities of Lahore and Amritsar, and the population in comparison with the western Punjab is largely urban. The western plains cover an area of 59,000 square miles, with a population of a little over six millions. The rainfall in this area, heaviest in the north and east and decreasing towards the west and south, is everywhere so scanty that cultivation is only possible with the aid of artificial irrigation or upon the low-lying river-banks left moist by the retreating floods. In this very circumstance, these tracts find their security against famine, for there cultivation is almost independent of rain, a failure of which means nothing worse than a scarcity of grass. So little rain is sufficient, and absolute drought occurs so seldom that the crops may be said never to fail from this cause. The western plains embrace the great colony areas on the Chenab and Jhelum Canals which now challenge the title of the eastern plains as the most fertile, wealthy and populous portions of the province. Multan and Lyallpur are the largest towns in the western area. Owing to its geographical position, its scanty rainfall and cloudless skies, and perhaps to its wide expanse of untilled plains, the climate of the Punjab presents greater extremes of both heat and cold than any other portion of India. The summer, from April to September, is scorchingly hot, and in the winter, sharp frosts are common. But the bright sun and invigorating air make the climate of the Punjab in the cold weather almost ideal.

States

The Indian States of the Punjab were formerly in the Political charge of the Punjab Government. In 1921, however, the thirteen most important States, including Patiala, Bahawalpur, Jind and Nabha, were formed into a separate "Punjab States Agency" under the control of the Agent to the Governor-General, Punjab States. The only States remaining in the charge of the Punjab Government are the Simla Hill States, for which the Deputy Commissioner of Simla is Political Officer, and three small States in the Ambala Division, Kalsia, Patandi and Dujana, which are supervised by the Commissioner of Ambala.

The People

Of the population roughly one-half is Mahomedan, three-eighths Hindu and one-eighth Sikh. Socially the landed classes stand high, and of these the Jats, numbering nearly five millions, are the most important. Roughly speaking, one-half the Jats are Mahomedan, one-third Sikh and one-sixth Hindu. In distribution they are ubiquitous and are equally divided between the five divisions of the province. Next in importance come the Rajputs, who number over a million and a half. The majority of them are Mahomedans by religion.

about a fourth are Hindus and a very few Sikhs. They are widely distributed over the province. Both Jats and Rajputs of the Punjab provide many of the best recruits for the Indian Army. In fact all the agricultural classes of the Punjab, except in the south-western districts, made a magnificent response to the appeal for recruits in the great war and the province's contribution of upwards of 400,000 men to the main power of the Empire speaks for itself. The Gujars are an important agricultural and pastoral tribe, chiefly found in the eastern half of the province and in the extreme north-west. In organisation they closely resemble the Jats and are often absorbed into that tribe. There are many minor agricultural tribes, priestly and religious castes (Brahmans, Savads and Kureshis), most of whom are landholders, the trading castes of the Hindus (Khatris, Aroras and Banias), the trading castes of the Mahomedans (Khojas, Parachas and Khakhas) and the numerous artisan and menial castes. There are also vagrant and criminal tribes and foreign elements in the population are represented by the Baluchis of Dera Ghazi Khan and neighbouring districts in the west, who number about half a million and maintain their tribal system, and the Pathans of the Attock and Mianwali districts. Pathans are also found scattered all over the province engaged in horse-dealing, labour and trade. A small Tibetan element is found in the Himalayan districts.

Languages

The main language of the province is Punjabi, which is spoken by more than half the population. Western Punjabi may be classed as a separate language, sometimes called Lahndi, and is spoken in the north and west. The next most important languages are Western Hindi, which includes Hindustani and Urdu (the polished language of the towns), Western Pahari, which is spoken in the hill tracts, and Rajasthani, the language of Rajputana. Baluchi, Pushto, Sindhi and Tibeto-Burman languages are used by small sections of the population.

Agriculture

Agriculture is the staple industry of the province affording the main means of subsistence to 60.5 per cent of the population. It is essentially a country of peasant proprietors. About one-sixth of the total area in British districts is Government property, the remaining five-sixths belonging to private owners, and a large part of the Government land is so situated that it cannot be brought under cultivation without extensive irrigation. Thus the Lower Chenab Canal irrigates 2,103,000 acres of what was formerly waste land, the Lower Jhelum Canal, 41,36,000 acres and the Lower Bari Doab Canal, adds 1,078,000 acres to this total. On account of the opening of the Sutlej Valley canals an area of about 1,314,000 acres more have been brought under cultivation. Large areas in the hills and elsewhere which are unsuited to cultivation are preserved as forest lands, the total extent of which is about 6,000 square miles. Of the crops grown, wheat is the most important and the development

of irrigation has led to a great expansion of the wheat area. Next in importance to wheat is gram. Other important staples are barley, rice, millets, maize, oilseeds (rape, toria and sesamum), cotton and sugarcane. In the canal colonies large areas of American cotton are grown but in the cotton growing districts the short staple indigenous varieties are predominant. The country being preponderantly agricultural, a considerable proportion of the wealth of the people lies in live-stock. Large profits are derived from the cattle and dairy trades and wool is a staple product in Kulu and Kangra and throughout the plains generally. The production of hides and skins is also an important industry.

Industries

The mineral wealth of the Punjab is small, rock salt, saltpetre and limestone for road building being the most important products. There are some small coal mines in the Jhelum, Shahpur and Mianwali districts. Gold washing is carried on in most of the rivers not without remunerative results. Iron and copper ores are plentiful but the difficulty of carriage and the absence of fuel have hitherto prevented smelting on a large scale. The Punjab is not a large manufacturing province, the total number of factories being only 640 the majority of which are cotton ginning and pressing factories. Blankets and woollen rugs are produced in considerable quantities and the carpets of Amritsar are famous. Silk weaving is also carried on and the workers in gold, silver, brass, copper and Earthenware are fairly numerous. Ivory carving is carried on extensively at Amritsar and Lehah and also in the Patiala State. Mineral oil is being extracted and refined in the Attock and Rawalpindi Districts and a cement factory is established at Wah near Hassanabdal. There is also a match factory at Shahdara and a factory for the hydrogenation and refining of oils at Ludhiana.

Administration

Prior to the amendment of the Government of India Act in 1919 the head of the administration was a Lieutenant-Governor, drawn from the ranks of the Indian Civil Service. Under the amended Act the province was raised to the status of a Governorship, with an Executive Council and Ministers, the Governor-in-Council being in charge of the Reserved Subjects and the Governor with his Ministers of the Transferred Subjects. The general system of provincial administration under this scheme is sketched in the section "Provincial Governments" (q v) where is also given a list of the Reserved and Transferred Subjects. Associated with the Governor and the Council and Ministers is an enlarged Legislative Council, with wide powers, whose scope and authority are given in the section "Legislative Councils" (q r), the system being common to all the major provinces. The business of Government is carried on through the usual Secretariat which consists of five Secretaries, designated (1) Chief, (2) Home, (3) Finance, (4) Revenue and (5) Transferred Departments, one Deputy Secretary, two Under-Secretaries, and one Assistant Secretary. In the Public Works Department, there are five Secretaries (Chief Engineers), one in the Buildings and

Roads Branch, one in the Hydro Electric Branch and three in the Irrigation Branch, while the Legal Remembrancer is also the Secretary to Government in the Legislative Department. The heads of the Police and Educational Departments are also Under-Secretaries to Government. The Government spends the winter in Lahore and the summer (from the middle of May to the middle of October) in Simla. Under the Governor, the province is administered by five Commissioners (for Ambala, Jullunder, Lahore, Rawalpindi and Multan) who exercise general control over the Deputy Commissioners—29 in number—each of whom is in charge of a district.

The principal heads of Department in the province are the two Financial Commissioners (who are the highest Court of Revenue jurisdiction, and heads of the departments of Land and Separate Revenue and of Agriculture and the Court of Wards), the five Chief Engineers, the Inspector-General of Police, the Director of Public Instruction, the Inspector-General of Prisons, the Inspector-General of Civil Hospitals, the Director of Public Health, the Chief Conservator of Forests, the Directors of Agriculture and Industries, the Inspector-General of Registration, the Registrar of Co-operative Credit Societies and Joint Stock Companies and the Legal Remembrancer.

Justice

The administration of justice is entrusted to a High Court, which is the final appellate authority to civil and criminal cases, and has powers of original criminal jurisdiction in cases where European British subjects are charged with serious offences and original civil jurisdiction in special cases. The Court sits at Lahore and is composed of a Chief Justice and eight Puisne Judges (either civilians or barristers), and three Additional Judges, including the Inspecting Judge sanctioned each year for six months. Subordinate to the High Court are the District and Sessions Judges (25 in number) each of whom exercise civil and criminal jurisdiction in a civil and session division comprising one or more districts. In districts in which the Frontier Crimes Regulation is in force the Deputy Commissioner on the finding of a Council of Elders (Jirga) may pass sentence up to seven years' imprisonment.

Local Self-Government

Local Self-Government is secured in certain branches of the administration by the constitution of District Boards, each exercising authority over a district, of Municipal, Small Town, and Notified Area Committees each exercising authority over an urban area, and of Panchayats, each exercising authority over a revenue estate or a compact group of revenue estates. The funds of District Boards are derived from a cess on the land revenue of the district supplemented by Government grants, profession taxes and miscellaneous fees, and those of Municipal, Small Town, and Notified Area Committees from octroi or terminal tax and other forms of taxation from Government grants and from rents and miscellaneous fees. The Panchayat system is an attempt to revive the

traditional village community organisation, the elected committee or Panchayat possessing certain powers in respect of taxation, local option, civil and criminal justice, the abatement of nuisances and other matters. Most of the members of practically all local bodies are now elected and elections are usually keenly contested.

Police

The Police force is divided into District Police, Railway Police and Criminal Investigation Department. The combined force is under the control of the Inspector-General, who is a member of the gazetted force and has under him three Deputy Inspectors General in charge of ranges comprising several districts and a fourth Deputy Inspector-General in charge of the Criminal Investigation Department and of the Finger Print Bureau at Phillaur. There is a Police Training School at Phillaur controlled by a Principal of the rank of Superintendent of Police. The Railway Police are under an Assistant Inspector-General. The District Police are controlled by Superintendents, each of whom is in charge of a district and has under him one or more Assistant Superintendents or Deputy Superintendents.

Education

The strides which have been made in the past decennium, especially in the concluding years of the period, have brought the Punjab into line with the older and more forward provinces. The advance has not been confined to any one form of education but is spread over all grades and varieties. In addition to institutions maintained in all parts of the province by private enterprise, Government itself maintains fourteen arts colleges (including one for Europeans and one for women). Five normal schools, thirty-six training classes and combined institutions (twenty-two for males and fourteen for females), one hundred and eighteen secondary schools for boys and girls and fifty-centres for vocational training. Apart from these institutions for general education, Government maintains six higher grade professional institutions, viz., the King Edward Medical College and Veterinary College at Lahore, the Agricultural College at Lyallpur, the Engineering College at Moghalpura, the Central Training College, Lahore and the Chelmsford Training College at Ghoragali, and two schools, viz., the Medical School at Amritsar and the Engineering School at Rasul. In addition there are thirty-one technical and industrial schools (twenty-nine for males and two for females) scattered over the province.

The Department of Education is in charge of the Minister for Education who is assisted in the work of administration by the Director of Public Instruction.

Medical

The Medical Department is controlled by the Inspector-General of Civil Hospitals, who is at present an officer of the Indian Medical Service holding the rank of Colonel. He is assisted by an officer designated the Assistant Inspector General of Civil Hospitals, who is at present an officer of the Punjab Civil Medical Service of the rank of a Civil Surgeon,

Public Health.

The Department of Public Health is controlled by the Director of Public Health (also a member of the Indian Medical Service) who has, working under him four Assistant Directors of Public Health, 34 District Medical Officers of Health, and twenty-eight District Sanitary Inspectors. In addition there is a temporary staff of 10 Sub-Assistant Health Officers and 15 Sanitary Inspectors for assistance in combating epidemic diseases. The ancillary services comprise

(1) A Vaccine Institute which is in charge of the Assistant Director of Public Health, Punjab (Technical) Vaccination, assisted by a Superintendent and which prepares sufficient vaccine lymph to meet the needs not only of the Punjab, but of the Army in Northern India and of several provinces and Indian States in and beyond the confines of India

(2) An epidemiological bureau, which is in charge of the Epidemiologist to Government where, in addition to routine bacteriological examination, research work in matters bearing upon public health problems is carried out

(3) An Education Bureau, to which is attached a photographer who is an expert in cinematography

(4) A Chemical Laboratory in charge of a fully trained chemist whose duties comprise the chemical analysis of water samples and food stuffs

(5) A Public Health Equipment Depot which supplies Government Institutions, local bodies, etc., with reliable disinfectants, vaccine sera, etc

(6) A Public Health School, the staff of which is responsible for the training of health visitors. The Principal, who is also Inspector of Health Centres, supervises the maternity and child welfare work throughout the province

In matters connected with sanitary works the Director of Public Health works in close touch with the Superintending Engineer, Public Health Circle, Punjab, who acts as technical adviser of the Public Health Department in engineering matters. This officer and the Director of Public Health are also the technical advisers of the Urban Sanitary Board whose duty it is to examine and report upon sanitary schemes put forward by local bodies

Burma.

Burma is a country of great natural thoroughfares. At all seasons of the year the great rivers, especially the Irrawaddy, are full of native and steam craft. In the Delta the network of waterways is indeed practically the main line of communication. The Irrawaddy Flotilla Company, with a fine fleet of mail cargo and ferry boats, gives the Irrawaddy, the Delta rivers and creeks a splendid river service.

The Burma Railway has a length of 1,172.5 miles open line. The principal lines run from Rangoon to Mandalay, from Sagalay to Moulmein, the most northern point in the system the Rangoon Promer line, and the Pegu Martaban line, which serves Moulmein on the further bank of the Salween River.

Industry

Agriculture is the chief industry of the province and supports nearly three fourths of the population. The net total cropped area is 16.1 million acres of which nearly 2 million acres are cropped more than once. Irrigation works supply water to nearly 1 million acres. India is very largely dependent on Burma for her supplies of kerosene, benzine and petrol which rank second to rice in order of importance. Teak wood is exported in large quantities from Burma to India.

Forests play an important part in the industrial life of the Province. The forest reserves cover some 33,018 square miles, while unclassified forests are estimated at about 1,14,025 square miles. Government extracts some 45,341 tons of teak annually private firms, of whom the Bombay Burma Trading Corporation and Steel Brothers are the chief, extract over 2,49,679 tons. Other timber extracted by license to over 2,79,116 tons and firewood 1,52,775 tons.

Tin and wolfram are found in Tavoy and Mergui Districts and are found together in most

The People

The population of Burma at the census of 1901 was 16,709,801, of which 9,612,111 were males and 7,097,690 females. The population of the provinces was 10,449,801, of which 5,449,801 were males and 5,000,000 females. The population of the provinces was 10,449,801, of which 5,449,801 were males and 5,000,000 females. The population of the provinces was 10,449,801, of which 5,449,801 were males and 5,000,000 females.

The Burmese who form the bulk of the population, belong to the Tibetan group and their language to the Sino-Chinese family. They are a tall, well built, cultural people, 89 per cent of the population of the country being in their hands. The Burmese and most of the hill tribes are professed Buddhists, but Animism, or the worship of nature spirits, is almost universal. The interest taken by the Burmese in the course of the war, their response to the call for recruits and their generous contributions to relief and charitable funds seem to show that their sympathy towards the government of the country is giving way to an intelligent loyalty to British rule.

Tavoy, the proportion varying from almost pure tin to almost pure wolfram. There was a fall in the price of tin.

The output of wolfram increased during the year 1930 but its value decreased owing to the fall in the price of this mineral. Silver, lead and zinc ore are extracted by the Burma Corporation at Bawdwin in the Northern Shan States. Copper in small quantities is also found there. There are small deposits of Molybdenite in Tavoy and Mergui and of platinum in Myitkyina. The output and value of precious stones from the ruby mines decreased during 1930. From the mines in the Hukong valley jade and amber are won. The oldest and largest oil field in the province is at Yenangayung in Magwe district where the Burma Oil Company has its chief wells. But borings in other districts have shown that the oil-bearing strata extend over a large part of the dry zone, and the output from the smaller fields in Pakokku and Minbu districts is now considerable, while the wells sunk in Thayetmyo district are also showing satisfactory returns. More than two-thirds of the total production comes from the Yenangyaung and Singu fields. The Burma Oil Company take their oil to the refineries at Rangoon by pipe line from Singu and Yenangyaung. Other companies take it down by river flats. The area under rubber is 94,277 acres.

Manufactures

There are 1,079 factories, nearly two thirds of which are engaged in milling rice and nearly one sixth are sawmills. The remainder are chiefly engineering works, cotton ginning mills, oil mills for the extraction of oil from groundnuts, printing presses, ice and aerated water factories and oil refineries connected with the petroleum industry. The average daily number of operatives is 98,701. At the Census of 1921, 1,935,729 or 28.48 per cent of the total population were engaged outside agriculture and production.

As is the case in other parts of the Indian Empire, the imported and factory made article is rapidly ousting the home-made and indigenous. But at Amarapura in the Mandalay District a revival has taken place of hand silk-weaving. Burmese wood-carving is still famous and many artists in silver still remain, the finish of whose work is sometimes very fine. Bassins and Mandalay parasols are well known and much admired in Burma. But perhaps the most famous of all hand-made and indigenous industries is the lacquer work of Pagan with its delicate patterns in black, green, and yellow traced on a ground-work of red lacquer over bamboo. A new art is the making of bronze figures. The artists have gone back to nature for their models, breaking away from the conventionalized forms into which their silver work had crystallized and the new figures display a vigour and life that make them by far the finest examples of art the province can produce.

Administration

Burma, which was at that time administered as a Lieutenant-Governorship, was deliberately excluded from the operation of the Reform Act

of 1919. It was felt that the Province differed so markedly from the other Provinces in the Indian Empire that its requirements should be separately considered. After repeated discussions the question was referred to a special Burma Reforms Committee, which in 1922 recommended that all the essential provisions of the Reform Act should be applied to the Province. This recommendation was accepted and its proposals became law. Under this Act Burma became a Governor's Province, with an executive council and ministers, and conforms to the provinces recreated under the Act of 1919 (q.v.). The main difference is in the size of the electorate. Under the franchise accepted, the rural electorate is estimated at 1,736,871 and the urban electorate has been put as high as 82,478. The Legislative Council consists of 104 members, of which 80 are elected and the balance nominated. Owing to the special status of women in Burma, female franchise was adopted from the beginning.

Burma is divided administratively into Upper Burma (including the Shan States and Chin Hills) and Lower Burma. The Shan States are administered by the Chiefs of the States, subject to the supervision of the Commissioner, Federated Shan States, who is also Superintendent for the Southern Shan States, and the Superintendent of the Northern Shan States. The Northern and Southern Shan States were formed into a Federation on the 1st October 1922, and are designated the F. S. States. The other Shan States in Burma are subject to the supervision of the Commissioner, Sagaing Division. The Civil, Criminal and Revenue administration is vested in the Chief of the State, subject to the restrictions contained in the sanad. The law administered is the customary law of the State.

Under the Governor are eight Commissioners of divisions, three in Upper, four in Lower Burma, and one in the Federated Shan States.

Justice

The administration of Civil and Criminal Justice is under the control of the High Court of Judicature at Rangoon, which consists of a Chief Justice and ten other permanent Judges. The Superior Judicial Service consists of District and Sessions Judges, there are also separate Provincial and Subordinate Judicial Services.

All village headmen have limited magisterial powers and a considerable number are also invested with civil jurisdiction to a limited extent.

In pursuance of the policy of decentralization steps were taken in 1917 to restore to the village headmen the power and influence which they possessed in Burmese times before the centralizing tendencies of British rule made them practically subordinate officers of the administration.

Public Works

The P. W. D. comprises two Branches, viz., the B. & R. Branch and the Irrigation Branch.

The B. & R. Branch of this Dept., which is under the Ministry of Forests, is administered by one Chief Engineer and one Deputy Chief Engineer. There is also a Personal Asst.

THE FINANCES OF BURMA

In common with the other Provinces of India, the financial arrangements between the Government of India and the Government of Burma underwent a remodelling in consequence of the reconstitution of the Province on the lines of the other Indian Provinces. The Province obtained substantial financial independence. The present position is set out in the following statement—

| ESTIMATED RECEIPTS FOR 1931-32 | |
|--|--------------|
| (A) REVENUE RECEIPTS—ORDINARY | |
| | Rs |
| Taxes on Income | 12,00,000 |
| Land Revenue | 5,49,56,000 |

Bihar and Orissa.

Bihar and Orissa lies between 19°-02' and 27°-30' N latitude and between 82°-31' and 88°-26' E longitude and includes the three provinces of Bihar, Orissa and Chota Nagpur, and is bounded on the north by Nepal and the Darjeeling district of Bengal, on the east by Bengal and the Bay of Bengal, on the south by the Bay of Bengal and Madras, and on the west by the United Provinces of Agra and Oudh and the Central Provinces.

The area of the British territories which constitute the Governorship of Bihar and Orissa is 83,180 square miles inclusive of the area of large rivers. In addition to the districts which are directly under British rule, there are two groups of petty States which lie to the south and south-west of the Province and which under the names of the Feudatory States of Orissa and Chota Nagpur are governed each by its own Chief under the superintendence and with the advice of the Political Agent and Commissioner, Orissa Feudatory States. The area of these territories is 28,664 square miles and as it is usual to include them when speaking of Bihar and Orissa the area of the whole Province may be stated at 111,828 square miles. Two of the provinces of the Governorship of Bihar and Orissa, *viz.* Bihar and Orissa, consist of great river valleys, the third, Chota Nagpur, is a mountainous region which separates them from the Central Indian Plateau. Orissa embraces the rich deltas of the Mahanadi and the neighbouring rivers and is bounded by the Bay of Bengal on the south-east and walled in on the north-west by the hilly country of the Tributary States. Bihar lies on the north of the Province and comprises the valley of the Ganges from the spot where it issues from the territories of the Governor of the United Provinces of Agra and Oudh till it enters Bengal near Rajmahal. Between Bihar and Orissa lies Chota Nagpur. Following the main geographical lines there are five Civil Divisions with headquarters at Patna, Muzaffarpur (for Tirhut), Bhagalpur, Cuttack (for Orissa) and Ranchi (for Chota Nagpur).

The People

The headquarters of Government are at Patna. The new capital which lies between the Military Cantonment of Dinapore and the old civil station of Bankipore is known as "Patna," the old town being called "Patna City."

The Province has a population of 42,233,812 persons. Even so with 339 persons per square mile, Bihar and Orissa is more thickly populated than Germany. There are only four towns which can be classed as cities, namely, Patna, Gaya, Jamshedpur and Bhagalpur. During the last ten years the population of Patna has been steadily increasing. Hindus form an overwhelming majority of the population. Though the Muhammadans form about one tenth of the total population they constitute more than one fifth of urban population of the province.

Animists account for 0.10 per cent. These are inhabitants of the Chota Nagpur plateau and the Santal Parganas, the latter district being a continuation of the plateau in a north easterly direction.

Industries *

The principal industry is agriculture, Bihar more especially North Bihar, being the "Garden of India." Rice is the staple crop but the spring crops, wheat, barley, and the like are of considerable importance. It is estimated that the normal area cultivated with rice is 15,094,000 acres or about 48 per cent of the cropped area of the Province. Wheat is grown on 1,185,100 acres, barley on 1,385,500 acres, maize or Indian-corn on 1,044,700 acres, the latter being an autumn crop. Oil-seeds are an important crop, the cultivation having been estimated by the demand for them in Europe. It is estimated that 2,037,600 acres of land are annually cropped with oil-seeds in the Province. There is irrigation in Shahabad, Gaya, Patna and Champaran districts in Bihar and in Balasore and Cuttack in Orissa. The Indigo industry is steadily on the decline, the total area sown having decreased from 342,000 acres in 1896 to 25,000 acres in 1923. The principal cause of this was the discovery of the possibilities of manufacturing synthetic or chemically prepared indigo on a commercial scale. Its place as a crop manufactured for export has been largely taken by sugarcane, the cultivation of which has been considerably extended owing to the high prices given by sugar factories. In the district of Purnea and in Orissa, and parts of the Tirhut Division jute is grown, but the acreage varies according to the price of jute. The last serious famine was in 1895-96, but there was a serious shortage of foodstuffs in the south of the Province in 1919. In any year in which monsoon currents from either the Bay of Bengal or the Arabian Sea are unduly late in their arrival or cease abruptly before the middle of September the agricultural situation is very grave. It may be said that for Bihar the most important rainfall is that known as the *hata*, due towards the end of September or up to middle of October. Rain at this time not only contributes materially to an increased outturn of the rice crop, but also provides the moisture necessary for starting the spring or *rabi* crops.

Manufactures

Opium was formerly, with indigo, the chief manufactured product of Bihar, but in consequence of the agreement with the Chinese Government the Patna Factory has been closed. At Monghyr the Peninsular Tobacco Company have erected one of the largest cigarette factories in the world and as a result tobacco is being grown much more extensively. The Tata Iron and Steel Works at Jamshedpur in

* The figures given in this paragraph relate to British territory only.

Under the Inspector-General of Police are four Deputy Inspectors-General and 29 Superintendents. There are also 24 Assistant Superintendents of Police and 28 Deputy Superintendents. The force is divided into the District Police, the Railway Police and the Military Police. A Criminal Investigation Department has also been formed for the collection and distribution of information relating to professional criminals and criminal tribes whose operations extend beyond a single district and to control, advise, and assist in investigations of crime of this class and other serious action which its assistance may be invoked. There are three companies of unmounted Military Police and one company of Mounted Military Police which are maintained as reserves to deal with serious and organised disturbances and perform no ordinary civil duties.

Education

The position of education in the Province with the numbers attending schools, is set out in the section Education and the tables attached thereto (q v) showing in great detail the educational status of the administration.

There is a University at Patna, whose functions are described under the Indian Universities (q v).

Medical.

The Medical Department is under the control of the Inspector-General of Civil Hospitals who is a Member of the Indian Medical Service. Under him there are 21 Civil Surgeons who are responsible for the medical work of the districts at the headquarters of which they are stationed. 61 Dispensaries are maintained by Government in addition to 612 Dispensaries maintained by Local bodies, Railways, private persons, etc. 6,781,880 patients including 87,153 in-patients were treated in all the dispensaries in 1929. The total income of the dispensaries maintained by Government and Local Bodies including that of the private aided institutions amounted to Rs. 40,13,563.

A large mental hospital for Europeans has been opened at Ranchi which receives patients from Northern India. A similar institution for Indians has been opened at Ranchi since September 1925 for the treatment of patients from Bihar and Orissa and Bengal. An institute for radium treatment has also been established at Patna.

A medical college has been opened at Patna and the Medical School which was in existence at Patna has been transferred to Darbhanga.

THE FINANCES OF BIHAR AND ORISSA

As Bihar now enjoys practical financial autonomy, the finances are set out in greater detail

| (In thousands of Rupees) | | (In thousands of Rupees) | |

The Central Provinces and Berar.

The Central Provinces and Berar are situated in the heart of India, and are bounded on the north by the Vindhya Range, on the south by the Narmada River, on the east by the Eastern Ghats, and on the west by the Arabian Sea. The area of the province is 1,10,000 square miles, and the population is 10,00,000. The climate is generally hot and dry, with a maximum temperature of 120° F. and a minimum of 60° F. The rainfall is about 40 inches per annum. The principal occupations of the people are agriculture, stock raising, and handicrafts. The principal crops are wheat, rice, and pulses. The principal animals are cattle, sheep, and goats. The principal handicrafts are spinning, weaving, and pottery. The principal towns are Jabalpur, Bhopal, and Nagpur. The principal rivers are the Narmada, Tapti, and Indus. The principal mountains are the Vindhya Range, the Eastern Ghats, and the Western Ghats. The principal lakes are the Jabalpur Lake, the Bhopal Lake, and the Nagpur Lake. The principal forests are the Jabalpur Forest, the Bhopal Forest, and the Nagpur Forest. The principal industries are agriculture, stock raising, and handicrafts. The principal exports are wheat, rice, and pulses. The principal imports are cloth, sugar, and oil. The principal occupations of the people are agriculture, stock raising, and handicrafts. The principal crops are wheat, rice, and pulses. The principal animals are cattle, sheep, and goats. The principal handicrafts are spinning, weaving, and pottery. The principal towns are Jabalpur, Bhopal, and Nagpur. The principal rivers are the Narmada, Tapti, and Indus. The principal mountains are the Vindhya Range, the Eastern Ghats, and the Western Ghats. The principal lakes are the Jabalpur Lake, the Bhopal Lake, and the Nagpur Lake. The principal forests are the Jabalpur Forest, the Bhopal Forest, and the Nagpur Forest. The principal industries are agriculture, stock raising, and handicrafts. The principal exports are wheat, rice, and pulses. The principal imports are cloth, sugar, and oil.

The Country

The Central Provinces and Berar are situated in the heart of India, and are bounded on the north by the Vindhya Range, on the south by the Narmada River, on the east by the Eastern Ghats, and on the west by the Arabian Sea. The area of the province is 1,10,000 square miles, and the population is 10,00,000. The climate is generally hot and dry, with a maximum temperature of 120° F. and a minimum of 60° F. The rainfall is about 40 inches per annum. The principal occupations of the people are agriculture, stock raising, and handicrafts. The principal crops are wheat, rice, and pulses. The principal animals are cattle, sheep, and goats. The principal handicrafts are spinning, weaving, and pottery. The principal towns are Jabalpur, Bhopal, and Nagpur. The principal rivers are the Narmada, Tapti, and Indus. The principal mountains are the Vindhya Range, the Eastern Ghats, and the Western Ghats. The principal lakes are the Jabalpur Lake, the Bhopal Lake, and the Nagpur Lake. The principal forests are the Jabalpur Forest, the Bhopal Forest, and the Nagpur Forest. The principal industries are agriculture, stock raising, and handicrafts. The principal exports are wheat, rice, and pulses. The principal imports are cloth, sugar, and oil.

The People

The population of the province is a composite of many different races and tribes. The early inhabitants were the Aryans, who came to India from the north. They were followed by the Dravidians, who came from the south. The next to come were the Mongolians, who came from the east. The last to come were the Europeans, who came from the west. The principal occupations of the people are agriculture, stock raising, and handicrafts. The principal crops are wheat, rice, and pulses. The principal animals are cattle, sheep, and goats. The principal handicrafts are spinning, weaving, and pottery. The principal towns are Jabalpur, Bhopal, and Nagpur. The principal rivers are the Narmada, Tapti, and Indus. The principal mountains are the Vindhya Range, the Eastern Ghats, and the Western Ghats. The principal lakes are the Jabalpur Lake, the Bhopal Lake, and the Nagpur Lake. The principal forests are the Jabalpur Forest, the Bhopal Forest, and the Nagpur Forest. The principal industries are agriculture, stock raising, and handicrafts. The principal exports are wheat, rice, and pulses. The principal imports are cloth, sugar, and oil.

Industries

The Central Provinces and Berar are rich in natural resources, and have a long history of industry. The principal industries are agriculture, stock raising, and handicrafts. The principal crops are wheat, rice, and pulses. The principal animals are cattle, sheep, and goats. The principal handicrafts are spinning, weaving, and pottery. The principal towns are Jabalpur, Bhopal, and Nagpur. The principal rivers are the Narmada, Tapti, and Indus. The principal mountains are the Vindhya Range, the Eastern Ghats, and the Western Ghats. The principal lakes are the Jabalpur Lake, the Bhopal Lake, and the Nagpur Lake. The principal forests are the Jabalpur Forest, the Bhopal Forest, and the Nagpur Forest. The principal industries are agriculture, stock raising, and handicrafts. The principal exports are wheat, rice, and pulses. The principal imports are cloth, sugar, and oil.

Commerce and Manufactures

Industrial life is only in its earliest development except in one or two centres, where the introduction of modern enterprise along the railway routes has laid the foundations for great future developments of the natural wealth of the province. Nagpur is the chief centre of a busy cotton spinning and weaving industry. The Empress Mills, owned by Parsi manufacturers, were opened there in 1877 and the general prosperity of the cotton trade has led to the addition of many mills here and in other parts of the province. The total amount of spun yarn exported from the Province during the year ending 31st March 1930 was 1,83,897 maunds, valued at Rs 55,18,910.

The largest numbers engaged in any of the modern industrial concerns are employed in manganese mining which in 1920 employed 2,037 persons and raised 621,905 tons. Then follow coal mining with an output of 882,331 tons and 7,656 persons employed, the Jubbulpore marble quarries and allied works, the limestone quarries and the mines for pottery clay, soapstone, etc.

The total number of factories of all kinds legally so described was 902 in 1930, the latest period for which returns are available and the number of people employed in them 68,856. The same economic influences which are operative in every progressive country during its transition stage are at work in the C P and Berar, gradually sapping the strength of the old village industries, as communications improve, and concentrating industries in the towns. While the village industries are fading away, a large development of trade has taken place. The last pre-war reports showed an increase in volume by one-third in eight years.

Administration

The administration of the Central Provinces and Berar is conducted by a Governor-in-Council, who is appointed by the Crown. He is assisted by eight Secretaries and five under-secretaries. Under the reform scheme the administration is conducted by a Governor with an Executive Council of two members, one of whom is a non-official and two Ministers, the latter being in charge of the transferred subjects.

The local legislature consists of 73 members distributed as follows—38 elected from the C P, 17 elected from Berar, 2 members of the Executive Council, 8 nominated non-officials, 8 nominated officials. The Governor (who is not a member of the Council) has the right of nominating two additional members with special knowledge on any subject regarding which legislation is before the Council. The C P are divided for administrative purposes into three divisions and Berar constitutes another division. Each of these is controlled by a Commissioner. The divisions are sub-divided into districts, each of which is controlled by a Deputy Commissioner, immediately subordinate to the Commissioner. The principal heads of Provincial departments are the Commissioner of Settlements and Director of Land Records, the Chief Conservator of Forests, the Inspector-General of Civil Hospitals, the Director of Public Health, the Inspector General of Police,

the Inspector-General of Prisons, the Director of Public Instruction, the Excise Commissioner and Superintendent of Stamps and Inspector General of Registration, and Registrar-General of Births, Deaths and Marriages, the Director of Agriculture, the Registrar of Co-operative Societies, the Director of Industries, the Legal Ramembrancer, the Director of Veterinary Services and the two Chief Engineers, Public Works Department, Buildings and Roads and Irrigation Branches. The Deputy Commissioners of districts are the chief revenue authorities and District Magistrates and they exercise the usual powers and functions of a district officer. The district forests are managed by a forest officer, over whom the Deputy Commissioner has certain powers of supervision, particularly in matters affecting the welfare of the people. Each district has a Civil Surgeon who is generally also Superintendent of the District Jail except at Central Jails at Nagpur and Jubbulpore and District Jails at Raipur, Narsinghpur, Amraoti and Akola where there are whole time Superintendents and whose work is also in various respects supervised by the Deputy Commissioner. The Deputy Commissioner is also Marriage Registrar and manages the estates of his district which are under the Court of Wards. In his revenue and criminal work the Deputy Commissioner is assisted by (a) one or more Assistant Commissioners, or members of the Indian Civil Service, (b) one or more Extra Assistant Commissioners, or members of the Provincial Civil Service, usually natives of India, but including a few Europeans and Anglo-Indians and (c) by Tahsildars and Naib Tahsildars, or members of the Subordinate service who are nearly always natives of India. The district is divided for administrative purposes into tahsils, the average area of which is 1,500 square miles. In each village a lambardar or representative of the proprietary body is executive headman.

Justice

The Court of the Judicial Commissioner is the highest court of appeal in civil cases, and also the highest court of criminal appeal and revision for the Central Provinces and Berar including proceedings against European British subjects and persons jointly charged with European British subjects.

The Court sits at Nagpur and consists of a Judicial Commissioner and 4 Additional Judicial Commissioners of whom one at least must be an advocate of the Court or a Barrister or pleader of not less than 10 years' standing.

Subordinate to the Judicial Commissioner's Court are the District and Sessions Judges (12 in number) each of whom exercises civil and criminal jurisdiction in a Civil and Sessions district comprising one or more Revenue districts. The civil staff below the District and Sessions Judge consists of Subordinate Judges of the first and second class.

Local Self-Government.

Municipal administration was first introduced under the Punjab Municipal Acts and the Municipality of Nagpur dates from 1864. Several

in which instruction is given both in English and the Vernacular. In the High School classes instruction until recently was given in English but the vernacular was adopted as the medium of instruction at the beginning of the school year 1922-23. For the convenience of pupils whose mother tongue is not a recognised vernacular of the locality a few English medium classes are still maintained. For administrative purposes schools are further divided according to their management into schools under public management and schools controlled by private bodies. The former consist of (a) schools controlled by Government and (b) schools controlled by Local Bodies or Boards. The latter consist of (a) Schools which are aided by grant from Government or from Local Funds and Municipal Funds and (b) unaided schools. All schools under public management, all aided schools and all unaided recognized schools conform in their courses of study to the standards prescribed by the Education Department or by the High School Education Board. They are subject to inspection by the Department and to the general rules governing schools of this type. They are "recognised" by the Department and their pupils may appear as candidates for any prescribed examination for which they are otherwise eligible. Unaided recognized schools do not follow the rules of the Department, nor are they subject to inspection by the Department. They are mostly indigenous schools which have been too recently opened to have acquired "recognition". Their pupils may not appear as candidates at any of the prescribed examinations without the previous sanction of the Department.

The Primary Education Bill which was passed by the Local Legislative Council in March 1920 marks an important stage by giving Local Bodies power to introduce compulsory education in the areas under their jurisdictions.

Higher education is at present given in five colleges. In Nagpur Morris College teaches up to the M.A. standard in Arts. Hislop College is affiliated up to the M.A. standard in Arts. The College of Science teaches up to the M.Sc. standard in Science. In Jubbulpore Robertson College teaches up to the B.A. and B.Sc. standards. The King Edward College teaches up to the B.A. degree in Arts and the Intermediate degree in Science. The province contains also a Teachers' Training College at Jubbulpore and Normal Schools at different centres in the province and an Engineering School at Nagpur. There is a Technical Institute at Amraoti, which is controlled by the Department of Industries. There is also an Agricultural College at Nagpur under the Department of Agriculture.

Collegiate Education is under the control of the University of Nagpur to which the colleges of the province are affiliated. The University was established by the Nagpur University Act of 1923. A University Law College has been established at Nagpur with effect from the 1st July 1925.

As a corollary to the Central Provinces University Act the Central Provinces High School Education Bill was passed in 1923. Its aim is to free the High Schools of the Province from the control of the University and from this point of view to substitute for the University a Board

of Secondary Education for the regulation and control of Secondary Education. In order, however, that the connection between Secondary and University Education may still be maintained the Bill provides that one-third of the members of the Board will be drawn from men experienced in university affairs and that of this one-third not less than two-thirds shall be teachers in the University or in colleges affiliated thereto. At the same time teachers engaged in school work are also represented on the Board.

Medical

The medical and sanitary services of the province are respectively controlled by an Inspector-General of Civil Hospitals and a Director of Public Health. The medical department has made much progress since the year 1911. A striking advance has been made in recent years with urban sanitation, and the opening of a Medical School at Nagpur. The principal medical institutions are the Mayo Hospital at Nagpur, opened in 1874, with accommodation for 213 in-patients, the Victoria Hospital at Jubbulpore, opened in 1886, and accommodation for 105 in-patients, the Lady Dufferin Hospital and the Muir Memorial Hospital at Nagpur and the Lady Elgin Hospital and the Crump Children's Hospital at Jubbulpore, these last four being for women and children and containing together accommodation for 200 in-patients. Two important hospitals for women have been recently opened at Chhindwara and Khandwa, and at all district headquarters where no separate women's hospitals exist, sections of the Main Hospitals have been opened for the treatment of women by women. The Mayo Hospital, Nagpur, was provincialised in 1923, the Main Hospital at Amraoti in 1925, the Victoria Hospital at Jubbulpore in 1926, and the Main Hospital at Raipur in 1928. In accordance with recent policy, 120 out of 179 local fund dispensaries have been transferred to the administrative and executive control of local bodies. The Province has one Mental Hospital at Nagpur. Vaccination is compulsory in nearly all Municipal towns to which the Vaccination Act has been extended. The Government in 1913 sanctioned the opening of peripatetic dispensaries in unhealthy areas. There are at present 39 such dispensaries. A school for training health workers has been started at Nagpur and 48 Infant Welfare Centres have been opened. A start in the direction of opening a Health Institute has been made with the initiation of chemical and bacteriological works with a small staff in Nagpur.

Finances.

The budget presented this year was a progressive one. Its success was in no small measure due to the cautious and skilful handling of the provincial finances in the post reform period by successive finance members. The willingness of the Council to submit to new taxation during the depressing days of 1923 was another factor that tended to maintain the equilibrium of the finances. The shadow of famine brooded over the northern districts in the provinces in the current year, but Government lost no time in extending relief on a lavish scale, with the result that the outlook is more hopeful.

FINANCES OF THE CENTRAL PROVINCES

ESTIMATED REVENUE FOR 1931-32.

Principal Heads of Revenue

| | Rs. |
|-----------------------|--------------------|
| Taxes on Income | 25,000 |
| Land Revenue | 2,48,00,000 |

North-West Frontier Province.

The North-West Frontier Province, as its name denotes, is situated on the north-west frontier of the Indian Empire. It is in form an irregular strip of country lying north by east and south by west and may generally be described as the tract of country, north of Baluchistan, lying between the Indus and the Durand boundary line with Afghanistan. To the north it extends to the mountains of the Hindu Kush. From this range a long broken line of mountains runs almost due south, dividing the province from Afghanistan, until the Sulaiman Range eventually closes the south of the Province from Baluchistan. The greatest length of the province is 408 miles, its greatest breadth 279 miles and its total area about 39,000 square miles. The territory falls into three main geographical divisions: the Cis-Indus district of Hazara, the narrow strip between the Indus and the Hills, containing the Districts of Peshawar, Kohat, Bannu and Dera Ismail Khan, and the rugged mountainous regions on the north and west between those districts and the border line of Afghanistan. Hazara and the four districts in the second division contain 13,518 square miles. The mountain regions, north and west, are occupied by tribes subject only to the political control of the Chief Commissioner in his capacity as Agent to the Governor-General. The area of this tract is roughly 25,500 square miles and in it are situated, from north to south, the political agencies severally known as the Malakand, Khyber, Kurram, North Waziristan and South Waziristan Agencies. Each of the Deputy Commissioners of the five administered districts is responsible for the management of political relations with certain tribes or sections of the tribes across the frontier. A few hundred miles of the trans-border Territory are internally administered by the Political Agents, but the bulk of the trans-border population is free from any internal interference, so long as offences are not committed and so long as the tribes observe the conditions on which allowances are paid to many of them.

The area of the Province is a little more than half that of Bombay (excluding Sind and Aden) and amounts to more than three fifths of the size of England without Wales. The density of population throughout the Province equals 130 persons to a square mile, but in the more favoured portions the pressure of population is much greater. In the Hazara District there are 208 persons to a square mile and in the trans-Indus plains tract the number is 156. The key to the history of the people of the N-W-F-P lies in the recognition of the fact that the valley of Peshawar was always more closely connected politically with Eastern Iran than with India, though in pre-Mahomedan times its population was mainly Indian by race. Early history finds the Iranians dominating the whole Indus valley. Then came the Greek invasion under Alexander the Great, in B.C. 327, then the invasions of

the Sakas, and of the White Huns and later the two great waves of Muhammadan invasion. Last came the Sikhs' invasion beginning in 1818. The Frontier Territory was annexed by the British in 1849 and placed under the control of the Punjab Government. Frequent warfare occurred with the border tribes. The most serious phases of these disturbances were the war provoked by the aggression of Afghanistan in 1919 and the protracted punitive operations against the Waziris in 1919-1920. These have resulted in the establishment at Razmak, a position dominating the Mahsud Waziri country, of a permanent garrison of 10,000 troops drawn mostly from stations lying in the Plains immediately below the hills. A circular road from Bannu, through Razmak to Sararogha, Jandola and back to the Derajat provides communications transport with this force and facilitates its mobility. The effect of this measure has been a marked improvement in the internal peace of the Tribal area.

The division of the Frontier Province from the Punjab has frequently been discussed, with the double object, in the earlier stages of these debates, of securing closer and more immediate control and supervision of the Frontier by the Supreme Government and of making such alterations in the personnel and duties of frontier officials as would tend to the establishment of improved relations between the local British representatives and the independent tribesmen. The province was eventually removed from the control of the Punjab administration in 1901. To it was added the political charge of Dir, Swat and Chitral, the Political Agent of which had never been subordinate to the Punjab. The new Province was constituted under a Chief Commissioner and Agent to the Governor-General, with headquarters at Peshawar, in direct communication with the Government of India in the Foreign and Political Department. In political questions there is no intermediary between the Chief Commissioner and the local officer, an arrangement designed to secure both prompt disposal of references and the utilisation of the expert knowledge of frontier conditions for which the head of the administration is selected. The advisability of reuniting the Province with the Punjab was much discussed in certain Indian political circles and as a result of the views expressed upon the matter in the Legislative Assembly the Government of India in 1922 appointed a Committee of officials and unofficials to investigate it. The Committee, presided over by Mr. D. de S. Bray, M.L.A., Joint Foreign Secretary, toured the Frontier Province and the Punjab and heard numerous witnesses. Its members were Messrs. Raza Ali, M.C.S., T. Rangacharia, Chaudhri Shahabuddin, N. M. Samarth and K. B. Abdur Rahim Khan, members of the Legislative Assembly, H. N. Bolton, I.C.S. (Foreign Dept.) and A. H. Parker, I.C.S. (Punjab) (members). The inquiry developed practically into a contest between

Mahomedans and Hindus on communal lines. The Hindus killed in sympathy with their co-religionists in the Punjab demanded the reunion of the administered districts of the Province with the Punjab or, if that were not attainable, then the placing of the judicial administration of the Province under the Punjab High Court at Lahore. The Mahomedans on the other hand claimed the right of their Province to a status corresponding with that enjoyed by other Provinces of India and to immediate reforms initiating and providing for progress along that line. The Hindus argued that a separate Pathan Province on the Frontier would cause a dangerous sentimental division from the rest of India, with leanings towards the allied racial elements outside British India. The answer to that was that a contented Pathan Province would be a valuable buttress against hostile feeling across the border. The Committee's deliberations ended in disagreement, the two Hindu members writing each a separate report favourable to the Hindu viewpoint already explained, and the majority of the Committee, comprised of all its other members recommending advance on a Provincial basis. Their principal recommendations were for—

Retention of the Settled Districts and Tribal Tracts as a separate unit in charge of a minor administration under the Government of India,

Early creation of a Legislative Council for the Settled Districts and appointment of Members of Council and Minister,

Appointment of a second Judicial Commissioner which has since been sanctioned and reform of the judicial administration in various directions, including interchange of officers with the Punjab, so that the members of the Service in the smaller Province should have the advantage of experience in the larger one.

'If (concluded the Majority) the Pathan nationality is allowed self-determination and given scope for that self-development within the Indian Empire under the Reform Scheme after which it is now striving we are assured that, with a contented Frontier population India can face with calm resolution the future that the Frontier has in store for her."

The People.

The total population of the N-W F P (1931) is 4,682,685, made up as follows —

| | |
|-----------------------|-----------|
| Pazara | 669,636 |
| Trans-Indus Districts | 1,753,744 |
| Trans-Border Area | 2,259,305 |

This last figure is estimated. There are only 361 3 females per 1,000 males in the towns, and 872 2 females per 1,000 males in rural areas.

This disproportion of the sexes cannot at present be explained in the N-W F P any more than in other parts of Northern India where it also appears. The discrepancy is greater here than in any other Province of India. There is no ground for believing that the neglect of girls in infancy has any effect in causing the phenomenon. On the other hand, the female population has to face many trials which are unknown to men. The evils of unskilled mid-

wifery and early marriage are among them. Both the birth and death-rates of the Province are abnormally low. The birth rate in the administered districts, according to the last available official reports, is 25 3 and the death-rate 21 0.

The dominant language of the Province is Pashtu and the population contains several lingual strata. The most important sections of the population, both numerically and by social position, are the Pathans. They own a very large proportion of the land in the administered districts and are the ruling race of the tribal areas to the west. There is a long list of Pathan, Baluch, Rajput and other tribal divisions. Gurkhas have recently settled in the Province. The Mahomedan tribes constitute almost the whole population, Hindus amounting to only 5 per cent of the total and Sikhs to a few thousands. The occupational cleavage of the population confuses ethnical divisions.

Under the North-West Frontier Province Law and Justice Regulation of 1901, custom governs all questions regarding successions, betrothal, marriage, divorce, the separate property of women, dower, wills, gifts, partitions, family relations such as adoption and guardianship, and religious usages and institutions, provided that the custom be not contrary to justice, equity or good conscience. In these matters the Mahomedan or Hindu law is applied only in the absence of special custom.

Climate, Flora and Fauna

The climatic conditions of the N-W F P which is mainly the mountainous region, but includes the Peshawar Valley and the riverine tracts of the Indus in Dera Ismail Khan District, are extremely diversified. The latter district is one of the hottest areas of the Indian continent, while on the mountain ranges the weather is temperate in summer and intensely cold in winter. The air is generally dry and hence the annual ranges of temperature are frequently very large. The Province has two wet seasons, one the S-W Monsoon season, when moisture is brought up from the Arabian Sea and the Bay of Bengal the other in winter, when storms from Mesopotamia, Persia and the Caspian Districts bring widespread rain and snowfall. Both sources of supply are precarious and not infrequently either the winter or the summer rainfall fails almost entirely. The following description of the Daman, the high ground above the Indus, stretching across Dera Ismail Khan to the mountains on the west, occurs in an account written some years ago by Captain Crosthwaite. "Men drink once a day and the cattle every second day. Washing is an impossible luxury. It is possible in the hot weather to ride thirty miles and neither hear a dog bark nor see the smoke of a single fire." With the exception of the Kunhar River, in Hazara, which flows into the Jhelum, the whole territory drains into the Indus. The flora of the Province varies from the shrubby jungle of the south eastern plains to barren hills, pine forests and fertile mountain valleys. Tigers used to abound in the forests but are

now quite extinct, leopards, hyenas, wolves, jackals and foxes are the chief carnivora. Bears, deer and monkeys are found, a great variety of fish is caught in the Indus.

The mountain scenery is often magnificent. The frontier ranges contain many notable peaks of which the following are the principal —

Takht-i-Sulaiman, Sulaiman Range, in Dera Ismail Khan, 11,292 feet

Pre Ghal, Sulaiman Range, in Mahsud Waziristan, 11,583 feet

Sika Ram, in the Safed Koh, in the Kurram Agency, 15,621 feet

Kagan Peaks of the Himalayas, in the Hazara District, 10,000 to 16,700 feet

Istragh Peak (18,900 ft.), Kachin Peak (22,641 ft.), Tirich Mir (25,426 ft.), all in the Hindu Kush, on the northern border of Chitral Agency

Trade and Occupations

The population derives its subsistence almost wholly from agriculture. The Province is practically without manufactures. There is no considerable surplus of commercial products for export. Any commercial importance which the province possesses it owes to the fact that it lies across the great trade routes which connect the trans-border tribal territories and the marts of Afghanistan and Central Asia with India, but the influence of railways is diminishing the importance of these trading interests. Special mention may be made of the railway comparatively recently opened linking Baluchistan, in the south-west of the N-W F P, via Nushki with south east Persia. The line connects with the north-west railway system of India and extends 343 miles to Duzdap, within the Persian border. Two weekly trains run each way and the freight carried largely consists of carpets, wool and dates, from Persia and of tea, sugar and piece-goods from the Indian side. Though the railway is primarily strategic in purpose its commercial and political effects will be considerable. The travelling traders (or Powin dahs) from the trans-frontier area have always pursued their wanderings into India and now, instead of doing their trading in towns near the border, carry it by train to the large cities in India. The Railway line from Pir to Lankitshina which is complete and open to public traffic now will similarly in course of time, develop both the manner and amount of transport communications and trade. The new roads in Waziristan are already largely utilised by the Tribal inhabitants for motor traffic. Prices of agricultural produce have in recent years been high, but the agriculturists, owing to the poverty of the means of communication, have to some extent been deprived of access to Indian markets and have therefore been unable to profit by the rates prevailing. On the other hand, high prices are a hardship to the non-agricultural classes. The effects of recent extensions of irrigation have been important. Land tenures are generally the same in the British administered districts as in the Punjab. The cultivated area of the land amounts to 25 per cent and uncultivated to 75 per cent.

The work of civilisation is now making steady progress, both by the improvement of communications and otherwise. Relations with the tribes

have improved, trade has advanced, free medical relief has been vastly extended, police administration has been reformed and the desire of people for education has been judiciously and sympathetically fostered, though in this respect there is complaint against the limitations imposed by financial embarrassments. In the British administered districts 19 per cent males and 7 per cent females of the total population are returned as literates. The figures for males denote a very narrow diffusion of education even for India. Those for females are not notably low, but they are largely affected by the high literacy amongst Sikh women, of whom 13.3 per cent are returned as literate. The inauguration of a system of light railways throughout the Province, apart from all considerations of strategy, must materially improve the condition of the people and also by that means strengthen the hold of the administration over them. The great engineering project of the Upper Swat River Canal, which was completed in 1914, and the lesser work of the Paharpur Canal, also completed a few years ago, will bring ease and prosperity to a number of peasant homes.

Administration

The administration of the North-West Frontier Province has until 1932 been conducted by the Chief Commissioner and Agent to the Governor General in Council. His staff consists of—

- (1) Officers of the Political Department of the Government of India
- (2) Members of the Provincial Civil Service
- (3) Members of the Subordinate Civil Service
- (4) Superintendents and Assistant Superintendents of Police
- (5) Officers recruited for the service of departments requiring special knowledge—Militia, Engineering, Education, Medicine and Forestry

The cadre posts reserved for officers coming under the first head above are —

| | | |
|--|--|----|
| Administration | Chief Commissioner & Agent to the Governor-General | 5 |
| | Secretary | |
| | Under-Secretary | |
| | Personal Assistant | |
| | Revenue Commissioner and Revenue Secretary | |
| | Resident in Waziristan | 1 |
| | Deputy Commissioners | 5 |
| | Political Agents | 5 |
| | District Judges | 2 |
| | Assistant Commissioners and Assistant Political Agents | 13 |
| Judicial Commr's Court & District Judges | Two Judicial Commissioners | 1 |
| | Two District and Sessions Judges | |
| | One Additional ditto | |

The districts under the Deputy Commissioners are divided into from two to five sub-collectorates in charge of tahsildars, who are

invested with criminal and civil and revenue powers, and are assisted by judicial officers, who exercise only criminal and revenue powers. Some subdivisions are in charge of Assistant or Extra Assistant Commissioners. The village community characteristic of some parts of India is not in evidence among the Pathans. Its place as a social unit is to some extent taken by the tribe, which is held together by the ties of kinship and ancient custom, real or imagined. Modern municipal local government has been introduced in the towns. There are also district boards. The district is the unit for police, medical and educational administration and the ordinary staff includes a District Superintendent of Police, a Civil Surgeon, the Superintendent of Jail and a District Inspector of Schools. The Province forms a single electoral circle and only possesses one forest division, that of Hazara. There are four divisions of the Roads and Buildings Branch of the Public Works Department, each under an Executive Engineer. The Irrigation Department of the P.W.D. is in charge of a Chief Engineer, Irrigation, who is also *ex-officio* Secretary to the Chief Commissioner. The administration of the civil police force of the districts is vested in an Inspector-General. There is a special force of Frontier Constabulary. The revenue and expenditure of the Province are wholly Imperial. Of the Agencies only Kurram and Tochi Valley pay land revenue to the British Government. The revenue administration of all five administered districts is controlled by the Revenue Commissioner. For the administration of civil and criminal justice there are two Civil and Sessions districts, each presided over by a District and Sessions Judge. The two Judicial Commissioners are the controlling authority in the judicial branch of the administration, and their Courts are the highest criminal and appellate tribunals in this Province. The improvements needed to bring the judicial administration up-to-date, in accord with the growth of the business of administration, are dealt with in the Inquiry Committee's report to which reference was made above.

A Governor's Province—In January 1932 it was announced that the Province would be constituted as a Governor's Province, and the application to the Province of the provisions of the Government of India Act was gazetted, subject to the following modifications—

- that the number of members of the Legislative Council shall be forty,
- that the maximum annual salary of the Governor shall be Rs 66,000, and of a member of the Executive Council Rs 42,000, and
- that Section 58 of the said Act shall cease to have effect in its application to the Province. This notification shall have effect from such date or dates in respect of any or all provisions as may be notified.

Electoral rules were notified in February 1932.

The Administration

The principal officers in the present Administration are—

Agent to the Governor General and Chief Commissioner. The Hon'ble Lieut-Col Sir Ralph Griffith, Kt, C.I.E., (Assumed charge 10th Sept 1931)

- Deputy Commissioner, Captain N. B. Burge*
Deputy Commissioner, B. J. Gould, C.M.G., C.I.E., I.C.S.
- Judicial Commissioner, I. H. R. Fraser, C.I.E., O.B.E., I.C.S.*
- Additional Judicial Commissioner, Khan Bahadur Saaluddin Khan, B.A., H.B.*
- Deputy Commissioner, Lieut-Col M. J. Rie*
Secretary to Chief Commissioner, C. H. Gidney, I.C.S.
- Under Secretary to Chief Commissioner, Capt H. A. Barnes*
- Assistant Financial Secretary to Chief Commissioner, Rai Bahadur Lala Chunil Lal*
- Indian Personal Assistant to Chief Commissioner, Khan Sahib Haji Gulam Naqshband Khan*
- Secretary, Public Works Department Building and Roads Branch, Colonel H. S. Gaskell, D.S.O., R.E.*
- Secretary, Public Works Department, Irrigation Branch, I. H. Burkhitt, C.I.E., O.B.E.*
- Chief Medical Officer, Lieut-Col C. I. Brierley, C.I.E., I.M.S.*
- Inspector General of Police, J. H. Adam, O.B.E.*
Commandant, Frontier Constabulary, V. A. Short
Director of Public Instruction, J. H. Towle, I.E.S., H.A.
- Superintendent, Archaeological Survey, Frontier Circle, J. F. Blackston*
- District and Sessions Judge, J. Almond, Bar-at-Law, I.C.S. (Peshawar)*
K. B. Arbab Wali Muhammad Khan (Derajat)
- Political Agents*
Captain W. R. Hay, Dir Swat and Chitral
Major J. W. Thomson-Glover, C.B.E., Khayber
Captain K. C. Packman North, Waziristan
Capt B. P. Ross Hurst, M.C., Kurram
Brevet-Major H. H. Johnson, M.M., South Waziristan
- Deputy Commissioners*
A. J. Hopkinson, I.C.S., Hazara
O. K. Caroe, I.C.S. Peshawar
Lieut-Col E. W. C. Noel, C.I.E., D.S.O., Dera Ismail Khan
L. W. H. D. Best, O.B.E., M.C., I.C.S., Kohat
Captain W. F. Campbell, Bannu
- Former Chief Commissioners*
Lieutenant-Colonel Sir Harold Deane, K.C.S.I., from 9th November 1901 to 3rd June 1908
Died 7th July 1908
Lieutenant-Colonel Sir George Roos-Keppel, G.C.I.E., K.C.S.I., from 4th June 1908 to 9th September 1919
The Hon'ble Sir Alfred Hamilton Grant, K.C.S.I., K.C.I.E., from 10th September 1919 to 7th March 1921
The Hon'ble Sir John Loader Maffey, K.C.V.O., C.S.I., I.C.S., from 8th March 1921 to 6th July 1923
The Hon'ble Sir Horatio Norman Bolton, K.C.I.E., C.S.I., I.C.S., from 7th July 1923 to 30th April 1930
The Hon'ble Sir Stuart Pears, K.C.I.E., C.S.I., I.C.S., from 10th May 1930 to 9th September 1931

Assam.

The Province of Assam, omitting the partly administered and unadministered tracts on its northern and eastern borders, comprises an area of some 87,334 square miles. It includes the Assam Valley Division, the Surma Valley and Hill Division and the State of Manipur. It owes its importance to its situation on the north-east frontier of India. It is surrounded by mountainous ranges on three sides while on the fourth (the west) lies the Province of Bengal on to the plains of which debouch the two valleys of the Brahmaputra and the Surma which form the plains of Assam. These two valleys are separated from each other by the Assam Range, which projects westward from the hills on the eastern border.

Population

The total population of the Province in 1931 was 9,247,857, of whom 445,606 were in Manipur. Of the population in 1931 nearly 5½ millions were Hindus, over 2½ millions were Muslims, a million belonged to tribal religions and a quarter of a million were Christians. 43 per cent of the population speak Bengali, 21 per cent speak Assamese other languages spoken in the province are Hindi, Uriya, Mundari, Nepali and a great variety of languages classified under the general heading of the Tibeto-Chinese languages. Owing to the great areas of waste and rivers the density of the province is only 137, which compared with that of most other parts of India is low.

Agricultural Products

It has agricultural advantages for which it would be difficult to find a parallel in any part of India, climate, soil, rainfall and river systems all being alike favourable to cultivation. Rice is the staple food crop, nearly 46,51,748 acres being devoted to this crop. Except in the Himalayan Terai irrigation is unnecessary. Tea and jute are the most important crops grown for export. The area under tea consists of 433,809 acres. Wheat and tobacco are also grown and about 32,994 acres are devoted to sugarcane.

Meteorological Conditions

Rainfall is everywhere abundant, and ranges from 67 to 229 inches. The maximum is reached at Cherrapunji in the Khasi Hills, which is one of the wettest places in the world, having a rainfall of 458 inches. The temperature ranges from 59 at Sibsagar in January to 84° in July. Earthquakes of considerable severity have taken place, by far the worst being that which occurred in 1897.

Mines and Minerals.

The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil. The most extensive coal measures are in the Naga Hills and the Lakhimpur districts, where about 350,000 tons are raised annually. Limestone is quarried in the Khasi and Jaintia Hills, in Sylhet, and in the Garo hills. Petroleum is worked only in Lakhimpur and Cachar.

An account of the petroleum occurrences in Assam was recently published in the

memoirs of the Geological Survey of India. It states that the petroleum localities in this province are confined to a curved belt of country along the basins of the Brahmaputra and Surma. This belt is traceable over a distance of some 800 miles from N.E. Assam through Cachar and Chittagong to the Arakan coast, where it has a S.S.E. trend.

Manufactures and Trade

Silk is manufactured in the Assam Valley, the weaving being done by the women. Cotton weaving is also largely practised by the women, and almost every house contains a loom, the cloth is being gradually displaced by imported goods of finer texture and colour. Tea manufacture is the most important industry of the province. Boat building, brass and metal and earthenwares, and limestone burning are the other industries apart from agriculture, which itself employs about 89 per cent of the population. Assam carries on a considerable trade with the adjoining foreign tribes and countries.

Communications

Much of the trade of Assam is carried by river. The excellence of its water communications makes the province less dependent upon roads than over parts of India. A large fleet of steamers maintained by the India General Navigation Company and the Rivers Steam Navigation Company plies on the rivers in both Valleys. An alternate day service of passenger-boats runs between Goalundo and Dibrugarh. In recent years the road system has developed. There is an unmetalled trunk road through the length of the Assam Valley and excellent metalled roads from Shillong to Gauhati and to Cherrapunjee and also between Dimapur, on the Assam Bengal Railway, and Imphal, the Capital of the Manipur State. A motor road, connecting Shillong with the Surma Valley, is under construction. The Government of Assam have recently launched into a large programme of road improvements. About 735 miles are to be bridged throughout and the surface improved by metalling and gravelling where possible. Kutch roads will be maintained by means of mechanical plant which has proved successful in maintaining, throughout the year, a surface fit for motor vehicles. Motor traffic has increased on all sides and the demands for better roads has been insistent. The open mileage of railway has also shown a steady improvement and several branch lines to the Assam Bengal Railway system have been added in recent years. The main Assam Bengal Railway line runs from Chittagong Port, in Bengal, through the North Cachar Hills to Tinsukia, a station on the Dibrugarh Railway and connects the Surma and Brahmaputra Valleys. A branch of the line runs from Badarpur to Silchar at the Eastern end of the Surma Valley and another runs through the west of the Assam Valley from Lumding to Gauhati where it effects a junction with the Eastern Bengal Railway. The Eastern Bengal Railway connects Assam with the Bengal system via the Valley of the Brahmaputra.

Administration

The province of Assam was originally formed in 1874 in order to relieve the Lieutenant-Governor of Bengal of part of the administration of the huge territory then under him. In 1905, as the result of further deliberations, it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant-Governor. The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912 the Eastern Bengal Districts were united with the Bengal Commissionerships of Burdwan and the Presidency to form the Presidency of Bengal under a Governor-in-Council, Bihar, Chota Nagpur and Orissa were formed into a separate province, while the old Province of Assam was re-constituted under a Chief Commissioner.

Under the Indian Reforms Act of 1919 the Province was raised in status to that of administration by a Governor-in-Council and was thereby ranked, with certain minor provinces, to suit its undeveloped character with the older major provinces of India.

The capital is Shillong, a town laid out with great taste and judgment among the pine woods on the slopes of the Shillong Range which rises to a height of 8,450 feet above the sea. It was destroyed in the earthquake of 1897 and has been rebuilt in a way more likely to withstand the shocks of earthquake.

GOVERNOR

H E Sir Egbert Laurie Lucas Hammond, K C S I, C B E, I O S (Michael Keane, Esq, C S I, C I E, Governor-Designate)

Baluchistan.

Baluchistan is an oblong stretch of country occupying the extreme western corner of the Indian Empire. It is divided into three main divisions: (1) British Baluchistan with an area of 9,476 square miles consisting of tracts assigned to the British Government by treaty in 1879, (2) Agency Territories with an area of 44,345 square miles composed of tracts which have, from time to time, been acquired by lease or otherwise brought under control and placed directly under British officers, and (3) the Native States of Kalat and Las Bela with an area of 80,410 square miles. The Province embraces an area of 134,638 square miles and according to the census of 1921 it contains 799,625 inhabitants.

The country, which is almost wholly mountainous, lies on a great belt of ranges connecting the Safed Koh with the hill system of Southern Persia. It thus forms a watershed the drainage of which enters the Indus on the east and the Arabian Sea on the south while on the north and west it makes its way to the inland lakes which form so large a feature of Central Asia. Rugged, barren, sunburnt mountains, rent by high chasms and gorges, alternate with arid deserts and stony plains, the prevailing colour of which is a monotonous sight. But this is redeemed in places by level valleys of considerable size in which irrigation enables much cultivation to be carried on and rich crops of all kinds to be raised.

The political connection of the British Government with Baluchistan commenced from the outbreak of the First Afghan War in 1839, it was traversed by the Army of the Indus and was afterwards occupied until 1842 to protect the British lines of communication. The districts of Kachi, Quetta and Mastung were handed over to the Amir of Afghanistan and Political Officers were appointed to administer the country. At the close of the First Afghan War, the British withdrew and these districts were assigned to the Khan of Kalat. The founder of the Baluchistan Province as it now exists was Sir Robert Sandeman who broke down the close border system and welded the Baluch and Brahui Chiefs into a close confederacy. In the Afghan War of 1879 Pishin, Shorapur, Sibi, Zawara Valley and Thal-Chotiali were handed over by Yakub Khan to the British Government and retained at Sir Robert Sandeman's strenuous insistence.

Industries

Baluchistan lies outside the monsoon area and its rainfall is exceedingly irregular and scanty. Shahrig, which has the heaviest rainfall, records no more than 11½ inches in a year. In the highlands few places receive more than 10 inches and in the plains the average rainfall is about 5 inches, decreasing in some cases to 3. The majority of the indigenous population are dependent for their livelihood

on agriculture, provision and care of animals and transport. The majority of the Afghan and the Baluch, as a rule, cultivate their own lands. The Brahuis dislike agriculture and prefer a pastoral life. Previous to the advent of the British, life and property were so insecure that the cultivator was fortunate if he reaped his harvest. The establishment of peace and security has been accompanied by a marked extension of agriculture which accounts for the increase in the numbers of the purely cultivating classes. The Makran Coast is famous for the quantity and quality of its fish and the industry is constantly developing. Fruit is extensively grown in the highlands and the export is increasing.

Education is imparted in 110 public schools of all kinds with 7,431 scholars. There is a distinct desire for education amongst the more enlightened headmen round about Quetta Pishin and other centres where the Local Government with its officers stays at certain seasons, such as Sibi and Ziarat, but on the whole education or the desire of it has made little or no advance in the outlying districts. The mineral wealth of the Province is believed to be considerable, but cannot be exploited until railways are developed. Coal is mined at Sharigh and Harnal on the Sind Pishin Railway and in the Bolan Pass. The output of coal in 1929-30 was 16,959 tons. Chromite is extracted in the Zhob District near Hindubagh. The chrome output fell off owing to poorer demand. Lime-stone is quarried in small quantities. The output of chromite during 1929-30 amounted to 17,906 tons.

Surveys, Col. station

The *Inspector General of Administration* is the officer *independent and Rele Governor-General and Chief of Administration* next in rank comes the *Revenue Commissioner* who controls the revenue administration. *General of Division* exercises the functions of a *Magistrate* and *Chief Commissioner* of the *Provincial Government* by the *tribe* as be, by means of their *Inspector General of Civil Supplies* along the ancient *Customs* J P Cameron, *Public Health*, the essence of which, *Police*, of the aggrieved and the *Police*, *Police*, not retaliation on the *Police* *Engineer*, E. vindictive punishment of a crime. *Police* levies play an unobtrusive but *Police* part in the work of the *Civil Administration*, not only in watch and ward and the investigation of crime, but also in the carrying of the mails, the serving of processes and other miscellaneous work. In addition to these district levies there are ordinarily three *Irregular Corps* in the Province, the *Zhob Militia*, the *Mekran Levy Corps* and the *Chagul Levy Corps*. The Province does not pay for itself and receives large subsidies from the Imperial Government.

Aden.

Aden is an extinct volcano, five miles long and three broad, jutting out to sea much as Gibraltar does, having a circumference of about 15 miles and connected with the mainland by a narrow isthmus of flat ground. This is nearly covered at one part at high spring tides, but the causeway and aqueduct are always above, though some times only just above water. The highest peak on the wall of precipitous hills that surrounds the old crater which constitutes Aden is 1,775 feet above sea level. Rugged spurs, with valleys between, radiate from the centre to the circumference of the crater. A great gap has been rent by some volcanic disturbance on the sea surface of the circle of hills and this opens to the magnificent harbour. The peninsula of Little Aden, adjacent to Aden proper, was obtained by purchase in 1868 and the adjoining tract of Sheikh Othman, 39 square miles in extent, was subsequently purchased when, in 1882, it was found necessary to make provision for an overflowing population.

Strategic Importance

Aden's first importance is as a naval and military station of strategic importance. It was seized in 1839 because of its usefulness as a harbour of refuge for British ships and from a strategist's point of view this is its primary purpose and the *raison d'être* of its forts and garrison. Aden under British rule has retained its ancient prestige as a fortress of impregnable strength, invulnerable by sea and by land, dominating the entrance to the Red Sea, and valuable to its owners as a commercial emporium, a port of call and a cable centre. The harbour extends 8 miles from east to west and 4 from north to south and is divided into two bays by a spit of land. The harbour is dredged to 30 below I S L W and is approached by a dredged cut of the same depth. This cut extends seaward to join the 5 fathom contour and thus gives a depth at low water spring tides of 5 fathoms for vessels entering the Port. The junction of this cut with the 5 fathom contour is marked by the fairway buoy which carries a flashing red light. The bottom is sand and mud. There are several islands in the inner bay. Strategic control of the Red Sea was rendered complete by the annexation of Perim and by a Protectorate treaty with the Sultan of Sokatra, which may both be regarded as outposts of Aden, and are under the political jurisdiction of the Resident.

The language of the settlement is Arabic, but several other Asiatic tongues are spoken. The population is chiefly returned as Arabs and Shaikhs. The Somalis from the African coast and Arabs do the hard labour of the port. So far as the settlement is concerned the chief industries are salt and cigarette manufacture. The crops of the tribal low country adjoining are fowar, sesamum, a little cotton, radder, a bastard saffron and a little indigo. In the hills, wheat, madder, fruit, coffee and a considerable quantity of wax and honey are

obtained. The water supply formed the most important problem. This appears to have been now nearly solved. An artesian supply of fresh water has been obtained at Sheikh Othman.

The discovery of artesian supplies of fresh water at Aden by the Bombay Government has removed one of the greatest hardships to the growth of that very important sea port, frequently referred to as the Gibraltar of the East and should cause much satisfaction to the residents, since the cost of sweet water hitherto only obtainable in normal years by distillation has been about fifty times higher than the water rates, usually payable to Municipalities in India. The urgent need of a fresh water supply at Aden can be realised the better when it is stated that it has a population of some 40,000 souls and that over 1,500 vessels enter the port annually, carrying on trade amounting to from 15 to 20 millions sterling per year. It is the only port at which ships call for water between the Suez Canal and India or Ceylon and up to the present time, this supply has been met by the costly process of condensing sea water.

The average temperature of the station is 87 degrees in the shade, the mean range being from 75 in January to 98 in June, with variations up to 102. The lull between the monsoons, in May and September, are very oppressive. Consequently, long residence impairs the faculties and undermines the constitution of Europeans and even Indians suffer from the effects of too long an abode in the settlement, and troops are not posted in the station for long periods, being usually sent there one year and relieved the next.

Aden and Bombay—The connection between Aden and British India began in 1839 when an expedition under Major Baillie took possession of what was then only a barren rock, and founded a Settlement there. This was treated as part of British India and included for administrative purposes in the Presidency of Bombay. But since the Settlement commanded the harbour, which is the natural centre of trade for the adjoining parts of Arabia and Africa, it was impossible for its affairs to be conducted without relation to the Arab tribes dwelling in the hinterland. The Resident of Aden consequently entered into relations with these tribes and with the rulers of remoter places such as Makalla and Shehr, Socotra, etc. To the tribes of the hinterland were extended guarantees of favour and protection in return for reciprocal undertakings. In those days Turkey claimed sovereignty over nearly the whole of the Arabian Peninsula and the development of relations between Aden and the adjoining peoples and rulers consequently brought His Majesty's Government into contract with the Turkish Empire.

Anglo-Turkish Boundary Commission—As a result of prolonged negotiations a joint Anglo-Turkish Boundary Commission was

appointed and in 1904-05 the boundary of the Hinterland or Protectorate, as it now began to be called, was demarcated. It was agreed on the one side that the Aden authorities should have no dealings with any indigenous ruler under Turkish suzerainty beyond the boundary then fixed, and on the other, that the Turks should not concern themselves with affairs inside that boundary. Matters continued thus until the outbreak of the Great War in 1914, when the Turks invaded the Protectorate and endeavoured to blockade the Settlement. For strategic reasons the direction of operations against this menace was transferred from Army Headquarters in India to the London War Office in 1917 and control of political relations with the Aden tribes and rulers necessarily accompanied this strategic transfer. The civil Administration of the Settlement as part of the Bombay Presidency was in no way affected by this change. After the war it was suggested that this too might be transferred, but the Indian Government objected and the project was dropped. Matters remained there, until 1927, when after much correspondence about the incidence of Aden expenditure, the arrangements of 1917, originally adopted as a war measure, were confirmed, and administrative as well as strategic control of the units composing the Aden garrison was also vested in His Majesty's Government.

The present position, therefore, is —

(1) The Aden Settlement to which Indian interests are confined, remains part of British India, included in the Bombay Presidency.

(2) The affairs of the Protectorate, in which India is not concerned, are dealt with by the Resident, who is also chief executive officer of the Settlement and Commander-in-Chief of the forces, under orders from the Colonial Office in London.

(3) Administrative and strategic control of the military and air forces in Aden is under the War Office in London.

The Resident is consequently under three authorities, namely —

(1) The Government of Bombay,

(2) The Government of India, and

(3) His Majesty's Government in London, an arrangement which makes smooth and efficient working very difficult.

The area of the Settlement of Aden is 75 square miles, the population in 1921 was

about 53,000. The racial composition of the population is as under —

| | |
|---------------|---------------|
| Arabs | 31,612 |
| Indians | 5,594 |
| Jews | 4,408 |
| Somalis | 6,551 |
| Miscellaneous | 4,867 |
| Total | 53,032 |

The Island of Perim has an area of about 5 square miles and a population of 2,075. The Aden Protectorate comprises an area of about 9,000 square miles and has an estimated population of 656,400.

Administration.—The chief executive officer (i.e., the Resident and Commander-in-Chief) has under him three Assistant Residents, the first and the third being officers of the Indian Political Department, and the second, an officer appointed by the Colonial Office in London, who is also the Protectorate Secretary. Judicial work is performed by a Judicial Assistant who is a member of the Indian Civil Service and is an Additional Sessions Judge. The Police are under the control of an officer of the Indian Police Service. The Island of Perim is also under the administration of the Resident. The civil administration generally follows the lines in force in India.

Finances.—Until 1900 the entire civil and military expenditure in connection with the Aden was borne by India, although as early as 1886, the Government of India urged the propriety of the expense of Aden being divided between Great Britain and India. In 1895 the Welby Commission was appointed to examine the question. They recommended that the equity of the case would perhaps be met if the United Kingdom were to contribute one half of the military charges. As a result of these recommendations His Majesty's Government made with effect from the 1st April 1901 a net annual contribution of £72,000 to Indian revenues towards the military charges of Aden, which continued up to 1927. With effect from 1st April 1927, His Majesty's Government have become responsible for the whole of the political and military expenditure of Aden, subject to an annual contribution of £250,000 from the Government of India for the first three years, to be reduced thereafter to £150,000 or a third of the total cost whichever may be less.

Civil expenditure in Aden is borne partly by the Government of Bombay and partly by the Government of India. The figures of revenue and expenditure (Provincial and Central) are as follows —

(a) PROVINCIAL

| | Accounts | | Revised Budget | | Average |
|-------------|----------|----------|----------------|----------|----------|
| | 1927-28 | 1929-30 | 1929-30 | 1930-31 | |
| | Rs | Rs | Rs | Rs | Rs |
| Receipts | 4,29,900 | 4,73,100 | 5,20,000 | 4,78,000 | 4,75,300 |
| Expenditure | 3,74,000 | 4,78,400 | 4,84,400 | 5,22,400 | 4,67,200 |
| Surplus | 55,900 | —5,300 | 25,600 | —44,400 | 8,000 |

(b) CENTRAL.

| | Accounts | | Revised Budget | | |
|-------------|----------|----------|----------------|----------|----------|
| | 1927-28 | 1929-30 | 1929-30 | 1930 31 | |
| Receipts | 3,16,600 | 6,12,700 | 6,29,600 | 5,54,600 | 5,28,400 |
| Expenditure | 9,95,200 | 7,44,600 | 6,72,600 | 8,75,900 | 8,22,100 |
| Deficits | 6,78,600 | 1,31,900 | 43,000 | 3,21,300 | 2,93,700 |

In the above figures "Interest on ordinary Debt"—Central—has been excluded, and due allowance made for pensionary liabilities accruing against Government and for items of expenditure in 1930 31 sanctioned after the Budget was passed.

The Provincial expenditure includes a sum of Rs 2 26 lakhs (roundly) on police, in addition to which His Majesty's Government have agreed to contribute a sum of £8,000 per annum and the Government of India a sum of Rs 42,000 per annum towards the reorganised police force. This point will be adverted to later.

The expenditure charged under "Central" includes at present certain heads such as Education, Medical, Public Health and General Administration. The amount involved in these items varied approximately from Rs 2,26,000 to Rs 3,65,000 during the years 1927-28 to 1930-31. The propriety of debiting to the Central Government items of expenditure which are really "Provincial" in nature is under consideration, and the adjustments which may become necessary will convert the small precarious Provincial surplus to a substantial deficit varying from 2 to 3 lakhs or more.

Difficulties of the position.—As already explained the relation of the Resident to three different authorities leads to delay and diffusion of energy. Moreover the strategic and political importance of Aden renders it obligatory from an imperial point of view that a high standard of civil administration should be maintained there. It is necessary to spend on the Police, in view of the isolation of Aden from the rest of India, and its peculiar geographical position considerably more than would have been required had Aden been on the mainland of India. A contribution towards this expenditure has no doubt been secured from His Majesty's Government and the Government of India, but the administration of the force involves unnecessary correspondence, as the Resident has often to obtain the sanction of three different authorities. Proposals for aid from Central Revenues are constantly put forward and although the Government of India are

convinced in some of these cases that there is justification for regarding a portion at least of the expenditure as of Central rather than provincial concern, difficulties arise under the present constitutional arrangements as the Government of India cannot incur expenditure on provincial subjects. According to the Government of Bombay, experience has shown that the overlapping of responsibilities and functions under the present system can only lead to delay and has resulted in what one authority called the "stagnation of Aden." It is unfair to expect the Government of Bombay, whose interest in Aden arises largely out of historical association, to spend their provincial revenues for the improvement of a distant outpost and raising its administration to a standard befitting a nodal point of the Empire. The present small surplus which the Government of Bombay secures from Aden is doubtful and is likely to be converted into a substantial deficit as a result of the investigation into the classification of some of the items of expenditure now charged to Central Revenues. With the growing demands of Aden, Aden is therefore bound to become an increasing burden on provincial revenues.

Proposed transfer.—The Government of Bombay have come to the conclusion that the most direct and satisfactory solution of the difficulties arising from divided control is that Aden while retaining its special connection with the Bombay Government to whom it would look, as in the past, for a supply of officers and administrative personnel, should cease to form part of the Bombay Presidency, and should be formed into a Chief Commissionership under the direct control of the Government of India.

The Home Government.

The Home Government of India represented for sixty years the gradual evolution of the governing board of the old East India Company. The affairs of the company were originally managed by the Court of Directors and the General Court of Proprietors. In 1784 Parliament established a Board of Control, with full power and authority to control and direct all operations and concerns relating to the civil and military government, and revenues of India. By degrees the number of the Board was reduced and its powers were exercised by the President, the local precursor of the Secretary of State for India. With modifications this system lasted until 1858, when the Mutiny, followed by the assumption of the Government of India by the Crown, demanded a complete change. Under the Act of 1858 (merged in the consolidating measure passed in 1915) the Secretary of State is the constitutional adviser of the Crown on all matters relating to India. He inherited generally all the powers and duties which were formerly vested either in the Board of Control, or in the Company, the Directors and the Secret Committee in respect of the government and revenues of India.

The Secretary of State

Until the Reform Act of 1919 came into force the Secretary of State had the unqualified power to give orders to every officer in India, including the Governor-General, and to superintend, direct and control all acts, operations and concerns relating to the government or revenues of India. In the relations of the Secretary of State with the Governor-General in Council no express statutory change was made, but Parliament ordained through the Joint Select Committee that in practice the conventions governing these relations should be modified, only in exceptional circumstances should he be called upon to intervene in matters of purely Indian interest where the Government and the Legislature of India are in agreement.

Of the wide powers and duties still vested in the Secretary of State, many rest on his personal responsibility, others can be performed only in consultation with his Council, and for some of these the concurrence of a majority of the members of his Council voting at a meeting is required. The Act of 1919 greatly modified the rigidity of the law maintained for sixty years as to the relations of the Secretary of State with his Council, and he has fuller power than in the past to prescribe the manner in which business is to be transacted. Though in practice the Council meets weekly (save in vacation periods) this has ceased to be a statutory requirement, the law now providing that there shall be a meeting at least once in every month.

The India Council

The number of members of the Council was reduced by the Act to not less than eight and not more than 12, the Secretary of State being free to appoint within those limits. The period of office was reduced from 7 to 5 years, though the Secretary of State may, for special reasons of public advantage to be communicated to Parliament, re-appoint a member for another five years. Half the Council must be persons

who have served or resided in India for at least ten years, and who have not left India more than five years before their appointment. The Act restored the old salary of £1,200, with an additional subsistence allowance of £600 for any member who was at the time of appointment domiciled in India. Lord Morley opened the door of the Council to Indians, and since 1917 the number of Indian members has been three.

Associated with the Secretary of State and the India Council is a Secretariat known as the India Office, housed at Whitehall. Appointments to the establishment are made by the Secretary of State in Council, and are subject to the ordinary Home Civil Service rules in all respects.

In the past the whole cost of the India Office has been borne by the revenues of India, except that the Home Government made certain grants and remissions in lieu of a direct contribution amounting to £50,000 a year. The total cost now is about £230,000. In conformity with the spirit of the 1919 Act, an arrangement was made whereby the salary of the Secretary of State is placed on the Home estimates and most of the outlay needed for the controlling and political functions exercised in Whitehall is met from British revenues, agency functions being still chargeable to Indian revenues. The contribution from the Treasury to India Office administrative expenses is about £115,000.

The High Commissionership

The financial readjustment was accompanied by a highly important administrative change provided for by the Act, in the creation of a High Commissioner for India in the United Kingdom with necessary establishments. From October 1st, 1920, the High Commissioner took over control of the purchase of Government stores in England and the Indian Students Branch, together with the supervision of the work of the Indian Trade Commissioner. The further development of the functions and powers of the High Commissioner have included such agency work as the payment of Civil leave allowances and pensions, the recruitment of technical officers, supervision of I.C.S. and Forest probationers after first appointment, the making of arrangements for officers on deputation or study leave, repatriation of destitute lascars, sale of Government of India publications, etc. The staff of the Stores Department is located at the Depot off the Thames in Belvedere Road, Lambeth. The High Commissioner and the rest of the staff are at India House, Aldwych, W.C.2, built to the designs of Sir Herbert Baker at a cost for construction and equipment of £324,000. There could be no question of adopting a distinctly Oriental style for the exterior, but there are enough Indian features of ornamentation to proclaim the Eastern association of the place. Moreover the Exhibition Hall (typically Indian in design) has five windows on two sides for display specimens of the arts, craft and commerce of India.

Parliament set up in 1920 a Joint Standing Committee consisting of eleven members of each House to keep Parliament in closer touch with Indian affairs but the system has not flourished in the last few years.

The Indian States.

The area enclosed within the boundaries of India is 1,773,168 square miles, with a population of 315,132,537 of people—nearly one fifth of the human race. But of this total a very large part is not under British Administration. The area covered in the Indian States is 675,267 square miles with a population of seventy millions. The Indian States embrace the widest variety of country and jurisdiction. They vary in size from petty states like Lawa, in Rajputana, with an area of 13 square miles, and the Simla Hill States, which are little more than small holdings, to States like Hyderabad as large as Italy with a population of thirteen millions. They include the inhospitable regions of Western Rajputana, Baroda, part of the Garden of India, Mysore, rich in agricultural wealth and Kashmir one of the most favoured spots on the face of the globe.

Relations with the Paramount Power

So diverse are the conditions under which the Indian States were established and came into political relation with the Government of India that it is impossible even to summarise them. But broadly it may be said that as the British boundaries expanded, the states came under the influence of the Government and the rulers were confirmed in their possessions. To this general policy however there was, for a brief period, an important departure. During the regime of Lord Dalhousie the Government introduced what was called annexation through lapse. That is to say, when there was no direct help, the Government considered whether public interests would be secured by granting the right of adoption. Through the application of this policy, the states of Satara and of Nagpur fell in to the East India Company, and the Kingdom of Oudh was annexed because of the gross misgovernment of its rulers. Then came the Mutiny. It was followed by the transference of the dominions of the East India Company to the Crown, and an irrevocable declaration of policy toward the Indian States. In the historic Proclamation of Queen Victoria it was set out that "We desire no extension of our present territorial possessions, and while we will permit no aggression on our dominions or our rights to be attempted with impunity, we shall allow no encroachments on those of others. We shall respect the rights, dignity and honour of the Native Princes as our own, and we desire that they, as well as our own subjects, should enjoy that prosperity and that social advancement which can only be secured by internal peace and good government." Since the issue of that proclamation there has been no encroachment on the area under Indian rule by the Government of India. On the contrary, the movement has been in the opposite direction. In 1881 the State of Mysore, which had been so long under British administration that the traditions of Native rule were almost forgotten, was restored to the old Hindu ruling house. In 1911 the Maharajah

of Benares, the great taluqdar of Oudh, was granted ruling powers over his extensive possessions. On many occasions the Government of India has had to intervene, to prevent gross misgovernment or to carry on the administration during a long minority, but always with the undeviating intention of restoring the territories as soon as the necessity for intervention passed. Almost all states possess the right of adoption in default of heirs.

Rights of Indian States

The rights and obligations of the Indian States are thus described by the Imperial Gazetteer. The Chiefs have, without exception, gained protection against dangers from without and a guarantee that the protector will respect their rights as rulers. The Paramount Power acts for them in relation to foreign Powers and other Indian States. The inhabitants of the Indian States are the subjects of their rulers, and except in case of personal jurisdiction over British subjects, these rulers and their subjects are free from the control of the laws of British India. Criminals escaping to an Indian State must be handed over to it by its authorities, they cannot be arrested by the police of British India without the permission of the ruler of the State. The Indian Princes have therefore a suzerain power which acts for them in all external affairs, and at the same time scrupulously respects their internal authority. The suzerain also intervenes when the internal peace of their territories is seriously threatened. Finally they participate in all the benefits which the protecting power obtains by its diplomatic action, or by its administration of its own dominions, and thus secure a share in the commerce, the railways, the ports, and the markets of British India. Except in rare cases applied to maritime states, they have freedom of trade with British India although they levy their own customs, and their subjects are admitted to most of the public offices of the British Government.

Obligations of Indian States

On the other hand, the Indian States are under an obligation not to enter into relations with foreign nations or other states, the authority of their rulers has no existence outside their territories. Their subjects outside their dominions become for all intents and purposes British subjects. Where foreign interests are concerned, the Paramount Power must act so that no just cause of offence is given by its subordinate allies. All Indian States alike are under an obligation to refer to the British every question of dispute with other states. Inasmuch as the Indian States have no use for a military establishment other than for police, or display, or for co-operation with the Imperial Government, their military forces, their equipment and armament are

prescribed by the Paramount Power. Although old and unaltered treaties declare that the British Government will have no manner of concern with any of a Maharajah's dependents or servants, with respect to whom the Maharajah is absolute, logic and public opinion have endorsed the principle which Lord Canning set forth in his minute of 1860, that the "Government of India is not precluded from stepping in to set right such serious abuses in a Native Government as may threaten any part of the country with anarchy or disturbance, nor from assuming temporary charge of a Native State when there shall be sufficient reason to do so." Of this necessity the Governor-General in Council is the sole judge subject to the control of Parliament. Where the law of British India confers jurisdiction over British subjects or other specified persons in foreign territory, that power is exercised by the British courts which possess it. The subjects of European Powers and the United States are on the same footing. Where can'tonments exist in an Indian State, jurisdiction both over the cantonment and the civil station is exercised by the suzerain power.

Political Officers

The powers of the British Government are exercised through Political Officers who, as a rule, reside in the states themselves. In the larger states the Government is represented by a Resident, in groups of states by an Agent to the Governor-General, assisted by local Residents or Political Agents. These Officers form the sole channel of communication between the Indian States and the Government of India and its Foreign Department, with the officials of British India and with other Indian States. They are expected to advise and assist the Ruling Chiefs in any administrative or other matters on which they may be consulted. Political Agents are similarly employed in the larger States under the Provincial Governments but in the petty states scattered over British India the duties of the Agent are usually entrusted to the Collector or Commissioner in whose district they lie. All questions relating to the Indian States are under the special supervision of the Supreme Government, and in the personal charge of the Governor-General.

Closer Partnership.

Events have tended gradually to draw the Paramount Power and the Indian States into closer harmony. Special care has been devoted to the education of the sons of Ruling Chiefs, first by the employment of tutors, and afterwards by the establishment of special colleges for the purpose. These are now established at Ajmere, Rajkot, Indore and Lahore. The Imperial Cadet Corps, whose headquarters are at Dehra Dun, imparts military training to the sons of the ruling chiefs and

noble families. The spread of higher education has placed at the disposal of the Indian States the products of the Universities. In these ways there has been a steady rise in the character of the administration of the Indian States, approximating more closely to the British ideal. Most of the Indian States have also come forward to bear their share in the burden of Imperial defence. Following on the spontaneous offer of military assistance when war with Russia appeared to be inevitable over the Penjdeh incident in 1885, the states have raised a portion of their forces up to the standard of the troops in the Indian Army. These were until recently termed Imperial Service Troops, but are now designated Indian State Forces. They belong to the States, they are officered by Indians, but they are inspected by a regular cadre of British officers under the general direction of an Inspector-General. Their numbers are approximately 22,000 men, their armament is the same as that of the Indian Army and they have done good service often under their own Chiefs, on the Frontier and in China, in Somaliland and in the Great War. Secure in the knowledge that the Paramount Power will respect their rights and privileges, the Ruling Chiefs have lost the suspicion which was common when their position was less assured, and the visits of the Prince of Wales in 1875, of the Prince and Princess of Wales in 1905-06, and of the King and Queen in 1911-12 have tended to seal the devotion of the great feudatories to the Crown. The improvement in the standard of native rule has also permitted the Government of India largely to reduce the degree of interference in the internal affairs of the Indian States. The new policy was authoritatively laid down by Lord Minto, the then Viceroy, in a speech at Udaipur in 1909 when he said —

"Our policy is, with rare exceptions, one of non-interference in the internal affairs of the Native States. But in guaranteeing their internal independence and in undertaking their protection against external aggression it naturally follows that the Imperial Government has assumed a certain degree of responsibility for the general soundness of their administration and could not consent to incur the reproach of being an indirect instrument of misrule. There are also certain matters in which it is necessary for the Government of India to safeguard the interests of the community as a whole as well as those of the paramount power, such as railways, telegraphs and other services of an Imperial character. But the relationship of the Supreme Government to the State is one of suzerainty. The foundation stone of the whole system is the recognition of identity of interests between the Imperial Government and Durbars and the minimum of interference with the latter in their own affairs."

HYDERABAD.

The Nizam exercises full sovereignty within his dominions, grants titles and has the power of life and death over his subjects. Before 1919, the Government consisted of a Prime Minister responsible to the Nizam, with Assistant Ministers, but in this year, an Executive Council was established which now consists of seven members. A legislative Council consisting of 20 members of whom 12 are official & non-official and 2 extraordinary is responsible for making laws. The administration is carried on by a regular system of departments on lines similar to those followed in British India. The state is divided into two divisions—Pellingana and Mahratwara—16 Districts and 101 Talukas. Local Boards are constituted in each District and Taluka. The state maintains its own currency which consists of gold and silver coins and a large note issue. The rupee, known as the *Osmania Sica*, exchanges with the British Indian rupee at an average ratio of 116-10-8 to 100. There is a State postal service and stamps for internal purposes. The Nizam maintains his own army consisting of 18,226 troops of which 5,820 are classed as regular troops and 11,324 as irregular. In addition to these there are two battalions of Imperial Service Troops, 1,073 strong.

Finance—Hyderabad State is far the wealthiest of the Indian States, having a revenue in its own currency of about 8½ crores, which is approximately the same as that of the Central Provinces and Bihar and Orissa and double that of any other State. After many vicissitudes, its finances are at present in a prosperous condition and it enjoys a large annual surplus of revenue from which a reserve of 8 crores has been built up. This is being used partly as a sinking fund for the redemption of debt and partly for the development of the resources of the State. The budget estimates for the present year show a revenue of 785 lakhs under service heads and an expenditure of 702 lakhs, inclusive of large sums set aside for development, famine insurance and reserve for re-organisation and development. The capital expenditure programme provides for an expenditure of 150 lakhs, which includes 43 lakhs for the large irrigation project known as "Nizam Sagar" and other sanctioned projects and 97 lakhs for the construction of feeder lines. The year opened with a cash balance of 286 lakhs which is expected to be about 106 lakhs by the end of the year. The Government loans stand at 102 for short term and 118-4-0 for long term issues.

Production and Industry—The principal industry of the State is agriculture, which maintains 57 per cent. of the population. The common system of land tenure is ryotwari. About 55 per cent. of the total area is directly administered by the State. The rest consists of private estates of His Exalted the Nizam, which comprise about one-tenth of the total area of the State, and the estates of the Jagirdars and Paigah nobles. The total land revenue is over 3 crores. The principal food crops are millet and rice, the staple money crops cotton, which is grown extensively on the black cotton soils, and oilseeds. Hyderabad is well known for

its Gaoni cotton which is the longest staple indigenous cotton in India. The total area under cotton exceeds 4 million acres. Hyderabad possesses the most southerly of the Indian coal mines and the whole of southern India is dependent on it for such coal as is transported by rail. The chief mine is situated at Singareni, which is not far from Bezwada junction on the Calcutta-Madras line. The chief manufacturing industry is based on the cotton produced in the State. There are four large mills in existence and others are likely to be established, while about one third of the cloth worn in the Dominions is produced on local hand-looms. There are about 204 ginning and pressing factories in the cotton tracts and also a number of tanneries and flour mills; the total number of factories (as defined in the Hyderabad Factory Act) of all kinds in the State being 355. The Shahabad Cement Co. which has been established at Shahabad on the Great Indian Peninsula Railway line, not far from Wadi, supplies the whole of southern India with cement and has at present an annual output of 99,439 tons.

Taxation—Apart from the land revenue which as stated above brings in about 3 crores, the main sources of taxation are excise and customs. The receipts from each are estimated for the present year at 158 and 125 lakhs respectively. After these come interest on investments (50 lakhs), railways (31 lakhs) and Berar rent (29 lakhs). The customs revenue is derived from an *ad valorem* duty of 5 per cent. on all imports and exports.

Communications—One hundred and thirty-seven miles of broad gauge line from Dombay to Madras traverse the State, also 33 miles of metre gauge line from Masulipatam to Maringoa. At Wadi, on this section, the broad gauge system of the Nizam's State Railway takes off and running east through Hyderabad City and Warangal reaches the Calcutta-Madras line at Bezwada, a total length of 352 miles. From Kazipet, near Warangal on this line, a new link to Bellary strikes north thus providing the shortest route between Madras and Delhi. From Secunderabad the metre gauge Godavari Valley railway runs north-west for 386 miles to Mannad on the main line of the Great Indian Peninsula Railway to Calcutta. A metre gauge line also runs south from Secunderabad through Mahbubnagar nearly to the border and is now linked up with Kurnool on the Madras and Southern Mahratta Railway. Branch lines exist from Purna to Hingoli, Parbhani to Purna, Karipalli to Kothagudem and Vikharabad to Bidar, which last is being extended to Purna. Thus, with branch lines, there are now 687 miles of broad gauge and 628 of the metre gauge in the State. The Barsi Light Railway owns a short extension from Kurdwadi on the Bombay Madras line to Latur in Osmanabad District. The Nizam's Guaranteed State Railway was worked by a Company until April, 1930, when it was purchased by the Nizam's Government. The road system is incomplete at present but is being rapidly extended on a well considered programme.

Education—The Osmania University at Hyderabad which marks a new departure in Indian education, imparts instruction in all the faculties through the medium of Urdu, English being taught as a compulsory language. It has one First Grade College, four Intermediate Colleges, a Medical College, an Engineering College and a Training College for teachers. The Nizam College at Hyderabad (first grade), is, however, affiliated to the Madras University. In 1929-30 the total number of educational institutions were 4,256, the number of Primary Schools in particular having been largely increased.

Executive Council—Raja Rajayan Rajah Sir Kishen Pershad Maharaja Bahadur, Yaminus Saltanath, G O I F, *President*, Nawab Wallud Dowlah Bahadur, *Education, Medical and Military Departments Member*, Nawab Sir Akbar Hydari, *Finance and Railway Member*, Lt-Col Sir R. H. Chenevix Trench, G I F, O B F, *Revenue and Police Member*, Nawab Lutful Dowlah Bahadur, *Judicial Member*, Nawab Aqeel Jung Bahadur, *Public Works Member*, Nawab Mahdi Yar Jung Bahadur, *Political Member*.

British Resident—The Hon'ble Lt-Col T. H. Keyes C M G C S I, C I E.

MYSORE

The State of Mysore is surrounded on all sides by the Madras Presidency except on the north and the north-west where it is bounded by the districts of Dharwar and North Canara respectively and towards the south-west by Coorg. It has two natural divisions each with a distinct character of its own—the hill country (or malnad on the west and the wide spreading valleys and plains (the maidan) on the east. The State has an area of 29,475 square miles including that of the Civil and Military Station of Bangalore and a population of 6,557,871 of whom over 92 per cent are Hindus. Kannada is the language of the State.

History—The ancient history of the country is varied and interesting. Tradition connects the table land of Mysore with many a legend enshrined in the great Indian epics, the Ramayana and the Mahabharata. Coming down to historical times, the north-eastern portion of the country formed part of Asoka's Empire in the third century B.C. Mysore then came under the rule of the Andhra dynasty. From about the third to the eleventh century A.D. Mysore was ruled by three dynasties, the north-western portion by the Pallavas and the central and the southern portions by the Gangas. In the eleventh century, Mysore formed part of Chola dominion, but the Cholas were driven out early in the twelfth century by the Hoysalas, an indigenous dynasty with its capital at Halebidu. The Hoysala power came to an end in the early part of the fourteenth century. Mysore was next connected with the Vijayanagar empire. At the end of the fourteenth century Mysore became associated with the present ruling dynasty. At first tributary to the dominant empire of Vijayanagar, the dynasty attained its independence after the downfall of Vijayanagar in 1565. In the latter part of the eighteenth century the real sovereignty passed into the hands of Hyder Ali and then his son, Tipu Sultan. In 1799, on the fall of Seringapatam, the British Government restored the State comprised within its present limits, to the ancient dynasty in the person of Maharaja Sri Krishnaraja Wodeyar Bahadur III. Owing to the insurrections that broke out in some parts of the country the management was assumed by the British Government in 1831. In 1881 the State was restored to the dynasty in the person of Sri Chamarajendra Wodeyar Bahadur under conditions and stipulations laid down in an Instrument of Transfer. That ruler with the assistance of Mr. (afterwards Sir) K. Seshadri Iyer, K O S I, as Dewan, brought Mysore to a State of great prosperity. He died in 1894,

and was succeeded by the present ruler Colonel Sir Sri Krishnarajendra Wodeyar Bahadur, G O S I, G B E, who was installed in 1902. In November 1913 the Instrument of Transfer was replaced by a Treaty which indicates more appropriately the relation subsisting between the British Government and the State of Mysore. In 1927, the Government of India remitted in perpetuity Rs. 10½ lakhs of the annual subsidy which will then had stood at Rs. 35 lakhs.

Administration—The City of Mysore is the Capital of the State, but Bangalore City is the Administrative headquarters. His Highness the Maharaja is the ultimate authority in the State and the administration is conducted under his control, by the Dewan and two Members of Council. The High Court consisting of three Judges is the highest Judicial tribunal in the State. There are two constitutional Houses in the State—the Representative Assembly and the Legislative Council. The Representative Assembly was established in 1881 by an executive order of Government, and its powers and functions have been increased from time to time by similar orders of Government. Under the scheme of constitutional developments announced in October 1923 the Representative Assembly has been placed on a statutory basis and given a definite place in the constitution by the promulgation of the Representative Assembly Regulation XVIII of 1923. The franchise has been extended and the disqualification of women on the ground of sex, from exercising the right to vote has been removed. The privilege of moving resolutions on the general principles and policy underlying the budget and on matters of public administration has been granted in addition to those already enjoyed of making representations about wants and grievances and of interpellating Government. The Assembly is also to be consulted on all proposals for the levy of new taxes and on the general principles of all measures of legislation before their introduction into the Legislative Council. Besides the Budget Session (formerly Birthday Session) and the Dasara Session, provision has been made for a special session of the Assembly to be summoned only for Government business.

The strength of the Legislative Council has been raised from 30 to 50, of whom 20 are official and 30 are non-official members. The Council which exercised the privileges of interpellation, discussion of the State Budget and the moving of the resolutions on all matters of public administration is, under the reformed constitution

tion, granted the power of voting on the demands for grants. The Dewan is the ex officio President of both the Representative Assembly and the Legislative Council.

The Legislative Council has a Public Accounts Committee which examines the audit and appropriation reports and brings to the notice of Council all deviations from the wishes of the Council as expressed in its Budget grant.

Standing Committees—With a view to enlarge the opportunities of non official representatives of the people to influence the everyday administration of the State three Standing Committees consisting of Members of the Representative Assembly and the Legislative Council have been formed one in connection with Rail way, Electrical and P. W. Departments, the second in connection with Local Self-Government and the Departments of Medicine, Sanitation and Public Health and the third in connection with Finance and Taxation.

All the important branches of the administration are controlled by separate Heads of Departments. The combatant strength of the Military Force at the end of 1930-31 was 2,136 of which 488 were in the Mysore Lancers, 132 in the Mysore Horse, and the remaining 1,516 in the Infantry. Animal Transport Corps, was replaced by the Mechanical Transport which consists of 2 lorries (six wheeler lorries) and 4 commercial lorries with the necessary staff. The total annual cost is about 17 lakhs of rupees. The cost of the Police Administration during 1929-30 was about 18 lakhs.

Agriculture—Nearly three-fourths of the population are employed in agriculture and the general system of land tenure is ryotwari. The principal food crops are ragi, rice, jola, millets, gram and sugar cane, and the chief fibres are cotton and sun hemp. Nearly fifty thousand acres are under mulberry, the silk industry being the most profitable in Mysore next to Gold Mining. The Department of Agriculture is popularising agriculture on scientific lines by means of demonstrations investigations and experiment. There are six Government Agricultural Farms at Hebbal, Babbur, Marthur Nagenahally, Hunsur and the coffee experimental Station at Balehonnur. A live stock section has

been organised which has been taking necessary steps for the improvement of live stock. A cattle breeding station has been established at Parvatharavanakere, near Ajlampur in the Kadur District, with a sub station at Basur. A Serum Institute has been opened at Bangalore for the manufacture of serum and virus for inoculation against rinderpest.

Industries and Commerce—A Department of Industries and Commerce was organised in 1913 with a view to the development of Industries and Commerce in the State. Its main functions are stimulating private enterprise by the offer of technical advice and other assistance for starting new industries, undertaking experimental work for pioneering industries and developing existing industries and serving as a general bureau of information in industrial and commercial matters. Mysore is the largest producer of Silk in India, and the care and development of this industry is entrusted to a Department of Sericulture in charge of a Superintendent subject to the general control of the Director of Industries and Commerce. Arrangements have been made for the supply of disease-free seed and a central and five taluk popular schools have been doing good work. The sandalwood oil factory started on an experimental basis is now working on a commercial scale. A factory is working at Mysore. A large plant at a cost of more than 170 lakhs of rupees has been constructed at Bhadravathi for purposes of manufacturing charcoal, pig-iron distilling wood-alcohol, and developing subsidiary industries. A new pipe foundry was opened there for the manufacture of pipes which are in great demand in several towns in India. The works are on the borders of an extensive forest area and practically at the foot of the hills containing rich deposits of iron, manganese and bauxite, and are not far from the Gersoppa Water Falls estimated to be capable of producing 100,000 horse-power of electric energy. A Trade Commissioner in London has been appointed to look after the interest of the trade and industry of the State.

Finances—The actual total receipts and disbursements charged to Revenue for the past five years together with the revised budget estimate for 1930-31 and budget for 1931-32 were as below—

| Year | Receipts | Disbursements | Surplus | Deficits |
|-------------------|-------------|---------------|----------|-----------|
| | Rs | Rs | Rs | Rs |
| 1925-26 | 3,46,36,060 | 3,46,2,036 | 34,324 | |
| 1926-27 | 3,38,69,340 | 3,47,39,906 | | 8,70,557 |
| 1927-28 | 3,60,80,002 | 3,60,40,350 | | 40,623 |
| 1928-29 | 3,74,57,981 | 3,74,02,395 | 55,586 | |
| 1929-30 | 3,75,40,314 | 3,75,34,720 | 5,594 | |
| 1930-31 (Revised) | 3,42,20,000 | 3,94,31,000 | | 52,11,000 |
| 1931-32 (Budget) | 3,78,25,000 | 3,70,84,000 | 1,91,000 | |

Hydro-Electric and Irrigation Works—The River Cauvery in its course through the State, possesses a natural fall of about 280 feet near the island of Sivasaamudram, and this fall was harnessed in the year 1902 for the development of electric power, to the extent of about 12,000 H. P. for supplying power mainly to the Kolar Gold Mining Companies and incidentally

for lighting the cities of Mysore and Bangalore. In course of time, the demand for power increased and with a view to protecting the existing supply and augmenting the generation of additional power to meet the growing demands, the "Krishnarajasagara Reservoir" called after the name of the present Maharaja was constructed. The storage from the reser-

voir besides enabling the generation of electric power up to 46,000 H P will also bring under irrigation about 1,20,000 acres of land situated in an area subject to more or less continuous drought. The new Canal Works are now in progress, and the main canal is named the "Irwin Canal" after the present Viceroy. Full advantage is being taken of the available electric power for small industries and the electrification of towns and lift irrigation.

Education—A separate University for Mysore was established on the 1st July 1916. It is of the teaching and residential type composed of the Central, and Engineering Colleges at Bangalore and the Medical Maharaja's and Maharani's Colleges at Mysore, and five Intermediate Colleges with head-quarters at Mysore. The colleges are efficiently equipped and organised and there is a training college for men located at Mysore. The Maharani's College at Mysore is a College for Women.

With the introduction of compulsory education in select centres and the increase in the number of village schools, primary education

has during recent years made considerable advance. Schools have been started for imparting instruction in agricultural, commercial, engineering and other technical subjects. There were altogether 8,358 institutions on 31st March 1930. This gives one school to every 2.9 square miles of the area and to every 7.1 of the population. An Elementary Education Regulation to provide for the progressive expansion and development of elementary education in the State has been recently passed. Under the Regulation local bodies are invested with powers for providing and controlling elementary education.

Resident in Mysore and Chief Commissioner of Coorg—The Hon. Lieut.-Col. R. J. C. Burke.
Dewan—Amin-ul-Mulk. Sir Mirza Mahomed Ismail, C.I.E., D.F.

Members of the Executive Council—Rajkaryaprasakta Diwan Bahadur M. N. Krishna Rao, B.A., First Member of Council, Rajamantrapravina C. S. Balasundaram Iyer, B.A., 2nd Member of Council and Rajamantrapravina K. Matthan, B.A., Third Member of Council.

BARODA.

The State of Baroda is situated partly in Gujerat and partly in Kathiawar. It is divided into four district blocks: (1) the southern district of Navsari near the mouth of the Tapti river, and mostly surrounded by British territory, (2) central district, north of the Narbada, in which lies Baroda, the capital city, (3) to the north of Ahmedabad, the district of Mehsana, and (4) to the west, in the peninsula of Kathiawar, the district of Amreli, formed of scattered tracts of land. The area of the State is 8,164 square miles, the population is 2,443,007 of whom over four-fifths are Hindus.

History—The history of the Baroda State as such dates from the break-up of the Mughal Empire. The first Maratha invasion of Gujerat took place in 1705. In later expeditions Pilaji Galkwar, who may be considered as the founder of the present ruling family, greatly distinguished himself. Songhad was the headquarters till 1768. After 1723 Pilaji regularly levied tribute in Gujerat. His son Damaji finally captured Baroda in 1734, since then it has always been in the hands of the Galkwars, but Mughal authority in Gujerat did not end until the fall of Ahmedabad in 1753, after which the country was divided between the Galkwar and the Peshwa. In spite of the fact that Damaji was one of the Maratha chiefs defeated at Panipat by Ahmed Shah, he continued to add to his territory. He died in 1768, leaving the succession in dispute between two rival sons. He was succeeded in turn by his sons Savaji Rao I, Fattessing Rao, Manaji Rao and Govind Rao. The last died in 1800, and was succeeded by Anand Rao. A period of political instability ensued which was ended in 1802 by the help of the Bombay Government, who established the authority of Anand Rao at Baroda. By a treaty of 1805 between the British Government and Baroda, it was arranged *inter alia* that the foreign policy of the State should be conducted by the British, and that all differences with the Peshwa should be similarly

arranged. Baroda was a staunch ally of the British during the wars with Bajji Rao Peshwa, the Pindari hordes and Holkar. But from 1820 to 1841, when Sayaji Rao II was Galkwar, differences arose between the two Governments, which were settled by Sir James Carnac, Governor of Bombay, in 1841. Ganpat Rao succeeded Sayaji Rao in 1847. During his rule, the political supervision of Baroda was transferred to the Supreme Government. His successor Khande Rao, who ascended the *Gadi* in 1856, introduced many reforms. He stood by the British in the Mutiny. He was succeeded by his brother Malhar Rao in 1870. Malhar Rao was deposed in 1875 for "notorious misconduct" and "gross misgovernment," but the suggestion that he had instigated the attempt to poison Col. Phayre, the Resident, was not proved. Sayaji Rao III, a boy of 13 years of age, who was descended from a distant branch of the family, was adopted as heir of Khande Rao in 1875 and is the present Galkwar. He was invested with full powers in 1881.

Administration—An executive council consisting of the principal officers of the State carries on the administration, subject to the control of the Maharaja, who is assisted by a Dewan and other officers. A number of departments have been formed, which are presided over by officials corresponding to those in British India. The State is divided into four *prants*, each of which is sub-divided into *Mahals* and *Peta Mahals* of which there are in all 42. Attempts have for some years been made to restore village autonomy, and village panchayats have been formed which form part of a scheme for local self-government. There is a Legislative Department, under a Legal Remembrancer, which is responsible for making laws. There is also a Legislative Council, consisting of nominated and elected members. A High Court at Baroda possesses jurisdiction over the whole of the State and hears all final appeals. From the decisions of the High Court,

appeals lie in certain cases, to the Maharaja, who decides them on the advice of the Hurur Nyaya Sahib. The State Army consists of 5,086 Regular forces and 3,806 Irregular forces

Finance—In 1927-28, the total receipts of the State were Rs 2,65,34,000 and the disbursements Rs 2,42,66,000. The principal Revenue heads were—Land Revenue, Rs 1,19,40,000; Akbari, Rs 34,23,000; Opium, Rs 4,94,000; Railways, Rs 14,83,000; Interest, Rs 17,31,000; Tribute from other States, Rs 9,59,000. British Currency was introduced in 1901.

Production and Industry—Agriculture and pasture support 63 per cent of the people. The principal crops are rice, wheat, gram, castor oil, rapeseed, poppy, cotton, sun hemp, tobacco, sugarcane, maize, and garden crops. The greater part of the State is held on *ryotwari* tenure. The State contains few minerals, except sandstone which is quarried at Songar, and a variety of other stones which are little worked. There are 70 industrial or commercial concerns in the State registered under the State Companies Act. There are four Agricultural Banks and 874 Co-operative Societies in the Baroda State.

Communications—The B R & C I Railway crosses part of the Narsari and Baroda *prants* and the Rajputana-Malwa Railway passes through the Kadi *prant*. A system of branch lines has been built by the Baroda Durbar in all the four *prants*, in addition to which the Tapti Valley Railway and the Baroda Godhra

Chord line (B B & C I) pass through the State. The Railways owned by the State are about 707 miles in length. The total mileage of metalled and fair weather roads in the State is 405 and 932 respectively.

Education—The Education Department controls 2,742 institutions of different kinds, in 76 of which English is taught. The Baroda College is affiliated to the Bombay University. There are a number of high schools, technical schools, and schools for special classes, such as the jungle tribes and unclean castes. The State is "in a way pledged to the policy of free and compulsory primary education." It maintains a system of rural and travelling libraries. Eighteen per cent of the population is returned in the census as literate. Total expense on Education is Rs 34.35 (lakhs).

Capital City—Baroda City with the cantonment has a population of 112,862. It contains a public park, a number of fine public buildings, palaces and offices, and it is crowded with Hindu temples. The cantonment is to the north-west of the city and is garrisoned by an infantry battalion of the Indian Army.

Ruler—His Highness Farzand-i-Khas-i-Dowlat-i-Englishtia, Maharaja Sir Sayaji Rao III Gaekwar, Sena Khas Khel, Samsher Bahadur, G C S I, G C I E, L D, Maharaja of Baroda.

Resident—Lt.-Col. C G Crosthwaite, C B E.

Dewan—Rao Bahadur V T Krishnamachari, C I E.

BALUCHISTAN AGENCY.

In this Agency lies the State of Kalat with its feudatory State of Las Bela.

Kalat is bounded on the North by the Chagai district, on the East by Sindh and the Marri-Bugti tribal territories, on the South by the Arabian Sea and on the West by Persia.

The State includes the tribal territories of the Chiefs of the Brahui Confederacy of which the Khan of Kalat is head. The divisions of the State are, Sarawan or the Highlands, Jhalawan or the Lowlands, Kachhi, Makran, the Khanate of Kharan and the feudatory State of Las Bela. The inhabitants are for the most part Brahuis or Baloch, both being Muhammadans of the Sunni sect. The area of Kalat with Las Bela is 80,410 sq miles. The country is sparsely inhabited, the total population being about 379,000.

The relations of Kalat with the British Government are governed by the treaties of 1854 and 1876, by the latter of which the independence of Kalat was recognized, while the Khan agreed to act in subordinate co-operation with the British Government. There are also agreements with Kalat in connection with the construction of the Indo-European telegraph line, the cession of jurisdiction on the railways and in the Bolan Pass, and the permanent leases of Quetta, Nushki and Nasirabad.

The Khan is assisted in the administration of the State by a Wazir-i-Azam, at present a retired officer of the British service. The Governor-General's Agent in Baluchistan conducts the relations between the Government of India and the Khan, and exercises general political supervision over the State. The revenue of the State is about Rs 15,11,000, out of which the Khan retains a civil list of Rs 3,50,000 per annum. The present Khan is His Highness Beglar Begi Sir Mir Mahmud Khan of Kalat, G C I E. He was born in 1864.

Las Bela is a small State under the suzerainty of Kalat. The Hab river for the Southern part of its course forms the Eastern boundary with Sindh, and the greater part of the State consists of the valley and the delta of the Puruli river. Area 7,132 square miles, population 50,690, chiefly Sunni Muhammadans. The estimated average revenue is about Rs 3,52,600. The Chief of Las Bela, known as the Jam, is bound by agreement with the British Government to conduct the administration of his State in accordance with the advice of the Governor-General's Agent. This control is exercised through the Political Agent in Kalat. The Jam also employs an approved Wazir, to whose advice he is subject and who assists him generally in the transaction of State business.

Agent to the Governor-General for Baluchistan.—Hon'ble Mr A N L Cicer, C I E, I C S.

RAJPUTANA AGENCY.

Rajputana is the name of a great territorial circle with a total area of about 131,698 square miles, which includes 19 Indian States, one chiefship, and the small British district of Ajmer-Merwara. It is bounded on the west by Sind, on the north-west by the Punjab State of Bahawalpur, on the north and north-east by the Punjab, on the east by the United Provinces and Gwalior, while the southern boundary runs across the central region of India in an irregular zigzag line. Of the Indian States and Chiefship 17 are Rajput, 2 (Bharatpur and Dholpur) are Jat, and one (Tonk) is Mahomedan. The chief administrative control of the British district is vested *ex-officio* in the political officer, who holds the post of Governor-General's Agent for the supervision of the relations between the several Indian States of Rajputana and the Government of India. For administrative purposes they are divided into the following groups—Bikaner, Sirohi and Alwar in direct relations with the Agent to the Governor-General Eastern Rajputana Agency 4 States (Bharatpur, Dholpur, Karnali and Kotah), Haraoti and Tonk Agency, 4 States (Bundi, Jhalawar, Shahapura and Tonk), Jaipur Residency, 2 States (Jaipur and Kishangarh), Mewar Residency, and Southern Rajputana States Agency 4 States (Mewar, Dangarpur, Banswara and Pratapgarh and the Kishangarh Chiefship), Western Rajputana States Residency, 2 States, (Jodhpur and Jaisalmer).

The Aravalli Hills intersect the country almost from end to end. The tract to the north-west of the hills is, as a whole, sandy, ill-watered and unproductive, but improves gradually from being a mere desert in the far west to comparatively fertile lands to the north-east. To the south-east on the Aravalli Hills lie higher and more fertile regions which contain extensive hill ranges and which are traversed by considerable rivers.

COMMUNICATIONS—The total length of railways in Rajputana is 3,259 miles, of which 100 are the property of the British Government. The B B & C I (Metre-gauge) (Government) runs from Ahmedabad to Bandikui and from there branches to Agra and Delhi. Of the Indian State railways the most important are the Jodhpur and Bikaner lines from Marwar Junction to Hyderabad (Sind) and to Bikaner.

INHABITANTS—Over 50 per cent. of the population are engaged in some form of agriculture, about 20 per cent. of the total population are maintained by the preparation and supply of material substances, personal and domestic service provides employment for about 5 per cent. and commerce for 2½ per cent. of the population. The principal language is Rajasthani. Among castes and tribes, the most numerous are the Brahmans, Jats, Mahajans, Chamars, Rajputs, Minas, Gujars, Bhils, Malis and Balais. The Rajputs are, of course, the aristocracy of the country, and as such hold the land to a very large extent, either as receivers of

rent or as cultivators. By reason of their position as integral families of pure descent, as a landed nobility, and as the kinsmen of ruling chiefs, they are also the aristocracy of India, and their social prestige may be measured by observing that there is hardly a tribe or clan (as distinguished from a caste) in India which does not claim descent from, or irregular connection with one of these Rajput stocks.

The population and area of the States are as follows—

| Name of State | Area in square miles | Population in 1921 |
|--|----------------------|--------------------|
| <i>In direct Political relations with A G G—</i> | | |
| Bikaner | 2,33,512 | 650,685 |
| Sirohi | 1,904 | 186,039 |
| Alwar | 3,21,299 | 701,154 |
| <i>Mewar Residency and S R S Agency—</i> | | |
| Udaipur | 12,915 | 1,406,990 |
| Banswara | 1,006 | 190,302 |
| Dungarpur | 1,447 | 189,272 |
| Pratapgarh | 836 | 67,110 |
| Kushalnagarh (Chiefship) | 340 | 29,162 |
| <i>Western State Residency—</i> | | |
| Jodhpur | 35,066 | 1,848,825 |
| Jaisalmer | 16,062 | 67,652 |
| <i>Jaipur Residency—</i> | | |
| Jaipur | 10,682 | 2,338,802 |
| Kishangarh | 958 | 77,734 |
| Lawa | 19 | 2,262 |
| <i>Haraoti-Tonk Agency—</i> | | |
| Bundi | 2,220 | 187,068 |
| Tonk | 2,586 | 287,898 |
| Jhalawar | 810 | 96,182 |
| Shahpura | 405 | 48,130 |
| <i>Eastern States Agency—</i> | | |
| Bharatpur | 1,382 | 496,437 |
| Dholpur | 1,200 | 230,188 |
| Karauli | 1,242 | 133,730 |
| Kotah | 5,684 | 630,060 |

Udaipur State (also called Mewar) was founded in about 646 A D. The capital city is Udaipur, which is beautifully situated on the slope of a low ridge, the summit of which is crowned by His Highness the Maharana's palaces, and to the north and west, houses extend to the banks of a beautiful piece of water known as the Pichola Lake in the middle of which stand two island palaces. It is situated near the terminus of the Udaipur-Chittorgarh Railway, 697 miles north of Bombay. His Highness Maharajadhiraj Maharana Sir Bhupal Singhji Bahadur, GCSI, K.C.I.E., who succeeded his father the late Maharana His Highness Maharajadhiraj Maharana Sir Fateh Singhji Bahadur, GCSI, G.C.I.E., G.O.V.O. in 1930, is the Premier Ruling Prince of Rajputana. The revenue and expenditure of the State are now about 80.6 lakhs. Its archaeological remains are

numerous and stone inscriptions dating from the third century have been found

Banswara State is the southernmost State of Rajputana within the Political Agency of the Southern Rajputana States. The area of the State is 1,946 square miles and the population 2,60,670-souls. It is thus in regard to size eleventh among the States of Rajputana. Banswara with Dungarpur originally formed a country known as Bagar which was from the beginning of the thirteenth century until about the year 1529, held by certain Rajput Rulers of the Ghelot or Sisodiya clan, who claimed descent from an elder branch of the family now ruling in Udaipur. After the death of Rana Udai Singhji the ruler of Bagar about 1529 his territory was divided between his two sons Prithwi Rajji and Jagmal Singhji, and the descendants of the two families are now respectively the Rulers of Dungarpur and Banswara. Where the town of Banswara now stands there was a large Bhil pal or colony under a powerful Bhil Chieftain named Wasna, who was defeated and slain by Maharawal Jagmal Singhji about 1530. The name of Banswara is by tradition said to be a corruption of Wasnawara or the country of Wasna. Others assert that the word means the country (wara) of bamboos (bras). Nearly three centuries after its foundation by Maharawal Jagmal Singhji, Maharawal Bijai Singhji anxious to get rid of the supremacy of the Marhattas offered to become a tributary to the British Government. In 1818, a definite treaty was made with his successor, Maharawal Ummed Singhji. Banswara has been described as the most beautiful portion of Rajputana, it looks at its best just after the rains. The principal rivers are the Mahi, the Anas, the Lran the Chiap and the Haran.

The present Ruler is His Highness Rana Rai Maharaja Dhiraj Maharawalji Sahib Shree Pirthi Singhji Bahadur, who was born on July 15, 1888, and is the 21st in descent from Maharawal Jagmal Singhji. His Highness was educated in the Mayo College, and succeeded his father in 1914. His Highness is entitled to a salute of 15 guns. The State is ruled by His Highness the Maharawalji Sahib Bahadur with the assistance of the Diwan and the Home Minister, and the Judicial and the Legislative Council, of which the Diwan is the President and the heir apparent, Maharaj-Raj Kumar Sahib Shri Chandraveer Singhji Sahib, is Senior Member. The revenue of the State is about 7 lakhs and the expenditure is about the same.

Diwan—Mr R. K. Chatterjee, B.A., Bar-at-Law

Home Minister—Mr Nand Lal Banerjee

Dungarpur State, with Banswara, for merly comprised the country called the Bagar. It was invaded by the Marhattas in 1818. As in other States inhabited by hill tribes, it became necessary at an early period of British supremacy to employ a military force to coerce the Bhils. The State represents the Gadi of the eldest branch of the Sisodias and dates its separate existence from about the close of the 12th Century. Samant Singh, King of Chitor, when driven away by Kirtipal

of Jalor, fled to Bagdad and killed Chowrasimal, Chief of Baroda, and founded the State of Dungarpur. The present Chief is His Highness Rai Ranan Maharajadhiraj Maharawal Shri Lakshman Singhji Bahadur born on 7th March 1908, succeeded on 15th November 1918 and assumed charge of the administration on the 10th February 1928. No railway line crosses the territory, the nearest railway station, Udaipur, being 65 miles distant and Talad on Ahmedabad side, being about 70 miles distant. Revenue about 6½ lakhs.

Partabgarh State, also called the Kanthal, was founded in the sixteenth century by a descendant of Rana Mokal of Mewar. The town of Partabgarh was founded in 1608 by Partab, Singh. In the time of Jaswant Singh (1775-1844), the country was overrun by the Marathas, and the Maharawat only saved his State by agreeing to pay Holkar a tribute of *Salm Shahi* Rs 72,700 (which then being coined in the State Mint was legal tender throughout the surrounding Native States), in lieu of its 15,000 formerly paid to Delhi. The first connexion of the State with the British Government was formed in 1804, but the treaty then entered into was subsequently cancelled by Lord Cornwallis, and a fresh treaty by which the State was taken under protection was made in 1818. The tribute to Holkar is paid through the British Government, and in 1904 was converted to Rs 36,350 British currency. The present ruler is His Highness Maharawat Ram Singh Bahadur who was born in 1903 and succeeded in 1920. The State is governed by the Maharawat with the help of the Dewan, and, in judicial matters, of a Committee of members styled the Raj Sabha or State Council. Revenue about 5½ lakhs, expenditure nearly 5½ lakhs. The financial administration is under the direct supervision of the State.

Jodhpur State, is the largest in Rajputana with an area of 35,016 miles and a population of 21 millions, of which 83 per cent are Hindus, 8 per cent Muslims and the rest Jains and Animists. The greater part of the country is an arid region. It improves gradually from a mere desert to comparatively fertile land as it proceeds from West to East. The rainfall is scanty and capricious. There are no perennial rivers and the supply of sub-soil water is very limited. The only important river is Luni.

The Maharaja of Jodhpur is the head of the Rathor clan of Rajputs and claims descent from Rama, the deified King of Ayodhya cadets. The earliest known King of the Clan named Abhimanyu, lived in the fifth century, from which time their history is increasingly clear. After the breaking up of their kingdom at Kanauj they founded this State about 1212, and the foundations of the Jodhpur City were laid by Rao Jodha in 1459. He had abolished the tax levied by Hussain Shah of Jaunpur from Hindu pilgrims at Gaya. His descendant was the famous Rao Maldeva, the most powerful ruler of his time having an army of 80,000 Rajputs and the Emperor Humayun when expelled by Sher Shah in 1542 A.D. had sought refuge with him. Raja Sur Singh, son of Raja Udai Singh, in recognition of his deeds of valour was created a 'Sawal Raja' with a mansab of 5,000 Zat.

3,300 Sowars by the Emperor Akbar. Maharaja Jaswant Singh I with whom the secret hostilities of Emperor Aurangzeb are well known was once a pillar of the Indian Empire and a great defender of the Hindus and their temples. He was also a patron of learning and himself wrote books on Philosophy, Prosody and other profound subjects. After his demise, Aurangzeb confiscated Marwar, and Maharaja Jaswant Singh's posthumous son and successor Maharaja Ajit Singh had to pass 8 years in hiding in mountains and subsequent 20 years in constant wars with Aurangzeb's army with the help of his nobles, chief of whom was the famous hero Durga Dass before he ascended the throne of Marwar. In the time of Maharaja Bijay Singh, a later descendant of the same line one of the richest districts, viz., Godwar was finally acquired from Mewar and annexed to Marwar. The State entered into a treaty of alliance with the British Government in 1818.

The present ruler Major His Highness Raj Rajeshwar Saramad Raja Hind Maharaja Dhiraj Maharaja Sri Sir Umald Singhji Sahib Bahadur, G C I E, K C S I, K C V O, is the head of Rathors, and is the 32nd ruler from Rao Sihaji. His Highness was born on 8th July 1903 and is now in the 28th year of his age. He succeeded his elder brother on 3rd October, 1918. He was educated at the Mayo College, Ajmer, and was invested with full ruling powers on 27th January, 1923. In October of the same year he was granted the rank of honorary Captain in the British Army, made a Knight Commander of the Royal Victorian Order in March 1921 and was elevated to the Rank of Honorary Major in June 1923. He was created K C S I, on 3rd June 1925 and invested with G C I E, on the 1st January 1930. His Highness was married in November 1921 and has three sons, and one daughter the heir-apparent being Maharaj Kumar Sri Hanut Singhji Sahib born on 16th June 1923. His Highness the Maharaja Sahib Bahadur has one younger brother, Maharaja Sri Ajit Singhji Sahib, and two sisters the elder of whom is Maharani of Jaipur and the younger the Maharani of Rewa.

His Highness is greatly interested in educational, athletic, and progressive institutions generally of modern times, both in India and abroad, and has always exhibited his sympathy with them by liberal donations. An example of this can be easily found in the donation of 3 lakhs made by His Highness for founding the Irwin Chair of Agriculture at the Benares Hindu University. He is a keen sportsman, Polo player and first rate shot. His favourite past-times are pig-sticking, fishing, shooting and photography.

His Highness enjoys a salute of 19 guns within his own territories and 17 guns elsewhere.

The administration is carried on with the aid of a State Council composed of His Highness the Maharaja Sahib Bahadur, President, Kunwar Maharaj Singh, C I E, (Divisional Commissioner, Allahabad, U P), Vice-President Mr J W Young, O B E, (Indian Finance Department), Finance Member Rao Bahadur Thakur Chaln Singhji M A, L L B, Judicial Member, Rao Bahadur Rao Raja Narpat Singhji, Member-in-Waiting, and Munshi Himmat Singhji, M A, Revenue Member. There is also an Advisory Committee representing

the great body of Sardars who hold as much as five sixths of the total area, to aid the administration with opinion on matters affecting general customs and usage in the country.

The revenue of the State during the year 1929-30 was Rs 1,37,16,000 and the expenditure Rs 1,10,35,000. The Jodhpur Railway extending from Hyderabad, (Sind) to Luni Junction and Marwar Junction to Kuchaman Road with its branches on all sides in the territories of the State is the principal railway, while the B B & C I Railway runs across a portion of the South-Eastern Border. The famous marble quarries of Makrana as well as the salt lake at Sambhar are situated in Jodhpur territory.

Jaisalmer State is one of the largest States in Rajputana and covers an area of 16,062 square miles. The Rulers of Jaisalmer belong to the Jadon clan and are the direct descendants of Krishna. Jaisalmer City was founded in 1156, and the State entered into an alliance of perpetual friendship with the British Government in 1818. In 1844 after the British conquest of Sind the forts of Shahgarh, Garsia and Ghotaru which had formerly belonged to Jaisalmer were restored to the State. The present Ruling Prince is His Highness Maharajadhiraja Maharawal Shri Sri Jawahar Singhji Bahadur, K C S I. Revenue about four lakhs.

Sirohi State is much broken up by hills of which the main feature is Mount Abu, 5,650 feet. The Chiefs of Sirohi are Deora Rajputs, a branch of the famous Chauhan clan which furnished the last Hindu kings of Delhi. The present capital of Sirohi was built in 1425. The city suffered in the eighteenth century from the wars with Jodhpur and the depredations of wild Mina tribes. Jodhpur claimed suzerainty over Sirohi but this was disallowed and British protection was granted in 1823. The present ruler is His Highness Maharajadhiraj Maharao Shri Sir Sarup Ram Singh Bahadur, K C S I. The State is ruled by the Maharao with the assistance of Ministers and other officials. Revenue about 10½ lakhs.

Jaipur is the fourth largest State in Rajputana. It consists for the most part of level and open country. It was known to the ancients as Matsya Desh, and was the kingdom of the King Virata mentioned in the Mahabharata, in whose court, the five Pandava brothers during their last period of exile resided. Bhairat in the Jaipur State has been identified.

The Maharaja of Jaipur is the head of the Kuchawa clan of Rajputs, which claims descent from Kush, son of Rama, King of Ayodhya, the famous hero of the famous epic poem, the Ramayana. This dynasty in Eastern Rajputana dates as far back as ninth century A D. Dulha Rai, one of its most early rulers, made Amber the capital of the State in 1037 A D. About the end of 12th century one of the rulers Pajun at the head of the army of Prithvi Raj, Emperor of Delhi, defeated Shahabuddin Ghori in the Khyber Pass and pursued him as far as Ghazni. Prithvi Raj had given his sister in marriage to him. History of India records several distinguished rulers of Jaipur from amongst whom the following require particular mention. Man Singh, 1590-1615. He was a victorious general, intrepid commander and

tactful administrator, whose fame had spread throughout the country. During most troublous times, he maintained Imperial authority in Kabul and was the brilliant character of Akbar's time. Maharaja Sawai Jai Singh II (1700—44) was the first town planner in India. He removed the capital of the State to Jaipur, so named after him. During his time, the State acquired great power and fame. He was a great mathematician and scientist of his age, and is famous for his astronomical observatories which he built at several important centres in India. His court was visited by foreign astronomers. Maharaja Sawai Ram Singh, 1835-1880. He was one of the most enlightened princes in India at that time. He encouraged art and learning. He embellished the city in various ways and improved the administration and material condition of the people. Maharaja Sawai Madho Singh II, 1880-1922. He was a very wise and intelligent ruler who followed in the foot-steps of his father. He maintained and steadily improved all the useful measures initiated by the late Maharaja. His administration was characterized by great liberality, catholicity and a broad outlook on affairs. His deep religious devotion and piety and unrivalled generosity and genuine and active sympathy are well known. His staunch loyalty and maintenance of the traditions of his house raised him in the estimation of the paramount power. He passed away after a long reign of 41 years. His late Highness' donations and subscriptions to works of charity are enormous and too numerous to detail. His Highness the present Maharaja Sawai Man Singh II Bahadur was born on 21st August 1911. He was adopted by His late Highness on 24th March 1921. He is a scion of the Rajawat House of Isarda, and ascended the gadi on the 7th September 1922, and was married to the sister of the present Maharajah of Jodhpur on the 30th January 1924. He studied at the Woolwich Military Academy in England and promises to be an ideal ruler having given abundant evidence already of the keen and sympathetic interest he takes in all that concerns the welfare of his people and mankind in general.

His Highness the Maharaja Sahib Bahadur was invested with full powers on 14th March 1931. A Chief Court of Judicature was established in 1921. The army consists of Cavalry, Infantry, Transport and Artillery. The normal revenue is about one crore and twenty-five lakhs and the expenditure about one crore and twenty lakhs. According to the Census of 1931 the population of the State is 26,30,977. In area it is 16,682 square miles.

Kishangarh State is in the centre of Rajputana and consists practically of two narrow strips of land separated from each other with an area of 858 square miles (population 90,000), the northern mostly sandy, the southern generally flat and fertile. The Ruling Princes of Kishangarh belong to the Rathor clan of Rajputs and are descended from Maharaja Kishan Singh (second son of Maharaja Udai Singh of Jodhpur) who founded the town of Kishangarh in 1611. The present ruler is His Highness Umdac Rajhat Buland Makan Maharajah Dhiraj Dikshit Yagnarain Singh Bahadur. He was born on the

26th January, 1890, and was educated at the Mayo College, Ajmer, where he passed the Diploma Examination. He was married to the sister of Raja Bahadur Makaudangarh in May, 1915. He went to England and travelled on the Continent with His Late Highness in 1921. On the demise of His Late Highness on 25th September 1926, he succeeded to the Gadi on the 24th November, 1926. He administers the State with the help of a Council. Revenue about 9 lakhs and expenditure 8 lakhs.

Lawa State, or Chief of Rajputana is a separate chieftship under the protection of the British Government and independent of any Native States. It formerly belonged to Jaipur and then became part of the State of Tonk. In 1867, the Nawab of Tonk murdered the Thakur's uncle and his followers, and Lawa was then raised to its present State. The Thakurs of Lawa belonged to the Naruka sect of the Kachwaha Rajputs. The present Thakur, Bansperdeep Singh was born on September 24, 1923 and succeeded to the chieftship on 31st December 1929. The chieftship is under minority Administration. Revenue about Rs 50,000.

Bundi State is a mountainous territory in the south-east of Rajputana. The Ruler of Bundi is the head of the Hara sect of the great clan of Chauhan Rajputs and the country occupied by this sect has for the last five or six centuries been known as Haraoti. The State was founded in the early part of the thirteenth century and constant feuds with Mewar and Malwa followed. It threw in its lot with the Mahomedan emperors in the sixteenth century. In later times it was constantly ravaged by the Marathas and Pindaries and came under British protection in 1815 at which time it was paying tribute to Holkar. The present ruler of the State is His Highness Maharao Raja Shri Ishwari Singhji Sahab Bahadur. He was born on 8th March 1893 and succeeded to the Gadi on 8th August 1927. His Highness is entitled to a Salute of 17 guns. Revenue about 12 lakhs. Expenditure nearly the same.

Tonk State—Partly in Rajputana and partly in Central India, consists of six Parganas separated from one another. The ruling family belongs to the Salazarai Clan of the Hunerwal Afghan tribe. The founder of the State was Nawab Muhammad Amir Khan Bahadur, General of Holkar's Army from 1798-1806. Holkar bestowed grants of land on him in Rajputana and Central India and the land so granted, him was consolidated into the present State. The present Ruler of the State is His Highness Said ud-Daula, Wazir-ul-Mulk, Nawab Hafiz Muhammad Saadat Ali Khan Bahadur Saulat Jang who ascended the Masnad in 1930. The administration is conducted by the Nawab in consultation with the Council of four members, viz, (1) Major D de M S Fraser, I.A., Principal Official and Adviser, Vice President and Finance Member, (2) Khan Bahadur Sheikh Rahim Bakhsh, O.B.E., Revenue Member, (3) E.T.D. Ferguson, Judicial Member, (4) Sahibzada Muhammad Abdul Tawwab Khan, Home Member.

Secretary—Mallik Muhammad Din.

Revenue Rs 23,82,446 Expenditure Rs 31,30,027

Shahpura State—The ruling family belongs to the Sescodia Clan of Rajputs. The State came into existence about 1629 when the Parganah of Phulla was granted by the Mughal Emperor Shah-i-Jehan to Maharaj Surjan Singh, son of Maharaj Surajmal, the second son of Maharana Amar Singh of Udaipur. Later on Raja Ran Singhji received the parganah of Kachhola from the Maharana of Udaipur and was recognised as a great noble of the Mewar State.

The present Ruler is Raja Dhiraja Sir Nahar Singhji, K O I E. The State enjoys permanent honour of 9 guns salute.

Bharatpur State—Consists largely of an immense alluvial plain, watered by the Banganga and other rivers.

The present ruling family of Bharatpur are Jats, of the Sinsinwar clan who trace their pedigree to the eleventh century. The family derives its name from its old village Sinsini. Bharatpur was the first State in Rajputana that made alliance with the British Government in 1803. It helped Lord Lake with 5,000 horse in his conquest of Agra and battle of Laswari wherein the Maratha power was entirely broken and received 5 districts as reward for the service. In 1804, however, Bharatpur sided with Jaswant Rao Holkar against the British Government which resulted in a war. Peace was established in 1805 under a treaty of alliance and it continues in force. The Gadi being usurped by Darjan Sal in 1825, the British Government took up the cause of the rightful heir Maharaja Balwant Singh Shaib. Bharatpur was besieged by Lord Combermere, and as the faithful subjects of the State also made common cause with the British Army the usurper was quickly disposed of, and Maharaja Balwant Singh, the rightful heir to the Throne, came into his own. Bharatpur also rendered valuable service to the British Government during the Mutiny. During the great War the Bharatpur Durbar gave valuable help to the Imperial Government. The Bharatpur Imperial Service Infantry served in East Africa and the Mule Transport Corps served in all theatres of war except Africa. The following are among the most important contributions made by the State during the great war: (1) reinforcement sent to E Africa for the Imperial Service Infantry, 714 rank and file, and 64 followers, (2) reinforcements for the Imperial Service Transport Corps, 430 rank and file and 64 followers, (3) State subscriptions to war loans 20 lakhs, (4) State subscriptions to Imperial Indian Relief Funds, Soldiers' Comfort Fund, Aeroplane Fleet Fund, Lord Kitchener's Memorial Fund, St John's Ambulance, Serbian Relief Fund, and Red Cross, 2 lakhs, (5) public subscriptions to various war funds Rs 26,000 and (6) public subscriptions to war bonds Rs 99,000. Immediately upon their return from Europe the Bharatpur Transport Corps went to the North-West Frontier, and remained on active service there during the Afghan War. The Corps returned to Bharatpur at the conclusion of peace in February 1920. The present Ruler is His Highness Shri Maharaja Brijendra Sawai Brijendra Singh Bahadur, Bahadur Jung, who was born in 1918 and succeeded his

father, Maharaja Sir Kishen Singh who died on the 27th of March 1929.

Revenue Rs 35 lakhs

Dholpur State—The family of the ruling Chiefs of Dholpur belongs to the Bamrolia Jats, the adopted home of one of their ancestors. The family took the name of Bamrolia about the year 1367. They next migrated to Gwalior, where they took the part of the Rajputs in their struggles against the Emperor's Officers. Eventually the Bamrolia Jats settled near Gohad and in 1505 Surjan Deo assumed the title of Rana of Gohad. After the overthrow of the Maharrats at Panipat, Rana Bhim Singh in 1761 possessed himself of the fortress of Gwalior but lost it six years later. In order to bar the encroachments of the Maharrats, a treaty was made with the Rana in 1779 by the British Government under Warren Hastings, and the joint forces of the contracting parties retook Gwalior. In the treaty of the 13th October 1781 between the British Government and Scindia, it was stipulated that so long as the Maharaj Rana observes his treaty with the English, Scindia should not interfere with his territories. The possession of Gohad however led to disputes between the British and Scindia, and in 1805 the Governor-General transferred Gwalior and Gohad to Scindia, and that of Dholpur, Bari, Baseri, Sepru and Rajakhra to Maharaj Rana Kirat Singh. Maharaj Rana Kirat Singh died in 1836 and was succeeded by his son Maharaj Rana Bhagwant Singh on whose death in 1870 his grandson, the late Chief Maharaj Rana Neha Singh, succeeded to the Gadi. Major H.H. Highness Rajs-ud-Daula Sipahdar-ul-Mulk Sasramad Rajhai Hind Maharajadhiraj Sri Sawai Maharaj Rana Sir Udal Bhan Singh Lokindra Bahadur Diler Jang Jai Deo, K O S I, K O V O, the present ruler, is the second son of Maharaj Rana Nehal Singh and was born on the 12th February 1893. On the death of his brother Maharaj Rana Ram Singh His Highness succeeded to the gadi on March 1911. He was educated at the Mayo College, Ajmer, where he passed the Diploma Examination and won several prizes. After a short course of training in the Imperial Cidet Corps at Dehra Dun, His Highness went on a tour to Europe in 1912 and was invested with full ruling powers on the 9th October 1913.

By clan and family the Maharaj Rana is connected with the Jat Chiefs of Patiala, Jhind, Nabha and Bharatpur. His mother was the second sister of late Shahzada Basdeo Singh Sahib Bahadur of the family of Maharaj Ranjit Singh of Lahore. His Highness is married to the daughter of the Sardar of Badrukha in the Jhind State.

Karauli State—A State in Rajputana under the Political control of the Political Agent, Eastern Rajputana States Agency, lying between 26° and 27° north latitude and 76° 30' and 77° 30' east longitude. Area, 1,242 square miles. The river Chambal forms the south eastern boundary of the State, dividing it from Gwalior (Scindia's Territory). On the south-west it is bounded by Jaipur, and on the north-east by the States of Bharatpur, Jaipur and Dholpur. The State pays no tribute to Government. Languages spoken Hindi and Urdu.

The Indian States—Rajputana.

Ruler—His Highness Maharajadhiraj Maharaj Singh Bahadur, Yadukul Chandra Lal. His apparent Maharaj Kumar Ganga Lal, Chief Member State Council, Pandit Shiva Kumar Chaturvedi, P.A., M.A., F.R.S.

Kotah State belongs to the Marwari section, the clan of Chauhan Rajputs, and the early history of their houses is up to the 17th century identical with that of the Bundi family from which they are an offshoot. Its existence as a separate State dates from 1625. It came under British protection in 1817. The present ruler is His Highness Maharaj Sir Umed Singh Bahadur, G.C.S.I., G.C.I.F., G.C.B., born in 1873 and invested with full powers in 1896. In administration he is assisted by two members, P.A. Bahadur Pandit Bishwanath Nath, M.A., and Major-General Onkar Singh, C.I.F. The most important event of his rule has been the restoration on the deposition of the late Chief of the Jhalawar State, of 15 out of the 17 districts which had been ceded in 1898 to form that principality. Revenue 53 lakhs. Expenditure 48 lakhs.

Jhalawar State consists of two separate tracts in the south-east of Rajputana with an area of 810 square miles yielding a revenue of about 8 lakhs of rupees. The ruling family belongs to the Jhalu clan of Rajputs. The present ruler, His Highness Maharaj Raja Rajendra Singhji, succeeded to the Gadi on 13th April, 1920. He was born in 1900 and educated at the Mayo College Ajmer and Oxford University. His heir apparent, Maharaj Kumar Virendra Singh was born in England on 27th September, 1921. He is now being educated at Paj Kumar College, Rajkot.

The Bikaner State in point of area is the seventh largest of all the Indian States and the second largest in Rajputana. The population of the State is 9,36,218 of whom 77 per cent are Hindus, 15 per cent Mahomedans, 4 per cent Sikhs and 3 per cent Jains. The capital city of Bikaner, with its population including the suburbs of 85,927, is the third city in Rajputana.

The northern portion of the State consists of level loam land, whilst the remainder is for the most part sandy and undulating. The average rainfall is about 12 inches. The water level over most of the State is from 150 feet to 300 feet deep.

The reigning family of Bikaner is of the Rathore clan of Rajputs, and the State was founded in 1465 A.D. by Rao Bikaji, son of Rao Jodhaji, Ruler of Marwar (Jodhpur), and after him both the Capital and the State are named. Raj Singhji, the first to receive the title of Rajah, was "one of Akbar's most distinguished Generals" and it was during his reign that the present Fort of Bikaner was built in 1593. The title of Maharajah was conferred on Rajah Anup Singhji by the Mughal Emperor in 1687 in recognition of his distinguished services in the capture of Golconda. The conspicuous services of Maharajah Sardar Singhji who in the Indian Mutiny of 1857 personally led his troops to co-operate with the British forces in the field

on the outbreak of the Mutiny was acknowledged by the Government of India by the transfer of the Sub Tehsil of Tihl consisting of 41 villages from the adjoining Sirsa Tehsil in the Punjab to the Bikaner State.

The present ruler, Lieutenant-General His Highness Maharajadhiraj Raj Rajeshwar Narendra Shriromant Maharajah Sri Sir Ganga Singhji Bahadur, G.C.S.I., G.C.I.F., G.C.V.O., G.B.I., K.C.B., A.D.C., I.L.D., is the 21st of a long line of distinguished rulers renowned for their bravery and state-manship. He was born on the 3rd October 1880 and assumed full ruling powers in December, 1898. He was awarded the first class Kaisar-i-Hind Medal for the active part he took in relieving the famine of 1899-1900, and soon after he went on active service to China in connection with the China War of 1900-1901 in command of his famous Ganga Risala and was mentioned in despatches and received the China Medal and K.C.I.E. The State Forces consist of the Camel Corps, known as 'Ganga Risala,' whose sanctioned strength is 465 strong, an Infantry Battalion 595 strong, a Regiment of Cavalry 342 strong including His Highness' Body Guard, a Battery of Artillery (4 guns 275), and 226 strong and a Camel Battery 20. At the outbreak of the Great War in 1914, His Highness immediately placed the services of himself and his State forces and all the resources of the State at the disposal of His Imperial Majesty the King-Emperor, and the Ganga Risala reinforced by the Infantry Regiment, which became incorporated in the Camel Corps in the field, rendered very valuable services in Egypt and Palestine. An extra force was also raised for internal security. His Highness personally went on active service in August 1914 and enjoys the honour of having fought both in France and Egypt, and thus has the distinction of having fought for the British Crown on three continents, viz., Asia, Europe and Africa. He was mentioned in despatches both in Egypt and France. His Highness also played a very conspicuous political part during the period of the War when he went twice to Europe as the Representative of the Princes of India, once in 1917 to attend the meetings of the Imperial War Cabinet and Conference, and again in 1918-19 to attend the Peace Conference where he was one of the signatories to the treaty of Versailles. His Highness led the Indian Delegation to the 11th Assembly of the League of Nations at Geneva and represented the Indian States at the Imperial Conference in 1930. His Highness also attended the Indian Round Table Conference and the Federal Structure Sub-Committee both in 1930 and 1931.

His Highness enjoys a salute of 19 guns (personal) whilst the permanent local salute of the State is also 19. His Highness has also had the honour of being elected the first Chancellor of the Chamber of Princes, an office which he filled most creditably for 5 years till 1925.

His Highness is assisted in the administration of the State by a Prime Minister and Chief Councillor in the person of Sir Manubhai N. Mehta, Kt., C.S.I., M.A., LL.B. formerly the

Dewan of the Baroda State A Legislative Assembly was inaugurated in 1913, and consists of 45 Members, 20 out of whom are elected Members, and which meets twice a year

The revenues of the State are over a crore of rupees and the State owns a large Railway system, the total mileage being 795.85 The Government have also under contemplation an extension of the Bikaner State Railway from Sadulpur to Rewari and from Bikaner to Sind *Via* Jaisalmer which will have the effect of connecting Delhi with Sind Hitherto there was practically no Irrigation in the State, the crops depending only on the scanty rainfall, but the Gang Canal taken out from the Sutlej river has now been constructed and opened and will help to protect about 6,20,000 acres of land in the northern part of the State against famine from which it has suffered in the past 14,785 Squares of the Canal land have already been sold Even larger expectations are held out from the Bhakra Dam Project from which it is hoped that the remaining level lands in the north of the State will be irrigated A coal mine is worked at Palana, 14 miles south from the Capital

Alwar State is a hilly tract of land in the East of Rajputana Its Rulers belong to the Lalawat Naruka branch of Kshatrias, Solar Dynasty This ruling family is descended from Raja Udai Karanji, who was the common ancestor of both Alwar and Jaipur The State was founded by Pratab Singh, who before his death in 1791 had secured possession of large territories His successor sent a force to co operate with Lord Lake in the war of 1803 and an alliance was concluded with him in that year Disputes about successions mark the history of the State during the earlier part of the nineteenth century The present chief, H H Raj

Rishi Veerendra Shikromani Dev Col Shri Sewai Maharaja Sir Jey Singhi Bahadur, C I E., K C S I, who was born in 1882, succeeded his father in 1892 and was invested with powers in 1903 He carries on the administration with the assistance of five Ministers, Members of His Highness' Council and various heads of departments The normal revenue and expenditure are about Rs 55 lakhs a year The State besides maintaining other forces, maintains also the Imperial Service Troops which His Highness the late Maharaja was the first prince in Rajputana to offer (in 1888) in the defence of the Empire Alwar stood first in recruiting in Rajputana at the time of the Great War and enjoys a salute of 17 guns The capital is Alwar on the Rajputana-Malwa Railway, 98 miles west of Delhi

CENTRAL INDIA AGENCY.

Central India Agency is the name given to the country occupied by the Indian States grouped together under the supervision of the Political Officer who is designated the Agent to the Governor-General in Central India with headquarters at Indore As constituted in 1921—that is, after the separation of the Gwalior Residency—it is an irregularly formed tract lying in two sections, the Eastern comprising Bundelkhand and Baghelkhand Agencies between 22°-38' and 26°-19' North and 78°-10' and 83°-0' East and the Western consisting of the Bhopal and the Southern States and Malwa Agencies between 21°-22' and 24°-47' North and 74°-0' and 78°-50' East The British districts of Jhansi and Saugor and the Gwalior State divide the Agency into two sections The total area covered is 51,501.3 square miles and the population (1921) amounts to 6,015,120 The great majority of the people are Hindus There are 28 Salute States of which the following 10 have direct treaty engagements with the British Government—Indore, Bhopal, Rewa, Orchha, Datia, Dhar, Dewas Senior Branch, Dewas Junior Branch, Samthar and Jaora All of these are Hindu except Bhopal Jaora and Baoni which are Muhammedan

Besides these there are 56 Minor States and Guaranteed Estates Excluding the Indore State and the Hiraipur and Lalgarh Estates they are divided into following groups for administrative purposes—Bhopal Agency, 8 States and Estates (principal State Bhopal), Baghelkhand Agency, 12 States and Estates (principal State Rewa), Bundelkhand Agency, 22 States and Estates (principal State Orchha), Southern States and Malwa Agency, 22 States and Estates (principal States Dhar, Dewas Senior Branch, Dewas Junior Branch, Jaora and Ratlam). The Agency may roughly be divided into two natural divisions, Central India West comprising the former Plateau division with such hilly land as lies on this side and Central India East comprising the former low-lying area and the Eastern hilly tracts The hilly tracts lie along the ranges of the Vindhya and Satpuras They consist of forest areas and agriculture is little practised there, the inhabitants being mostly members of the wild tribes The territories of the different States are much intermingled and their political relations with the Government of India and each other are very varied

The following is the size, population and revenue of the ten treaty States mentioned above—

| Name | Area in square miles | Population | Revenue Lakhs Rs. |
|----------------------|----------------------|------------|-------------------|
| Indore | 9,519 | 13,16,237 | 136 |
| Bhopal | 6,902 | 7,29,955 | 62 |
| Pewa | 13,000 | 15,87,445 | 60 |
| Orchha | 2,079 | 3,14,661 | 11 |
| Datla | 911 | 1,58,814 | 17 |
| Dhar | 1,777 | 2,43,470 | 17 |
| Dewas, Senior Branch | 449 | 83,321 | 9 |
| Dewas, Junior Branch | 419 | 70,513 | 6 |
| Samthar | 180 | 33,397 | 3 |
| Jaora | 601 | 1,00,166 | 12 |

Gwalior—The house of Scindia traces its descent to a family of which one branch held the hereditary post of patel in a village near Satara. The head of the family received a patent of rank from Aurangzeb. The founder of the Gwalior House was Ranoji Scindia who held a military rank under the Peshwa Baji Rao. In 1726 the Peshwa granted deeds to Puar, Holkar and Scindia, empowering them to levy 'Chauth' and 'Sardesmukhi' and retain half the amount for payment to their troops. In 1736 Ranoji Scindia accompanied Baji Rao to Delhi where he and Mulhar Rao Holkar distinguished themselves in military exploits. Ranoji fixed his headquarters at the ancient city of Ujjain, which for the time became the Capital of the Scindia dominions. During the time of Mahadji Scindia and Dowlat Rao Scindia Gwalior played an important part in shaping the history of India. Despite the partial reverse which Mahadji Scindia's troops suffered at the hands of the British in 1780, reverses which led to the treaty of Salbai (1782), Scindia's power remained unbroken. For the first time he was now recognized by the British as an independent sovereign and not as a vassal of the Peshwa.

In 1790 his power was firmly established in Delhi. While he was indulging ambitious hopes he fell a prey to fever which ended his remarkable career on 12th February, 1794. Himself a military genius, Mahadji Scindia's armies reached the zenith of their glory under the disciplined training of the celebrated French adventurer—De Boigne. Mahadji was succeeded by his grand nephew Daulat Rao in whose service Perron, a Military Commander of great renown played a leading part. The strength of Scindia's Army was, however, considerably weakened by the reverses, sustained at Ahmednagar, Asraye Asirgarh and Laswari. Daulat Rao Scindia died in 1827. Till his death he remained in undisputed possession of almost all the territory which belonged to him in 1805.

Daulat Rao was succeeded by Jankoji Rao who passed away in the prime of life. On his demise in 1843 intrigue and party spirit were rampant and the Army was in a state of mutiny with the result that it came into collision with the British forces at Maharajpore and Panalhar.

Jankoji Rao was succeeded by Jaji Rao whose adherence to the British cause during the dark days of Mutiny, when his own troops deserted him, was unshakable. In 1861 he was created a Knight Grand Commander of the Most Exalted Order of the Star of India and in 1877 was made a Councillor of the Empress. Subsequently he received other titles and entered into treaties of mutual exchange of territories with the British Government. He died on the 20th June 1886 and was succeeded by his son Lieutenant-General H. H. Maharaja Sir Madho Rao Scindia, Alijah Bahadur, G.O.V.O., C.C.S.I., C.B.E., A.D.C. to the King. He succeeded in 1886 and obtained powers in 1894. In 1901 he went to China during the war, he held the rank of honorary Lieutenant General of the British Army and the honorary degrees of LL.D., Cambridge, and D.C.L., Oxon. He was also a Donat of the Order of St. John of Jerusalem in England. He died in June 1925 and was succeeded by his son H. H. Jeewajirao Scindia. During His Highness' minority the administration of the State is being conducted by a Council of Regency.

The ruler of the State enjoys a salute of 21 guns. The State is in direct relations with the Government of India.

The northern part of the State is traversed by the G.I.P. Railway and two branches run from Bhopal to Ujjain and from Bina to Baran. The Gwalior Light Railway runs for 250 miles from Gwalior to Blind, from Gwalior to Sheopur and from Gwalior to Shivpuri. The main industries are cotton spinning, which is done all over the State, fine muslins made at Chanderi, leather work, etc. The State maintains three regiments of Imperial Service Cavalry, two battalions of Imperial Service Infantry and a transport corps. Lashkar, the capital city, is two miles to the south of the ancient city and the fort of Gwalior. Annual income about 2 crores and expenditure about 175 lakhs.

Indore—The founder of the House of the Holkar of Indore was Malhar Rao Holkar, born in 1693. His soldierly qualities brought him to the front under the Peshwa, who took him into his service and employed him for his conquests. When the Maratha power was weakened at the battle of Panipat in 1761, Malhar Rao had acquired territories stretching from the Deccan to the Ganges as a reward for his career as a Military Commander. He was succeeded by his grandson. On his death without issue his mother Ahilya Bai became the Ruler and her administration is still looked upon with admiration and reverence as that of a model ruler. She was succeeded by Tukoji Holkar who indeed had been associated with her to carry the Military Administration and had in course of it distinguished himself in various battles. Tukoji was succeeded by Kashirao, who was supplanted by Jeswant Rao, his step brother a person of remarkable daring strategy as exhibited in a number of engagements in which he had taken part. The brilliant success he obtained at the battle of Poona against the combined armies of Peshwa and Scindia made him a dictator of Poona for some time and he declared in consequence the independence of Holkar State.

During 1804-5 he had a protracted war with the British, closed by a Treaty which recognised the independence of Holkar State with practically no diminution of its territories and rights. Yeshwant Rao showed signs of insanity from 1808 onwards and succumbed to that malady in 1811, when he was succeeded by his minor son Malhar Rao II. During the Regency which followed the power of the State was weakened by various causes, the most important of which was the refractory conduct of the Military Commanders. On the outbreak of the war between the English and the Peshwa in 1817, some of these Commanders, with a part of the army, rebelled against the authority of the State and were disposed to befriend the Peshwa, while the regent, mother and her ministers were for friendship with the British. There was a battle between the British Army and this refractory portion of the Holkar Army which culminated in the latter's defeat. Holkar had to come to terms and to cede extensive territories and rights over the Rajput Princes to the British, but the internal sovereignty remained unaffected. The Treaty of 1818 which embodied these provisions still regulates the relations between the British Government and the State.

Malhar Rao died a premature death in 1833. Then followed the weak administration of Hari Rao and his son. In 1844 Tukoji Rao II ascended the Throne, but as he was a minor the administration was carried on by a Regency under Sir Robert Hamilton, the Resident as its Adviser. The prosperity of the State revived a great deal during this administration and the progress was maintained after the Maharaja assumed powers in 1852. It was interrupted by the outbreak of Mutiny in 1857 in British India. This wave of disaffection did not leave some of the State troops untouched. The Maharaja with his adherents and the remaining troops remained however staunch to the British and gave every possible assistance to the British authorities at Indore, Mhow and other places which was recognised by the British Government. The Maharaja died in 1886 after having effected various reforms in the administrations and raised the position of the State to a high degree of prosperity and honour. He was succeeded by Shivaji Rao who reigned for 16 years and will be specially remembered for his beneficent measures in matters of education, sanitation, medical relief and abolition of transit duties. Tukoji Rao III succeeded in 1903 while yet a minor. The Regency Administration was continued till 1911 and it effected a number of reforms in all the branches of administration. The policy of the Regency was maintained by the Maharaja. With his assumption of powers the State advanced in education in general including female education, commerce and industrial developments, municipal franchise and other representative institutions. This prosperity was specially reflected in the Indore City, the population of which rose by 40 per cent.

During the war of 1914 the State placed all its resources at the disposal of the British Government. Its troops took part in the various theatres of war and the contribution of the State towards the war and Charitable

Funds in money was 41 lakhs and its subscriptions to the War Loans amounted to Rs 82 lakhs while the contribution from the Indore people amounted to over one crore. This assistance received the recognition of the British Government.

The area of the State is 9,520 square miles with a revenue of about one crore and thirty-eight lakhs. According to the Census of 1931 the population of the State is 1,318,237, showing an increase of 14.6 per cent over the Census figures of 1921.

The State now possesses one first grade College teaching up to M.A. and LL.B., 5 High Schools, 1 Sanskrit College and 545 other educational and 78 medical institutions. An Institute of Plant Industry for the improvement of cotton is located at Indore. It has also 9 spinning and weaving mills.

The State Army consists of about over 4,200 Officers and men. The State is traversed by the Holkar State Railway, the principal station of which is Indore, the B.B. & C.I. Railway and the U.B. Section of the G.I.P. Railway. Besides the trunk roads, there are 600 miles of roads constructed and maintained by the State. The reforms introduced were the establishment of State Savings Banks, a scheme of Life Insurance for State officials, establishment of a Legislative Committee consisting of seven elected Members out of a total of nine members, introduction of a Scheme of Compulsory Primary Education in the City of Indore and measures for the expansion of education in the mofussil.

His Highness Maharaja Tukoji Rao II abdicated in favour of his son. The present Maharaja Yeshwant Rao Holkar was born on 6th September 1903. He received his education in England from 1920-23 and again at Christ Church College, Oxford from 1926-27. He married a daughter of the Junior Chief of Kagal (Kolhapur) in February 1924. His educational career at Oxford in England having come to an end, he returned to India arriving at Indore on the 12th November 1929, and received administrative training with Mr C. U. Wills, C.I.E., I.O.S. He assumed full Ruling Powers on the 9th May 1930.

The chief imports are cloth, machinery, sugar, salt and kerosene oil. The total imports in 1929 amounted to Rs 2,36,85,876.

The chief exports are cotton, cloth, tobacco and cereals. The total exports in 1929 amounted to Rs 1,03,86,634 exclusive of the exported produce of the Ginning and Pressing Factories which was valued at Rs 3,00,47,692.

Cloth manufactured at the local mills is valued at over two crores and the local trade in wheat is estimated at one crore.

Cotton excise duty at 3½ per cent *ad valorem* has been abolished from 1st May 1926 and an industrial tax is levied on the cotton mills from the same date.

Bhopal—The principal Mohammadan State in Central India ranks next in importance to Hyderabad among the Mohammadan States of India. The ruling family was founded by

Income and expenditure is about 19½ and 10 lacs respectively. Dewan Bahadur K. Nadkar is Dewan of the State and Vice-President of the Council. The present Ruler His Highness Maharaja Anand Rao Paur Sahib Bahadur is a minor. The famous and the ancient Hill Fort of Mandoo—the capital of several ancient and medieval Kingdoms—with its beautiful mausoleums, tombs and palaces and high hills and deep dales is situated in the State at a distance of 24 miles from the city of Dhar.

Jaora State—This State is the only Treaty State in the Malwa Political Agency covering an area of about 601 square miles with a total population of 1,00,204 and has its Headquarters at Jaora town. The Chiefs of Jaora claim descent from Abdul Majid Khan, an Afghan of the Tajik Khel from Sowat, who came to India to acquire wealth. The first Nawab was Abdul Ghafoor Khan who obtained the State about the year 1808. The present Chief is Lt.-Col. His Highness Fakharud Daulah Nawab Sir Mohammad Iftikhar Ali Khan Bahadur Saulat Jung, C.I.E., who was born in 1883. His Highness is an Honorary Lieutenant-Colonel in the Indian Army.

In the administration of the State His Highness is assisted by a Council constituted as under—**President**—His Highness the Nawab Sahib Bahadur **Vice-President**—Khan Bahadur Sahibzada Mohammad Serfraz Ali Khan, Chief Secretary **Members**—(1) Khan Bahadur Sahibzada Mohammad Sher Ali Khan, Military Secretary (2) Sahibzada Mohammad Mohammad Saifur Ali Khan, Judicial Secretary (3) Pandit Amar Nath Katju, B.Sc., LL.B., Financial Secretary (4) Mirza Mohammad Aslam Beg, Senior Member, Revenue Board (5) Mr. Scrajur Rehman Khan, Bar-at-Law, Judge, Chief Court (6) Mr. John A. Merrett, M.I. Mech. E., Consulting Engineer.

A Chief Court with a Chief Justice and two Puisne Judges and a Revenue Board with two Members have also been established.

The soil of the State is among the richest in Malwa being mainly of the best black variety bearing excellent crops of wheat, cotton and poppy. The average annual revenue is Rs 11,67,000.

Rutlam—Is the premier Rajput State in the Malwa Agency. It covers an area of 871 square miles, including that of the Jagir of Khara in the Kushalgarh Chiefship, which pays an annual tribute to the Rutlam Darbar. The State was founded by Raja Ratansinghji, a great grandson of Raja Udai Singh of Jodhpur, in 1652. The Ruler of Rutlam is the religious head of the Rajputs of Malwa, and important caste questions are referred to him for decision. The State enjoys full and final civil and criminal powers. The present Ruler of Rutlam is Colonel His Highness Maharaja Sir Sajjan Singh, G.C.I.F., C.O.S.I., A.D.C. to H.R.H. the Prince of Wales, who was born in 1880, and educated at Daly College, Indore, received military training in Imperial Cadet Corps and invested with full powers in 1898. His Highness served in the war in France and Egypt from 1915 to 1918,

was mentioned in despatches and received the Croix d'Officiers de Legion d'Honneur. Salute 13 guns, local 15 guns.

Dewan—Raj Kumar Sirdar Singh of Shahpura.

Datia State—The rulers of this State, in the Bundelkhand Agency, are Bundela Rajputs of the Orchha house. The territory was granted by the chief of Orchha to his son Bhagwan Rao in 1026, this was extended by conquest and by grants from the Delhi emperors. The present Ruler Major His Highness Maharaja Lokendra Sir Govind Singh Ju Deo Bahadur, C.O.S.I., 1918, who was born in 1886 and succeeded in 1907, married 1902, enjoys a salute of 15 guns. He placed all his resources and his personal services at the disposal of the Imperial Government during the Great War and established a War Hospital at Datia. He is a progressive Ruler and has created a Legislative Council and introduced many useful and important reforms in his State. He is a Vice-President of St. John Ambulance Association, a patron of Red Cross Society and has recently offered to the Imperial City of Delhi the life size marble statue of Lord Reading, the late Viceroy. His Highness is a famous big game shot and has shot more than 126 tigers. The heir apparent Raja Bahadur Balbhadra Singh, born 1907, has married a daughter of the Maharaja Bahadur of Balam-pur and is a very promising prince. His Highness has got a second son and a grandson.

Orchha State—The rulers of this State are Bundela Rajputs claiming to be descendants of the Gaharwars of Benares. It was founded as an independent State in 1048 A.D. It entered into relations with the British by the treaty made in 1812. His Highness Sir Pratap Singh, G.O.S.I., G.O.I.F., died in March 1930 and has been succeeded by his grandson His Highness Sawal Mahendra Maharaja Bir Singh Dev Bahadur, the present ruler. The ruler of the State has the hereditary titles of His Highness Saramadl-Rajshahi-Bundelkhand Maharaja Mahendra Sawal Bahadur. The State has a population of about 3,15,000 and an area of 2,080 square miles. The capital is Tikamgarh, 36 miles from Lalitpur Station, on the G.I.P. Railway. Orchha, the old capital, has fallen into decay but is a place of interest on account of its magnificent buildings of which the finest were erected by Maharaja Bir Singh Dev I, the most famous ruler of the State (1675-1627).

Political Agent—Lt.-Col. F. M. Bailey, C.I.E.

SIKKIM.

Sikkim is bounded on the north and north east by Tibet, on the south-east by Bhutan, on the south by the British district of Darjeeling, and on the west by Nepal. The population consists of Bhutias, Lepchas and Nepalese. It forms the direct route to the Chumbi Valley in Tibet. The main axis of the Himalayas, which runs east and west, forms the boundary between Sikkim and Tibet. The Singalila and Chola ranges, which run southwards from the main chain, separate Sikkim from Nepal on the west, and from Tibet and Bhutan on the east. On the Singalila range rise the great snow peaks of Kanchenjunga (28,146 feet), one of the highest mountains in the world. The Chola range which is much loftier than that of Singalila, leaves the main chain at the Dongkya La.

Tradition says that the ancestors of the Rajas of Sikkim originally came from eastern Tibet. The State was twice invaded by the Gurkhas at the end of the eighteenth century. On the outbreak of the Nepal War in 1814, the British formed an alliance with the Raja of Sikkim and at the close of the war the Raja was rewarded by a considerable cession of territory. In 1835 the Raja granted the site of Darjeeling to the British and received Rs. 12,000 annually in lieu of it.

The State was previously under the Government of Bengal, but was brought under the direct supervision of the Government of India in 1906. The State is thinly populated, the area being 2,818 square miles, and the population 1,99,657, chiefly Buddhists and Hindus. The most important crops are maize and rice. There are several trade routes through Sikkim from Darjeeling District into Tibet. In the convention of 1890 provision was made for the opening of a trade mart but the results were disappointing, and the failure of the Tibetans to fulfil their obligations resulted in 1904 in the despatch of a mission to Lhasa, where a new convention was signed. Trade with the British has increased in recent years, and is now between 40 and 50 lakhs yearly. A number of good roads have been constructed in recent years. The present ruler, His Highness Maharajah Sir Tashi Namgyal, K.C.I.E., was born in 1893 and succeeded in 1914. His Highness was invested with full ruling powers on the 5th April 1918. The title of a C.I.L. was conferred upon the Maharaja on the 1st January 1918 and K.C.I.E. on 1st January 1923. The average revenue is Rs. 5,20,422.

Political Officer in Sikkim.—F. Williamson.

BHUTAN.

Bhutan extends for a distance of approximately 190 miles east and west along the southern slopes of the central axis of the Himalayas, adjacent to the northern border of Eastern Bengal and Assam. Its area is 18,000 square miles and its population, consisting of Buddhists and Hindus, has been estimated at 300,000. The country formerly belonged to a tribe called Tek-pa, but was wrested from them by some Tibetan soldiers about the middle of the seventeenth century. British relations with Bhutan commenced in 1772 when the Bhotias invaded the principality of Cooch Behar and British aid was invoked by that State. After a number of raids by the Bhutanese into Assam, an envoy (the Hon. A. Eden) was sent to Bhutan, who was grossly insulted and compelled to sign a treaty surrendering the Duars to Bhutan. On his return the treaty was disallowed and the Duars annexed. This was followed by the treaty of 1865, by which the State's relations with the Government of India were satisfactorily regulated. The State formerly received an allowance of half a lakh a year from the British Government in consideration of the cession in 1865 of some areas on the southern borders. This allowance was doubled by a new treaty concluded in January 1910, by which the Bhutanese Government bound itself to be guided by the advice of the British Government in regard to its external relations, while the British

Government undertook to exercise no interference in the internal administration of Bhutan. On the occasion of the Tibet Mission of 1904, the Bhotias gave strong proof of their friendly attitude. Not only did they consent to the survey of a road through their country to Chumbi, but their ruler, the Tongsa Penlop, accompanied the British troops to Lhasa, and assisted in the negotiations with the Tibetan authorities. For these services he was made a K.C.I.L., and he has since entertained the British Agent hospitably at his capital. The ruler is now known as H.H. the Maharaja of Bhutan, Sir Ugyen Wangchuk, K.C.S.I., K.C.I.E. At the head of the Bhutan Government, there are nominally two supreme authorities, the Dharma Raja, known as Shapting Renipoché, the spiritual head, and the Deb or Depa Raja, the temporal ruler. The Dharma Raja is regarded as a very high incarnation of Buddha, far higher than the ordinary incarnations in Tibet, of which there are several hundreds. On the death of a Dharma Raja a year or two is allowed to elapse, and his reincarnation then takes place, always in the Choje, or royal family of

NEPAL.

The kingdom of Nepal is a narrow tract of country extending for about 520 miles along the southern slope of the central axis of the Himalayas. It has an area of about 56,000 square miles, with a population of about 5,580,000, chiefly Hindus. The greater part of the country is mountainous, the lower slopes being cultivated. Above these is a rugged broken wall of rock leading up to the chain of snow clad peaks which culminate in Mount Everest (29,002 feet) and others of slightly less altitude. The country before the Gurkha occupation was split up into several small kingdoms under Newar kings. The Gurkhas under Prithvi Narayan Shah overran and conquered the different kingdoms of Patan, Kathmandu, and Bhatgaon, and other places during the latter half of the 18th century and since then have been rulers of the whole of Nepal. In 1846 the head of the Rana family Maharaja Jung Bahadur Rana, obtained from the sovereign the perpetual right to the office of Prime Minister of Nepal, and the right is still enjoyed by the descendants of the Rana family. In 1850 Jung Bahadur paid a visit to England and was thus the first Hindu Chief to leave India and to become acquainted with the power and resources of the British nation. The relations of Nepal with the Government of India are regulated by the treaty of 1816 and subsequent agreements by which a representative of the British Government is received at Kathmandu. By virtue of the same treaty Nepal maintains a Representative at Delhi and her treaty relations with Tibet allow her to keep a Resident at Lhasa of her own. Her relation with China is of a friendly nature. Ever since the conclusion of the treaty of 1816 the friendly relations with the British Government have steadily been maintained. During the rule of the late Prime Minister it has been at its height as is evidenced by the valuable friendly help in men and money which has been given and which was appreciatively mentioned in both the Houses of Parliament and by Mr Asquith in his Guildhall speech in 1915. The message from His Majesty the King Emperor to the Nepalese Prime Minister sent on the termination of hostilities and published at the time as also the Viceroy's valedictory address to the Nepalese contingent on the eve of their return home after having laudably fulfilled their mission in India eloquently and gratefully acknowledged the valuable help rendered by Nepal during the four and a half years of war. In recognition of this help Nepal receives an annual gift of Rupees ten lakhs from the British Government to be paid in perpetuity. To further strengthen and cement the bonds of friendship that have subsisted so long between the two countries, a new Treaty of friendship was concluded between the Governments of Nepal and Great Britain on the 21st December 1923.

From the foregoing account of the history of Nepal it will be seen that the Government of

the country has generally been in the hands of the Minister of the day. Since the time of Jung Bahadur this system of government has been clearly laid down and defined. The sovereign, or Maharajadhiraja, as he is called, is but a dignified figure-head, whose position can best be likened to that of the Emperor of Japan during the Shogunate. The present King, His Majesty Maharajadhiraja Tribhubana Bir Bikram Jung Bahadur Shah Bahadur Shum Shere Jung Deva, ascended the throne on the death of his father in 1911. The real ruler of the country is the Minister who, while enjoying complete monopoly of power, couples with his official rank the exalted title of Maharaja. Next to him comes the Commander in Chief, who ordinarily succeeds to the office of Minister.

The present Minister at the head of affairs of Nepal is Maharaja Bhim, Shum Shere Jung Bahadur Rana, G.C.I., K.C.V.O. Honorary Major-General, British Army and Hon. Colonel, 4th Gurkhas, who succeeded the late Maharaja Chandra Shum Shere Jung Bahadur Rana as Prime Minister and Supreme Commander-in-Chief in November 1920. A man of proved ability as the Commander-in-Chief of Nepal, he has already inaugurated several important works of public utility. With consummate skill and political acumen he averted a breach of relations with Tibet and in his public utterances has expressed an earnest desire to uphold and maintain the traditional friendship with the British Government.

Rice, wheat and maize form the chief crops in the lowlands. Mineral wealth is supposed to be great, but, like other sources of revenue, has not been developed. Communications in the State are primitive, but since 1920 the Government has already undertaken the construction of a good and permanent road for vehicular traffic from Amlekhgunj to Bhimphedi—the base of a steep ridge in the main route to the capital of the country from British India—and also has installed a ropeway to connect this base with the capital proper covering a distance of 14 miles. A light railway from Amlekhgunj covering a distance of 25 miles in the route and connecting with the B & N W Ry at Raxaul also has been constructed and opened for traffic since March 1927. It has also put up a telephone over this route connecting the capital with the frontier township of Birgunge near Raxaul. The revenue is about two crores of rupees per annum. The standing army is estimated at 45,000 the highest posts in it being filled by relations of the minister. The State is of considerable archaeological interest and many of the sites connected with scenes of Buddha's life have been identified in it by the remains of inscribed pillars.

British Envoy—Lieut.-Col. C. T. Dankes, C.I.F.

NORTH-WEST FRONTIER STATES.

The Indian States of the North-West Frontier Provinces are Amb, Phulera, Dir, Swat and Chitral. The area of the latter three is 3,000, 1,800 and 4,000 square miles and population 250,000, 216,000 and 99,000 respectively.

Amb—Is only a village on the western bank of the Indus in Independent Tanawala.

Chitral—Runs from Iowara top to the south of the Hindu-Kush range in the north, and has an area of about 4,000 square miles. The ruling dynasty has maintained itself for more than three hundred years, during the greater part of which the State has constantly been at war with its neighbours. It was visited in 1885 by the Lockhart Mission, and in 1889, on the establishment of a political agency in Gilgit, the ruler of Chitral received an annual subsidy from the British Government. That subsidy was increased two years later on condition that the ruler, Amen-ul-Mulk, accepted the advice of the British Government in all matters connected with foreign policy and frontier defence. His sudden death in 1892 was followed by a dispute as to the succession. The eldest son Nizam-ul-Mulk was recognised by Government, but he was murdered in 1895. A war was declared by Umra Khan of Jandul and Dir against the infidels and the Agent at Gilgit, who had been sent to Chitral to report on the situation, was besieged with his escort and a force had to be despatched (April 1895) to their relief.

The valleys of which the State consists are extremely fertile and continuously cultivated. The internal administration of the country is conducted by His Highness Sir Shujaul-mulk, K O I E, the Mehtar of Chitral and the foreign policy is regulated by the Political Agent at Malakand.

Dir—The territories of this State, about 3,000 square miles in area, include the country drained by the Panjkora and its affluents down to the junction of the former river with the Bajaur Rud. The Nawab of Dir is the overlord of the country, exacting allegiance from the petty chiefs of the clans. Dir is mainly held by Yusufzal Pathans, the old non-Pathan inhabitants being now confined to the upper portion of the Panjkora Valley known as the Dir Kohistan.

Swat—The Ruler of the State, Miangul Gulshahzada Sir Abdul Wadood, K B E, is a descendent of the famous Akhund Sahib of Swat. He consolidated his rule in Swat from 1917 to 1922, and was recognized by the Government of India as Wali of Swat in 1920. The area of the State is 1,800 square miles and population 216,000. The Headquarters of the State is at Saidu Sharif about 40 miles from Malakand and connected with Malakand by motor road.

Political Agent for Dir, Swat and Chitral—
R. J. Gould, C M G, C I E, I C S.

STATES IN THE MADRAS PRESIDENCY.

The Madras Presidency includes 5 Indian States covering an area of 10,643 square miles. Of these, the States of Travancore and Cochin represent ancient Hindu dynasties. Pudukottai is the inheritance of the chieftain called the Tondiman, Banganapalle and Sandur two petty States, of which the first is ruled by a Nawab, lie in the centre of two British districts.

| Name. | Area sq miles | Population | Estimated Gross Revenue in lakhs of rupees |
|--------------|---------------|------------|--|
| Travancore | 7,625 | 4,008,062 | 251.60 |
| Cochin | 1,417½ | 979,019 | 93.87 |
| Pudukottai | 1,179 | 426,813 | 20.72 |
| Banganapalle | 255 | 36,692 | 2.69 |
| Sandur | 167 | 11,684 | 1.71 |

These States were brought into direct relation with the Government of India on October 1st, 1923.

Travancore—This State, which has an area of 7,624.84 square miles and a population of 5,090,462 with a revenue of Rs 250.79 lakhs occupies the south-west portion of the Indian Peninsula, forming an irregular triangle with its apex at Cape Comorin. The early history of Travancore is in great part traditional, but there is little doubt that H. H. the Maharaja is the representative of the Chera dynasty, one of the three great Hindu dynasties which exercised sovereignty at one time in Southern India. The petty chiefs, who had subsequently set up as independent rulers within the State, were all subdued, and the whole country, within its present boundaries, was consolidated and brought under one rule, by the M.

Marthanda Varma (1729-58) The English first settled at Pango, a few miles to the north of Trivandrum, and built a factory there in 1684. In the wars in which the East India Company were engaged in Madras and Tinnevely, in the middle of the 18th century, the Travancore State gave assistance to the British authorities. Travancore was reckoned as one of the staunchest allies of the British Power and was accordingly included in the Treaty made in 1784 between the East India Company and the Sultan of Mysore. To protect the State from possible inroads by Tipu, an arrangement was made in 1788 with the East India Company, and in 1795 a formal treaty was concluded, by which the Company agreed to protect Travancore from all foreign enemies. In 1805 the annual subsidy to be paid by Travancore was fixed at 8 lakhs of rupees.

H H the Maharaja (6 November 1912) ascended the masnad in September 1924. During the minority the State is ruled by Her Highness Maharani Setu Lakshmi Bai, C.I., aunt of the Maharaja, as Regent on his behalf. The work of legislation is entrusted to a Council brought into existence in 1888 and as last reconstituted in 1921, has a majority of non-official elected members. The Council is invested with the powers of voting on the budget, moving resolutions and asking questions including supplementary questions. Women are placed on a footing of complete equality with men in the matter of both franchise and membership. This is the largest measure of constitutional reform introduced in any Indian State. A representative assembly, known as the Sri Mulam Popular Assembly meets once a year. Its members who are the elected representatives of the people are given an opportunity to express direct to the Dewan their wants and wishes and their views regarding the administrative measures adopted from time to time. Local Self-Government on a small scale exists in the more important towns. The State supports a military force of 1,473 men. Education has advanced considerably in recent years and the State takes a leading place in that respect. In the matter of female Education the State has a leading place among Indian States and the British Indian Provinces. The principal food-grain grown is rice, but the main source of agricultural wealth is the cocoanut. Other crops are pepper, areca-nut, jack-fruit, sugar-cane and tapioca. Rubber and tea are among other important products. Cotton weaving and the making of matting from the coir are among the chief industries. The State is well provided with roads, and with a natural system of back-waters, besides canals and rivers navigable for country crafts. One line of railway about one hundred miles in length cuts across the State from east to west and then runs along the Coast to the Capital. More Railway lines are in contemplation. The capital is Trivandrum.

Agent to the Governor-General—Lieut.-Col H E N Pritchard C.I.E., O.B.E.

Dewan—V S Subrahmanya Aiyar, B.A., B.L.

Cochin—This State on the south-west coast of India is bounded by the Malabar District of the Madras Presidency and the State of Travancore.

Very little is known of its early history. According to tradition, the Rajas of Cochin hold the territory in right of descent from Cheraman Perumal, who governed the whole country of Kerala, including Travancore and Malabar, as Viceroy of the Chola Kings about the beginning of the ninth century, and afterwards established himself as an independent Ruler. In 1502, the Portuguese were allowed to settle in what is now British Cochin and in the following year they built a fort and established commercial relations in the State. In the earlier wars with the Zamorin of Calicut, they assisted the Rajas of Cochin. The influence of the Portuguese on the west coast began to decline about the latter part of the seventeenth century, and in 1603 they were ousted from the town of Cochin by the Dutch with whom the Raja entered into friendly relations. About a century later, in 1759, when the Dutch power began to decline, the Raja was attacked by the Zamorin of Calicut, who was expelled with the assistance of the Raja of Travancore. In 1776, the State was conquered by Hyder Ali, to whom it remained tributary and subordinate, and subsequently to his son, Tipu Sultan. A treaty was concluded in 1791 between the Raja and the East India Company, by which His Highness agreed to become tributary to the British Government for his territories which were then in the possession of Tipu, and to pay a subsidy.

His Highness Raja Sri Sir Rama Varmah, G.O.S.I., G.O.I.E., who was born in 1852, and who ascended the Masnad in 1895, having abdicated in December, 1914. His Highness Sri Sir Rama Varmah, G.O.I.E., who was born on 6th October, 1858, succeeded to the throne and was duly installed as Raja on the 21st January 1915. The administration is conducted under the control of the Maharaja whose chief Minister and Executive Officer is the Dewan, G.O. Herbert, Esq., I.O.S. The forests of Cochin form one of its most valuable assets. They abound in teak, ebony, blackwood, and other valuable trees. Rice forms the staple of cultivation. Cocoanuts are largely raised in the sandy tracts, and their products form the chief exports of the State. Communications by road and back-waters are good, and the State owns a line of railway from Shoranore to Ernakulam, the capital of the State, and a Forest Steam Tramway used in developing the forests. The State supports a force of 32 officers and 337 men.

Agent to the Governor-General—Lieut. Col H R N Pritchard C.I.E., O.B.E.

Pudukkottai—This State is bounded on the north and west by Trichinopoly, on the south by Ramanad and on the east by Tanjore. In early times a part of the State belonged to the Chola Kings and the southern part to the Pandya Kings of Madura. Relations with the English began during the Carnatic wars. During the siege of Trichinopoly by the French in 1752, the Tondiman of the time did good service to the Company's cause by sending them provisions, although his own country was on at least one occasion ravaged as a consequence of his fidelity to the English. In 1756 he sent some of his troops to assist Muhammad Yusuf, the Company's sepoy commandant, in settling the Madura and Tinnevely

Banas Kantha Agency—This group of States in Gujarat, comprises of the Third Class States of Tharad, Fourth Class States of Vav, Fifth Class State of Malek Jorawar Khanji of Varahi and a few minor estates and talukas. Before the year 1925 it was known as the Palanpur Agency, when it also comprised the First Class States of Palanpur and Radhanpur. Consequent upon the transference of these two First Class States of Palanpur and Radhanpur to the direct political relationship with the Government of India, through the Hon'ble the Agent to the Governor-General in the States of Western India the group comprising the remaining minor States, Estates and Talukas, has been named the Banas Kantha Agency and is in charge of a Political Agent, who is subordinate to the Hon'ble the Agent to the Governor-General of the Western India States Agency.

Bhavnagar—This State lies at the head and west side of the Gulf of Cambay. The Gohel Rajputs, to which tribe the Ruler of Bhavnagar belongs, are said to have settled in the country about the year 1260, under Sajakji from whose three sons—Ranoji, Sarangji and Shahji—are descended respectively the rulers of Bhavnagar Lathi and Palltana. An intimate connexion was formed between the Bombay Government and Bhavnagar in the eighteenth century when the ruler of that State took pains to destroy the pirates which infested the neighbouring seas. The State was split up when Gujarat and Kathiawar were divided between the Peshwa and the Gaekwar, but the various claims over Bhavnagar were consolidated in the hands of the British Government in 1807. The State pays an annual tribute of Rs 1,28,000 to the British Government, Rs 3,581-8-0 as Peshkashi to Baroda, and Rs 22,858 as Zortali to Junagadh. His Highness Maharaja Krishna Kumar-sinhji succeeded to the *gadh* on the death of his father, Maharaja Sir Bhavsinhji, K O I E, on 17th July 1919, and was invested with full powers on 18th April 1931. The State Council consists of Sir Prabhashankar D. Pattani, K O I E, as President, and Lieut-Colonel A. H. E. Mosse as Vice-President. The other members of the Council are Dewan Bahadur T. K. Trivedi and Khan Bahadur S. A. Goghawala, M. A., LL. B., Bar-at-Law. One noteworthy feature in the administration is the complete separation of judicial from executive functions and the decentralisation of authority is another. The authority and powers of all the Heads of Departments have been clearly defined, and each within his own sphere is independent of the others being directly responsible to the Council.

The chief products of the State are grain, cotton, sugar-cane and salt. The chief manufactures are oil, copper and brass vessels and cloth. The Bhavnagar State Railway is 307 miles in length. The capital of the State is the town and port of Bhavnagar, which has a good and safe harbour for shipping and carried on an extensive trade as one of the principal markets and harbours of export for cotton in Kathiawar. Bhavnagar supports 270 State Lancers and 250 State Infantry.

Population (in 1931) was 500,274 of whom 86 per cent were Hindus and 8 per cent

Mahomedans. The average income for the last five years was Rs 1,10,29,734, and the average expenditure Rs 84,32,730.

Dhrangadhra State is a State of the First Class in Kathiawar with a population of nearly one lakh and an area of 1,167 square miles exclusive of the Dhrangadhra portion of the Runn of Cutch. The ruler of Dhrangadhra is the head of the Jhala family of Rajputs, originally called the Makvanas. This Rajput clan is of great antiquity having migrated to Kathiawar from the North, establishing itself first at Pallri in Ahmedabad District, thence moving to Halvad and finally settling in its present seat. Being the guardians of the North-Eastern marches of Kathiawar they had to suffer repeatedly from the successive inroads of the Mahomedans into that Peninsula, but after suffering the various vicissitudes of war they were confirmed in their possession of Halvad, its surrounding territories and the salt-pans attached thereto by an Imperial Firman issued by Emperor Aurangzeb. The States of Wankaner, Limbdi, Wadhwan, Chuda, Savla and Thun-Lakhtar are offshoots from Dhrangadhra. His Highness Maharaja Shri Sir Ghanashyamsinhji, G O I E, K C S I, Maharaja Raj Saheb, is the ruler of the State and the titular head of all the Jhalas. The administration is conducted under the Maharaja's directions by the Dewan Raj Rana Shri Mansinhji S. Jhala, C I E. The soil being eminently fit for cotton cultivation, the principal crops are long stapled cotton and cereals of various kinds. Excellent building and ornamental stone is quarried from the hills situated within the State. Wadagra salt of an excellent quality is also manufactured at the State Salt Works at Kuda which offer practically inexhaustible supplies for the manufacture of salt and its bye-products. To utilize these valuable resources, the State has recently built and put into operation a huge factory in Dhrangadhra, known as the Shri Shakti Alkali Works, for the manufacture on a large scale of Soda Ash, Caustic Soda and Soda Bicarb as bye-products of salt, and these are finding a ready market all over India. The capital town is Dhrangadhra, a fortified town, 75 miles west of Ahmedabad.

Dhrangadhra State owns the Railway from Wadhwan Junction to Halvad, a distance of 40 miles, which is worked by the B. B. & C. I. Railway. An extension of this line to Maliva is under contemplation. A railway siding has been laid from Dhrangadhra to Kuda—a distance of 11 miles—to facilitate the salt traffic.

Gondal State—The Ruling Prince of Gondal is a Rajput of the Jadeja stock with the title of H. H. Maharaja Thakore Saheb, the present Ruler being H. H. Shri Bhagwat Singhji, G O I E. The early founder of the State Kumbhoji I, had a modest estate of 20 villages. Kumbhoji II, the most powerful Chief of the House, widened the territories to almost their present limits by conquest, but it was left to the present ruler to develop its resources to the utmost, and in the words of Lord Reay, Governor of Bombay, by its "importance and advanced administration" to get it recognised as a First Class State.

The State pays a tribute of Rs 1,10,721. The chief products are cotton, groundnuts and grain and the chief manufactures are cotton and woollen fabrics and gold embroidery. Gondal has always been pre-eminent amongst the States of its class for the vigour with which public works have been prosecuted, and was one of the earliest pioneers of railway enterprise in Kathiawar having initiated the Dhara-Dhoraji line. It owns the Dhara-Jam-Jodhpur section called the Gondal Railway and manages it along with the Jettalar-Pajkot Railway and H. H. Gekwad's Khijadiya-Dhoraji line. It subsequently built the Jettalar-Pajkot Railway in partnership with other Native States in Kathiawar. There are no export and import duties, the people being free from taxes and dues. Comparatively speaking Gondal stands first in Kathiawar in respect of the spread of education. Compulsory female education in the State has been ordered by His Highness. Rs 25 lakhs have been spent on irrigation tanks and canals, water supply and electricity to the town of Gondal. The Capital is Gondal a fortified town on the line between Rajkot and Jettar.

Junagadh State—A first class State under the Western India States Agency and lies in the South-Western portion of the Kathiawar Peninsula between 21°-44' and 21°-53' North latitude, 69° and 72° East longitude with the Malabar division of the province as its northern boundary and Golliwad Prant to its east. It is bounded on the south and west by the Arabian Sea. The State is divided into 12 Mahals. It has 16 ports of which the principal are Veraval and Mangrol. The principal rivers in the State are the Bhadar, Uben, Oz, Hirani, Saraswati, Machhundri, Shingoda, Veghal, Vrijmi, Rasal and Sabli. The principal town of Junagadh which is one of the most picturesque towns in India, is situated on the slope of the Girnar and the Datar Hills, while in antiquity and historical interest it yields to none. The Upperkot or old citadel contains interesting Buddhist caves and the whole of the ditch and neighbourhood is honey-combed with caves of their remains. There are a number of fine modern buildings in the town. The famous Asoka inscription of the Buddhist time carved out on a big bolster of black granite stone is housed at the foot of the Girnar Hill which is sacred to the Jains, the Shivaistes, the Vaishnavistes and other Hindus. To the south east of the Girnar Hill lies the extensive forest of the Gir comprising 494 square miles, 823 acres and 10 gunthas. It supplies timber and other natural products to the residents of the State and the neighbouring districts and is unique as the sole stronghold of the Indian lion. The area of the State is 3,337 square miles and the average revenue amounts to about Rs 87,00,000. The total population according to the census of 1931 is 545,200. Until 1472 when it was conquered by Sultan Mahmud Begra of Ahmedabad Junagadh was a Rajput State ruled by Chiefs of the Chuda Sama tribe. During the reign of the Emperor Akbar it became a dependency of Delhi under the immediate authority of the Moghal Viceroy of Gujarat. About 1735 when the representatives of the Moghals had lost his anchor in Gujarat, Shirkhan Babi, the ancestor of the present Babi Ruler,

expelled the Moghal Governor, and established his own rule. The ruler of Junagadh first entered into engagements with the British Government in 1807. The principal articles of production in the State are cotton, bajri, jowar, sesamum, wheat, rice, sugarcane, cereals, grass, timber, stone, castor seed, fish, country tobacco, groundnuts, coconuts, bamboos etc., while those of manufacture are ghee, molasses, sugar candy, copper, and brassware, dyed cloth, gold and silver embroidery, pottery, hardware, leather, bamboo furniture, etc. The State pays a tribute of Rs 28,391 annually to the Paramount Power and Peshlashi of Rs 38,210 to His Highness the Gaekwar on the other hand, the State of Junagadh receives a tribute styled Zorabli amounting to Rs 92,121 from not less than 14 States and Talukas a relic of the day of Mohammedan supremacy. The State maintains State Forces consisting of Lancers and the Mahabat Khanji Infantry, the sanctioned strength of the former being 173 and of the latter 220 inclusive of Bag pipe Band.

The Ruler bears the title of Nawab. The present Nawab is His Highness Sir Mahabat Khan III, a C I E, K C S I, and is the ninth in succession and seventh in descent from His Highness Nahrudurkhanji I, the founder of the Babi family of Junagadh in 1735 A.D. His Highness the Nawab Sahib was born on 2nd August 1909 and succeeded to the *gadi* in 1911, visited England in 1913-14, received his education at the Mayo College, Ajmer, and has been invested with full powers since March 1920. His Highness the Nawab Sahib is the Ruler of the Premier State in Kathiawar, ranks first amongst the Chiefs of Kathiawar, exercising plenary powers and enjoys a salute of 15 guns, personal, 13 permanent and 15 local within the territorial limits of the Junagadh State. Languages spoken—Gujarati and Urdu.

Ruler—His Highness Sir Mahabat Khanji

Rasulkhanji, a C I E, K C S I

Heir Apparent—Shahzada Mahomed Dllawarkhanji, 2nd Shahzada Mahomed Himatkhanji

Vice President of the Council—P. R. Cadell, C S I

Navanagar State, on the southern shore of the Gulf of Cutch, has an area of 3,791 square miles. The Maharaja of Navanagar is a Jadeja Rajput by caste, and belongs to the same family as the Rao of Cutch. The Jadejas originally entered Kathiawar from Cutch, and dispossessed the ancient family of Jethwas then established at Ghumli. The town of Jamnagar was founded in 1540. The present Jam Sahib is the well-known cricketer, H. H. Jam Sahib Shri Ranjitsinhji Vibhaji, who was born in 1872 and succeeded in 1907. The principal products are grain, cotton and oil-seeds, shipped from the ports of the State. A small pearl fishery lies off the coast. The State pays a tribute of Rs 1,20,093 per annum jointly to the British Government, the Gaekwar of Baroda and the Nawab of Junagadh. The State maintains two squadrons of Navanagar State Lancers and 17 Company of the State Infantry. The Capital is Jamnagar, a flourishing place, nearly 4 miles in circuit, situated 5 miles east of the port of Bedi. Population 4,09,192. Revenue nearly Rs 90 lakhs.

Revenue Secretary —Gokulbhal B Desai,
Bar-at-law

Political Secretary —Parshuram B Junnarkar,
B A, LL B

General Secretary —Hirabhai M Mehta, B A
(Cantab), Bar-at-law

Huzur Personal Assistant—P M Karanjia,

Cutch—The State is bounded on the north and north-west by Sind, on the east by the Palanpur Agency, on the south by the Peninsula of Kathiawar and the Gulf of Cutch and the south-west by the Indian Ocean. Its area, exclusive of the great salt marsh called the Rann of Cutch, is 7,616 square miles. The capital is Bhuj, where the ruling Chief (the Maharao) His Highness Maha Rao Sri Khengarji Saval Bahadur, GCSI, GCI E, resides. From its isolated position, the special characteristics of its people, their peculiar dialect, and their strong feeling of personal loyalty to their ruler, the peninsula of Cutch has more of the elements of a distinct nationality than any other of the dependencies of Bombay. The earliest historic notices of the State occur in the Greek writers. Its modern history dates from its conquest by the Sind tribe of Samma Rajputs in the fourteenth century. The section of the Sammas forming the ruling family in Cutch were known as the Jadejas or 'children of Jada'. The British made a treaty with the State in 1815. There is a fair proportion of good arable soil in Cutch, and wheat, barley and cotton are cultivated. Both iron and coal are found but are not worked. Cutch is noted for its beautiful embroidery and silverwork and its manufactures of silk and cotton are of some importance. Trade is chiefly carried by sea. The ruling chief is the supreme authority. A few of the Bhayats are invested with jurisdictional powers in varying degrees in their own estates and over their own ryots. A notable fact in connection with the administration of the Cutch State is the number and position of the Bhayat. These are Rajput nobles forming the brotherhood of the Rao. They were granted a share in the territories of the ruling chief as provision for their maintenance and are bound to furnish troops on an

emergency. The number of these chiefs is 137, and the total number of the Jadeja tribe in Cutch is about 16,000. The British military force having been withdrawn from Bhuj, the State now pays Rs 82,257 annually as an Anjar equivalent to the British Government. The military force consists of about 1,000 in addition to which, there are some irregular infantry, and the Bhayats could furnish on requisition a mixed force of four thousand.

Palanpur—Palanpur is a first class State with an area of 1,768.89 square miles and a population of 243,71. The net revenue of the State (calculated on the average of the last five years) is about 11 lakhs.

The State is under the rule of Major His Highness Zuddul Mulk Dewan Mahakhan Taley Muhammad Khan Bahadur, GCI E, KCSI, Nawab of Palanpur. His Highness is descended from the Usafzal Lohani Pathan, an Afghan tribe who appeared in Gujarat in the 14th century. The connection of the British Government with the State dates from 1809, in which year the Ruler was murdered by a body of Sindhi Jamadars. A considerable trade in cloth, grain, sugar and rice is carried on in the State. The State pays tribute of Rs 38,461 to the Gaekwar of Baroda. The capital city of Palanpur is situated on the B B & C I Railway, and is the junction station of the Palanpur-Deesa Branch of B B & C I Railway. It is a very old settlement of which mention was made in the 8th century.

Radhanpur is a first-class State, with an area of 1,150 square miles, which is held by a branch of the illustrious Babi family, who since the reign of Humayun have always been prominent in the annals of Gujarat. The present chief is H H Jalalud-din Khanji, the Nawab of Radhanpur. The State maintains a Police force of 200. The principal products are cotton, wheat and grain. The capital is Radhanpur town, a considerable trade centre for Northern Gujarat and Cutch. Sami has a cotton press and three ginning factories. There is one ginning factory at Munjpur and one at Lolada. One large ginning factory has been recently constructed at Sankeshwar which is a great centre of Jain pilgrimage all the year round.

STATES IN THE BOMBAY PRESIDENCY.

The territories under the rule of Indian Princes and Chiefs in the Bombay Presidency extend over an area of 28,039 square miles. The characteristic feature of the Bombay States is the great number of petty principalities. The recognition of these very numerous jurisdictions is due to the circumstance that the early Bombay administrators were induced to treat the *de facto* exercise of civil and criminal jurisdiction by a landholder as carrying with it a quasi-sovereign status. In no part of India is there a greater variety of principalities. Some of the largest are of modern origin, having been founded by the Marathas in the general scramble for power in the middle of the 18th century but the Rajput houses in the Gujarat Agencies date from earlier times. Interesting traces of ancient history are to be found at Sachin and

Janjira, where Chiefs of foreign ancestry, descended from Abyssinian admirals of the Deccan fleets, still remain. A few aboriginal Chiefs, Bhils or Kolis exercise very limited authority in the Dangs and the hilly country that fringes the Mahi and the Narmada rivers.

The variety of the relations which under the terms of the several treaties, subsist between the British Government and the rulers of the different States, and the general superintendence exercised by Government as the Paramount Power, necessitate the presence of an Agent or representative of Government at the Principal Courts. The smaller and less important States are either grouped together under the general supervision of a Political Agent or are looked after by the Collectors of the districts which they adjoin. The position of the Agent varies,

roughly speaking, with the importance of the State. In some cases he does little more than give advice and exercise a general surveillance. In other cases the Agents are invested with a direct share in the administration, while States the Rulers of which are minor are directly managed by Government Officers or under arrangements approved by Government. Some of the States are subordinate to other States and not in direct relations with the British Government. In these cases the status of the feudatories is usually guaranteed by Government. The powers of the Chiefs are regulated by treaty or custom, and range downwards to a more right to collect revenue in a share of a village, without criminal or civil jurisdiction, as in the case of the petty Chiefs in the Mahi Kantha and Rewa Kantha Agencies.

The number of Indian States in the Bombay Presidency is 151, with an area of 28,039 square miles and population (1921) of 3,579,095. They are divided for administrative purposes into the following Agencies: Belgaum Agency, Savantvadi, Bijapur Agency, Jath Dharwar Agency, Savanur, Kaira Agency, Cambay, Kolaba Agency, Janjira, Kolhapur Residency and Southern Maratha Country States Agency, 9 States (Kolhapur with 9 feudatories), Jamkhadi, Kurundwad Senior, Kurundwad Junior, Miraj Senior, Miraj Junior, Mudhol, Ramdurg and Sangli), Mahi Kantha Agency, 51 States (principal States Idar and Danta), Nasik Agency, Sargana, Poona Agency, Bhore, Rewa Kantha Agency, 62 States (principal States Balasinor, Baria, Chhota Udepur, Lunawada, Rajpipla and Sant), Satara Agency, Aundh and Phaltan, Sholapur Agency, Akalkot, Sukkur Agency, Khairpur, Surat Agency, 3 States (Banasa, Dharampur and Sachin) and 14 Dang Chiefs, Thana Agency, Jawhar. The table below gives details of the area of the more important States—

| State | Area
in
sq miles | Popula-
tion
(in 1921) | Approximate
Revenue |
|---------------|------------------------|------------------------------|------------------------|
| | | | Rs |
| Balasinor | 189 | 44,030 | 2,54,244 |
| Bansda | 215 | 40,125 | 8,64,265 |
| Baria | 813 | 137,201 | 12,69,936 |
| Bhor | 925 | 130,420 | 6,56,697 |
| Cambay | 350 | 71,715 | 9,78,794 |
| Chhota Udepur | 800 | 125,702 | 16,02,294 |
| Danta | 450 | 23,023 | 1,75,965 |
| Dharampur | 704 | 95,171 | 10,90,998 |
| Idar | 1,069 | 226,351 | 13,61,925 |
| Janjira | 377 | 110,366 | 8,83,336 |
| Jawhar | 310 | 49,862 | 8,12,208 |
| Khairpur | 6,050 | 193,152 | 24,18,137 |
| Kolhapur | 3,217 | 838,726 | 1,25,08,570 |
| Lunawada | 388 | 83,136 | 5,36,008 |
| Mudhol | 368 | 60,140 | 6,13,615 |
| Rajpipla | 1,517 | 108,425 | 24,15,523 |
| Sachin | 46 | 19,977 | 3,97,012 |
| Sangli | 1,136 | 221,321 | 14,02,654 |
| Savantvadi | 925 | 206,440 | 6,83,213 |
| Sant | 394 | 70,957 | 5,40,043 |

Bijapur Agency—This comprises the Satara Jaghir of Jath (980.8 square miles in area). On the annexation of Satara, in 1849, Jath and Daphlapur like other Satara Jaghirs, became feudatories of the British Government. The latter has more than once interfered to adjust the pecuniary affairs of the Jath Jaghir and in consequence of numerous acts of oppression on the part of the then ruler was compelled to assume direct management from 1874 to 1885. The small estate of Daphlapur with an area of 96.8 square miles lapsed to the Jath Jaghir on the demise of its last ruler Ranibai Saheb Daphle in January 1917. The Chief of Jath who belongs to the Marhatta caste, ranks as a first class Sardar. The succession follows the rule of primogeniture. The present Chief Meherban Vijayasinharao Ramrao alias Babasaheb Dille succeeded his father who died on August 14, 1923, and was installed on January 12th, 1929. He conducts the administration of the Jath State. The gross revenue of the State is about 3 lakhs chiefly derived from land revenue. The Jath State pays to the British Government Rs 6,400 per annum in lieu of horse contingent and Rs 4,847 on account of Sardeshmukhi rights.

Political Agent—V. B. Mardhekar, M.A.,
Collector of Bijapur

Dharwar Agency—This comprises only the small State of Savanur. The founder of the reigning family who are Mahomedans of Pathan origin was a Jagirdar of Emperor Aurangzeb. At the close of the last Maratha War the Nawab of Savanur, whose conduct had been exceptionally loyal, was confirmed in his possessions by the British Government. The State pays no tribute. The principal crops are jowari and cotton. The area is 70 square miles and population 16,830. The revenue is Rs 2,01,410-6-8. The present chief is Captain Meherban Nawab Abdul Majid Khan Diler Jang Bahadur, Nawab of Savanur.

Political Agent—J. F. B. Hartshorne, I.C.S.

Kaira Agency—This includes only the State of Cambay at the head of the Gulf of the same name. Cambay was formerly one of the chief ports of India and of the Anhilvada Kingdom. At the end of the thirteenth century it is said to have been one of the richest towns in India. At the beginning of the sixteenth century also it formed one of the chief centres of commerce in Western India. Factories were established there by the English and the Dutch. It was established a distinct State about 1730, the founder of the present family of Chiefs being the last but one of the Mahomedan Governors of Gujarat. The present Nawab is His Highness Mirza Hussein Yawar Khan who is a Shahi Mogul of the Najumiansi family of Persia, and was born on the 16th May 1911. His father, the late Nawab Jaffar Ali Khan, died on 21st January 1915, leaving him a minor. The State was under British administration up to December 1930 when the Nawab was installed on the *gadai*. The State pays a tribute of Rs 21,924 to the British Government. Wheat and cotton are the principal crops. There is a broad gauge line from Cambay *via* Petlad, connecting with the B. B. & C. I. Railway.

Anand Cambay is a first class State having full jurisdiction. Revenue is about eight lakhs. The area of the State is 350 square miles, population, 71,715

Political Agent K B Bhadrapur, M A

Kolaba Agency—This Agency includes the State of Janjira in the Konkan, a country covered with spurs and hill ranges and much intersected by creeks and backwaters. The ruling family is said to be descended from an Abyssinian in the service of one of the Nizam Shahi Kings of Ahmednagar at the end of the fifteenth century. The most noticeable point in its history is the successful resistance that it alone, of all the States of Western India, made against the determined attacks of the Marathas. The British, on succeeding the Marathas as masters of the Konkan, refrained from interfering in the internal administration of the State. The chief is a Sunni Mahomedan, by race a Sidi or Abyssinian, with a title of His Highness the Nawab. He has a sanad guaranteeing succession according to Mahomedan law and pays no tribute. Till 1808 the State enjoyed singular independence, there being no Political Agent, and no interference whatever in its internal affairs. About that year the maladministration of the chief especially in matters of police and criminal justice, became flagrant, those branches of administration were in consequence taken out of his hands and vested temporarily in a Political Agent. The last ruler, H H Nawab Sidi Sir Ahmed Khan, G C I E, died on 2nd May 1922, and was succeeded by his son Sidi Muhammad Khan born on the 7th March 1914. The area of the State is 377 square miles, and the population 1,10,366. The average revenue is 8 lakhs, including that derived from a small dependency named Jafferabad in the south of Kathiwar under the Kathiwar Agency. The State maintains an irregular military force of 237. The capital is Murud on the main land, the name of Janjira being retained by the island fort opposite. The Chief is entitled to a dynastic salute of 11 guns. In recognition of services rendered in connection with the war the last ruler's salute was raised on the 1st January 1918 to 13 guns personal and 13

permanent within the limits of his own State from the 1st January 1921. The State is now under a minority administration with the minor Nawab's mother as Regent, assisted by a Dewan appointed with the approval of Government. The present Dewan is Mr P R Kapadia, B A, a retired Deputy Collector.

Kolhapur Agency—Kolhapur is a State with an area of 3,217 square miles and population of 9,50,861. Subordinate to Kolhapur are nine feudatories, of which the following four are important: Vishalgarh, Bayda, Kagal (senior), and Ichalkaranji. The ruling house traces its descent from a younger son of Shivaji, founder of the Maratha power. The prevalence of piracy from the Kolhapur port of Malvan compelled the Bombay Government to send expeditions against Kolhapur in 1765, and again in 1792, when the Raja agreed to give compensation for the losses which British merchants had sustained since 1785, and to permit the establishment of factories at Malvan and Kolhapur. Internal dissensions and wars with neighbouring States gradually weakened the power of Kolhapur. In 1812 a treaty was concluded with the British Government, by which, in return for the cession of certain ports, the Kolhapur Raja was guaranteed against the attacks of foreign powers, while on his part he engaged to abstain from hostilities with other States, and to refer all disputes to the arbitration of the British Government. The principal articles of production are rice, joowar and sugar cane and the manufactures are coarse cotton and woollen cloths, pottery and hardware. The State pays no tribute, and supports a military force of 692. The nine feudatory estates are administered by their holders except in the case of four whose holders are minors. Kolhapur proper is divided into seven pethas or talukas and three mahals and is managed by the Maharaja, who has full powers of life and death. The Madras and Southern Mahratta Railway passes through the State and is connected with Kolhapur City by a line which is the property of the State.

Resident and Senior Political Agent for Kolhapur and the Southern Mahratta Country—Major L E Lang, C I E, M C

Southern Maratha Country States—The Agency consists of the following eight States—

| Name of State | Area in square miles | Population | Tribute to British Government | Average revenue |
|------------------------------|----------------------|------------|-------------------------------|-----------------|
| | | | Rs | Rs |
| Sangli | 1,136 | 221,321 | 1,35,000 | 14,02,654 |
| Miraj (Senior) | 342 | 82,580 | 12,558 | 4,58,355 |
| Miraj (Junior) | 196½ | 34,665 | 7,389 | 3,61,794 |
| Kurundwad (Senior) | 182½ | 38,760 | 9,619 | 3,22,071 |
| Kurundwad (Junior) | 114 | 34,288 | | 3,00,687 |
| Jamkhandi | 524 | 101,195 | 20,510 | 9,92,518 |
| Mudhol | 368 | 60,140 | 2,672 | 5,33,885 |
| Ramdurg | 169 | 33,997 | | 3,23,333 |
| Total | 3,032 | 606,946 | 1,87,754 | 46,95,297 |

Mahi Kantha—This group of States has a total area of 3,124 square miles and a population of 51,8938 including that of Idar which is 262,790. The Agency consists of the State of Idar and 51 smaller States. Idar covers more than half the territory. It has an area of 1,669 square miles and an average revenue of about 14 lakhs. The present Ruler of Idar H. H. Maharaja Himatsinghji is a Rajput of the Rathod clan. He was born in 1889 A.D. and ascended the gadi in 1931 on the demise of His late Highness Maharaja Sir Dowlatsinghji. His Highness accompanied His late Highness Lt Col Sir Dowlatsinghji to Europe when the latter went to attend the Coronation of His Majesty the King Emperor in London and acted as Page to his Imperial Majesty at the Coronation Durbar held at Delhi in 1911. The subordinate Feudatory Jagirdars are divided into three classes. The Jagirdars comprised in the class of Bhayats are cadets of the Ruling House to whom grants have been made in maintenance or as a Jiwara. Those known as Sardar Pattawats are descendants of the military leaders who accompanied Anand Singh and Rai Singh, the founder of the present Marwar dynasty when they took possession of the State in the first quarter of the eighteenth century and to whom grants of land were made by Maharaja Anand Singh in 1741 A.D. on condition of military service. In the case of the Bhoomias are included all subordinate Feudatories who were in possession of their Pattas prior to the advent of the present Marwar dynasty. The pattas they hold were acquired by their ancestors by grant from the former Rao Rulers of the State. The Maharaja receives Rs 52,427 annually on account of Kichdi and other Raj Haks from his subordinate Sardars the tributary talukas of the Mahi Kantha Agency and others and pays Rs 30,340 as Ghasdana to Gaekwar of Baroda through the British Government. Of the smaller States Vijaynagar and Danta are two States enjoying plenary jurisdictional powers. The names of their Chiefs are Rao Shree Hamir Singhji and Maharana Shri Bhawansinghji. While 31 enjoy limited jurisdiction, the remainder are estates.

POLITICAL AGENT—Captain I. W. Galbraith, M.C.I.A.

Nasik Agency—This consists of one State, Surgana, lying in the north-west corner of the Nasik District. Surgana has an area of 360 square miles and a population of 15,258. The ruler of the State (Meherban Prataprao Shankarrao Deshmukh) died in June 1930 and the Government of India selected Meherban Yeshwantrao Prataprao Deshmukh, the eldest of his sons, as heir to the gadi on which he was installed in January 1931. The revenue of the State is Rs 73,432.

Rewa Kantha Agency—This Agency, with an area of 4,956 square miles and a population of 665,099, comprises 61 States, of which Rajpipla is a first class State, 5 are second class, one is third class and the rest are either petty States or talukas. Among those petty States are Sanjeli in the north, Bhadarya and Umeta in the west, Jambhughoda in the south-east, and two groups of Mehwas. The 26 Sankheda

Mehwas petty estates lie on the right bank of the Narbada, while the 24 Pandu Mehwas petty estates including Dodka, Anghad and Raika, which together form the Dodka Mehwas are situated on the border of the Mahi.

The following are the statistics of area and population for the principal States—

| State | Area in square miles | Population (1931 Census) |
|---|----------------------|--------------------------|
| Balasnor | 180 | 52,525 |
| Bariya | 813 | 159,429 |
| Chhota Udaipur | 800 | 144,074 |
| Lunawada | 388 | 95,013 |
| Narukot (Jambhughoda) | 143 | 11,402 |
| Rajpipla | 1,517 | 203,935 |
| Sunt | 394 | 83,538 |
| Other Jurisdictional States, Civil Stations and Thana Circles | 639 | 140,702 |

Under the first Anhilwada dynasty (746-961) almost all the Rewa Kantha lands except Champaner were under the government of the Bariyas, that is, Koli and Bhil chiefs. In the eleventh, twelfth and thirteenth centuries chiefs of Rajput or part Rajput blood, driven south and east by the pressure of Muhammadan invasions, took the place of the Koli and Bhil leaders. The first of the present States to be established was the house of the Maharaja of Rajpipla, a Gohel Rajput.

Lunawada is a State in the Rewa Kantha Political Agency with an area of 388 square miles and an annual revenue of about Rs 5,50,000. The Rulers of Lunawada belong to the historic Solanki clan of Rajputs claiming their descent from the famous Siddhraj Jaysinh of Anhilwad (Gujarat). Besides having fine patches of good agricultural land, the State contains a considerable forest area yielding rich timber. The State enjoys a hereditary salute of nine guns whereas His late Highness Maharana Shri Sir Wakhatsinghji, K.C.I.E., used to enjoy a personal salute of 11 guns. The population of the State is 95,013 according to the census of 1931. Maharana Shri Virbhadrasinghji, Rajaji Siheb of Lunawada, has been invested with full powers on the gadi of his ancestor on 2nd October 1930.

Rajpipla—This State lies to the south of the Narbada. It has an area of 1,517½ square miles. The lands are rich and very fertile and except a few forest-clad hills are suitable and available for cultivation in large quantities in the south-east talukas. The family of the Maharaja of Rajpipla, Captain H. H. Maharana Shri Sir Vijaysinghji, K.C.S.I., is said to derive its origin from a Rajput of the Gohel clan. Cotton is the most important crop in the State. In the hills there are valuable teak forests. The capital is Rajpipla which is connected with Ankleswar by railway built by the State.

Satara Jahagirs.—Under this heading are grouped the following States —

| State | Area
in sq
miles | Popu-
lation | Revenue
in
lakhs |
|---------|------------------------|-----------------|------------------------|
| Aundh | 501 | 64,500 | Rs
3 |
| Phaltan | 397 | 43,286 | 3 |
| Bhor | 925 | 130,420 | 5 |
| Akalkot | 498 | 81,250 | 6½ |
| Jath | 081 | 82,654 | 3½ |

These were formerly feudatory to the Raja of Satara. In 1849 five of them, including the Daffapur Estate, which has since reverted to the Jath State, were placed in relations with the Collector of Satara, and Akalkot with the Collector of Sholapur. Subsequently, the Jahagir of Bhor was transferred to the Collector of Poona, and Jath to the Agency for the Southern Mahratta Country States. The latter has since been placed in relation with the Collector of Bijapur. The ruling Chiefs are as follows —

| State | Ruling Chiefs | Tribute to
British
Government |
|---------|--|-------------------------------------|
| | | Rs |
| Aundh | Meherban Bhavanrao Shrinivasrao <i>alias</i> Bala Saheb, Pant Pratinidhi | |
| Phaltan | Captain Meherban Malojirao Mudhojirao <i>alias</i> Nana Saheb Naik Nimbalkar | 9,600 |
| Bhor | Meherban Raghunathrao Shankarrao <i>alias</i> Baba Saheb, Pant Sachiv | 4,684 |
| Akalkot | Meherban Shrimant Vijayasinh Fatehsinh Raje Bhonsle Raje Saheb of (minor) | 14,592 |
| Jath | Meherban Vijayasinh Ramrao <i>alias</i> Baba Saheb Daphley | 10,120 |

Sawantwadi—This State has an area of 925 square miles and population of 2,30,581. The average revenue is Rs 6,83,213. It lies to the north of the Portuguese territory of Goa, the general aspect of the country being extremely picturesque. Early inscriptions take the history of the State back to the sixth century. So late as the nineteenth century the ports on this coast swarmed with pirates and the country was very much disturbed. The present Ruler is Captain His Highness Raje Badadur Shrimant Khem Sawant *alias* Babu Saheb Bhonsle, Sar Desai of Savantwadi. Rice is the principal crop of the State, and it is rich in valuable teak. The sturdy Marathas of the State are favourite troops for the Indian Army and supply much of the immigrant labour in the adjacent British districts. The Capital is Sawantwadi, also called Sundar Wadi, or simply Wadi.

Sholapur Agency—This contains the State of Akalkot which forms part of the table land of the Deccan. It has an area of 498 square miles and a population of 92,052. In the latter part of the 17th Century, the Akalkot Territory which formerly formed part of the Ahmednagar and Bijapur Kingdoms, was annexed by Emperor Aurangzeb and bestowed on Raja Shahu as a wedding present. In the beginning of the 18th Century it was granted by the Raja of Satara in commemoration of the victories achieved to Ranaji Lokhande of Parad who was adopted by the Raja as his own boy and named Fatesinh, the ancestor of the Raja of Akalkot. During the Peshwas Government the grant was made a Military Saranjam subject to the supply of a contingent of horse which has been commuted by the British into a money payment. After the annexation of Satara in

1849, the Akalkot Raja became a Jahagirdar of the British Government with full civil and criminal powers subject to a single proviso regarding the trial with permission of British subjects for capital offences.

Baria—The State has an area of 813 square miles with a population of 137,201 and is situated in the heart of the Panchmahals district. The capital Devgad Baria is reached by the Baria State Railway from Piprod station on the B B & C I Railway, at a distance of ten miles. The average revenue of the State is about 10 lakhs. The State enjoys plenary powers. The Ruler Major His Highness Maharaoi Shree Sir Ranjitsinhji, KCSI, is the direct descendant of the Great House of Kichhi Chowhan Rajputs who ruled over Gujerat for 244 years with their capital at Champanor with the proud title of Pavapatis. His family has the noblest historical traditions. The State pays no tribute either to the British Government or any other Indian State. He enjoys a salute of eleven guns. He served in France and Flanders in the Great European War and in the Afghan War, 1919.

The Sukkur Agency—This consists of the Khairpur State, a great alluvial plain in Sind. It has an area of 6,050 square miles and a population of 2,27,168. The annual revenue hitherto has been in the neighbourhood of 25 lakhs, but owing to agricultural depression has fallen in 1931 to about 17 lakhs. The present Chief, H. H. Mir Ali Nawaz Khan, belongs to a Baloch family called Talpur. Previous to the accession of this family on the fall of the Kalhora dynasty of Sind in 1783 the history of Khairpur belongs to the general history of Sind. In that year Mir Fatch Ali

Khan Talpur established himself as Ruler of Ruler of Sind, and subsequently his nephew, Mir Solrab Khan Talpur, founded the Khairpur branch of the Talpur family. In 1832 the individuality of the Khairpur State, as separate from the other Talpur Mirs in Sind, was recognised by the British Government in a treaty under which the use of the river Indus and the roads of Sind were secured to the British. The chief products of the State are oilseeds, ghee, hides, tobacco, fuller's earth, carbonate of soda, cotton wool and grain. The manufactures comprise cotton fabrics and various kinds of silverware and metal work. There is an industrial school at the capital where lacquer work, carpets, pottery, etc., are produced. The Railway from Hyderabad to Rohri runs through

the whole length of the State. The rule of the Mirs has all along been patriarchal until very recently when the present Ruler, Mir Ali Nawaz Khan Talpur, an educated and enlightened prince, in 1927 turned a new leaf in the administration of the State and replaced the old Wazarat system by a Council of three members, he being the President. This Council was abolished in 1931, and a European member of the Indian Civil Service is now sole minister to His Highness. The State supports a military force of 211 infantry and 100 armed police. It also had an Imperial Service Camel and Baggage Corps 180 strong, which served at the front, but this was disbanded in 1931 on account of financial stringency.

Political Agent: The Collector of Sukkur.

Surat Agency—This is a small group of three second class States under the Political Agent, Surat.

| State | Ruling Chiefs | Area
in sq
miles | Popula-
tion
(1921) |
|-----------|--|------------------------|---------------------------|
| Dharampur | His Highness Maharana Shri Vijayadevji Mohandevji | 704 | 95,171 |
| Daneda | Maharawal Shri Indrasinhji Pratapsinhji | 215 | 40,125 |
| Sachin | His Highness Nawab Sidi Muhamad Halder Mohamed Yakub Khan, Muhariqud Daula Nasrat Jung Bahadur | 40 | 19,077 |

The joint revenue of these States is Rs 24,64,000. Tribute is paid to the British Government of Rs 9,154. There is also attached to this Agency a tract of country known as the Dangs, which has an area of 653 square miles and a population of 24,576 and a revenue of Rs. 24,711. The country is divided into 14 Dangs or States of very unequal area, each under the purely nominal rule of a Bhili Chief with the title of Raja, Nalk, Pradhan or Povar.

Thana Agency—This includes the State of Jawhar, in the Thana District, on a plateau above the Konkan plain. It has an area of 310 square miles and a population of 57,288

according to the 1931 Census and a gross revenue of Rs 6,03,961. Up to 1294, the period of the first Mahomedan invasion of the Deccan, Jawhar was held by a Varli, not a Koli chief. The first Koli chief obtained his footing in Jawhar by a device similar to that of Dido, when he asked for and received as much land as the hide of a bull would cover. The Koli chief cut a hide into strips, and thus enclosed the territory of the State. The present chief is Raja Patangsha alias Yeshwantrao Vikramsha, who is a minor and hence the State under British administration.

UNDER THE GOVERNMENT OF BENGAL.

Cooch Behar—This State, which at one time comprised almost the whole of the Northern Bengal, Assam and a part of Bhutan now known as the Duars, is a low-lying plain in North Bengal. It has an area of 1,318 square miles, a population of 5,90,866 and a revenue of over 43 lakhs. By the demise of the late ruler His Highness Maharaja Sir Jitendra Narayan Bhup Bahadur in December 1922 in England, his eldest son Yuvaraj Jagaddipendra Narayan (born on December 15, 1915) succeeded to the gadi at the age of 7, which necessitated a minority administration under the guidance of a Regent. His Highness the Maharaja belongs to the Kshatriya Varna of Kshatriya origin. The present Maharaja has three sisters. Maharajkumar is Ila Devi (aetat 17), Avesha Devi (aetat 12) and Menaka Devi (aetat 11) and

one brother Maharajkumar Indrajit Narayan (aetat 13). Her Highness the Maharani Sahiba of Cooch Behar was appointed Regent under the wishes of the late Maharaja and administers the State on behalf of her minor son with a Council of Regency, comprising three members at present, of which Her Highness is the President. Cooch Behar once formed part of the famous kingdom of Kamrup. British connection with it began in 1772 when owing to inroads of the Bhutias, the assistance of the East India Company was invoked. The chief products of the State are rice, jute, mustard seed and tobacco. The capital is Cooch Behar, which is reached by the Cooch Behar State Railway, a branch of the Eastern Bengal State Railway System.

Tripura—This State lies to the east of the district of Tippera and consists largely of hills covered with dense jungles. It has an area of 4,116 square miles and a population of 382,219. The revenue from the State is about 20 lakhs and from the Zemindaries in British India is about 13 lakhs. The State enjoys a Salute of 13 guns. The present Ruler is Maharaja Manikya Bir Bikram Kishore Deb Barman Bahadur, who is a Kshatriya by caste and comes of the Lunar race. He was born on 19th August 1908 and he is entitled to a salute of 13 guns. He succeeded the late Maharaja Manikya Birendra Kishore Deb Barman Bahadur on 13th August 1923. The Military prestige of Tripura dates back to the fifteenth century and a mythical account of the State takes the history to an even earlier date. Both as regards its constitution and its relations with the British Government, the State differs alike from the large Native States of India, and from those which are classed as tributary. Besides being the Ruler of Tripura, the Maharaja also holds a large landed property situated in the plains of the Districts of Tippera, Noakhali and Sylhet. This estate covers an area of 600 square miles and is held to form with the State an indivisible Raj.

Disputes as to the right of succession have occurred on the occasion of almost every vacancy in the *gadi* producing in times gone by disturbances and domestic wars, and exposing the inhabitants to serious disorders and attacks from the Kukis, who were always called in as auxiliaries by one or other of the contending parties. The principles which govern succession to the State have recently, however, been embodied in a *sanad* which was drawn up in 1904. The chief products of the State are rice, cotton, til, tea and forest produce of various kinds, the traffic being carried chiefly by water. The Maharaja received full administrative powers on 10th August 1927. His Highness married the sixth daughter of the late Maharaja Sir Bhagabati Prasad Singhji Sahib Bahadur, K C I E, K B F of Balarampur (Oudh) on the 16th January 1920 but on her death in November, 1930 married the eldest daughter of H H Mahrudra Maharaja Sir Jadendra Singhji Sahib Bahadur, K C I E, of Panna. The State courts are authorised to inflict capital punishment. The capital is Agartala.

Political Agent—Magistrate and Collector of Tippera (*Ex-officio*)

UNDER THE GOVERNMENT OF BIHAR AND ORISSA.

Under this Government there are the Chota Nagpur Feudatory States of Kharsawan and Seraikela, and the Orissa Feudatory States, 24 in number. The total area is 28,664 square miles, and the total population 46,43,436. The average revenue is Rs 1,01,28 2/3. The inhabitants are hill-men of Kolarian or Dravidian origin and their condition is still very primitive. The Chief of **Kharsawan** belongs to a junior branch of the Porahat Raja's family. The State first came under the notice of the British in 1793, when, in consequence of disturbances on the frontier of the old Jungle Mahals, the Thakur of Kharsawan and the Kunwar of Seraikela were compelled to enter into certain agreements relating to the treatment of fugitive rebels. The Chief is bound, when called upon, to render service to the British Government, but he has never had to pay tribute. His present *sanad* was granted in 1919. He exercises all administrative powers, executive and judicial, subject to the control of the Political Agent and Commissioner, Orissa Feudatory States. The Bengal Nagpur Railway runs through a part of the State. The adjoining State of Seraikela is held by the elder branch of the Porahat Raja's family.

Orissa Feudatory States—This group of 24 dependent territories is situated between the Mahanadi Delta and the Central Provinces, and forms the mountainous background of Orissa. The names of the individual States are Athgarh, Talcher, Mayurbhanj, Nilgiri, Keonjhar, Pal Lahara, Dhenkanal, Athmalik, Hindol, Narsinghpur, Baramba, Tigrira, Khandpara, Nayagarh, Ranpur, Daspalla and Baud. To these there were added in 1905 the following States: Bamra, Rairakhol, Sonpur, Patna and Kalihandi from the Central Provinces,

and Gangpur and Bonai from the Chota Nagpur States. The total population is 3,807,172 with an average revenue of Rs 94,50,039. The Feudatory States have no connected or authentic history. Comprising the western and hilly portion of the province of Orissa they were never brought under the central government, but from the earliest times consisted of numerous petty principalities which were more or less independent of one another. They were first inhabited by aboriginal races, who were divided into innumerable communal or tribal groups each under its own chief or headman. These carried on incessant warfare with their neighbours on the one hand and with the wild beasts of the forests on the other. In course of time their hill retreats were penetrated by Aryan adventurers, who gradually overthrew the tribal chiefs and established themselves in their place. Tradition relates how these daring interlopers, most of whom were Rajputs from the north, came to Puri on a pilgrimage and remained behind to found kingdoms and dynasties. It was thus that Jai Singh became ruler of Mayurbhanj over 1,300 years ago, and was succeeded by his eldest son, while his second son seized Keonjhar. The Chiefs of Baud and Daspalla are said to be descended from the same stock, and a Rajput origin is also claimed by the Rajas of Athmalik, Narsinghpur, Pal Lahara, Talcher and Tigrira. Nayagarh, it is alleged, was founded by a Rajput from Rewah, and a scion of the same family was the ancestor of the present house of Khandpara. On the other hand, the chiefs of a few States, such as Athgarh, Baramba and Dhenkanal, owe their origin to favourites or distinguished servants of the ruling sovereigns of Orissa. The State of Ranpur is believed to

be the most ancient, the list of its chiefs covering a period of over 3,600 years. It is noteworthy that this family is of Khono origin, and furnishes the only known instance in which, amid many vicissitudes, the supremacy of the original settlers has remained intact. The States acknowledged the suzerainty of the paramount power and were under an implied obligation to render assistance in resisting invaders, but in other respects neither the ancient kings of Orissa nor their successors, the Mughals and Marathas, ever interfered with their internal administration. All the States have annals of the dynasties that have ruled over them, but they are made up of most part of legend and fiction and long genealogical tables of doubtful accuracy, and contain very few features of general interest. The British conquest of Orissa from the Marathas which took place in 1803, was immediately followed by the submission of ten of the Tributary States, the Chiefs of which were the first to enter into treaty engagements.

The States have formed the subject of frequent legislation of a special character. They were taken over from the Marathas in 1803 with the rest of Orissa, but, as they had always been tributary states rather than regular districts of

the native governments, they were exempted from the operation of the general regulation system. This was on the ground of expediency only and it was held that there was nothing in the nature of British relations with the proprietors, that would preclude their being brought under the ordinary jurisdiction of the British courts, if that should ever be found advisable. In 1882 it was held that the States did not form part of British India and this was afterwards accepted by the Secretary of State.

The staple crop in these States is rice. The forests in them were at one time among the best timber producing tracts in India, but until lately forest conservancy was practically unknown. The States have formed the subject of frequent legislation of a special character. The relations with the British Government are governed by sanads which, in the case of Gangpur and Bonal, were last revised in 1919, and in the case of the others in 1915. They recite the rights, privileges, duties and obligations of the Chiefs, providing for the settlement of boundary disputes, and indicating the nature and extent of the control of the Political Agent and Commissioner.

Political Agent and Commissioner P. C. Talents, C I E, I C S

UNDER THE GOVERNMENT OF THE UNITED PROVINCES

Three States Rampur, Tehri and Benares are included under this Government —

| State | Area
Sq Miles | Population | Revenue
in lakhs
of Rupees |
|-----------------|------------------|------------|----------------------------------|
| Rampur | 892 | 453,607 | 53 |
| Tehri (Garhwal) | 4,500 | 318,482 | 18 |
| Benares | 875 | 302,735 | 24 |

Rampur State—The State of Rampur was founded by Nawab Sayed Ali Mohammad Khan Bahadur in the middle of the 18th century and his dominions included a considerable portion of what is now known as Rohilkhand. The founder belonged to the famous Sayeds of the Bareilly clans in the Muzaffarnagar district and was a statesman of remarkable ability. He rendered invaluable services to the Moghal Emperor who recognised him as Ruler of Rohilkhand.

Upon his death, his Kingdom underwent many vicissitudes and was considerably reduced in size during the reign of his son Nawab Sayed Faizulla Khan Bahadur. The Province of Rohilkhand had now passed into the hands of the East India Company. Nawab Sayed Faizulla Khan Bahadur was most loyal and true to the British Government to whom he always looked

up for help during those unsettled days and he gave tangible proof of his loyalty when during the war against France he offered all his cavalry 2,000 strong to the British Government in 1878 and received the following message of thanks from the then Governor-General —

"That in his own name as well as that of the Board, he returned him the warmest thanks for this instance of his faithful attachment to the Company and the 'English Nation'."

Another opportunity arose for the ruler of Rampur to evince his steadfast loyalty and devotion to the Imperial Cause on the outbreak of the Mutiny of 1857. His Highness Nawab Sir Sayed Yusuf Ali Khan Bahadur occupied the Musnad of Rampur in those days. From the very start till peace was re-established in the country, he was lavish in his expenditure of men and money on the side of the British Government. He fought their battles, saved the lives of many Europeans whom he provided with money and other means of comfort and had so much established his reputation as a good administrator that he was placed in charge of the Moradabad district. These signal services were recognised by the Government by the grant of an *Ilaka* besides other marks of distinction.

The reign of His Late Highness Nawab Sir Sayed Mohammad Ali Khan Bahadur stood out unique made great fact in every interest in Edu
ways Rampur
and took
on

bute handsome donations but made annual grants to the various educational institutions. He was no whit behind his compatriots in his loyalty to the British Government. The Great War of 1914 found him foremost in offering his personal services and all the resources of the State—men, money and material—to the British Government. The 1st Rampur Infantry was sent to East Africa and returned home after nearly four years' service and won the favourable remarks of high British Officers. Besides the expenditure involved in this His Highness also participated in the Scheme of the Hospitalship "Loyalty" and contributed one lakh of rupees towards the cost and upkeep of it. His other contributions to the various funds amounted to over half a lakh of rupees and he also subscribed Rs 7,00,000 to the two War Loans. At the time of the Afghan War 1919 the 18 Lancers and the Imperial Service Infantry were sent on garrison duty in British India.

The Present Ruler His Highness Nawab Sayed Raza Ali Khan Bahadur succeeded his father on 20th June 1930. His Highness was born on 17th November 1908 and was educated at the Rajkumar College, Rajkot. He is an enlightened ruler and takes very keen interest in the administration of the State.

Since his accession to the masnad, His Highness has introduced reforms in Judicial, Police and Army Departments and during the short period that the reins of the State have been in his hands he has overhauled and reorganised, the whole administration. His Highness is also greatly interested in education, commerce and industry and has taken practical steps to improve them. The welfare of his subjects and their advancement in every walk of life is the cherished desire of His Highness.

His Highness has one son, Sahebzada Sayed Murtaza Ali Khan Bahadur, who is the Heir Apparent.

The permanent salute of the State is 15 guns and the annual income over fifty lakhs of rupees.

Tehri State (or Tehri-Garhwal)—This State lies entirely in the Himalayas and contains a tangled series of ridges and spurs radiating from a lofty series of peaks on the border of Tibet. The sources of the Ganges and the Jumna are in it. The early history to the State is that of Garhwal District, the two tracts having formerly been ruled by the same dynasty Pradyumna Shah, the last Raja of the whole territory, was killed in battle fighting against the Gurkhas, but at the close of the Nepalese War in 1815, his son received from the British the present State of Tehri. During the Mutiny the latter rendered valuable assistance to Government. He died in 1859. The present Raja is Captain H. H. Narendra Shah, C.S.I. The principal products are rice and wheat grown on terraces on the hill sides. The State forests are very valuable and there is

considerable export of timber. The Raja has full powers within the State. The strength of the State forces is 330. The capital is Tehri, the summer capital being Pratapnagar, 8,000 feet above the sea-level.

Agent to the Governor-General. The Governor of the U. P. of Agra and Oudh.

Benares—The kingdom of Benares under its Hindu Rulers existed from time immemorial and finds mention in Hindu and Buddhist literature. In the 12th century it was conquered by Shahab-ud-din Ghorî and formed a separate province of the Mohammadan Empire. In the 18th century when the powers of Moghal Emperors declined after the death of Aurangzib, Raja Mansa Ram, an enterprising zamindar of Gangapur (Benares District), founded the State of Benares and obtained a *sanad* from the Emperor Mohammad Shah of Delhi in the name of his son Raja Balwant Singh in 1738. Raja Mansa Ram died in 1740 and his son Balwant Singh became the virtual ruler. During the next 30 years attempts were unsuccessfully made by Safdar Jang and after him by Shuja-ud-daula of Oudh to destroy the independence of the Raja and the Fort of Ramnagar was built on the bank of the Ganges opposite the Benares city. Raja Balwant Singh died in 1770 and was succeeded by his son Chet Singh. He was expelled by Warren Hastings. Balwant Singh's daughter's son Mahip Narain Singh was placed on the *gadî*. The latter proved an imbecile and there was maladministration which led to an Agreement in 1794 by which the lands, held by the Raja in his own right which was granted to him by the British Government, were separated from the rest of the province. The direct control of the latter was assumed by the Government and an annual income of one lakh of rupees was assured to the Raja while the former constituted the Domains. Within the Domains the Raja had revenue powers similar to those of a Collector in a British District. There was thus constituted what for over a century was known as the Family Domains of the Maharaja of Benares. On the 1st of April 1911 the major portion of these Domains became a State consisting of the paragonas of Bhadohi and Chakia (or Kera Mangraur). The town of Ramnagar and its neighbouring villages were ceded by the British Government to the Maharaja in 1913 and became part of the State. The Maharaja's powers are those of a ruling Chief, subject to certain conditions, of which the most important are the maintenance of all rights acquired under laws in force prior to the transfer, the reservation to Government of the control of the postal and telegraph systems, of plenary criminal jurisdiction within the State over servants of the British Government and European British subjects, and of a right of control in certain matters connected with excise. The present ruler is Lieut.-Colonel H. H. Maharaja Sir Prabhu Narain Singh Bahadur, C.S.I. C.I.E., LL.D., who was born in 1855 and succeeded to the State in 1889. He is entitled to a salute of 15 guns and is a Hon. Lieut.-Colonel in the Indian Army. His Heir Apparent is Maharaj Kumar Aditya Narain Singh Bahadur.

PUNJAB STATES

There are 13 States of the Punjab which since 1921 have been in direct political relation with the Government of India through the Hon'ble

the Agent to the Governor General, Punjab States, who resides at Lahore. The following are details —

| Name | Permanent salute in guns | Area (Sq. miles) | Population (1921) | Approximate revenue lakh of rupees |
|---------------------|--------------------------|------------------|-------------------|------------------------------------|
| Patiala | 17 | 5,912 | 1,499,739 | 1,35.7 |
| Bahawalpur | 17 | 15,000 | 781,101 | 49.8 |
| Hind | 13 | 1,250 | 303,183 | 29.3 |
| Nalwa* | 13 | 928 | 263,334 | 29.8 |
| Kapurthala | 13 | 630 | 284,275 | 37.0 |
| Mandi | 11 | 1,200 | 185,048 | 15.4 |
| Sirmur, (Nahan)† | 11 | 1,198 | 140,468 | 6.0 |
| Bilaspur (Kahloor)* | 11 | 448 | 93,000 | 3.0 |
| Malerkotla | 11 | 68 | 80,322 | 14.7 |
| Laridkot* | 11 | 643 | 150,601 | 18.9 |
| Chamba | 11 | 3,216 | 141,883 | 8.4 |
| Suket | 11 | 420 | 54,328 | 2.3 |
| Lahore* | 9 | 222 | 20,614 | 1.3 |

* Under administration

† Personal salute raised to 13 guns

Bahawalpur — A Native State in direct political relationship with the Government of India through the Agent to the Governor-General, Punjab States Agency. Bahawalpur is situated between the Punjab and Rajputana, Latitude $27^{\circ} 41'$ to $30^{\circ} 22'$ $15''$, Long $70^{\circ} 47'$ to $74^{\circ} 1'$ and bounded on the North-East by the District of Ferozepur, on the East and South by the Rajputana States of Bikaner and Jaisalmer, on the South-West by Sind, on the North-West by the Indus and Sutlej rivers. Area, 15,000 square miles.

This State is about 300 miles in length and about 50 miles wide, is divided lengthwise into three great strips. Of these, the first is a part of the Great Indian Desert, the central track which is as barren as uplands of the Western Punjab, has however been partly rendered capable of cultivation by the net work of Sutlej Valley Canals constructed recently, and the third a fertile alluvial tract in the river valley is called the Sind. The State is a partner in the great Sutlej Valley Project which is now nearing completion. The scheme embodies four colossal weirs and a net work of canals that are gradually but surely converting the arid and bleak desert of Cholistan into a valley of smiling fields and rich gardens. It has been estimated that the perennial and non-perennial areas to be brought under cultivation by the Project would cover 14.64 and 25.82 lakh acres of land respectively. The ruling family is descended from the Abbasside Khalifas of Baghdad. The tribe originally came from Sind, and assumed independence during the dismemberment of the Durrani Empire in the Treaty of Lahore in 1809. Ranjit Singh was confined to the right bank of the Sutlej.

The first treaty with Bahawalpur was negotiated in 1833, the year after the treaty with Ranjit Singh for regulating traffic on the Indus. It

secured the independence of the Nawab within his own territories and opened up the traffic on the Indus and Sutlej. During the first Afghan War the Nawab rendered assistance to the British and was rewarded by a grant of territory and life pension. On his death his heir being minor for a time the administration of the State was in the hands of the British authorities. The present ruler is Rukn-ud-Daula, Nusrat-Jang, Mukhlis ud-Daula, Hafiz ul-Mulkh, His Highness Captain Nawab Sir Sadik Muhammad Khan Abbasi V, C I E, K O V O, K C I E, who was born in 1904 and succeeded in 1907. During his minority the State was managed by a Council of Regency which ceased to exist in March 1924, when His Highness the Nawab was invested with full power. His Highness is now assisted in the administration of his State by a Chief Minister, Izzat Nishan, Imad-ul-Mulk, Raisul-Wozra Khan Bahadur Mr. Nabi Buksh Muhammad Husain, M A, LL B, K C A O, B O S, a Public Works and Revenue Minister, Mr. J. A. Mackeown, I C S, and a Home and Military Secretary, Major Maqbool Hasan Kurelshy, M A, LL B, C A O, C H O.

The chief crops are wheat, rice and millet. The Lahore-Karachi branch of the North Western State Railway passes through the State. The State supports an Imperial Service combined Infantry, in addition to other troops. The capital is Bahawalpur, a walled town built in 1718.

Income from all sources over 70 lakhs. Languages spoken Multani or Western Punjabi (Jatki), and Marwari.

Agent to the Governor-General, Punjab States — Mr. J. A. O. Fitzpatrick, B A, LL B, C I E, C B E, I C S.

Chamba — This State is bounded on the west and north by the British and on the east and south by the British and the State of Patiala.

Gurdaspur, and it is shut in on almost every side by lofty hill ranges. The whole country is mountainous and is a favourite resort of sportsmen. It possesses a remarkable series of copper plate inscriptions from which its chronicle have been compiled.

Founded probably in the sixth century by Marut, a Surjyabansi Rajput, who built Brahmapura, the modern Barnaur, Chamba was extended by Meru Varma (680) and the town of Chamba built by Sahil Varma about 920. The State maintained its independence, until the Moghal conquest of India.

Under the Moghals it became tributary to the empire, but its internal administration was not interfered with, and it escaped almost unscathed from Sikh aggression. The State first came under British influence in 1846. The part, west of the Ravi, was at first handed over to Kashmir, but subsequently the boundaries of the State were fixed as they now stand, and it was declared independent of Kashmir. The present chief is H. H. Raja Ram Singh, who was born in 1890, and succeeded in 1919. The principal crops are rice, maize and millets. There are some valuable forests which were partly leased to Government in 1864 for a term of 99 years, but the management of them has now been retroceded to the Chamba Durbar. The mountain ranges are rich in minerals which are little worked. The principal road to Chamba town is from Pathankot, the terminus of the Amritsar Pathankot branch of the North Western Railway. Chamba town, on the right bank of the Ravi, contains a number of interesting temples, of which that of Lakshmi Narayan, dating possibly from the tenth century, is the most famous.

Faridkot—The ruling family of this sandy level tract of land belongs to the Sidhu-Barar clan of the Jats, and is descended from the same stock as the Phulkian houses. Their occupation of Faridkot and Kot Kapura dates from the time of Akbar, though quarrels with the surrounding Sikh States and internal dissensions have greatly reduced the patrimony.

The present Ruling Prince, Farzand-i-Saadat Nishan Hazarat-i-Kaisar-i-Hind Brar Bans Raja Har Indar Singh Bahadur was born in 1915 and succeeded his father in 1919. Under the orders of the Government of India the administration of the State has been entrusted to a Council of Administration consisting of a President, Sardar Bahadur Sardar Indar Singh, B.A., and four members. The State has an area of 643 square miles with a population of 150,661 and has an annual income of 18 lakhs. The Ruler is entitled to a salute of 11 guns and a visit and return visit from the Viceroy. The State Forces consist of State Sappers and Household Troops (Cavalry and Infantry).

Jind—Jind is one of the three Phulkian States (the other two being Patiala and Nabha). Its area is 1,268 square miles, with a population of 3,24,670 souls and an income of 25 lakhs.

The history of Jind as a separate State dates from 1763, when Raja Gajpat Singh, the maternal grandfather of Maharaja Ranjit Singh, and great grandson of the famous Phul, established his

principality. He was succeeded by Raja Bhag Singh, who greatly assisted Lord Lake in 1805. His grandson Raja Singat Singh was succeeded by the nearest male collateral Raja Sarup Singh in 1837. In the crisis of 1857 Raja Sarup Singh rendered valuable services to the British and was rewarded with a grant of nearly 600 square miles of land, known as Dadri territory. He was succeeded by his son Maharaja Raghuir Singh, who gave help to the British Government on the occasion of Kuka outbreak (1872) and the 2nd Afghan War (1878). The present ruler Maharaja Ranbir Singh was born in 1879, succeeded in 1887, and invested with full powers in 1899. The State rendered exemplary services in the Great European War. It supplied 8,673 men to the Indian Army and Imperial Service Troops and doubled the strength of its Imperial Service Infantry. The total contribution amounted to nearly 35 lakhs, in gifts of cash, materials, animals and loan.

His Highness enjoys a salute of 15 guns. The capital is Sangrur, which is connected by a State Railway with the North-Western Railway. The principal executive Officer of the State is called Chief Minister.

Ruler—Colonel His Highness Farzand-i-Dilband Rasikh-ul-Itikad, Daulat-i-Inglishia Raja-i-Rajgan Maharaja Sir Ranbir Singh Rajendra Bahadur, G O I E, K O S I, etc.

Kapurthala—This State consists of three detached pieces of territory in the great plain of the Jullundur Doab. The ancestors of the ruler of Kapurthala at one time held possessions both in the Cis and Trans-Sutlej and also in the Bari Doab. In the latter lies the village of Ahlu whence the family springs, and from which it takes the name of Ahluwalia. When the Jullundur Doab came under the dominion of the British Government in 1846, the estates north of the Sutlej were maintained in the independent possession of the Kapurthala Ruler, conditional on his paying a commutation in cash for military service engagements by which he had previously been bound to Maharaja Ranjit Singh, of Lahore. This annual tribute of Rs 1,31,000 a year was remitted by the Government of India in perpetuity in (1924) in recognition of the splendid war record and uniformly efficient administration of the State. The Bari Doab estates are held by the head of the House as a jaghir in perpetuity, the civil and police jurisdiction remaining in the hands of the British authorities. For good services during the Mutiny, the present Maharaja's grandfather was rewarded with a grant of other estates in Oudh, which yield a large annual income equal to those of Kapurthala State. The present Ruler's titles are Col H. H. Farzand-i-Dilband Rasikhul-Itikad Daulat-i-Inglishia Raja-i-Rajgan Maharaja Jagatjit Singh Bahadur Maharaja of Kapurthala, G O S I, (1911), G O I E, (1918), G B E, (1927), who was born on 24th November 1872 and succeeded his father His Highness the late Raja-i-Rajgan Kharak Singh of Kapurthala in 1877. He was granted the title of Maharaja as an hereditary distinction in 1911. His salute was raised to 15 guns and he was made Honorary Colonel of the 46th Rattars Sikhs. The Maharaja received the Grand Cross of the Legion d'Honneur from the French Government in 1924, and possesses also the Grand Cross of the

Order of Carlos 3rd, of Spain, Grand Cross of the Order of the Star of Roumania, Grand Cross of the Order of Merit of Abyssinia, Grand Cordon of the Order of the Nile of Egypt, Grand Cordon of the Order of Morocco, Grand Cordon of the Order of Tunis, Grand Cross of the Order of Chili, Grand Cross of the Order of the Sun of Peru, Grand Cross of the Order of Cuba, represented Indian Princes and India on the League of Nations in 1926, 1927 and 1929, celebrated the Golden Jubilee of his reign in December 1927 with great éclat, when Their Excellencies the Viceroy and Lady Irwin, the Commander-in-Chief in India and Lady Birdwood, Governor of the Punjab and Lady Pallet, Their Highnesses the Maharajas of Jammu and Kashmir, Bikaner, Patiala, Jammu, Alwar, Bharatpur, Rajpipla, Mandi, the Nawabs of Palampur, Malerkotla, Loharu and the Raja of Kalsia were present, besides a very large and distinguished gathering of European and Indian guests.

The rulers of Kapurthala are Rajput Sikh, and claim descent from Rana Kapur, a distinguished member of the Rajput House of Jaisalmer. Only a small proportion of the population however are Sikhs, the majority being Mahomedans. The chief crops are wheat, gram, maize, cotton and sugarcane. The town of Sultanpur in this State is famous for hand printed cloths. Phagwara is another important town in the State and is very prosperous on account of its grain markets and factories for manufacture of agricultural implements, and metallic utensils of household use. The situation of this town on the main railway line and the consequent facilities of export and import make its importance still greater and this is the chief commercial town in the State. The main line of the North Western Railway passes through part of the State and the Grand Trunk Road runs parallel to it. A branch railway from Jullundur City to Ferozepur passes through the capital. The Imperial Service and local troops of the State have been re-organized and are now designated as Kapurthala State Forces. The State Troops, the strength of which was raised during the Great War, to nearly 2,000, served the Empire in that crisis in East Africa, Mesopotamia and on the Afghan Frontier. Primary education is free throughout the State, and it spends a large proportion of its revenues on its Education Department. The State also possesses a Legislative Assembly which was created by the present Maharaja on the occasion of the Silver Jubilee of his reign in 1916. The capital is Kapurthala which has been embellished by the present Maharaja with a Palace of remarkable beauty and grandeur and with various buildings of public utility. The town boasts modern amenities such as electric light, water-works, etc.

Political Officer. The Hon'ble Agent to the Governor-General, Punjab States, Lahore.

Malerkotla—This State consists of a level sandy plain unbroken by a hill or stream, bounded by the district of Ludhiana on the north by Patiala territory on the east and south and by the Ludhiana District, Patiala and Nabha territories on the west. The Rulers

(Nawabs) of Malerkotla are of "Kurd", descent who came originally from the Province of "Sherwan" and settled in the town of "Sherwan" north of Persia, and after settling for a time in Afghanistan near Ghazni came to India and settled at Maler, the old capital of the State in 1442. Originally they held positions of trust under the Lodhi and Moghal Emperors. As the Moghal Empire began to sink into decay they gradually became independent. They were in constant feuds with the newly created adjacent Sikh States. After the victory of Laswari, gained by the British over Sindhi in 1803 and the subjugation and flight of Holkar in 1805, when the Nawab of Malerkotla joined the British Army, the British Government succeeded to the power of the Mahrattas in the districts between the Sutlej and the Jumna. The State entered into political relations with the British Government in 1809. The present Ruler is Lt-Col. His Highness Nawab Sir Ahmad Ali Khan, Bahadur, KCSI, KCIE, who was born in 1881 and succeeded in 1908. He was created Hon'ry Major in the Indian Army in June 1916 and promoted to the rank of Lt-Col in December 1919.

The chief products are cotton, sugar, poppy, aniseed, mustard, ajwain, methi, tobacco, garlic, onions and all sorts of grains.

The State maintains Sappers, Infantry, Cavalry and Artillery. The capital is Malerkotla. The population of the town is 30,000. Annual revenue of the State is about 16 lakhs.

Mandi is an Indian State in the Punjab Political Agency lying in the upper reaches of Bias river which drains nearly all its area. Its area is 1,200 square miles and it lies between 31°-23' North Lat., and 76°-22' East Long., and is bounded on the east by Kulu, on the south by Suket and on the north and west by Kangra. It has an interesting history of considerable length which finally resulted in its entering into a treaty with the British in 1846 A.D.

The present Ruler, Lieutenant His Highness Raja Sir Jogindar Sen Bahadur, KCSI, assumed full powers in February 1925. His Highness married the only daughter of His Highness the Maharaja of Kapurthala.

The work of the Mandi Hydro-Electric Project is in progress. This Project when finished will supply electric power to practically the whole of the Punjab and will materially help in developing local industries. It is expected that the first stage of the scheme would be completed during 1932.

The principal crops are rice, maize, wheat and millet. About three fifths of the State are occupied by forests and grazing lands. It is rich in minerals. The capital is Mandi founded in 1527 which contains several temples and places of interest and is one of the chief marts for commerce with Ladkhal and Yarkand.

Nabha—Nabha which became a separate State in 1763 is one of the 3 Phulkian States—Nabha, Patiala and Jind—and though second in point of population and revenue of the 3 sister States, it claims seniority being descended from the eldest branch. It consists of two distinct parts, the main portion comprising 12 separate pieces of territory scattered among the other Punjab States and Districts, forms the City of Nabha and the *Nizamats* of Phul and Amloh, the second portion forms the *Nizamat* of Bawal in the extreme south-east of the Punjab on the border of Rajputana, this *Nizamat* of Bawal was subsequently added to its territory as a reward from the British Government for the loyalty of the Rulers of Nabha. The State now covers an area of about 1,000 square miles and has a population of about 3 lakhs. The State, maintains one battalion of Infantry known as the Nabha Akal Infantry under the Indian State Forces Scheme consisting of 450. For the preservation of the peace there is also a Police force consisting of over 400 men.

The State is traversed by the main and 3 branch lines of the N W Railway and the B B & C I crosses the *Nizamat* of Bawal. A portion of the State is irrigated by the Sirhind Canal. The crops of the State are gram, pulses, bajra, sugarcane, cotton, wheat and barley, to facilitate trade the Durbar has opened grain markets and Banks near the principal railway station within the State territory. The chief industries of the State consist of the manufacture of silver and gold ornaments, brass utensils, and cotton carpets, lace and *gota*, etc. There are some ginning factories and a cotton steam press in the State which are working successfully. In 1923 an inquiry was held into certain matters in dispute between the Patiala and the Nabha Durbars which showed that the Nabha Police had fabricated cases against persons connected with the Patiala State with the object of injuring them through the Patiala Durbar. As a result, the Maharaja Ripudaman Singh, who was born in 1883 and succeeded his father in 1911 entered into an agreement with the Government of India whereby he voluntarily separated himself from the administration and the control of the State was accordingly assumed by the Government of India. In consequence of repeated breaches of the agreement by the Maharaja, he was in February 1928 deprived of the title of Maharaja and of all rights and privileges pertaining thereto, and his eldest son, Partab Singh, was recognized as Maharaja in his stead.

Patiala—This is the largest of the Phulkian States, and the premier State in the Punjab. Its territory is scattered and interspersed with small States and even single villages belonging to other States and British districts. It also comprises a portion of the Simla Hills and territory on the border of Jampur and Alwar States. Area 5,932 square miles. Population 16,25,520. Gross income Rs one crore and thirty-five lakhs. Its history as a separate State begins in 1762. The present Ruler, Lieutenant General His Highness Farzand-i-Khas Daulat-i-Inglishia Mansur-ul-Zaman Amir-ul-Umra Maharaja Dhiraaj Raj Rajeshwar, Sri Maharaja-i-Rajgan

Sir Bhupindra Singh Mohinder Bahadur, Yadvu Vanshavalans Bhatti Kul Bhushan, GCSI, G O F E, G O V O, G B E, A D C, was born in 1891, succeeded in 1900, and assumed the reins of government in 1909 on attaining majority. His Highness the Maharaja Dhiraaj enjoys at present personal salute of 19 guns and he and his successors the distinction of exemption from presenting *Nazar* to the Viceroy in Durbar in perpetuity. The principal crops are grain, barley, wheat, sugar-cane, rapeseed, cotton and tobacco. A great part of the State is irrigated by the Sirhind and Western Jumna Canal distributaries. It possesses valuable forests. The State is rich in antiquities, especially at Pinjaur, Sunam, Sirhind, Bhatinda, Narnaul, etc. One hundred and thirty-eight miles of broad-gauge railway line comprising two Sections—from Rajpura to Bhatinda and from Sirhind to Rupar—have been constructed by the State at its own cost. The North-Western Railway, the E I Railway, the B B & C I Railway and the J B Railway traverse the State. His Highness maintains a contingent of two regiments of cavalry and four battalions of infantry—one battery of Horse Artillery.

The State maintains a first grade college which imparts free education to all students. Primary education is also free throughout the State. The Durbar sanctioned a scheme of compulsory education in 1928.

Since the State has entered into alliance with the British Government in 1809, it has rendered help to the British Government on all critical occasions such as Gurkha War, Sikh War, Mutiny of 1857, Afghan War of 1878-79, Tirah and N W F campaign of 1897. On the outbreak of the European War His Highness placed the entire resources of his State at the disposal of His Majesty the King-Emperor and offered his personal services. The entire Imperial Service Contingent was on active service throughout the period of the War and served on various fronts in Egypt, Gallipoli, Mesopotamia and Palestine, winning numerous distinctions. Two mule and one camel corps were raised and placed at the service of the British Government for the period of the War, and in addition to furnishing nearly 28,000 recruits for the British Indian Army and maintaining the State Imperial Service Contingent at full strength, contributed substantially in money and material. Again in 1919 on the outbreak of hostilities with Afghanistan His Highness served personally on the Frontier on the Staff of the General Officer Commanding and the Imperial Service Contingent saw active service towards Kohat and Quetta fronts. For his services on the N W Frontier His Highness was mentioned in despatches.

His Highness was selected by His Excellency the Viceroy to represent the Ruling Princes of India at the Imperial War Conference and Imperial War Cabinet in June 1918 and during his stay in Europe His Highness paid visits to all the different and principal fronts in Belgium, France, Italy and Egypt (Palestine) and received the following decorations from the allied Sovereigns and Governments—(a) Grand Cordon of the Order de Leopold, (b) Grand Cross of the Legion of Honour, France, and (c) Grand

States which they claim to be the richest in the world. The Mawson area in the Southern States is also rich in lead, lignite and iron ore of a low grade are found in many places.

Lashio, the headquarters of the Northern Shan States District, is the terminus of the Myoh-aung-Lashio Branch of the Burma Railways (178 miles) and is also connected with Mandalay by a cart road.

The Burma Corporation's narrow gauge private railway track 46 miles long connects their Bawdwin mine with the Burma Railways system at Namyao.

The Southern Shan States are served by the Burma Railways branch line Thazi to Heho (87 miles) which has recently been extended to Tayaw in the Yawngbwe plain.

Taunggyi, the headquarters of the Southern Shan States, is connected with Thazi by a well-graded motor road. The States vary much in size and importance. The largest State is Kengtung with an area of 12,400 square miles and population 208,761. The smallest State is Namtok with an area of 14 square miles and population 880.

Hsipaw with an area of 4,400 square miles and population 131,410 is the richest State with a gross revenue of Rs 10,62,418.

The Sawbwas of Kengtung, Hsipaw and Yawngbwe and Mongnai have salutes of nine guns while the Mong Mit Sawbwa has a personal salute of the same number.

Administration

Under the Burma Laws Act, 1898, the Civil, Criminal and Revenue administration of every Shan State is vested in the Chief of the State subject to the restrictions specified in the sanad of appointment granted to him and under the same Act the law to be administered in each State is the customary law of the State so far as it is in accordance with justice, equity and good conscience and not opposed to the law in force in the rest of British India. The customary law may be modified by the Governor who has also power to appoint officers to take part in the administration of any State and to regulate the powers and proceedings of such officers. The Chiefs are bound by their sanads to follow the advice of the Superintendents appointed but subject to certain modifications which have been made in the customary law relating to criminal and civil justice have more or less maintained the semi-independent status which was found existing at the annexation of Upper Burma.

In 1920, Sir Reginald Craddock, Lieutenant-Governor of Burma, proposed a scheme for the sanction of the Secretary of State under which the Chiefs of the Northern and Southern Shan States have agreed to federalise the departments of Government in which they had been previously largely dependent on contributions from the Provincial Funds. Under this scheme no interference is contemplated in the internal management of the States and the Chiefs continue to collect their taxes and be responsible for law and order, maintain Courts for the disposal of criminal and civil cases, appoint their own officials and control their own

subjects under the advice of the Superintendents. But the Federation is responsible for the centralised Departments of Public Works, Medical, Forests, Education, Agriculture and to a small extent Police. In place of the individual tribute formerly paid by them the Chiefs contribute to the Federation a proportion of their revenue which amounts roughly to the expenditure hitherto incurred by them on the heads of administration now centralised while the Provincial Government surrenders to the Federation all provincial revenue previously derived from the States and makes an annual contribution to enable it to maintain its services at the same degree of efficiency formerly enjoyed. The Federation on the other hand pays a fixed proportion of its revenue to the Provincial Treasury as tribute in place of the individual contributions of the Chiefs. Under this scheme the Federation is a sub-entity of the Burma Government, is self-contained and responsible for its own progress. The Chiefs express their views on Federal and general matters through a Council of Chiefs consisting of all Chiefs of the rank of Sawbwa and four elected representatives of the lesser Chiefs. The Superintendents, Northern Shan States and the Commissioner of the Federated Shan States to whom the supervision of the Federation has been entrusted are *ex-officio* members of the Council. The scheme was sanctioned and brought into force with effect from October 1922. The first meeting of the Council of Chiefs was formally opened by His Excellency the Governor Sir Spencer Harcourt Butler, G C I E, K C S I, I C S., in March 1923.

Karenni

This district which formerly consisted of five States now consists of three as two have been amalgamated with others. It has a total area of 3,015 square miles and a population of 37,064. It lies on the south of the Southern Shan States between Siam and the British district of Toungoo. The largest State is Kantarawadi with an area of 3,000 square miles and a population of 36,621 and a revenue of nearly 1½ lakhs of rupees. More than half of the inhabitants are Red Karens. An Assistant Political Officer is posted at Loiaw subject to the supervision of the Superintendent, Southern Shan States, who exercises in practice much the same control over the Chiefs as is exercised in the Shan States though nominally they are more independent than their Shan neighbours. Mineral and forest rights however in Karenni belong to the Chiefs and not to the Government. In the past substantial contributions from Provincial revenues have been made to the Karenni Chiefs for education and medical service. The Chiefs are at present unwilling to surrender their special rights and join the Shan States Federation though very considerable advantages might accrue from their doing so.

The principal wealth of the country used to be in its teak timber and a large alien population was at one time supported by the timber trade. This has largely declined in the last few years and unless the Chiefs are prepared to deny themselves and close their forests they will soon disappear.

UNDER THE GOVERNMENT OF ASSAM.

Manipur—The only State of importance, under the Government of Assam, is Manipur which has an area of 8,620 square miles and a population of 4,45,606 (1931 Census), of which about 58 per cent are Hindus and 35 per cent animistic hill tribes. Manipur consists of a great tract of mountainous country, and a valley about 50 miles long and 20 miles wide, which is shut in on every side. The State adopted Hinduism in the early eighteenth century, in the reign of Pamheiba or Gharib Nawaz, who subsequently made several invasions into Burma. On the Burmese retreating, Manipur negotiated a treaty of alliance with the British in 1762. The Burmese again invaded Manipur during the first Burmese war, and on the conclusion of peace in 1826 Manipur was declared independent. The chief event in its subsequent history was the intervention of the British in 1891 to establish the claim of Kula Chandra Singh as Maharaja, followed by the treacherous murder of the Chief Commissioner, Mr Quinton, and the officers with him, and the withdrawal of the escort which accompanied him. From 1891 to 1907 the State was administered by the Political Agent, during the minority of H. H. Chura Chand Singh. The Raja was invested with ruling powers in 1907 and formally installed on the gadi in 1908. For his services during the War the hereditary title of Maharaja was

conferred on him. He is entitled to a salute of 11 guns.

The administration of the State is now conducted by H. H. the Maharaja, assisted by a Durbar, which consists of a President, who is a member of the Indian Civil Service, his services being lent to the State by the Assam Government, three ordinary and three additional members, who are all Manipuris. The staple crop of the country is rice. Forests of various kinds cover the great part of the mountain ranges.

Khasi States—These petty chiefships, 25 in number, with a total area of about 3,600 square miles and a population of 1,80,000, are included under the Government of Assam. Most of the States have treaties or engagement with the British Government. The two largest are Jhym and Mjliem and the smallest is Nongliwal, which has a population of only 213. Most of them are ruled by a Chief of Stem. The Stemship usually remains in one family. The succession was originally controlled by a small electoral body constituted from the heads of certain clans but in recent years there has been a tendency to broaden the elective basis. The constitution of a Khasi State has always been of a very democratic character, a Stem exercising but little control over his people.

UNDER THE GOVERNMENT OF THE CENTRAL PROVINCES

The Central Provinces include fifteen States in political relation with the Government with an area of 31,080 square miles and a population of 2,477,832, according to the Census of 1931. One of the States, Makrai, adjoins the Hoshangabad District, the remainder are scattered round the Chhattisgarh Division to the different districts of which the majority of them were formerly attached. Their relations with the Government are controlled by a Political Agent. The States vary greatly in size and importance, Sakti, the smallest, having an area of 138 square miles and Bastar, the largest, an area of 13,062 square miles. They are administered by hereditary chiefs, who hold on conditions of loyalty and good government set forth in Sanads and acknowledgments of fealty, but are nominally free from direct interference save in the case of sentences of death in the case of all Chiefs and sentences of over 7 years imprisonment, in the case of all Chiefs but two, which require confirmation of His Excellency the Governor and the Political Agent respectively. But as a fact, the Government has exercised a very large amount of control owing mainly to the frequency with which the States have been taken under direct management, because of either the minority or the maladministration of the Chiefs.

The States pay a tribute to Government which amounts in the aggregate to about 2½ lakhs.

Statistics relating to the chief States are contained in the following table—

| State | Area. | Population
1931 | Revenue
(approximate)
in lakhs |
|-----------------------|-------------|--------------------|--------------------------------------|
| | Sq
Miles | | Rs |
| Bastar | 13,062 | 522,283 | 9 2½ |
| Jashpur | 1,963 | 193,694 | 3 74 |
| Kanker | 1,429 | 136,129 | 4 14 |
| Khatnagarh | 931 | 157,200 | 6 15 |
| Nandgaon | 871 | 182,108 | 6 12 |
| Raigarh | 1,486 | 277,569 | 6 44 |
| Surguja | 6,055 | 499,428 | 5 59 |
| Eight other
States | 5,283 | 502,430 | 14 91 |
| Total | 31,080 | 2,477,832 | 56 62 |

Bastar.—This State, in the south-east corner of the province, is the most important in the group. In area (13,062 square miles) it is the twelfth largest State in India, but the population in 1931 was only 522,283 and is very scattered and backward. A point of interest is that Bastar is the only State in India of which the Chief is a Hindu lady. She is the last descendant of an ancient family of Lunar Rajputs, which ruled over Warangal until the Mahomedan conquest of the Deccan in the 14th century A. D. when the brother of the last Raja of Warangal fled into Bastar and established a kingdom there. From then till the days of the Marathas the State was virtually independent, its inaccessibility securing it from all but occasional raids of Mahomedan freebooters. The Bonslas of Nagpur imposed a small tribute on Bastar in the 18th century, and at various times for delay in payment deprived it of the Sihawa tract in the Raipur district, and allowed the Raja of Jeypore in the adjacent Vizagapatam Agency of Madras to retain possession of the Kotapad tract, originally pledged to Jeypore by a Bastar Raja for assistance during family dissensions. The dispute between Bastar and Jeypore over this land led to constant border disturbances, and was not finally settled till 1863, when the Government of India, while recognising Bastar's claim, finally made the tract over to Jeypore on the ground of long possession, on condition of payment by Jeypore of Rs 3,000 tribute, two-thirds of which was remitted from the tribute payable by Bastar. The present tribute paid by Bastar is Rs 18,000 a year.

On the formation of the Central Provinces Bastar was recognised as a Feudatory State. Since then the State has made steady, if slow, progress, hampered by the innate conservatism of its aboriginal population, which has from time to time rebelled. The last rebellion, in 1910, was due to oppression by minor State officials and dislike of the rigorous forest policy then under introduction. After the rebellion the Raja had his powers reduced, and a series of Diwans was appointed by the Central Provinces Administration. The State has since his death continued to be under Government management, owing to the minority of Rani Profulla Kumari Devi, the present Chief. The present Administrator of the State is Mr D. E. Rutnam, I.C.S., of the Central Provinces Commission. He is assisted by two sub-divisional officers, a European Medical Officer, a State Engineer, a Superintendent of Police and a Forest Officer.

Nearly 11,000 square miles are covered by forest, of which about 3,000 square miles are reserves. Cultivation is therefore sparse. Rice and mustard are the chief crops. There is a large export of grain, timber and minor forest produce, particularly myrabolams. Most of the sal forest is leased to Messrs Gillanders Arbuthnot for sleeper manufacture. The forest revenue in 1930 was about 3.85 lakhs. The extension of the Salur branch of the B. N. R. to Jagdalpur and of the Raipur Forest Tramway to Kondagaon are under consideration. There are more than 600 miles of gravel motorable road in the State. The advent of the railway should lead to a great increase in the revenue of the State, and may lead to the exploitation of its great deposits of iron, manganese and tin. The revenue in 1930 was Rs 9.22 lakhs, expenditure Rs 10.46 lakhs and free closing balance Rs 1.25 lakhs.

The capital, Jagdalpur, on the Indrawati River, has a population of 1,1028, and is 184 miles by motorable road from Raipur in the Central Provinces, and 210 from Vizagapatam in Madras Presidency. The famous Chitrakot falls (97 ft high) of the Indrawati are 23 miles from Jagdalpur.

Surguja.—Until 1905 this was included in Chota Nagpur States of Bengal. The most important feature is the Mainpat, a magnificent tableland forming the southern barrier of the State. The early history of Surguja is obscure, but according to a local tradition in Palamau, the present ruling family is said to be descended from an Arksel Raja of Palamau. In 1758 a Maratha army overran the State, and compelled its Chief to acknowledge himself a tributary of the Bhonsla Raja. At the end of the eighteenth century, in consequence of the Chief having aided a rebellion in Palamau against the British, an expedition entered Surguja, and, though order was temporarily restored, disputes again broke out between the Chief and his relations, necessitating British interference. Until 1818 the State continued to be the scene of constant lawlessness, but in that year it was ceded to the British Government under the provisional agreement concluded with Mudhoji Bhonsla of Nagpur, and order was soon established. The principal crops are rice and other cereals. The present Chief of the State is Maharaja Ramanuj Saran Singh Deo, C.B.E., who succeeded to the *gadi* in 1918 and enjoys full powers of a Ruling Chief.

COMMUNICATIONS—Great efforts have been made and are being made towards the improvement of roads for wheeled traffic in the State. The Jhelum Valley road (106 miles) which links the Kashmir Valley with the Punjab and the North-Western Frontier Province is considered to be one of the finest motorable mountain roads in the world.

The Banihal Cart Road, 205 miles long, which has recently been completed, joins Kashmir with the North Western Railway system at Jammu-Tawi and is also a fine motorable road.

Roads for pack animals lead from Srinagar, the summer capital of Kashmir, to the frontier districts of Gilgit and Ladakh. Internal village communications have also been much improved.

The Jammu-Suchetgarh Railway, a section of the Wazirabad-Sialkot branch line of the North Western Railway system, is the only Railway in the State. The mountainous nature of the country has made the extension of the line into the heart of the State so far impracticable.

PUBLIC WORKS—In 1904 a flood spill channel above Srinagar was constructed to minimise the constant danger of floods in the River Jhelum and it was hoped that the danger would be still further reduced by the carrying out of a scheme for lowering a part of the bed of the River Jhelum by dredging, which has been taken in hand. It is interesting to know that dredging operations were once before carried out in the reign of Avantivarman (A.D. 855-883) by his

engineer Suyya near Sopore, with the same object. Good progress has been made with irrigation but the most important scheme of recent years has been the installation of a large Electric Power Station on the Jhelum River at Mahora which was completed in 1907.

EDUCATION—Of the total population of 3,259,527 excluding the frontier lagas where literacy is not recorded, there are 72,228 persons who are able to read and write, of whom 4,007 only are females. In other words, 26 out of every 1,000 persons aged five or more can read and write. Among males 16 in every 1,000 are literate. The number of educational institutions including two Arts Colleges and two technical institutes is 784 and is being steadily increased. In municipal areas education for boys has been made compulsory from 1929. Much progress has also been made in female education and two new girls' schools have been established during the year.

REFORMS—The most important reforms connected with the present Maharaja's reign have been the establishment of an independent High Court of Judicature modelled on British High Courts and the annual summoning of representatives from the provinces as a beginning of popular institutions in the State. Important legislative measures passed by His Highness' Government in recent years include the raising of the age of consent to 14 for girls and 16 for boys and the Agriculturists' Relief Regulation meant to cope with the problem of rural indebtedness.

THE CHAMBER OF PRINCES.

The Narendra Mandal, or Chamber of Princes came into existence, with the earnest co-operation of a number of leading Princes themselves as one of the results of the Report on Indian constitutional reform presented to Parliament by Mr. Montagu, Secretary of State for India and H. E. Lord Chelmsford, Viceroy and Governor-General of India, in 1919. The proposal was that the Chamber should exist as a permanent consultative body, with the Viceroy as President and the members composing the Chamber consisting mainly of the Princes and Chiefs having salutes, or whose membership might otherwise be considered desirable by the Viceroy. Certain smaller Chiefs were grouped and were given the privilege of nominating a member to represent them from year to year. The Chamber is a recommendatory body, which performs its functions under a constitution approved by the Secretary of State and it deals with questions submitted to it concerning the Princes and their rights and privileges generally and their position in Imperial affairs.

The Chamber was formally inaugurated by H. R. H. the Duke of Connaught on 8th February 1921. It meets regularly once a year and the agenda of subjects for discussion is framed and proposed by the Chancellor of the Chamber who at present is His Highness the Maharajah of Patiala. The Chamber selects by vote its own officers, who are the Chancellor, a pro-Chancellor to act for him in his absence out of India and a Standing Committee of the Chamber. This Committee considers before the annual meetings the subjects to be discussed at them.

Until 1929, the proceedings of the Chamber were considered as confidential and there was no admittance of the general public to its meetings. At the annual session in February 1929, the Princes passed a resolution by which all meetings were ordinarily made open to the public. The Chamber contains very restricted accommodation and admission has to be regulated according to the number of seats available.

Indian States' Tribute.

Many of the States pay tribute varying in amount according to the circumstances of each case, to the British Government. This tribute is frequently due to exchanges of territory or settlement of claims between the Governments but is chiefly in lieu of former obligations to supply or maintain troops. The actual annual receipts in the form of tribute and contributions from Indian States are summarised in the following table. The relations of the States to one another in respect of tributes are complicated, and it would serve no useful purpose to enter upon the question. It may, however, be mentioned that a large number of the States of Kathiawar and Gujarat pay tribute of some kind to Baroda, and that Gwalior claims tribute from some of the smaller States of Central India —

States paying tribute directly to the Government of India

| <i>Bombay</i> | |
| Tribute from Kathiawar | 31,129 |
| " " various petty States | 2,825 |
| Contribution from Baroda States | 25,600 |
| " " Jagirdars, Southern Mahratta Country | 5,765 |
| Tribute from Cutch | 5,424 |

It was announced at the Coronation Durbar of 1911 that there would in future be no Nazarana payments on successions.

Foreign Possessions in India.

Portugal and France both hold small territorial possessions in the Indian Peninsula

The Portuguese possessions in India, all of which are situated within the limits of Bombay Presidency, consist of the Province of Goa on the Arabian Sea Coast, the territory of Daman with the small territory called Pragana-Nagar-

Avely on the Gujarat Coast, at the entrance to the Gulf of Cambay, and the little island of Diu, with two places called Gogla and Simbor, on the southern extremity of the Kathiawar Peninsula. All these three territories constitute what is called the State of India

GOA.

Goa forms a compact block of territory surrounded by British districts. Savantwadi State lies to the north of it, the Arabian Sea on the west and North Kanara on the south, and the eastern boundary is the range of the Western Ghats, which separates it from the British districts of Belgaum and North Kanara. The extreme length from north to south is 62 miles and the greatest breadth from east to west 40 miles. The territory has a total area of 1,301 square miles and consists of the *Velhas Conquistas*, or Old Conquests, comprising the island of Goa, acquired by the Portuguese in 1510, and the neighbouring municipalities of Salsette, Bardez, and Mormugao acquired in 1543, and of the *Novas Conquistas*, or New Conquests, comprising the municipalities of Pernem, Sanquellim, Ponda, Quepem, Canacona, Satari and Sanguem acquired in the latter half of the 18th century. The small island of Angediva situated opposite the port of Karwar, in the British district of North Kanara, forms administratively a portion of the Canacona municipality. This was acquired in 1505. The whole country is hilly, especially the eastern portion, the predominating physical feature being the Western Ghats, which besides bounding the country along the north-east and south-east, just off westward and spread across the country in a succession of spurs and ridges. There are several conspicuous isolated peaks, of which the highest, Sonsagar, is 3,827 feet high.

The country is intersected by numerous rivers running westward from the Ghats, and the principal eight, which are all navigable, are in size of some importance. Goa possesses a fine harbour, formed by the promontories of Bardez and Salsette. Half-way between these extremities lies the *cabo*, or cape, which forms the extremity of the island of Goa. This divides the whole bay into two anchorages, known as Aguada and Mormugao. Both are capable of accommodating the largest shipping from September to May, but Aguada is virtually closed during the south-west monsoon, owing to the high winds and sea and to the formation of sand bars across the estuary of the Mandovi river, which opens into Aguada. Mormugao is accessible at all times and is therefore the harbour of commercial importance. It is the terminus of the railway running to the coast from the inland British system of lines. A breakwater and port have been built there and the trade is considerable being chiefly transit trade from British territory. The international transit of Mormugao port was in 1926 about Rs 440 lakhs.

The People

The total population of Goa was 531,952 at the census of 1921. This gives a density of 408 persons to the square mile and the popula-

tion showed an increase of 9 per cent since the census ten years previously. In the *Velhas Conquistas* the majority of the population is Christian. In the *Novas Conquistas* Hindus are more numerous than Christians. The Moslems in the territory are numbered in a few thousands. The Christians still very largely adhere to caste distinctions, claiming to be Brahmans, Charados and low castes, which do not intermarry. The Hindus who form about one-half of the total population are largely Maratha and do not differ from those of the adjacent, Konkan districts of Bombay. All classes of the people, with the exception of Europeans, use the Konkani dialect of Marathi with some admixture of Portuguese words. The official language is Portuguese, which is commonly spoken in the capital and the principal towns as well as by all educated people. Nearly all the Christians profess the Roman Catholic religion and are spiritually subject to an archbishop who has the titles of Primate of the East and Patriarch of the East Indies and exercises ecclesiastical jurisdiction also over a portion of British India, and the provinces of Macau (China) and Timor (Oceania), with missions in foreign countries and Mocambique (Portuguese East Africa). The Christians of Daman and Diu are subject under a new Treaty signed in 1928 between Portugal and the Holy see to the Archbishop of Goa. There are numerous churches in Goa, mostly built by the Jesuits and Franciscans prior to the extinction of the religious orders in Portuguese territory. The churches are in charge of secular priests. Hindus and Mahomedans now enjoy perfect freedom in religious matters and have their own places of worship. In the early days of Portuguese rule the worship of Hindu gods in public and the observance of Hindu usages were strictly forbidden and rigorously suppressed.

The Country

A little over one-third of the entire territory of Goa is stated to be under cultivation. The fertility of the soil varies considerably according to quality, situation and water-supply. The *Velhas Conquistas* are as a rule better and more intensively cultivated than the *Novas Conquistas*. In both these divisions a holding of fifteen or sixteen acres would be considered a good sized farm but the majority of holdings are of much smaller extent varying from half an acre to five or six acres. The staple produce of the country is rice, of which there are two good harvests, but the quantity produced is barely sufficient to meet the needs of the population for two-thirds of the year. Next to rice, the culture of coconut palms is deemed most important, from the variety of uses to which the products are applied. Hilly places and inferior

soils are set apart for the cultivation of cereals and several kinds of fruits and vegetables are cultivated to an important extent. The condition of the agricultural classes in the Velhas Conquistas has improved during recent years owing to the general rise in the prices of all classes of agricultural produce and partly to the current of emigration to British territory. There is a great shortage of agricultural labour in the Velhas Conquistas, and the cultivation of rice fields is now practically controlled by the Hindu population. In the summer months bands of artisans and field labourers from the adjoining British territory make their way into Bardez where the demand for labour is always keen. Stately forests are found in the Novas Conquistas. They cover an area of 116 square miles and are under conservation and yield some profit to the administration. Iron is found in parts of the territory, but has not been seriously worked. Manganese also exists and some mines are being worked at present, the ore being exported to the Continent.

Commerce

In the days of its glory, Goa was the chief entrepot of commerce between East and West and was specially famous for its trade in horses with the Persian Gulf. It lost its commercial importance with the downfall of the Portuguese Empire and its trade is now insignificant.

The present trade of Goa is not very large. Its imports amount to about Rs. 160 lakhs and exports to about Rs. 40 lakhs. The discrepancy is met from the money sent to Goa by the many emigrants who are to be found all over the world. Few manufacturing industries of any moment exist and most manufactured articles in use are imported. Exports chiefly consist of cocoanuts, betel nuts, mangoes and other fruits and raw produce.

A line of railway connects Mormugao with the Madras and Southern Mahratta Railway. Its length from Mormugao to Castle Rock above the Ghats where it joins the British system, is 51 miles, of which 49 are in Portuguese territory. The railway is under the management of the Madras and Southern Mahratta Railway administration, and the bulk of the trade of Mormugao port is what it brings down from and takes to the interior. The telegraphs in Portuguese territories are worked as a separate system from the British. The latter, however, had an office at Nova-Goa maintained jointly by the two Governments but since 1925 the Nova-Goa office has been handed over to the Portuguese Government which now maintains and works all the telegraphs in its territories.

Taxes and Tariffs

The country was in a state of chronic financial equilibrium for nearly sixty years with occasional exceptions. The last war enhanced the deficits to alarming proportions and these were met by fresh taxes and new loans. Most of the new taxes were the result of the initiative of the Governor-General Jaime de Morais, who is popularly known as the "Governor of Taxes". Only in 1927 the country experienced the joys of a balanced budget and the public servants whose salaries had always remained in arrears are now being paid regularly. There is an estimated surplus of about a lakh and a half which has been earmarked for promoting the indus-

trial progress of the country. If municipal and national taxes be added together, the country presents a very high incidence of taxation, even higher than that of British India, the average coming to about Rs. 88 *per capita*. There is no income-tax, except for government servants, but there is a special ten per cent tax on all incomes derived in the shape of interest on loans. This tax is a powerful contributory cause to the flight of capital from Portuguese India. The chief sources of revenue are the land tax, Excise and the customs. There is a special tax on emigrants which yields to the State about Rs. 60,000. The country being economically backward, the taxes give very little indication of its productive capacity or of its annual wealth. The national wealth is a matter of pure conjecture for lack of statistics.

The tariff schedule is based on the three-fold principle, fiscal, protective and preferential. There is a limited free list on which books and paper figure prominently. The fiscal tariff ranges from 10 to 30 per cent according to the nature of the commodities, but the duties in several cases are specific, not *ad valorem*. This causes considerable hardship to trade, and specially to the poorer classes of consumers. The preferential tariff applies to goods coming from Lisbon and the Portuguese Colonies. Very recently the principle of protection has been extended to the export of canned fruits which are entitled to a bounty of 10 per cent on their basic price.

The Capital.

Nova-Goa, the present capital of Portuguese India, comprehends Panjim and Ribandar. Old Goa is some six miles distant from the new city. Panjim occupies a narrow strip of land leading up to the Cabo, the cape dividing the Aguada bay from that of Mormugao, and mainly slopes down to the edge of the Aguada. It was selected as the residence of the Portuguese Viceroy in 1759, and in 1843 it was raised to its present rank as the capital of Portuguese India. The appearance of the city, with its row of public buildings and elegant private residences, as seen from the water is very picturesque and this impression is not belied by a closer inspection of its neat and spacious roads, bordered by decent, tidy houses. The most imposing public structures are the barracks, an immense quadrangular building the eastern wing of which accommodates the Primary School, the Public Library and the Government Press. Other noticeable buildings are the Cathedral and various churches, the viceregal palace, the High Court and so on. The square in the lower part of the town is adorned with a life-sized statue of Albuquerque standing under a canopy.

History

Goa was captured for the Portuguese by Alfonso de Albuquerque in 1510. Albuquerque promptly fortified the place and established Portuguese rule on a firm basis. From this time Goa rapidly rose in importance and became the metropolis of Portuguese power in the East. There was constant fighting with the armies of the Bijapur Kingdom, but the Portuguese held their own and gained the surrounding territory now known as the Velhas Conquistas.

The subsequent history of the town is one of ostentation and decay. Gor reached its summit of prosperity at the end of the sixteenth century. The accounts of travellers show that the Goa of those days presented a scene of military, ecclesiastical and commercial magnificence which has had no parallel in the British capitals of India. Portugal, however, with its three millions of population was too small to defend itself against Spain and maintain at the same time its immense Empire in the four Continents. Albuquerque tried to consolidate Portuguese rule in India by his policy of attracting the conquered Indians and granting them civil and religious liberties. His contemporaries, however, could not understand his far-seeing statesmanship and after his death they undid all his work basing their dominion on conquest by the sword and military force and they laboured to consolidate it by a proselytising organisation which throws all the missionary efforts of every other European power in India into the shade. Old Goa, as the ruins of the old capital are called to-day, had a hundred churches, many of them of magnificent proportions, and the Inquisition which was a power in the land. The sixty years' subjection to Spain in the 17th century completed the ruin of the Portuguese Empire in the East and though the Marquis of Pombal in the 18th century tried to stave off its decadence, his subordinates in far off India either could not understand or would not carry out his orders and even his strong hand was unable to stop the decline. It was in the 19th century that the colonials began to enjoy full Portuguese citizenship and sent their representatives to the Parliament in Lisbon.

Modern Times

There was frequently recurring fighting and in 1741 the Marathas invaded the neighbourhood of Goa and threatened the city itself. An army of 12,000 men arrived from Portugal at the critical moment. The invaders were beaten off, and the *Novas Conquistas* were added to the Portuguese possessions. In 1844 the shelter given by Goa to fugitives from justice in British territory threatened to bring about a rupture with the British Government at Bombay. In 1852 the Ranes of Satari, in the *Novas Conquistas*, revolted. In 1871 the native army in Goa mutinied and the King's own brother came from Lisbon to deal with the trouble and having done so disbanded the native army, which has never been reconstituted. But another outbreak among the troops took place in 1895 and the Ranes joining them the trouble was again not quieted until the arrival of another special expedition from Lisbon. The Ranes again broke out in 1901 and again in 1912, troops being again imported to deal with the last outbreak, which was only reported concluded in the summer of 1913. There has been no outbreak after that date.

The people on the whole appear to be quite satisfied with the Portuguese connection. There is no agitation for further reforms as in British India and not a sign of disaffection against Portuguese rule. This is chiefly due to the fact that under the present regime the natives of Goa enjoy complete equality with the natives of Por-

tugal, many of the sons of Goa occupying high and responsible positions in Portugal. Thus Elvino do Britto who was Minister of Public Works towards the end of the last century was a native of Goa as was the father of Dr. Bettencourt Rodrigues, Minister for Foreign Affairs in General Carmona's dictatorial Government. Natives of Goa are also Dr. Almeida Azêvedo, the President of the Supreme Court in Lisbon, Dr. Caetano Gonçalves, Judge of the same Court and Mr. Alberto Xavier, Secretary General of the Ministry of Finance.

Administration

The Lisbon Government by Decree No. 3260, dated 27th July 1917, enacted new rules regarding the administration of Portuguese India under an Organic Charter (*Carta Organica*) in force since 1st July 1919. This Charter, regarding civil and financial administration of the colony, was modified by rules Nos. 1005 and 1022, dated 7th and 20th August 1920, and decrees Nos. 7008 and 7030 dated 9th and 10th October. A new Organic Charter modifying in certain parts the earlier one was granted by Decree No. 12,499 of 4th October 1926 and is now in force.

The territory of Portuguese India is ruled by one Governor-General, residing in the Capital of the State, at Panjim *alias* Nova-Goa, and is divided into three districts: Goa, Daman and Diu. The last two are each under a Lieutenant-Governor. The district of Goa is under the direct superintendency of the Governor-General.

Subordinate to the Governor-General the following Secretariats are working: Home and Political, Finance, Customs, Education, Military, Naval, Agriculture, Health and Public Works. There are also three special and autonomous Departments, which do not constitute exclusive Secretariats, one of them being the Department of Posts and Telegraphs, the second that of Survey and the third that of the Fiscal of the W. I. P. Railway.

As the principal organ of administration next to the Governor-General and in collaboration with him works a Governor's Council (*Conselho do Governo*) with Legislative and advisory powers. The Council is constituted, in addition to the Governor-General, *ex-officio* President, of four officials (Attorney-General, the Director of Finances, the Director of Civil Administration and the Director of Public Works), five elected members (three representing *Velhas Conquistas*, one the *Novas Conquistas* and one the Districts of Daman and Diu) and five members nominated by the Governor-General to represent the minorities, agricultural, commercial and other interests and the press.

In each province of Goa, Daman and Diu, there is a District Council to supervise the Municipalities and other local institutions. The District Council of Goa is composed of the Director of Civil Administration, President, the Government Prosecutor of the Nova-Goa Civil Court, the Deputy Chief Health Officer, the Engineer next to the Director of Public Works, the Deputy Director of Finances, the Chairman of the Municipal Corporation of the Islands, one member elected by the Commercial and Industrial Associations of the district, one member elected by the 60 highest tax payers of Goa, one member elected by the Associations of Land

owners and Farmers of the District, and one member advocate elected by the Legislative Council among the legally qualified.

At Daman and Diu the corresponding body is composed of the local Governor, President, the Government Prosecutor, the Chief of the Public Works Department, the Health Officer, the Financial Director of the district, the Chairman of the Municipal Corporation, two members elected by 40 highest tax payers of the District and one member elected by the Merchants, Industrials and Farmers of the district.

Under the provisions of the above quoted Decree is also existing in the capital of Portuguese India a administrative court tribunal to take cognizance and decide all litigation administrative matter fiscal questions and accounts. It is named *Tribunal Administrativo Fiscal* and is composed of the Chief Justice as President four High Court judges one superior Government officer who must be a Bachelor of Laws nominated by the Government and a citizen, who is not an official elected by the Governor General's Council. When matter regarding finances and accounts

come up for decision and discussion the Director of Finances also sits on this Tribunal.

Under the presidency of the Governor General the following bodies are also working —

Technical Council of Public Works — Its members are all engineers on permanent duty in the head office a military officer of highest rank in the army or navy, the Director of Finance, the Attorney General, the Chief Health Officer and a Secretary being a clerk of the Public Works Department appointed by the Director of Public Works.

Council of Public Instruction — This Council presided over by the Governor General is composed of five officials the Director of Civil Administration, the Director of the Medical College, the Director of the Lyceum, the Director of the Normal School and the Inspector of Primary Schools, and four nominated members.

There is one High Court in the State of Indias with five Judges and one Attorney-General, and Courts of Justice at Panjim, Margao, Mapus, Micholim, Quepem Damão, and Municipal Courts of Justice at Mormugão (Vasco da Gama), Ponda, Diu and Nagar-Aveli.

PORT OF MORMUGAO

Mormugão is situated towards the south of Agonda Bar on the left Bar, on the left bank of Zuari River in Lat. 15° 25' N and Long. 73° 47' E, about 22½ miles south of Bombay and 2½ miles south of Panjim, the Capital of Portuguese India. The Port of Mormugão is the natural outlet to the sea for the whole area served by the M & S M Ry (metre gauge), and offers the shortest route both passenger and goods traffic. The distance from Aden to Mormugão is about the same as from Aden to Bombay. The Port is provided with light-houses, buoys and all necessary marks and it is easily accessible all the year round and at any hour of the day or night even without the assistance of a Pilot. Pilotage is not compulsory, but when usual pilot flag is hoisted, a qualified officer will board the vessel and render such assistance.

Mormugão Harbour is the terminal station of the West of India Portuguese Railway which is controlled by the Madras and Southern Maharatta Railway Company, with headquarters at Madras. Goods are shipped direct from Mormugão to any Continental Ports every facility being afforded for such direct shipments. Cargo can be unloaded from or loaded direct into Railway wagons, which run alongside steamers, thus reducing handling. Warehouses are built on the quay and have railway sidings alongside. Steamers of over 5,000 tons net register, from any Continental Ports can be discharged or loaded rapidly and in complete safety, in a working day of 10 hours 650 tons iron work or 800 tons bale or bag cargo can easily be loaded or discharged. The port is provided with steam cranes and all other appliances for quick loading and discharging of vessels, one of the cranes being of 30 tons capacity for discharging heavy lifts. The tonnage, quay dues and all other charges are very low, special concessions being granted for steamers arriving from European or American Ports touching Lisbon. Fresh water can be obtained at a low cost.

The Bombay Steam Navigation Company's (Shepherd) steamers between Bombay and Mangalore call at Mormugão twice a week. The British India Steam Navigation Company's steamers between Bombay and Africa call at Mormugão at least once a month. The Lillerman Strick Line maintains a regular service from Liverpool to Mormugão calling occasionally at Lisbon. This service offers every facility for shipment from the United Kingdom to stations on the M & S M Railway under the "Combined Sea and Rail Through Bills of Lading". There are several stevedoring firms, the maximum rate for discharging or loading coal and general cargo being fixed by Government at 6 annas per ton, deadweight. Goods for British India pass through Goa without any charge being collected by Portuguese Government. British Customs duty payable at Castle-Rock can be paid by the Railway Company and collected at destination. Goods from stations on the M & S M Ry System to Mormugão or *vice-versa* are railed without transshipment, thus avoiding a second handling. Steam tugs, barges, etc., for unloading in the stream can be had at a very low charge.

With a view to promoting the economical, commercial and industrial development of Mormugão, a special Department under the designation of the "Mormugão Improvement Trust" with its head office at Vasco da Gama, 2 miles from Mormugão Harbour, has been created and the Local Government have introduced various regulations granting every facility to those intending to raise buildings for residential and industrial purposes in the whole area, comprising about 300 acres, near the Harbour. There are over 2,000 plots, each measuring between 1,000 and 2,000 square metres (each square yard—0.8361 square metre), available for residential quarters, granted on permanent lease on each payment of 2 annas to Rs 1-8 per square metre, according to their situation, in addition to an annual payment of 4 ples per square metre as lease-hold rent.

Within about 60 days from the date of application for a plot, the same is made over to the applicant or to the highest bidder, should there be more than one applicant for one and the same plot. The plan of buildings is in all cases subject to the approval of the Chairman of the Improvement Trust, such plan being required to be submitted within 60 days from the date the plot is made over to the lessee, and the period within which building is to be completed is 2 years. Importation of building materials is allowed free of Custom duties. In addition to the above, there is an extensive area available and reserved only for Industrial and Commercial Establishments, this area being known as "Free Zone." Within this "Free Zone," in addition to plots, which are leased at a very low rate for building factories, bonded warehouses or for establishment of any kind of industrial or commercial concerns, in accordance with rules and regulations lately issued by the local Government, special concessions and privileges are granted, such as

(I) *For Establishment of Factories or Industrial Concerns*—All machinery, building materials, tools, raw materials, etc., required for construction, maintenance and regular working

of the Factories are permitted free of import duty, likewise export of the goods manufactured within the "Free Zone."

(II) *For Establishment of Depots of Manufactured or Unmanufactured Goods, Bonded Warehouses, etc., etc*—All goods imported by the Concessionaire for the purpose of such depot are allowed to be exported to any Foreign territory, after being improved and repacked, if necessary, without payment of either import or export duty.

(III) *Exemption of Government Taxes*—In addition to the above privileges, all Factories, Commercial Establishments, buildings, etc., within the "Free Zone" are exempt from all Government taxes for a period of 20 years from May 1923. Applications for any of the above concessions have to be addressed to H E the Governor-General of Portuguese India and presented at the office of the Mormugão Improvement Trust at Vasco da Gama, giving therein full particulars of the area and plot, etc., required. Such applications are disposed of within as little time as possible. Full information can be obtained from the Mormugão Improvement Trust, Vasco da Gama.

DAMAN.

The settlement of Damán lies at the entrance to the Gulf of Cambay, about 100 miles north of Bombay. It is composed of two portions, namely, Damán proper, lying on the coast, and the detached pargana of Nagar Avell separated from it by a narrow strip of British territory and bisected by the B B & C I Railway. Damán proper contains an area of 22 square miles and 26 villages and has a population (1921) of 17,566 of whom 1,480 are Christians. The number of houses is according to the same census 4,095. Nagar Avell has an area of 60 square miles and a population (1921) of 31,048, of whom only 271 are Christians. The number of houses is 6,069. The town of Damán was sacked by the Portuguese in 1531, rebuilt by the natives and retaken by the Portuguese in 1558, when they made it one of their permanent establishments in India. They converted the mosque into a church and have since built eight other places of worship. The native Christians adopt the European costume, some of the women dressing themselves after the present European fashion, and others following the old style of petticoat and mantle once prevalent in Spain and Portugal.

The soil of the settlement is moist and fertile, especially in Nagar Avell, but despite the

ease of cultivation only one-twentieth part of the territory is under tillage. The principal crops are rice, wheat, the inferior cereals of Gujarat and tobacco. The settlement contains no minerals. There are stately forests in Nagar Avell, and about two-thirds of them consist of teak, but the forests are not conserved and the extent of land covered by each kind of timber has not been determined. Before the decline of Portuguese power in the East, Damán carried on an extensive Commerce especially with the east coast of Africa. In those days it was noted for its dyeing and weaving.

The territory forms for administrative purposes a single district and has a Municipal Chamber and Corporation. It is ruled by a Governor invested with both civil and military functions, subordinate to the Governor-General of Goa. The judicial department is administered by a judge, with an establishment composed of a delegate of the Attorney-General and two clerks. In Nagar Avell the greater part of the soil is the property of the Government, from whom the cultivators hold their tenures direct. A tax is levied on all lands, whether alienated or the property of the State. The chief sources of revenue are land-tax, forests, excise and customs duties.

DIU.

Diu is an island lying off the southern extremity of the Kathiawar Peninsula, from which it is separated by a narrow channel through a considerable swamp. It is composed of three portions, namely, Diu proper (island), the village of Gogla, on the Peninsula, separated by the channel, and the fortress of Simbor, about 5 miles west of the island. It has a small but excellent harbour, where vessels can safely ride at anchor in two fathoms of water and owing to the great advantages which its position offers for trade with Arabia and the Persian Gulf, the Portuguese were fired at an early period with a desire to obtain possession

of it. This they gained, first by treaty with the Sultan of Gujarat and then by force of arms. Diu became opulent and famous for its commerce. It has now dwindled into insignificance. The extreme length of the island is about seven miles and its breadth from north to south, two miles. The area is 20 square miles. The population of the town of Diu, from which the island takes its name, is said to have been 50,000 in the days of its commercial prosperity. The total population of the island, according to the census of 1921, is 18,844, of whom 228 were Christians.

FRENCH POSSESSIONS.

The French possessions in India comprise five settlements, with certain dependent lodges, or *poles*. They aggregate 203 square miles, and had a total population in the first January 1931 of 256,410. The first French expedition into Indian waters, with a view to open up commercial relations, was attempted in 1603. It was undertaken by private merchants at Rouen, but it failed, as also did several similar attempts which followed. In 1642 Cardinal Richelieu founded the first *Campagne d'Orient*, but its efforts met with no success. Colbert reconstituted the Company on a larger basis in 1664, granting exemption from taxes and a monopoly of the Indian trade for fifty years. After having twice attempted, without success, to establish itself in Madagascar, Colbert's Company again took up the idea of direct trade with India and its President, Caron, founded in 1668 the *Comptoir*, or agency at Surat. But on finding that this unsuited for a head establishment he seized the harbour of Trincomalee in Ceylon from the Dutch. The Dutch however, speedily retook Trincomalee, and Caron, passing over to the Coromandel coast, in 1672, seized St Thome a Portuguese town adjoining Madras, which had for twelve years been in the possession of Holland. He was, however, compelled to restore it to the Dutch in 1674.

The ruin of the Company seemed impending when one of its agents, the celebrated François Martin, suddenly restored it. Rallying under him a handful of sixty Frenchmen, saved out of the wreck of the settlements at Trincomalee and St Thome, he took up his abode at Pondicherry, then a small village, which he purchased in 1683 from the Raja of Gingee. He built fortifications, and a trade began to spring up, but he was unable to hold the town against the Dutch, who wrested it from him in 1693, and held it until it was restored to the French by the Peace of Ryswick, in 1697. Pondicherry became in this year and has ever since remained the most important of the French Settlements in India. Its foundation was contemporaneous with that of Calcutta. Like Calcutta, its site was purchased by a European Company from a native prince, and what Job Charnock was to Calcutta François Martin proved to Pondicherry. On its restitution to the French by the Peace of Ryswick in 1697, Martin was appointed Governor, and under his able management Pondicherry became an entrepot of trade.

Chandernagore, in Lower Bengal, had been acquired by the French Company in 1688, by grant from the Delhi Emperor, Mahé, on the Malabar Coast, was obtained in 1725-6, under the government of M Lenoir, Karikal, on the Coromandel Coast, under that of M Dumas, in 1730. Yanaon, on the coast of the Northern Circars, was taken possession of in 1750, and formally ceded to the French two years later.

Administration.

The military command and administration-in-chief of the French possessions in India are vested in a Governor, whose residence is at Pondicherry. The office is at present held by Monsieur Yvancou (François-Adrien). He is assisted by a

Chief Justice and by several "*Chefs de Service*" in the different administrative departments. In 1879 local councils and a council general were established, the members being chosen by a sort of universal suffrage within the French territories. Seventeen Municipalities, or Communal Boards, were erected in 1907, namely, Pondicherry, Ariancoupan, Modellarpet, Oularet, Villenour, Thiroubouvane, Bahour and Nettapacam, for the establishment of Pondicherry, Karikal, Neravv, Nedouneadon, Tirunalar, Grande Aldée, Cotechery, for the establishment of Karikal, and also Chandernagore, Mahé and Yanaon. On municipal boards natives are entitled to a proportion of the seats. Civil and criminal courts, courts of first instance and a court of appeal compose the judicial machinery. The army and establishments connected with the Governor and his staff at Pondicherry, and those of administrators at Chandernagore, Yanaon, Mahé and Karikal, together with other headquarters charges necessarily engross a large proportion of the revenue. All the state and dignity of an independent Government, with four dependent ones, have to be maintained. This is effected by rigid economy, and the prestige of the French Government is worthily maintained in the East. Pondicherry is also the scene of considerable religious pomp and missionary activity. It forms the seat of an Archbishop, with a body of priests for all French India, and of the Missions Etrangères, the successors of the Mission du Carnatic founded by the Jesuits in 1776. But the chief field of this mission lies outside the French Settlements, a large proportion of its Christians are British subjects and many of the churches are in British territory. The British rupee is the ordinary tender within French territories. A line of railway running via Villenour, from Pondicherry to Villupuram on the South Indian Railway, maintains communication with Madras and the rest of British India, and Karikal is linked to the same railway by the branch from Peralam. A Chamber of Commerce consisting of fifteen members, nine of them Europeans or persons of European descent, was reorganised by a decree of 7th March, 1914. The capital, Pondicherry, is a very handsome town, and presents, especially from the sea, a striking appearance of French civilisation.

People and Trade

The Settlements are represented in Parliament at Paris by one senator and one deputy. The Senator is Mons Lemoigne. The Deputy is Mons Coponat. There were in 1920 60 primary schools and 3 colleges all maintained by the Government, with 308 teachers and 8,573 pupils. Local revenue and expenditure (Budget of 1931) Rs 2,890,320. The principal crops are paddy, groundnut, and ragi. There are at Pondicherry 3 cotton mills, and at Chandernagore 1 jute mill. The cotton mills have, in all, 1,091 looms and 71,744 spindles, employing 7,490 persons. There are also at work one oil factory and a few oil presses for groundnuts, and one ice factory.

The chief exports from Pondicherry are oil seeds. At the ports of Pondicherry, Karikal, and Mahé in 1930 the imports amounted to frs 84,042,407 and the exports to frs 210,985,438. At these three ports in 1930 317 vessels entered and cleared, tonnage 1,707,948 T. Pondicherry is

visited by French steamers, sailing monthly between Colombo and Cricuttia in connection with the Messageries Maritimes. The figures contained in this paragraph are the latest available and are corrected up to December 1930.

PONDICHERRY.

Pondicherry is the chief of the French Settlements in India and its capital is the headquarters of their Governor. It is situated on the Coromandel Coast, 105 miles from Madras by road and 122 by the Villupuram-Pondicherry branch of the South Indian Railway. The area of the Settlement is 115 square miles and its population in the first January 1931 was 183,555. It consists of the eight communes of Pondicherry. The Settlement was founded in 1674 under François Martin. In 1693 it was captured by the Dutch but was restored in 1699. It was besieged four times by the English. The first siege under Admiral Boscawen in 1748 was unsuccessful. The second, under Eyre Coote in 1761, resulted in the capture of the place, which was restored in 1765. It was again besieged and captured in 1778 by Sir Hector Munro, and the fortifications were demolished in 1779. The place was again restored in 1785 under the Treaty of Versailles of 1783. It was captured a fourth time by Colonel Braithwaite in 1793 and finally restored in 1816.

South Arcot is empowered to deal with ordinary correspondence with the French authorities on these and kindred matters, and in this capacity is styled the Special Agent. At Pondicherry itself is a British Consular Agent accredited to the French Government, who is usually an officer of the Indian Army. The town is compact, neat and clean, and is divided by a canal into two parts, the *Ville blanche* and the *Ville noire*. The *Ville blanche* has a European appearance, the streets being laid at right angles to one another with trees along their margins reminding the visitor of continental boulevards, and the houses being constructed with courtyards and embellished with green venetians. All the cross streets lead down to the shore, where a wide promenade facing the sea is again different from anything of its kind in British India. In the middle is a screw-pile pier, which serves, when ships touch at the port, as a point for the landing of cargo, and on holidays as a general promenade for the population. There is no real harbour at Pondicherry, ships lie at a distance of about a mile from the shore, and communication with them is conducted by the usual *masula* boats of this coast. Facing the shore end of the pier is a statue of the great Dupleix, to whom the place and the French name owed so much.

CHANDERNAGORE.

Chandernagore is situated on the bank of the Hooghly, a short distance below Chinsura. Population (in the first January 1931) 27,262. The town was permanently occupied by the French in 1688, though previously it had been temporarily occupied by them at a date given as 1672 or 1676. It did not, however, rise to any importance till the time of Dupleix. It changed hands between British and French various times during the Napoleonic wars and was finally restored to the French in 1816.

The former grandeur of Chandernagore has

disappeared, and at present it is little more than a quiet suburban town with little external trade. The railway station on the East Indian Railway is just outside French territory 22 miles from Calcutta (Howrah). The chief administrative officer is the Administrator who is subordinate to the Governor of the French Possessions. The chief public institution is the College Dupleix, formerly called St Mary's institution, founded in 1882 and under the direct control of the French Government.

KARIKAL.

Karikal lies on the Coromandel Coast between the Tanjore District of Madras and the Bay of Bengal. The settlement is divided into six communes, containing 110 villages in all, and covering an area of 53 square miles. It is governed by an Administrator subordinate to the Governor at Pondicherry. The population has in recent years rapidly decreased. In 1883 it was 93,055, in 1891, 75,526, in 1901, 54,603, in 1923, 57,023, in 1924, 56,922, and in 1931, 57,914, but the density is still very high, being 1,068 persons per square mile. Kumbakonam is the only taluk in Tanjore District which has a higher density. Each of the six communes—namely, Karikal, La Grande Aldee, Nedungadu, Cotchery, Neravy and Tirnoular—possesses a mayor and council. The members are all elected by

universal suffrage, but in the municipality Karikal half the number of seats are reserved for Europeans or their descendants. The country is very fertile, being irrigated by seven branches of the Cauvery, besides many smaller channels.

The capital of the settlement is situated on the north bank of the river Arasalar, about 1½ miles from its mouth. It has a brisk trade in rice with Ceylon, and to a less extent with the Straits Settlements. It has no commerce with France, and very little with other French colonies. The port is merely an open roadstead, provided with a light-house 142 feet high, the light in which has a range of from 8 to 10 miles. In 1899 Karikal was connected with Perallem on the Tanjore District Board Railway. Karikal finally came into French possession on the settlement after 1815.

have swept from Persia and Central Asia to loot the fat plains of Hindustan, traverse this region. Therefore it was deemed essential to control, if not to occupy them, in the interests of the Imperial situation. In this zone therefore policy ebbed and flowed between the Forward School, which would have occupied, or dominated, the whole Frontier up to the Durand Line, that is to say up to the Afghan frontier: and the Close Border School, which would have us remain out of the difficult mountainous zone and meet the tribesmen on the plains if they sallied forth. The extreme advocates of this school would even have had us return to the line of the Indus.

The Two Policies — The result of this conflict of opinion was a series of wavering compromises, which like all compromises was profoundly unsatisfactory. We pushed forward posts here and there, which irritated the Tribesmen, and made them fearful of their prized independence, without controlling them. These advanced posts were in many cases inadequately held and rarely were they linked with their supporting posts by adequate means of communication. We preserved between our administrative frontier and the Durand Line which demarcated our frontier with Afghanistan an irregular belt of land called The Independent Territory, in which neither we nor the Afghan Government exercised jurisdiction. This was left entirely under the control of the tribes who peopled it. Now it was often asked why we did not follow the precedent of Baluchistan and "Sandemanise" the Independent Territory. That was one of the perennial topics of Frontier discussions. But stress was laid upon the essential differences between this zone and Baluchistan. Sir Robert Sandeman found a strong tribal system existing in Baluchistan, and he was able to enter into direct engagements with the tribal Chiefs. There is no such tribal organisation in the Independent Territory. The tribal Chiefs, or maliks, exercise a very precarious authority, and the instrument for the collective expression of the tribal will is not the chief, but the jirga, or tribal council, of the most democratic character, where the voice of the young men of the tribe often has the same influence, in time of excitement perhaps more influence, than the voice of the wiser greybeard. The bitter fruit of this policy of compromise was reaped in 1897, when following a minor outbreak in the Tochi Valley the general uneasiness flamed into a rising which involved the whole of the North-West Frontier, from the Gomal to the borders of Nepal. A force over thirty thousand strong had to be mobilised to deal with it. Even this large force, owing to the immense difficulties of transportation, was unable effectively to deal with the situation, though peace was made. The emergency thus created synchronised with the advent of Lord Curzon as Viceroy. He dealt with it in masterful fashion. In the first place, he separated the frontier zone from the Government of the Punjab, which had hitherto been responsible for its administration, and had organised for the purpose a special force of Frontier soldiers, known as the Punjab Irregular Frontier Force. This was the revival of a scheme as old as the Viceroyalty of Lord Lytton, though no other Viceroy had been able to carry it through in the face of the strong opposition of successive Punjab Governments. The area so separated was

constituted into a separate administrative zone under the direct authority of the Government of India, exercised through a Chief Commissioner. Then Lord Curzon withdrew the advanced military posts and concentrated the Regular troops in bases better linked with the main military centres of India by roads and railways. The advanced posts, and especially important Passes like the Tochi, the Kurram and the Khyber, were entrusted to the defence of local militia, recruited from the tribesmen themselves, and officered by British officers drawn from the ranks of the Indian Army. Later it was supplemented by a fine development policy. The construction of the Upper Swat Canal, afterwards developed into the Swat Canal (*q v* Irrigation) led to such an increase in cultivation that the tribesmen were given a means of livelihood and were invested with the magic charm of valuable property. The irrigated part of the Frontier has since been one of the most peaceful in the whole border line.

Lord Curzon's Success — Judged by every reasonable standard the Curzon policy was successful. It did not give us complete peace. There were occasional punitive expeditions demanded, such as for instance the Zalkha Khel and Mohmand expeditions, and the Waziris, and in particular the truculent Mahsud Waziris never ceased raiding. But in comparison with what had gone before, it gave relative peace. It endured throughout the Great War, though the Waziris built up a heavy bill of offences, which awaited settlement when Government were free from the immense preoccupations of the war. It broke down under the strain of the wanton invasion of India by the Afghans in the hot weather of 1919. On February 20th the Amir Habibullah Khan was assassinated in his sleep near Jelalabad. Although he does not figure so prominently in frontier history as his iron father Abdurrahman Khan, he nevertheless has high claims on the favourable verdict of history. None anticipated that any successor to Abdurrahman Khan could hold in the leash of a single State the fractious, fanatical tribes who make up the population of the Afghan kingdom. Yet this Habibullah did. On occasions his attitude seemed to be equivocal, as when armed gatherings of the tribes called lashkars were permitted to assemble in Afghan territory and to invade the Independent Territory, causing the Zalkha Khel and Mohmand expeditions. But we must not judge a State like Afghanistan by European standards, the Amir had often to bow before the fanatical elements amongst his own people until they had burnt their fingers by contact with the British troops. At the outset of the Great War he warned the Government that he might often have to do things which seemed unfriendly, but they must trust him. In truth, the position of the Amir when Turkey entered on the war, and called Moslems everywhere to arms on the side of Germany was extraordinarily difficult, he received Turkish, German and Austrian missions in Kabul, from which British representatives were still excluded. But he kept Afghanistan out of the war, and with the complete defeat of the Central Powers and their satellites, his policy was justified up to the hilt. Indeed, his success was the cause of his assassination. The irreconcilable elements in the Kingdom saw that the day of reckoning had come and strove

of Persians in the War. But again taking long views, the Agreement fully justified itself in a broad definition of the interest of the two countries, which put an end to the period of excursions and alarms up to the outbreak of the War. Russia then ceased to be a material factor in the Indian Frontier Problem. With the establishment of the Soviet Oligarchy in Moscow uneasiness has returned, for the geographical and allied circumstances which influenced the policy of the Tsarist regime exert precisely the same pressure upon its successor, and the Soviet have a troublesome motive which the Tsars had not: their aim to produce world revolution is avowed and Britain and the Constitutionalism for which she stands are the greatest obstacles in their path.

German Influence.—As nature abhors a vacuum so in the case of States bordered by higher civilisations, no sooner does one strong influence recede than some other takes its place. Long before the signing of the Anglo-Russian Agreement the shadow of the German menace had begun to appear on the horizon. Imitative, not creative, in this, as in most other activities, the Germans adapted their method from the penetration by railway which was so marked a feature of Russian expansion in Manchuria, brought to an end by the disastrous issue of the war with Japan. The seeds of the German effort were sown when the Kaiser, extending the hand of Christian fellowship to the Sultan of Turkey, Abdul-Hamed, at a time when that sovereign was ostracised by Europe for his direct complicity in the massacre of Armenians, or rather one of the massacres of Armenians, made German influence supreme at Constantinople. His theatrical tour through Palestine, which was generally treated in Europe as an exhibition of opera bouffe, soon bore fruit in the acquisition by German interests of the principal railways in Anatolia. Later it fructified more effectively in the Baghdad Railway concession, under which German interests secured the right of extending the Anatolian lines from the port of Haider Pasha, opposite Constantinople, to a port in the Persian Gulf. Now successive British Statesmen of both parties had declared that the acquisition of a territorial foothold in the Persian Gulf by any power—Russia and the port of Bunder Abbas being then in view—would be regarded as an unfriendly act. There followed a replica of the period of alarms and excursions which had disfigured our relations with Russia. Undaunted, even when their endeavour to secure British co-operation in the enterprise failed, and when the Revolution in Turkey which set the Committee of Union and Progress in power entailed a temporary interruption of their influence at Constantinople, the Germans pressed forward with their enterprise. They pushed the Anatolian railways as far east as Bourgulu, and constructed a line northwards from Baghdad to Samara. They sent a mission to explore the potentialities of the port of Koweit in the Persian Gulf, and set the Turks in motion to subordinate the Sheikh of Koweit to direct Turkish sovereignty, with a nominal view to extending the Baghdad railway from Basra to Koweit, or the vicinity of Koweit at the deep water inlet behind Bubiya Island. They commenced the most difficult part of the work in piercing the Amanus and Taurus

ranges by a series of tunnels, and laid the rails on the other side of the mountains across the Taurus to Ras-al-Ain. Behind this railway activity stood a grandiose policy, which is indicated in what became known in Germany as "B B B"—Berlin, Byzantium, Baghdad. Throughout the progress of these schemes, which did not stop short of Baghdad, but were directed through a port in the Persian Gulf at India, the Germans were anxious to secure the co-operation of Great Britain, if they could do so on their own terms, that is to say without affecting the enterprise as a dominant German adventure. Shortly before the commencement of the war the protracted negotiations with London which had this end in view ended in a definite agreement between the two Powers. Under this agreement the Gulf section of the line was to have been British, and the other portion German. But this agreement which had not been signed became waste paper with the outbreak of the war, and the German plans vanished in thin air with the complete defeat of Turkey and Germany. Nevertheless the railway did not stand still during the war. Germany made immense efforts to complete the difficult tunnel sections and the work was substantially finished when the Armistice was signed.

The Significance of the Baghdad Railway.—The real significance of the Baghdad Railway was little appreciated in Great Britain. It was constantly pictured as a great trunk line, which would short-circuit the traditional British dominance by sea, and absorb the passenger and goods traffic from the East. This idea could only be nourished by those completely ignorant of the conditions of the Indian passenger service and the essentials of a competitive route for the carriage of merchandise. The rush of passenger traffic from India is from April to June, in order to escape the hot weather in India and, the return traffic is spread over the period of from October to January. From April to June the heat in Mesopotamia is appalling. To imagine that the passenger traffic from India would turn from the easy and comfortable, as well as fairly expeditious sea route from Bombay to Marseilles and thence by the easiest railway travelling outside the British Isles to Calais and London, for such a land route was an amazing chimera. The Baghdad route would have involved a sea voyage from Bombay or Karachi to Koweit or Basra, then a journey across the burning plains of Mesopotamia and Asia Minor to Haider Pasha, then across the Straits to Constantinople, and finally right across Europe to a North Sea port. This would in any circumstances have been a costly freak journey in comparison with the sea route. Then as for the commercial aspect of the line, the natural port of the Middle East is Basra. The sea freight from England or Germany to Basra was often less than half the freight from Basra to Baghdad. To imagine again that merchandise would desert this route for a land and sea route, which would have involved a double break of bulk at Constantinople and Haider Pasha, was again a chimera.

As a through route the primary purpose of the Baghdad Railway was strategic. It was designed to make the Power seated at Constantinople—and that Power the Teutons were resolved should be Germany—complete master of Asia

East and The Middle East, and the route selected, often criticised, was the best for the rapid movement of troops to the strategic centre. As a commercial line the railway, if completed, would have served three zones. The western zone of Turkey in Asia at Haidar Pasha. The rich lands of Anatolia at Alexandretta. The eastern zone at Basra. The Germans, it is understood, attached immense importance to the subsequent engagements with Turkey which placed them in maritime command at Alexandretta. They began to inaugurate a commercial position in the Persian Gulf through the establishment of a subsidized line of steamers run by the great Hamburg America corporation. They strove to obtain an actual footing in the Gulf through the German house of Winkhaus. The Germans were probably never serious in their alleged designs on Koweit, which could never have borne a more definite relation to the commerce of the Gulf than fishing to Antwerp or Cuxhaven to Hamburg that was one of the red herrings they drew across their trail to divert attention from their real objective Basra which is destined by virtue of an unchallengeable geographical and natural position to be the great port of The Middle East. These considerations have no more than an academic value now. Germany was defeated. The Turks, when they emerged from an isolated military despotism based on Angora, were confronted with the immense problem of rebuilding their bankrupt State, deprived of the most intelligent section of the old population—the Greeks and the Armenians by massacre and expulsion—were a very different factor. The completion of the through line was indefinitely postponed. But as the advantages of the route, for the purposes we have indicated are many and great, the ultimate construction of the through line is only a matter of time, so one has placed these authoritative characteristics on record for the guidance of opinion when the project of the through route is revived as it must be.

Turkey and the Frontier—The position of Turkey on the Indian frontier was never of any considerable importance in itself, and never assumed any significance, save as the *avant courier* of Germany, when she passed under the tutelage of that Power, and for a limited period during the war. Although so long established in Mesopotamia, Turkey was not very firmly seated in that country, the Arabs tolerated rather than accepted Turkish rule so long as they were substantially left alone, and the administration, it is understood, never paid its way. For a brief period Midhat Pasha raised the status of Mesopotamia, and after the Revolution that fine soldier Nazim Pasha became a power in the land. But speaking broadly Turkey remained in Mesopotamia because it was no one's interest, even that of the Arab, to turn her out. When however Germany developed her "B B B" policy, Turkey was used as a stalking horse. She moved a small force to the Peninsula of Al-Katr in order to frighten the Sheikh of Bahrein, and tried to convert the nominal suzerainty exercised, or rather claimed, over the Sheikh of Koweit into a *de facto* suzerainty, exercised by military force. These efforts faded before the vigorous action of the British Government which con-

cluded a binding arrangement with the Sheikh of Koweit, and the position of the Turks at Al-Katr was always very precarious. On the outbreak of the war however the situation profoundly changed. When the sound and carefully executed expedition to Basra and its strategic hinterland was developed into the insane enterprise to capture Baghdad by *coup de main*, with very inadequate forces, and still more inadequate transport, we found ourselves involved in military operations of the most extensive and unprofitable character. These were completely successful with General Maude's occupation of Baghdad. After the Russian debacle we found ourselves involved in a new front which stretched from the Luphrates to the wildest part of Central Asia, producing military exploits of an almost epic character, but exercising little influence on the war. They were brought to an end by pressure not on extensive wings, but at the heart of Turkish Power in Palestine, where Lord Allenby scattered the Turks like chaff. But the aftermath of the war left us in an indefinite position in Mesopotamia, with indefinite frontiers. This enabled the Turks, if they were so disposed, to be troublesome through guerilla warfare in the Mosul Zone, and by stirring up the Kurds, who are the Ishmaelites of Asia Minor. The conclusion of the Treaty of Tausanne in 1923 brought temporary relief, but it did not settle the main issue, the frontier between Turkey and Iraq. Under the Treaty it was provided that if the two parties could not agree to a boundary line delimitation should be left to The League of Nations. Negotiations were promptly opened at Constantinople, but it was immediately found that there could be no mutual agreement, the Turks demanded the whole of the Mosul Vilayet, and the British delegates declared that Mosul and its hinterland were necessary to the existence of Iraq. The issue therefore went to the League of Nations. That body despatched a neutral commission to study the position on the spot, this commission reported that the best settlement would be for the Mosul Vilayet to be incorporated in Iraq, if the British Government were prepared to prolong its mandate over that State for a period of twenty-five years. When the report of this commission came before the League in 1925 Britain gave the necessary guarantee, and the Council of The League unanimously allotted the Mosul Vilayet to Iraq. The Turkish delegates, who at first recognised the decisive authority of the League, then declared that they would not be bound by its decisions. So the matter rested at the end of the year, with Iraq in occupation of the disputed up to the temporary frontier, which was known as The Brussels Line. After at first breathing nothing but armed resistance to acceptance of the award, the Turks afterwards assumed a more conciliatory note, and alarmed, it may be, by the threat of Italian aggression, accepted the frontier line demarcated by the League.

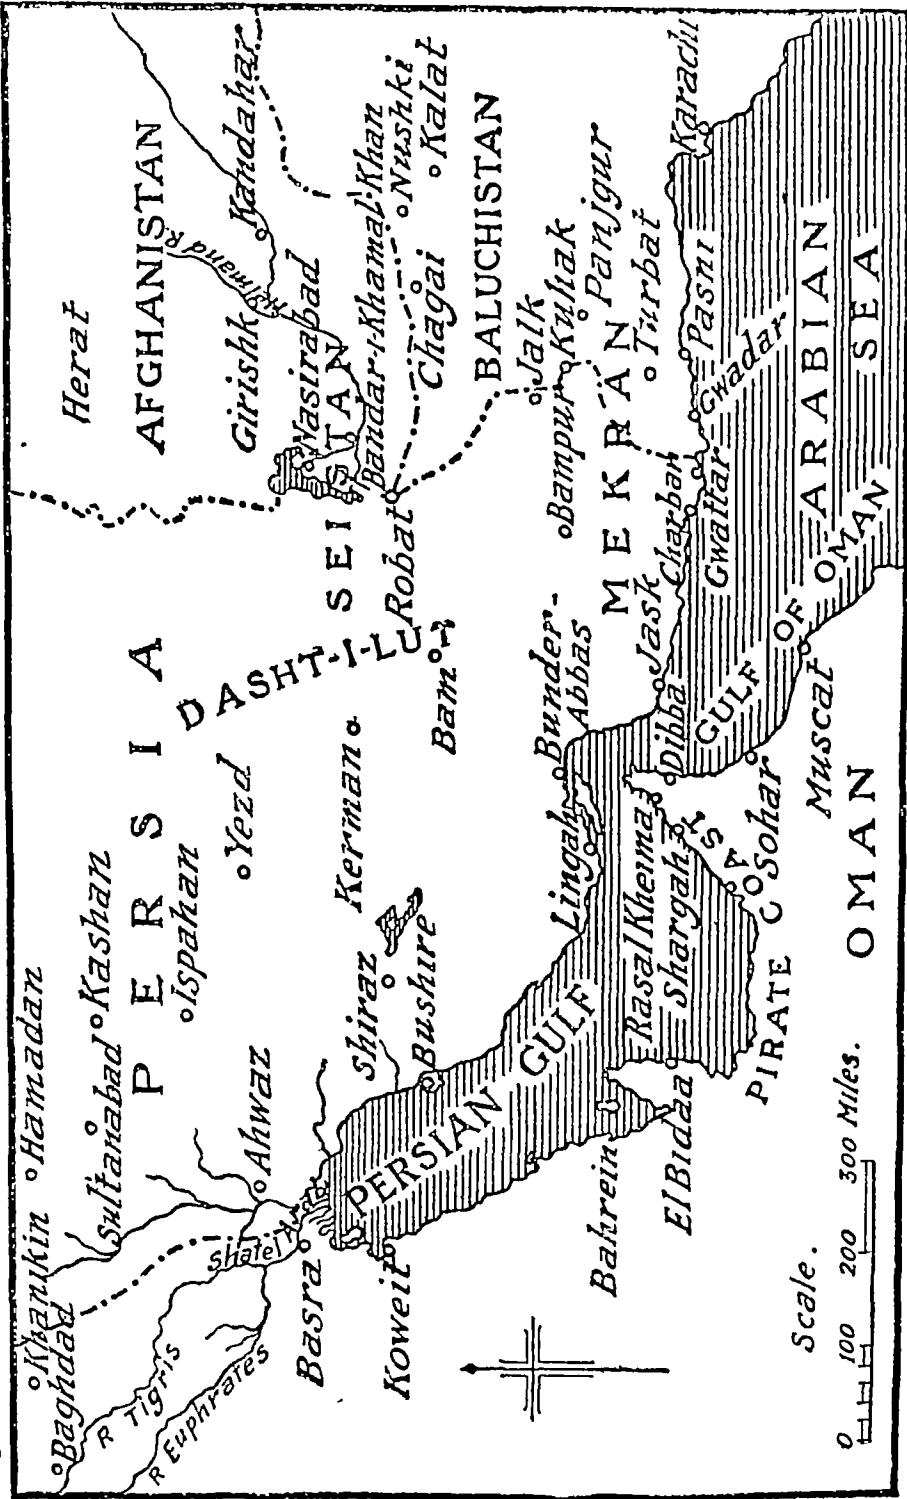

France and the Frontier—If we touch for a few sentences on the position of France on the frontiers of India, it is not because they have any present day significance, but in order to complete this brief survey of the waxing and waning of external influences on Indian frontier policy. It is difficult to find any sound policy behind the efforts of France to obtain a coaling

station at Maskat in the Persian Gulf, and her long opposition to the steps necessary to extirpate the slave trade, and hold in check the immense traffic in arms which was equipping all the tribesmen on our North-West Frontier with rifles of precision and a large supply of ammunition. We can find no more definite purpose in it than a general pin-pricking policy, a desire to play the part of Russia, and perhaps a source of annoyance to Great Britain, which would form a useful lever for the exaction of considerable cessions in West Africa, particularly in the neighbourhood of Gambia, as the price of abstention. These embarrassments were slowly removed one by one after the conclusion of the Anglo-French Entente. Far otherwise was it in the East. The consolidation of French authority in French Indo-China was the prelude to designs for the expansion of this authority at the expense of Siam and to find compensation there for the veiled British protectorate of Egypt. There had earlier been mutterings in Burma. We were established in Lower Burma in the thirties and in the eighties the foolish and tyrannical King Theebaw, in Upper Burma, became an impossible neighbour, and ambitious Frenchmen were not averse to fanning his opposition to the British. However, if any hopes were entertained of extending the Asiatic possessions of France in this direction, they were dissipated by the Second Burmese War and the firm establishment of British rule. Far otherwise was it on the confines of Siam. It was the fixed purpose of British policy to preserve Siam as a buffer state between Burma, then a regular Province of the Indian Empire and French Indo-China. This policy was definitely challenged by French encroachments on Siam. Matters approached a crisis in 1894, and we were within measurable distance of a situation which might have ended in open war between the two States. But as in the case of Penjdeh, and later when Major Marchand marched across Africa to Fashoda, the imminence of hostilities made statesmen on both sides ask themselves what they might be going to fight about. They found there was nothing essential and an agreement was negotiated between the two Powers which secured the independence and integrity of Siam. That agreement has been consolidated by wise and progressive rule in Siam itself, under its own independent sovereign, who is imbued with a strong friendship for Great Britain, whilst at the same time maintaining good relations with French neighbours.

The New Frontier Problem—The whole purpose of this brief sketch has been to show that for three generations—most assuredly since the events leading to the Afghan War of 1838—the Indian frontier problem has never been a local problem. It has been dominated by external influences—in the main the long struggle between Great Britain and Russia, for a brief period the German ambition to build up a dominant position in the East through the revival of the land route and to a much lesser extent by the ambitions of France and Turkey. The circumstances affecting the Frontier from centres beyond it have greatly changed. Old dangers have disappeared. And, generally, conditions have become more like those normal to critical land frontiers anywhere in the world in this present time of swift

communications, aerial operations and easy propaganda. Consequently, a great deal of new attention is necessarily being directed to local aspects of the general problem. The tribesman was always an opponent to be respected. Brave, hardy, fanatical, he has always been a first-class fighting man. Knowing every inch of the inhospitable country to which punitive operations must of necessity take place he has hung on our rearguards and given them an infinite of trouble. Even when armed with a jezail and when every cartridge had to be husbanded with jealous care, the tribesman was a respectable antagonist. Now the tribesmen are everywhere armed with magazine rifles, either imported through the Persian Gulf when gunrunning was a thriving occupation, stolen from British magazines, or secured from Russian and Afghan sources. They have an abundant supply of ammunition. Considerable numbers of the fighting men have been trained in the ranks of the Indian Army, either as Regulars in the Pathan regiments, or else in the tribal militias. We found this to our cost in the events following the Afghan War of 1919. The Afghan regular army was of little account. The tribesmen who rose at the call of the Jihad, especially in Waziristan, were of great account. They gave our troops the hardest fighting they have ever had on the Frontier, their marksmanship and fire discipline were described by experienced soldiers as admirable. The tribal militia, the keystone of the Curzon system, had for all practical purposes disappeared. What was to take its place?

Immediately following the Afghan War, the frontier positions were garrisoned by regular troops, but this was only a temporary measure. It may be said that the crux of the situation was in Waziristan. This sector of the Frontier has always been the most difficult of the whole, because of the intractable character of the people and of their inveterate raiding activities. Besides, possessing a bolt hole into Afghanistan they had in the past evaded effective punishment. In view of the complete disappearance of the external menace, and the consequent lapsing of any necessity to preserve open lines of communication which would enable us to go to the support of Afghanistan, now formally recognised in the Treaty of 1921 as a completely independent State, there were many who urged the desirability of complete withdrawal, even to the line of the Indus. This extreme school gained little support. Our position in Quetta on the one side and Peshawar on the other is fully consolidated, and no good case could be made out for withdrawing from it. On the other hand, there was a strong case made out for leaving the tribesmen severely alone from the Gomal to the Kurram, and dealing with them if they emerged from their fastnesses. The military standpoint was that the Waziris are absolutely intractable, that it was unfair to impose on troops the frequent necessity of punitive operations in most arduous conditions; and that the only solution of the question was the occupation of dominant points in Waziristan, as far north as Ladha, and linking these posts with our military bases, and particularly with the termini of the Indian frontier railways, by good motor roads.

words of great import—"We (i.e., His Majesty's Government) should regard the establishment of a naval base or of a fortified port in the Persian Gulf by any other Power as a very grave menace to British interests, which we should certainly resist with all the means at our disposal." The negative measures following these declarations were followed by a constructive policy when the oil fields in the Bakhtiari country, with a great refinery, were developed by the Anglo-Persian Oil Company, in which the British Government has a large financial stake. But with the disappearance of these external forces on Gulf policy, as set out in the introduction to this section, the politics of the Persian Gulf receded in importance, until they are now more than they were before these external influences developed, a local question, mainly a question of police. They are therefore set out more briefly and those who desire a complete narrative are referred to the *Indian Year Book* for 1923 pp 178-183. An interesting new feature in 1931 was the decision of the Persian Government to instal a Navy of their own in the Gulf. At the time of writing the fleet consisting of two sloops and four launches all suitably armed, is being built in Italy. It is at the outset to be officered by Italians. The immediate reason for the new fleet is that an increase in the Persian Customs tariff for revenue purposes led to extensive smuggling. The fleet is required to check it.

Maskat.

Maskat, which is reached in about forty-eight hours from Karachi, is outside the Persian Gulf proper. It lies three hundred miles south of Cape Musandim, which is the real entrance to the Gulf, but its natural strength and historical prestige combine to make it inseparable from the politics of the Gulf, with which it has always been intimately associated.

Formerly Maskat was part of a domain which embraced Zanzibar, and the Islands of Kishm and Larak, with Bunder Abbas on the Persian shore. Zanzibar was separated from it by agreement, and the Persians succeeded in establishing their authority over the possessions on the eastern shore.

The relations between Britain and Maskat have been intimate for a century and more. It was under British auspices that the separation between Zanzibar and Maskat was effected, the Sheikh accepted a British subsidy in return for the suppression of the slave trade and in 1892 sealed his dependence upon us by concluding a treaty pledging himself not to cede any part of his territory without our consent.

The Pirate Coast.

Turning Cape Musandim and entering the Gulf Proper, we pass the Pirate Coast, controlled by the six Trucial Chiefs. The ill name of this territory has now ceased to have any meaning, but in the early days it had a very real relation to the actual conditions. The pirates were the boldest of their kind, and they did not hesitate to attack on occasion, and not always without success, the Company's ships of war. Large expeditions were fitted out to break their power, with such success that since 1820 no considerable

punitive measures have been necessary. The Trucial Chiefs are bound to Great Britain by a series of engagements, beginning with 1806 and ending with the perpetual treaty of 1853 by which they bound themselves to avoid all hostilities at sea, and the subsequent treaty of 1873 by which they undertook to prohibit altogether the traffic in slaves. The relations of the Trucial Chiefs are controlled by the British Resident at Bushire, who visits the Pirate Coast every year on a tour of inspection.

The commercial importance of the Pirate Coast is increasing through the rise of Debal. Formerly Lingah was the entrepot for this trade, but the exactions of the Belgian Customs officials in the employ of Persia drove this traffic from Lingah to Debal. The Trucial Chiefs are—Debal, Abu Thabeeb, Shargah Ajman, Um-al-Gawail and Ras-el-Kheyma.

Bahrein.

North of the Pirate Coast lies the little Archipelago which forms the chiefship of the Sheikh of Bahrein. Of this group of islands only those of Bahrein and Maharak are of any size, but their importance is out of all proportion to their extent. This is the great centre of the Gulf pearl fishery, which, in a good year, may be worth half a million pounds sterling. The anchorage is wretched, and at certain states of the tide ships have to lie four miles from the shore, which is not even approachable by boats, and passengers, mails and cargo have to be landed on the donkeys for which Bahrein is famous. But this notwithstanding the trade of the port is valued at over a million and a quarter sterling, and the customs revenue, which amounts to some eighty thousand pounds makes the Sheikh the richest ruler in the Gulf.

In the neighbourhood of Bahrein is the vast burying ground which has hitherto baffled archaeologists. The generally accepted theory 's that it is a relic of the Phœnicians, who are known to have traded in these waters.

Political Agent Captain C. G. Prior

Koweit

In the north-west corner of the Gulf lies the port which has made more stir than any place of similar size in the world. The importance of Koweit lies solely in the fact that it is a possible Gulf terminus of the Baghdad Railway. This is no new discovery, for when the Euphrates Valley Railway was under discussion, General Chesney selected it under the alternative name of the Granc—so called from the resemblance of the formation of the Bay to a pair of horns—as the sea terminus of the line. Nowhere else would Koweit be called a good or a promising port. The Bay is 20 miles deep and 5 miles broad, but so shallow that heavy expense would have to be incurred to render it suitable for modern ocean-going steamers. It is sheltered from all but the westerly winds, and the clean thriving town is peopled by some 20,000 inhabitants, chiefly dependent on the sea, for the mariners of Koweit are noted for their boldness and hardihood.

Political Agent Lt-Col H. R. P. C. I. L.

Muhammerah.

On the opposite side of the entrance to the Shatt-el-Arab lie the territories of Sheikh Khazal of Muhammerah. The town, favourably situated near the mouth of the Karun River, has grown in importance since the opening of the Karun River route to trade through the enterprise of Messrs Lynch Brothers. This route provides the shortest passage to Isfahan and the central tableland, and already competes with the older route by way of Bushire and Shiraz. This importance has grown since the Anglo-Persian Oil Company established refineries at Muhammerah for the oil which they win in the rich fields which they have tapped near Ahwaz. Its importance will be still further accentuated, by the opening of the railway to Khorremabad by way of Dizful which is now under construction.

Vice-Consul at Ahwaz Captain A. C. Galloway

Basra.

In a sense Basra and Turkish Arabistan can hardly be said to come within the scope of the frontiers of India, yet they are so indissolubly associated with the politics of the Gulf that they must be considered in relation thereto. Basra is the present sea terminus of the Baghdad Railway. It stands on the Shatt-el-Arab, sixty miles from its mouth, favourably situated to receive the whole water-borne trade of the Tigris and Euphrates Rivers. The local traffic is valuable, for the richness of the date groves on either side of the Shatt-el-Arab is indescribable, there is a considerable entrepot traffic, whilst Basra is the port of entry for Baghdad and for the trade with Persia, which follows the caravan route *via* Kerman-shah and Hamadan.

The political destinies of Basra are at present wrapped up with the destinies of the new Arab State which we have set up in Mesopotamia under King Faisal. When the war was over we found ourselves committed to immense, undefined and burdensome responsibilities in that land. The sound concepts which dictated the original expedition were dislocated in the foolish advance to Baghdad, then the great military enterprises necessitated by the fall of Kut-al-Amara carried our frontier north to Mosul and the mountains of Kurdistan, east to the Persian boundary, and west to the confines of Trans-Jordan. Amongst ardent Imperialists, there was undoubtedly the hope that this immense area would be in one way or another an integral part of the British Empire. The cold fit followed when the cost was measured, and the Arabs rose in a revolt which showed that any such domination could only be maintained by force of arms and that the cost would be prodigious. In these circumstances King Faisal was imported from the Hedjaz and installed on the throne under the aegis of Great Britain. Still we were committed to the support of the new kingdom, and that most dangerous condition arose—responsibility without any real power unless King Faisal was to be a mere puppet, immense expenditure and indefinite military commitments. In these circumstances there was an insistent demand for withdrawal from the land. British policy moved slowly towards

that end, but a definite step was taken in 1923. The Secretary of State for the Colonies announced this policy in a statement which is reproduced textually, for the purpose of reference. Addressing the House of Lords on May 3rd he said—

Your Lordships will remember that the Cabinet have been discussing this matter for some time and decisions have now been taken. Sir Percy Cox has accordingly been authorised by His Majesty's Government to make an announcement at Baghdad, the terms of which I propose to read out to Your Lordships. This announcement was drawn up in consultation with King Faisal and his Government, and has their cordial assent. It is being published at Baghdad to-day.

The announcement is as follows —

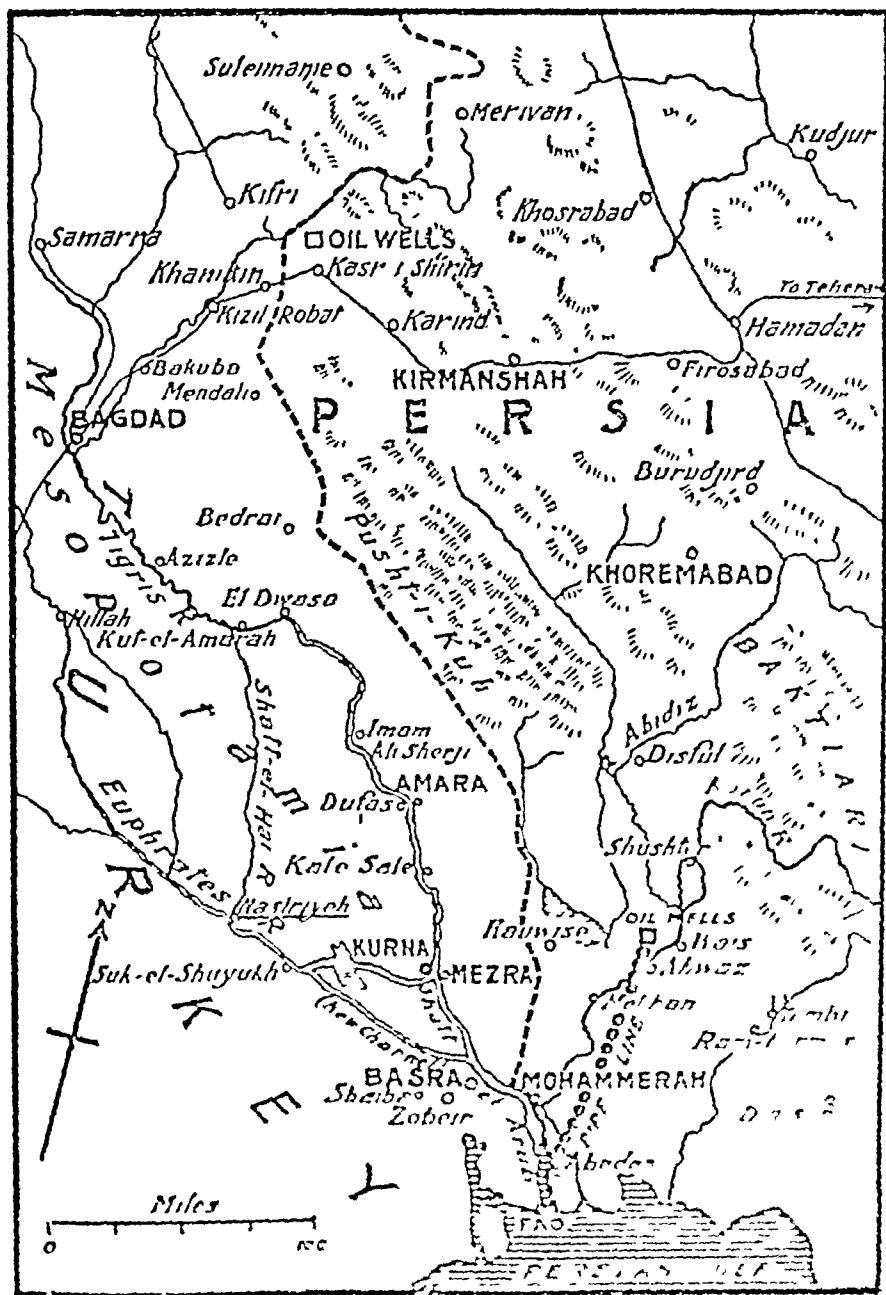

"It will be remembered that in the autumn of last year, after a lengthy exchange of views, it was decided between the Governments of His Britannic Majesty and His Majesty King Faisal that a Treaty of Alliance should be entered into between His Britannic Majesty and His Majesty the King of Iraq. This Treaty, which was signed on the 10th October, 1922, and the term of which was to be twenty years (subject to periodical revision at the desire of either party) provided for the establishment of an independent Constitutional Government in Iraq, enjoying a certain measure of advice and assistance from Great Britain of the nature and extent indicated in the text of the Treaty itself and of subsidiary Agreements which were to be made thereunder.

"Since then the Iraq Government has made great strides along the path of independent, and stable existence and has been able successfully to assume administrative responsibility and both parties being equally anxious that the commitments and responsibilities of His Majesty's Government in respect of Iraq should be terminated as soon as possible, it is considered that the period of the Treaty in its present form can conveniently be shortened. In order to obviate the inconvenience of introducing amendments into the body of a Treaty already signed, it has been decided to bring about the necessary modifications by means of a protocol which, like the Treaty itself, will be subject to ratification by the Constituent Assembly.

"Accordingly a protocol has now been signed by the parties in the following terms —

It is understood between the High Contracting Parties that, notwithstanding the provisions of Article 18, the present Treaty is all terminate upon Iraq becoming member of the League of Nations and in any case not later than four years from the ratification of peace with Turkey. Nothing in this protocol shall prevent a fresh agreement from being concluded with a view to regulate the subsequent relations between the High Contracting Parties, and negotiations for that object shall be entered into between them before the expiration of the above period."

It will be noticed that under this protocol the Treaty in its present form was to terminate on the entry of Iraq into the League of Nations or in four years, whichever might be earlier.

The position of Iraq as regards the League was that when the Treaty was ratified His Britannic Majesty was bound under Article 6 to use his good offices to secure the admission of Iraq to membership of the League of Nations as soon as possible. His Majesty's Government would be in a position to take this step on the fulfilment of the two following essential conditions, namely, the delimitation of the frontiers of Iraq, and the establishment of a stable government in accordance with the Organic Law.

The Council of the League of Nations in January, 1932, adopted the report of the Iraq Commission recommending the termination of the mandate subject to the admission of Iraq to membership of the League and Iraq entering into a number of undertakings, with regard to treatment of minorities and the administration of justice. This means that the mandate will terminate if and when the next Assembly of the League votes for the admission of Iraq to League membership.

Under the Treaty of Lausanne between Turkey and the Powers, which was signed in 1923, it was agreed that the frontier between King Feisal's State and Turkey, the important frontier because the future of Mosul was in dispute, should be settled by the League of Nations, should Great Britain and Turkey be unable to come to agreement by direct negotiation. These direct negotiations were opened at Constantinople, but no agreement was reached, so the question was opened before the Council of the League in September 1924. Whilst the matter was under discussion complaint was made by Great Britain that Turkey had violated the provisional frontier drawn in the Treaty of Lausanne, and certain irregular hostilities were carried on in the disputed zone. This matter too was remitted to the League, and a further provisional boundary was drawn, which was accepted by both parties.

Here the matter remained until the autumn of 1925. In order to secure the material for a decision the League of Nations despatched a neutral commission to Mosul to investigate the situation. This commission produced a long and involved report, but one which led by devious paths to a common sense recommendation. It was that the first essential in the Mosul vilayet is stable government. The desires of the people were for incorporation in the State of Iraq. If therefore the British Government was willing to extend its mandate over Iraq for a further period of twenty-five years—a guarantee of stable government—then Mosul should be incorporated in Iraq. If Britain was not willing, then Mosul should return to Turkey. When the matter came before the Council of the League Great Britain gave the necessary guarantee. The Turks thereupon challenged the whole competence of the Council to give an award under the terms of the Treaty of Lausanne. The issue was remitted to the Court of International Justice at The Hague which decided in favour of the competence of the Council. About this time there was published the report of a distinguished Estonian General, General Laidoner, who had been despatched by the League to investigate allegations of brutality by the Turks in deporting Christians from their own zone,

and this report was of the most damning character. Great Britain having given the necessary assurance, that she was prepared to extend her mandate over Iraq for a further twenty-five years, thereupon the Council of the League allocated the whole of the area in dispute, right up to the temporary frontier—commonly called The Brussels Line—to Iraq. The Turks refused to accept the award and withdrew from Geneva threatening force. Later wiser counsels and in 1920 Turkey accepted a frontier substantially as drawn by the League. A formal treaty was concluded between Great Britain and Iraq extending the mandate for a further twenty-five years. The British Government express the hope that a shorter period will be sufficient to set Iraq on its feet as an independent and stable State, and the present policy of H. M.'s Government is to establish this independence at the earliest possible date.

A New Treaty—A new Treaty regulating the relation of Iraq with Great Britain, the Mandatory Power, was negotiated in 1927, and signed towards the end of the year. The full text is not available, but a semi official announcement on December 20th may be regarded as substantially authentic.

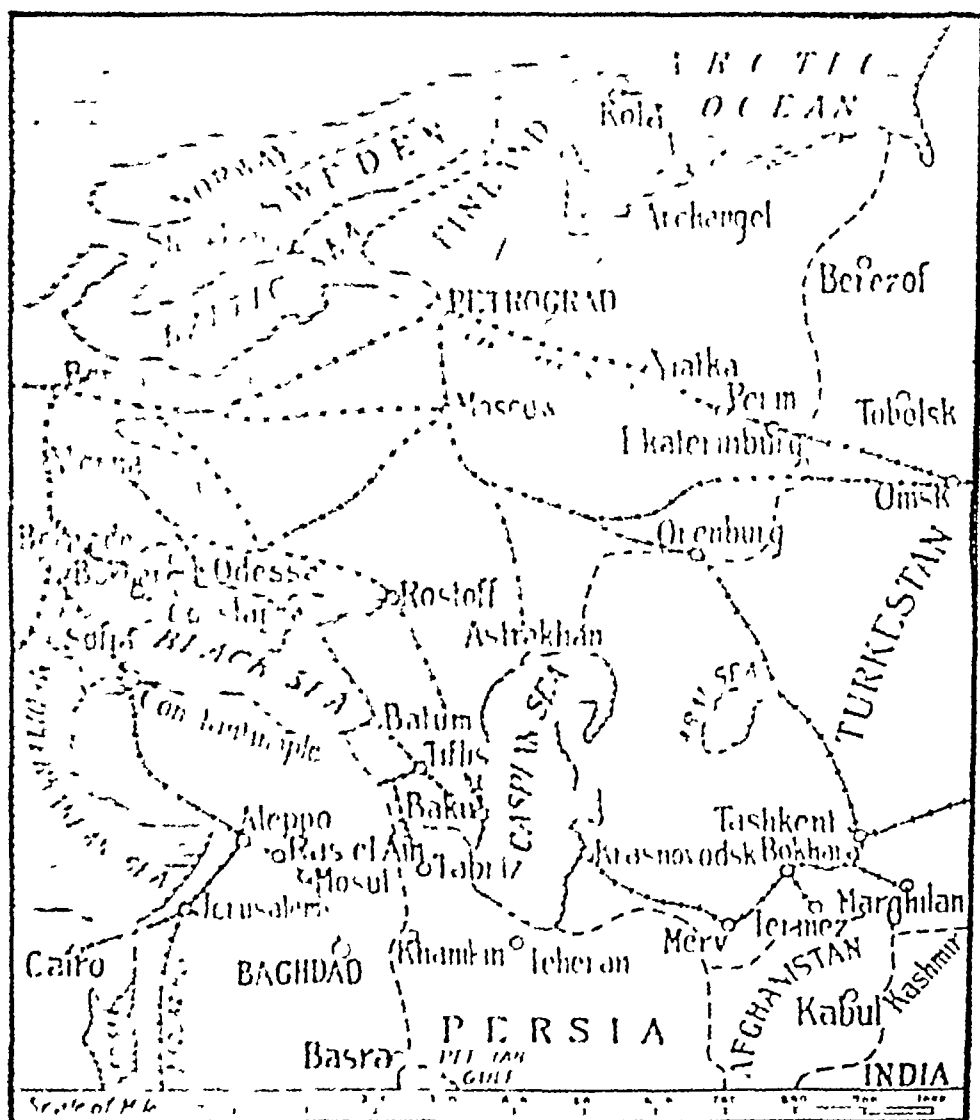

The Treaty declares that there shall be peace and friendship between His Britannic Majesty and His Majesty the King of Iraq. It states that "Provided the present rate of progress in Iraq is maintained and all goes well in the interval, His Britannic Majesty will support the candidature of Iraq for admission to the League of Nations in 1932." It stipulates that separate agreements superseding those of March 25, 1924, shall regulate the financial and military relations.

The King of Iraq undertakes to secure the execution of all international obligations which His Britannic Majesty has undertaken to see carried out in respect of Iraq. He also undertakes not to modify the existing provisions of Iraq's organic law so as adversely to affect the rights and interests of foreigners, and to constitute any difference in the rights before the law among Iraqis on the grounds of differences of race, religion, or language.

There shall be full and frank consultation between the high contracting parties in all matters of foreign policy which may affect their common interests. The King of Iraq undertakes, so soon as local conditions permit, to accede to all general international agreements already existing, or which may be concluded hereafter, with the approval of the League of Nations, in respect of the slave trade, the traffic in drugs, arms and munitions, the traffic in women and children, transit navigation, aviation, and communications, and also to execute the provisions of the Covenant of the League of Nations, the Treaty of Lausanne, the Anglo-French Boundary Convention, and the San Remo Oil Agreement in so far as they apply to Iraq.

There shall be no discrimination in matters concerning taxation, commerce, or navigation against nationals or companies of any State which is a member of the League of Nations, or of any State to which the King of Iraq has agreed by Treaty that the same rights should be ensured as if it were a member of the League.

Eastern Position in the Middle East

Any difference that may arise between the high contracting parties shall be referred to the Permanent Court of International Justice provided for by Article Fourteen of the Covenant of the League. The Treaty shall be subjected to revision with the object of making all the modifications required by the circumstances when Iraq enters the League of Nations.

It is important to remember that there is a considerable difference between the vilayet of Basra and the other portions of King Faisal's State. Basra has for long been in the closest commercial contact with India, and is in many respects a commercial appanage of Bombay. Its people have not much in common with those of the North. They took no part in the Arab rising which followed the war, and they ask nothing better than to remain in close touch with India and through India with the British Government. If we are correct in the supposition that Basra is destined to be the great port of the Middle East, then its future under an Arab State, with no experience of administration in such conditions, is one of the greatest interest, which can hardly be regarded as settled by the policy underlying the declaration which is set out above.

The Persian Shore.

The Persian shore presents fewer points of permanent interest. The importance of Bushire is administrative rather than commercial. It is the headquarters of Persian authority, the residence of the British Resident, and the centre of many foreign consuls. It is also the main entrepot for the trade of Shiraz, and competes for that of Isfahan. But the anchorage is wretched and dangerous, the road to Shiraz passes over the notorious kotals which preclude the idea of rail connection, and if ever a railway

to the central tableland is opened the commercial value of Bushire will dwindle to insignificance. Further south lies Lingah, reputed to be the prettiest port on the Persian coast, but its trade is being diverted to Debal on the Pirate Coast. In the narrow channel which forms the entrance to the Gulf from the Arabian Sea is Bunder Abbas. Here we are at the key of the Gulf. Bunder Abbas is of some importance as the outlet for the trade of Kerman and Yazd. It is of still more importance as a possible naval base. To the west of the town between the Island of Kishm and the mainland, lie the Clarence Straits which narrow until they are less than three miles in width, and yet contain abundance of water. Here, according to sound naval opinion, there is the possibility of creating a naval base which would command the Gulf. The great obstacle is the climate, which is one of the worst in the world. On the opposite shore, under the shadow of Cape Musandim, lies another sheltered deep-water anchorage, Elphinstone's Inlet, where the climate conditions are equally vile. But between these two points there is the possibility of controlling the Gulf just as Gibraltar controls the Mediterranean. For many years Bunder Abbas loomed large in public discussions as the possible warm water port for which Russia was seeking. There is a British Naval station at Henjam, a small island close to Kishm, where the station was established under agreement with the Persian authorities. On the Mekran coast, there is the cable station of Jask, and the possible port of Chamber.

Political Resident in the Persian Gulf—The Hon. Major F. O. W. Fowle, C.B.E.

II—SEISTAN.

The concentration of public attention on the Persian Gulf was allowed to obscure the frontier importance of Seistan. Yet it was for many years a serious preoccupation with the Government of India. Seistan lies midway north and south between the point where the frontiers of Russia, Persia and Afghanistan meet at Zulfikar and that where the frontiers of Persia and of our Indian Empire meet on the open sea at Gwattur. It marches on its eastern border with Afghanistan and with Baluchistan, it commands the valley of the Helmand, and with it the road from Herat to Kandahar, and its immense resources as a wheat-producing region have been only partly developed under Persian misrule. It offers to an aggressive rival, an admirable strategic base for future military operations, it is also midway athwart the track of the shortest line which could be built to connect the Trans-Caspian Railway with the Indian Ocean, and if and when the line from Askabad to Meshed were built, the temptation to extend it through Seistan would be strong. Whilst the gaze of the British was concentrated on the North-West Frontier, and to possible lines of advance through Kandahar to Quetta, and through Kabul to Peshawar, there can be little doubt that Russian atten-

tion was directed to a more leisurely movement through Seistan, if the day came when she moved her armies against India.

Whether with this purpose or not, Russian intrigue was particularly active in Seistan in the early years of the century. Having Russianified Khorassan, her agents moved into Seistan and through the agency of the Belgian Customs officials, "scientific missions" and an irritating plague cordon, sought to establish influence, and to stifle the British trade which was gradually being built up by way of Nushki. These efforts died down before the presence of the McMahon mission, which, in pursuance of Treaty rights, was demarcating the boundary between Persia and Afghanistan, with special reference to the distribution of the waters of the Helmand. They finally ceased with the conclusion of the Anglo-Russian Agreement. Since then the international importance of Seistan has waned.

The natural conditions which give to Seistan this strategic importance persist. Meantime, British influence is being consolidated through the Seistan trade route. The distance from Quetta to the Seistan border at Killa Robot is 465 miles, most of it dead level, and it has now been provided with fortified posts, and

Frontier (Durand Line) ————

British Administrative Border - - - - -

bungalows, wells, and all facilities for caravan traffic. The railway was pushed out from Spezand, on the Bolan Railway, to Nushki, so as to provide a better starting point for the caravans than Quetta. This line was extended to Duzdap, 54 miles on the Persian side of the Indo-Persian Frontier during the war as a

military measure, but the traffic after the re-establishment of peace supported only two trains a week. There then arose trouble owing to Persian insistence on the collection of Customs duties on rations taken across their frontier for the railway staff. This led to the stoppage of train running on the Persian side of the frontier.

III—PERSIA.

From causes which only need to be very briefly set out, the Persian question as affecting Indian frontier policy has receded until it is of no account. Reference is made in the introduction to this section to the fact that the conclusion of the Anglo-Russian Agreement left us a bitter legacy in Persia. That Agreement divided Persia into two zones of influence, and the Persians bitterly resented this apparent division of their kingdom between the two Powers, though no such end was in view. German agents, working cleverly on this feeling, established an influence which was not suspected, and when the war broke out they were able to raise the tribes in opposition to Great Britain, in the South, and after the fall of Kut-al-Amara when a Turkish Division penetrated Western Persia, they exercised a strong influence in Teheran. With the defeat of Turkey and the Central Powers this influence disappeared, but at that time there was no authority in Persia besides that of the British Government, which had strong forces in the North West and controlled the southern provinces through a force organised under British officers and called The South Persian Rifles. It was one of the first tasks of the British Government to regularise this position, and for this purpose an agreement was reached with the then Persian Government the main features of which were—

To respect Persian integrity,

To supply experts for Persian administration,

To supply officers and equipment for a Persian force for the maintenance of order

To provide a loan for these purposes

To co-operate with the Persian Government in railway construction and other forms of transport

Both Governments agreed to the appointment of a joint committee to examine and revise the Customs tariff

The second agreement defined the terms and conditions on which the loan was to be made to Persia. The loan was for £2,000,000 at 7 per cent. redeemable in 20 years. It was secured on the revenues and Customs' receipts assigned for the repayment of the 1911 loan and should these be insufficient the Persian Government was to make good the necessary sums from other sources.

The Present Position—We have given the main points in the Anglo-Persian agreement, because few documents have been more misunderstood. Those who desire to study it in greater detail will find it set out in the Indian Year Book for 1921, pag 138 *et seq*. It has been explained that most Persians construed it into a guarantee of protection against all external enemies. When the British troops in the north-west retired before the Bolsheviks,

the Persians had no use for the Agreement and it soon became a dead instrument. It was finally rejected and the advisers who were to have assisted Persia under it withdrew.

A remark frequently heard amongst soldiers and politicians in India after the War was that Great Britain must take an active hand in Persia because she could not be a passive witness to chaos in that country. The view always taken in the Indian Year Book was that the internal affairs of Persia were her own concern, if she preferred chaos to order that was her own lookout, but left alone she would hammer out some form of Government. That position has been justified. The Sirdar Sipah, or commander-in-chief, a rough but energetic soldier, gradually took charge of Persian affairs and established a thinly-veiled military dictatorship which made the Government feared and respected throughout the country for the first time since the assassination of Shah Nasr-ed-din. A body of capable Americans under Dr Millsaugh restored order to the chaotic finances. These two forces operating in unison gave Persia the best government she had known for a generation. But the Sirdar Sipah chafed under the irregularities of his position, with a Shah spending his time in Europe and wasting the resources of the country. He moved to have his position regularised by the deposition of the absentee Shah and his own ascent of the throne. At first he was defeated by the opposition of the Mollahs, but in 1925 prevailed, and the Shah was formally deposed and the Sirdar Sipah chosen monarch in his place. The change was made without disturbance, and Persia entered on a period of peace and consolidation which has removed it from the disturbing forces in the post-war world. Since then considerable progress has been made with the reform of the administration, and many projects are afoot for the improvement of communications, which is the greatest need of the land, such as an air service to Teheran and railway construction. The least reassuring episode was the departure of the American financial mission, which had done admirable work in the restoration of the finances. When their contract expired Dr Millsaugh and his colleagues were offered a renewal of it on terms which they did not regard as satisfactory, especially in regard to the powers they were to exercise. They therefore withdrew from the country and have been replaced by other foreign advisers.

Mr R. H. Hoare, C.M.G., is British Minister at Teheran.

H. B. M.'s Consul in Seistan and Kaim—Major C. K. Daly, C.I.E.

IV.—THE PRESENT FRONTIER PROBLEM

There yet remains a small part of British India where the King's writ does not run. Under what is called the Durand Agreement with the Amir of Afghanistan, the boundary between India and Afghanistan was settled, and it was delimited in 1903 except for a small section which was delimited after the Afghan War in 1919. But the Government of India have never occupied up to the border. Between the administered territory and the Durand line there lies a belt of territory of varying width extending from the Gomal Pass in the south, to Kashmir in the north; this is generically known as the Tribal Territory. Its future is the subject of the interminable discussions of frontier policy for nearly half a century.

This is a country of deep valleys and secluded glens, which nature has fenced in with almost inaccessible mountains. It is peopled with wild tribes of mysterious origin, in whom Afghan, Tartar, Turkoman, Persian Indian, Arab and Jewish intermingle. They had lived their own lives for centuries, with little intercourse even amongst themselves, and as Sir Valentine Chitral truly said 'the only bond that ever could unite them in common action was the bond of Islam'. It is impossible to understand the frontier problem unless two facts are steadily borne in mind. The strongest sentiment amongst these strange people is the desire to be left alone. They value their independence much more than their lives. The other factor is that the country does not suffice even in good years to maintain the population. They must find the means of subsistence outside, either in trade, by service in the Indian Army or in the Khyrsadars, or else in the outlet which hill-men all the world over have utilised from time immemorial, the raiding of the wealthier and more peaceful population of the Plains.

Frontier Policy

The policy of the Government of India toward the Independent Territory has ebbed and flowed in a remarkable degree. It has fluctuated between the Forward School, which would occupy the frontier up to the confines of Afghanistan, and the school of Masterly Inactivity, which would leave the tribesmen entirely to their own resources, punishing them only when they raided British territory. Behind both the policies lay the menace of a Russian invasion, and that coloured our frontier policy until the Anglo-Russian Agreement. This induced what was called Hit and Retire tactics. In the half century which ended in 1897 there were nearly a score of punitive expeditions, each one of which left behind a legacy of distrust, and which brought to permanent improvement in its train. The fruit of the suspicion thus engendered was seen in 1897. Then the whole Frontier, from the Malakand to the Gomal, was ablaze. The extent of this rising and the magnitude of the military measures which were taken to meet it compelled a consideration of the whole position. The broad outlines of the new policy were laid down in a despatch from the Secre-

tary of State for India, which prescribed for the Government the "limitation of your interference with the tribes, so as to avoid the extension of administrative control over tribal territory." It fell to Lord Curzon to give effect to this policy. The main foundations of his action were to exercise over the tribes the political influence requisite to secure our imperial interests, to pay them subsidies for the performance of specific duties, but to respect their tribal independence and leave them, as far as possible, free to govern themselves according to their own traditions and to follow their own inherited habits of life without let or hindrance.

New Province

As a first step Lord Curzon took the control of the tribes under the direct supervision of the Government of India. Up to this point they had been in charge of the Government of the Punjab, a province whose head is burdened with many other concerns. Lord Curzon created in 1901 the North-West Frontier Province, and placed it in charge of a Chief Commissioner, with an intimate frontier experience, directly subordinate to the Government of India. This was a revival of a scheme prepared by Lord Lytton in 1877, and often considered afterwards, but which had slipped for lack of driving power. Next, Lord Curzon withdrew the regular troops as far as possible from the advanced posts, and placed these fortresses in charge of tribal levies, officered by a handful of British officers. The most successful of these was the Khyber Rifles, which steadfastly kept the peace of that historic Pass until 1910. At the same time the regular troops were cantoned in places whence they could quickly move to any danger point, and these bases were connected with the Indian railway system. In pursuance of this policy frontier railways were run out to Dargai, and a narrow-gauge line, since converted to the broad-gauge, was constructed from Kushal Garh to Kohat, at the entrance of the Kohat Pass, and to Thal in the midst of the Kurram Valley. These railways were completed by lines to Tonk and Bannu. By this means the striking power of the regular forces was greatly increased. Nor was the policy of economic development neglected. The railways gave a powerful stimulus to trade and the Lower Swat Canal converted fractious tribesmen into successful agriculturists. This policy of economic development is receiving a great development through the completion of the Upper Swat Canal (q v Irrigation). Now it is completed there are other works awaiting attention. For many years this policy was completely justified by results.

A New Policy

It saved us from serious complications for nearly twenty years, although the position could never be said to be entirely satisfactory, particularly in Waziristan, peopled by the most reckless raiders on the whole border-line, with a bolt hole into Afghanistan when pressed from the British side. It endured through the Great War and did not break

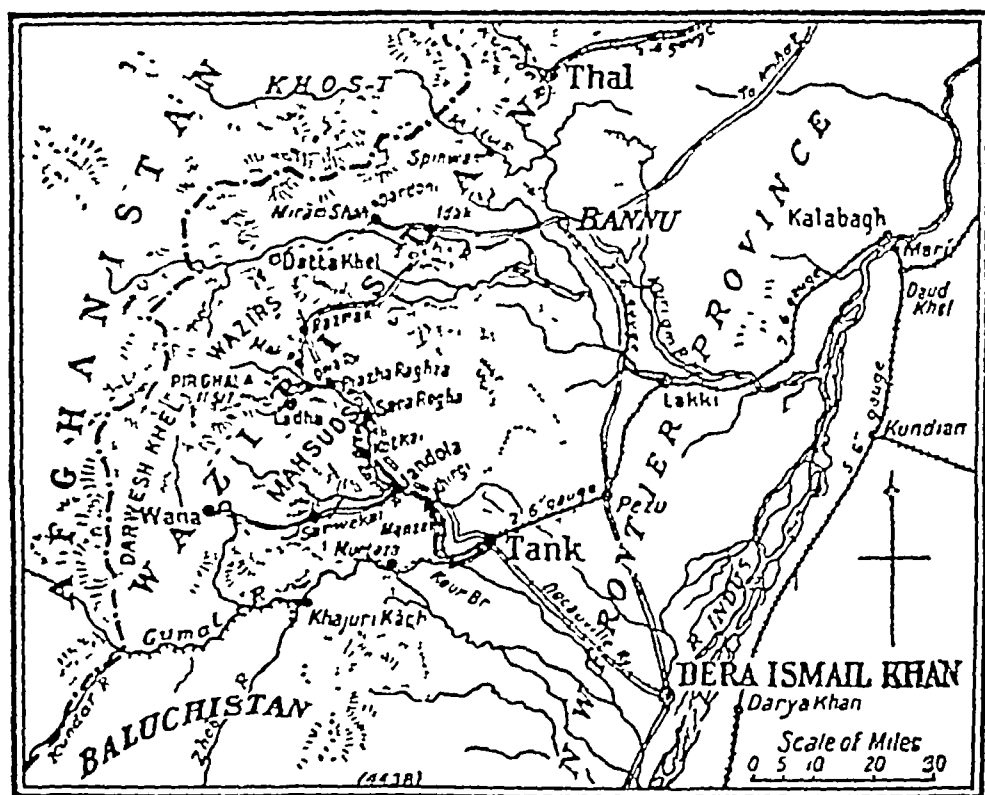

down until the Amir of Afghanistan sought refuge from his internal troubles in a Jihad against India. In this insane enterprise the Afghans placed less reliance in their regular troops, which have never offered more than a contemptible resistance to the British forces than in the armed tribesmen. In this they were justified, for the Indian Military authorities failed to give timely support to the advanced militia posts, some of these posts were ordered to withdraw, the militia collapsed and the most serious fighting was with the tribesmen. The tribal levies collapsed with almost universal swiftness. The Southern Waziristan militia broke and there was serious trouble throughout the Zhob district. The Afridis, our most serious enemies in 1897, and the most powerful of the tribes on the North-West Frontier, remained fairly quiet throughout the actual hostilities with Afghanistan, but later it was necessary to take measures against a leading malcontent and destroy his fort at Chora. But the Mahsuds and the Waziris broke into open hostilities. Their country lies within the belt bounded by the Durand Line and the Afghan frontier on the west, and by the districts of Bannu and Dehra Ismail Khan on the east. Amongst them the Afghan emissaries were particularly active and as they could put in the field some 30,000 warriors, 75 per cent armed with modern weapons of precision, they constituted formidable adversaries. They refused to make peace even when the Afghans caved in. They rejected our terms and active measures were taken against them. The fighting was the most severe in the history of the Frontier. The Mahsuds fought with great tenacity. Their shooting was amazingly good; their tactics were admirable, for amongst their ranks were many men trained either in the militia or in the Indian Army; and more than once they came within measurable distance of considerable success. They were assisted by the fact that the best trained troops in the Indian Army were still overseas and younger soldiers were opposed to them. But their very tenacity and bravery were their own undoing, their losses were the heaviest in the long history of the Borderland and when the Mahsuds made their complete submission in September 1921 they were more severely chastened than at any time during their career.

A New Chapter.—As the result of the Afghan War of 1919, Indian frontier policy was again thrown into the melting pot. There was much vague discussion of the position in the course of the months which followed the Afghan War and the troubles in Waziristan which succeeded it, but this discussion did not really come to a head until February-March 1922. The Budget then presented to the country revealed a serious financial position. It showed that despite serious increases in taxation, the country had suffered a series of deficits, which had been financed out of borrowings. Further heavy taxation was proposed in this Budget, but even then the equilibrium which the financial authorities regarded as of paramount importance was not attained. When the accounts were examined, it was seen that the heaviest charges on the exchequer were those under Military Expenses, and that there was an indefinitely large, and seemingly unend-

ing expenditure on Waziristan. This forced the Military, and allied with it the Frontier, expenditure to the front. In actual practice the discussion was really focussed on Waziristan. In essentials it was the aged controversy—shall we deal with this part of the Frontier on what is known as the Sandeman system, namely, by occupying commanding posts within the country itself, dominating the tribesmen but interfering little in their own affairs, or shall we revert to what was known as the close border system, as modified by Lord Curzon, of withdrawing our regular troops to strategic positions outside the tribal area, leaving the tribesmen, organised into militia, to keep the passes open, and punishing the tribesmen by expeditions when their raiding propensities become unbearable.

The Curzon Policy.—The Curzon policy, adopted in 1899, to clear up the aftermath of the serious and unsatisfactory Frontier rising in 1897, was a compromise between the "occupation" and the "close border" policies. It was based on the withdrawal of the regular troops so far as possible to cantonments in rear whilst the frontier posts, such as those in the Tochi at Wana and in the Khyber and Kurram were held by militia, recruited from amongst the tribesmen themselves. The cantonments for regular troops were linked so far as possible with the Indian railway system, so as to permit of rapid reinforcement. But it must be remembered that like all Frontier students, Lord Curzon did not regard this as the final policy. He wrote in the Memorandum formulating his ideas "It is of course inevitable that in the passage of time the whole Waziri country up to the Durand line will come more and more under our control. No policy in the world can resist or greatly retard that consummation. My desire is to bring it about by gradual degrees and above all without the constant aid and presence of British troops." The Curzon policy, though it was not pursued with the steadfastness he would have followed if he had remained in control, gave us moderate—or rather it should be said bearable—frontier conditions until the Afghan War. It then broke down, because the tribal militia, on which it was based, could not, when left without the support of regular troops in the day of need, withstand the wave of fanaticism and other conditions set up by the Afghan invasion of 1919. The Khyber militia faded away, the Waziri militia either mutinied, as at Wana, or deserted. The pillar of the Curzon system fell.

The Policy.—The policy first adumbrated to meet these changed conditions was outlined by Lord Chelmsford, the then Viceroy, in a speech which he addressed to the Indian Legislature. He said it had been decided to retain commanding posts in Waziristan, to open up the country by roads, to extend the main Indian railway system from its then terminus, Jamrud, through the Khyber to the frontier of Afghanistan, and to take over the duties of the militia by regular troops. That immediate policy was soon modified so far as the garrisoning of these frontier positions by regular troops was concerned. Such duties are immensely unpopular in the regular army, which is not organised and equipped for work of this character. Irregulars have always existed on

WAZIRISTAN

the frontier, and as they had disappeared with the Militia, it was necessary to recreate them. The new form of irregular was what have been called *Khasadars* and *Scouts*. The *Khasadar* is an extremely irregular. He has no British officers and no uniform, except a distinguishing kind of *pagri*. In contradistinction to the old Militia, he finds his own rifle. As one informed observer remarked, the beauty of the system is that so long as the *Khasadars*, under their own headmen, secure the immunity of the caravans and perform their other police duties, they draw their pay and no questions

are asked. If they desert in the day of trouble, they lose their pay but the Government loses no rifles, nor does it risk mutiny or the loss of British and Indian officers. But the application of this policy produced an acute controversy. It was one thing to say that commanding posts in Waziristan should be retained, it was another to decide what these posts should be. We must therefore consider the special problem of Waziristan. The *Scouts* are a mobile, mounted, irregular force not territorially recruited, officered by British officers.

V.—WAZIRISTAN.

We can now approach the real frontier question of the day, the future of Waziristan. What follows is drawn from an admirable article contributed to the January number of "The Journal of the United Service Institution of India," written by Lt.-Col. G. M. Routh, D.S.O.

Geographically Waziristan is a rough parallelogram averaging 60 miles from East to West and 160 from North to South. The western half consists of the Suleiman Range gradually rising up to the ridge from five to ten thousand feet high, which forms the watershed between the Indus and the Helmund Rivers and corresponds with the Durand Line separating India from Afghanistan. This is the western boundary. On the east is the Indus. North is the watershed of the Kurram River running East and West about 30 miles north of Bannu separating Waziristan from the Kohat District. South is a zigzag political boundary from the Durand Line running between Wana and Fort Sandeman in Baluchistan with a turn southwards to the Indus.

The western half is a rugged and inhospitable medley of ridges and ravines straggled and confused in hopeless disarray. The more inhabited portions lie well up the slope at heights of four to six thousand feet. Here are our outposts of Wana and Ladha some 15 and 20 miles respectively from the Durand Line, in the centre of the grazing district, the latter within five miles of important villages of Kaniguram and Makin.

The submontane tracts from the hills to the Indus vary from the highly cultivated and irrigated land round Bannu to the sandy desert in the Marwat above Pezu.

Where irrigation or river water is obtainable cultivation is attempted under conditions which can hardly be encouraging. Other tracts like that between Pezu and Tank, usually pastoral, can only hope for an occasional crop after a lucky rainfall.

Inhabitants—The inhabitants, unable to support existence on their meagre soil, make up the margin by armed robbery of their richer and more peaceful neighbours. The name originates according to tradition from one Wazir, two of whose grandsons were the actual founders of the race. Of the four main tribes Darweshkhel, Mahsuds, Dawars and Batanni, only the first two are true Wazirs. Their villages are separate though dotted about more or less indiscriminately, and inter-marriage is the exception—in fact all traditionally are in open strife, a circumstance which, until some bright political comet like the Afghan War of 1919 joined them together, as materially aided our dealings with them.

Unlike other parts of India, however, these wild people acknowledge little allegiance to *maliks* or headmen. No one except perhaps the Mulla Powindah till his death in 1913 could speak of any portion of them as his following.

Policy—The policy of the British was at first one of non-interference with the tribes. Even now only part of the country is administered. Gradually it was found that more and more supervision became necessary to control raiding and this was attempted by expeditions to portions of the country with Regulars, followed by building posts and brick towers to be held by Militia. These posts were at first placed at the points where raiders usually debouched. The Political Officers, at first supported by Regulars, built up from 1904 onwards a force of some 3,000 Militia with British Officers at their disposal, who were backed up by the garrisons at Bannu and Dera Ismail Khan. In addition certain allowances were made to the tribes for good behaviour, prevention of raids and surrender of offenders when required, also for tribal escorts as necessary. Gradually, as occasion required, posts were occupied. Wana was occupied in 1895 at the request of the Wana Wazirs. Similarly the Tochi in 1896. In the comprehensive expedition of 1895-96 when this policy was put into effect, the British arms were shown in every remote valley in the vain hope of taming the Mahsuds. It was hoped the various posts would prove a pacifying influence and a rallying ground for Government supporters. From 1904 to 1919 they were held by Militia. Roads and communications were improved and tribal allowances augmented by sales of produce to the troops on a liberal scale.

A Programme—Lt.-Col. Routh then outlined a possible policy for Waziristan. We give it textually, because we believe that when it was written it reflected how military opinion in India was developing—

"To the unprejudiced mind it appears more practical to grasp the nettle firmly and dominate the inhabited tracts. Why should not the road now being made to Ladha be continued 36 miles north to the Tochi road at Datta Khel and 29 miles south to Wana? Why should we not occupy the healthier portions of Waziristan rather than the foothills or Cis-Indus zones? The Razmak district round Makin 6,000 feet up is both healthy and fertile. The same applies to the Shawal valley lying behind Pir Gul, the national peak near Ladha rising to a height of 11,556 feet above the sea. The Wana plain, 5,000 feet up, 30 miles by 15, could with railways support an army corps; there is no doubt that

a forward railway policy will help to solve the problem. A line has been surveyed from Tank to Dardard and thence up the valley to Fort Sandeman, so connecting with the Zhoi and perhaps later to Wana. The Gumal Tangi from Murruva to Khajuri Kach is the apparently obvious route, but would be prohibitively expensive in construction and require much tunnelling. Beyond Khajuri Kach via Tanni and Bogla Kot to Wana some 23 miles, offers no difficulty. The old policy of the raiders working westwards and our retaliative expeditions stretching their very temporary tentacles eastwards seems to suggest better lateral communications. The broad gauge at Kohat might without undue cost be extended to Thal and thence to Idak via Spinwam. From here till further extension proved desirable a motor road through Razmak, Makin and Dwatol to link up with that now surveyed to Ladhia sounds possible to the looker on. Eventually such communications road, rail or both, could continue to Wana, Fort Sandeman and Quetta via Hindu Ragh a strategic line offering great defensive possibilities substituting Razmak, which resembles Ootacamund, and healthy uplands for the deadly fever spots now occupied. The very fact of employing the tribesmen on these works with good pay and good encouragement tends to pacify the country as well as providing healthy accessible hill stations in place of the proverbially comfortless cantonments which now exist in this part of the Frontier.

A Compromise—A full statement of the policy finally adopted by Government in view of the situation left upon their hands after the Mahsud rebellion was made by the Foreign Secretary, Sir (then Mr.) Denys Bray, in the course of a Budget discussion in the Legislative Assembly on 5th March 1923. He outlined neither a Forward policy nor a Close Border policy. Both these terms had, in fact, ceased to be appropriate. Circumstances had so changed that neither the one plan nor the other remained within the bounds of reasonable argument.

The Foreign Secretary explained that the ingredients of the Frontier problem at the present day are essentially three, namely, the Frontier districts, the neighbouring friendly State of Afghanistan, and the so called Independent Territory, this last being the belt of unsettled mountain country which lies between the borders of British India and India. He proceeded specially to show that this belt is, in fact, within India. "It is boundary pillars that mark off Waziristan from Afghanistan, it is boundary pillars that include Waziristan in India. We are apt to call Waziristan Independent territory, and it is only from the point of view of our British districts that these tribes are trans-frontier tribes. From the point of view of India, from the International point of view that is, they are cis-frontier tribesmen of India. If Waziristan and her tribes are India's scourge, they are also India's responsibility—and India's alone. That is an international fact that we must never forget."

Sir Denys next referred to the triumph of the Sandeman policy in Baluchistan. He pointed out that some people long ago believed that the same policy would prove effective in Waziristan. "But what was a practical proposition 20 or 30 years ago is not necessarily

so now. The task is infinitely more difficult to-day, chiefly because the tribesmen are infinitely better armed, their arms having increased at least tenfold during the last 20 years." Dealing with the Close Border prescription he showed that if one erected a Chinese wall of barbed wire fence along the plain some distance below the hills, "all the time the problem in front of us would be going from bad to worse, with the inevitable increase of arms in the trans border and with that inevitable increase in the economic stringency in this mountainous tract, which would make the tribesmen more and more desperate, more and more thrown back on barbarism. A rigid Close Border policy is really a policy of negation, and nothing more. We might gain for our districts a momentary respite from raids but we would be leaving behind a legacy of infinitely worse trouble for their descendants."

The settled policy of Government in Waziristan, Sir Denys showed, was the control of that country through a road system, of which about 140 miles would lie in Waziristan itself and one hundred miles along the border of Derajat and the maintenance of some 4,000 Khassadars and of some 5,000 irregulars, while at Razmak, 7,000 feet high and overlooking northern Waziristan, there would be an advanced base occupied by a strong garrison of regular troops. Razmak he showed to be further from the Durand line than the old-established posts in the Tochi. In the geographical sense, therefore, the policy was, in one signal respect, a backward policy. None the less, it was a forward policy in a very real sense, for it was a policy of constructive progress and was a big step forward on the long and laborious road towards the pacification, through civilization, of the most backward and inaccessible, and therefore the most truculent and aggressive tribes on the border. Come what may, civilization must be made to penetrate these inaccessible mountains or we must admit that there is no solution to the Waziristan problem, and we must fold our hands while it grows inevitably worse."

The policy thus initiated has proceeded with results according with the highest reasonable expectations and exceeding the most sanguine hopes of most people concerned in its formulation.

The roads are policed by the Khassadars, who have, in the main, proved faithful to their trust. The open hostility of the Waziri tribesmen to the presence of troops and other agents of Government in their midst, which at the outset they showed by shooting up individuals and small bodies of troops on every opportunity, has faded away, and the people have shown an understanding of the rule of law, and, under the control exercised, a readiness to conform to it in various small but significant ways, methods of civilization have caught the imagination of the people and won their approval. Thus, the safety of the roads has encouraged, and is buttressed by, a considerable development of motor-bus traffic. The roads, as the King's Highway, are officially held to be sacrosanct, that is no shooting up or other pursuit of personal or tribal feuds is permitted upon them. This permits villagers to proceed to and from the plains towns in safety. Under the influence of their women, the tribesmen have

applied that the ban against shooting upon the highway shall be extended to all the country for three miles on either side of the highway. Tentative efforts to introduce primary education have been possible and have achieved as much success as could be expected. The hospitals and dispensaries maintained for irregular troops, called Scouts, employed about the country, attend to the wants of the tribes-people who come to them. So much has this arrangement been appreciated that the Mahsuds formally applied for the establishment of a hospital of their own. With grim humour, they offered to provide such an institution with the necessary surgical instrument, saying that they had saved this from the time when the British formerly left the country. In other words, they offered what they had captured or looted during the 1919 emeute.

A remarkable illustration of the acceptance by the people of the new conditions was provided a year or two ago by the Wana Wazirs when they partitioned the Political Authorities for the occupation of south Waziristan corresponding with that already established in northern Waziristan. A motor road had already been run out from Jhandola through Chagmail and the Shahur Tangi to Sarwekal. A brigade of troops, hitherto stationed at Manzai, whereabouts the Tak-i-Zam, after flowing down its deep valley from northern Waziristan, debouches on to the Derajat, was accordingly ordered up to Wana in the autumn of 1929. It proceeded throughout the journey thither without opposition and was warmly welcomed by the tribes people at Wana, where it established itself in a favourably sited camp not far from the fort which was the earlier centre of British occupation.

The reoccupation of Wana and the circumstances in which it took place illustrate that a policy is a live thing. In other words, it is not a programme which can reach fulfilment or completion. It lives and always waits upon some new action to give it further expression. In this respect the new policy, though it has only demonstrably been applied in Waziristan, must be regarded as that which governs the actions of the authorities in regard, at least to the whole Frontier region lying between Baluchistan and the Khyber Pass, except, possibly, the Kurram Valley.

The area cultivated by the villagers of Wana plain doubled by the end of 1931 and the people declared their readiness to surrender their firearms if their neighbours also gave up theirs or were deprived of them. A road has been built commencing Fort Sandeman via Gul-kach, on the Gomal river, with Tanai, on the Sarwekal-Wana road. A road, as yet roughly made, has been constructed between Razmak and Kaniguram, in the heart of Mahond.

A startling new development upon the North West Frontier during 1930 was the spread thereto of agitation carried on by the Indian National Congress in the interior of India in pursuit of its efforts to bring political pressure to bear upon the Government of India, and above them, His Majesty's Government. The Congress at its annual session at Lahore in the week following Christmas, 1929, adopted a programme aiming at the separation of India

from the British Empire and at the promotion of revolution in India to secure this end. In particular, it avowedly set out "to make Government impossible." Revolutionary agitation, and especially a campaign to promote disobedience of the civil law in order to bring the administration to a stand still, commenced all over India immediately after the Congress meetings. The settled districts of the N W F P were the scene of this, in common with the rest of the land. The agitation was there carried on by Congress agents organised in what are known as Khilafat Committees. For their purpose they made special use of misrepresentations of the Sarda Act, recently passed by the Indian Legislature by the official and Hindu votes against the opposition of the Muslim non-official members. This measure makes illegal and provides penalties for the marriage of boys and girls below stated minimum ages. The age at which marriage may take place is also in general terms laid down for Mohammedans by their religious law. Hence, the Muslims in British India, while acknowledging that the Sarda Act would not in practice affect them, because its provisions in no way over-rule their religious law, nevertheless saw in the measure an act affecting the domain of their religious law, and passed, in spite of their dissent, in a Legislature in which Muslims are, by themselves, a hopeless minority. They regarded its enactment as a grave illustration of their fears that under any scheme of democratic self-government in India, Muslim interests would not be safe against disregard by the Hindu majority.

Outbreak at Peshawar in 1930—This Muslim apprehension has, since the passing of the Act, strongly influenced the attitude of the community towards all questions of political reform, and the lever which misrepresentation of the Act provided for stirring up anti-Government agitation in the almost wholly and fanatical Muslim province in the north can easily be understood. Grossly untrue propaganda was carried on, it was, for instance, alleged that under the Act all girls must be medically examined before marriage. An elaboration of this untruth was that the Government were recruiting a large body of Hindu inspectors to make the examinations. And the agitation was deliberately pushed outwards from the settled districts of the N W F P into the tribal areas. Waziristan was amongst the first of them to be inundated with the propaganda. This was in March-April 1929. The poison spread outwards from Peshawar into Tirah about the same time. The agitation was sedulously carried on in the district northward of Peshawar city and from thence was pushed into Mohmand country. The first point of violent combustion was Peshawar city, where the mob murderously broke out on 23rd April 1930. Within a short time, Afridi bands descended the ravines and nullahs from Tirah to join in the fray. The Mohmands became greatly excited and sent down bands to sit near the border and watch for an opportunity to join in. The Upper Tochi's Wazirs simultaneously took to arms and shortly afterwards the Mahsud Wazirs, about Ladha, did the same. At this stage, the development of the Air arm in India proved of incalculable value. Aero-planes patrolled the whole country and were

All outbreaks of revolt were suppressed in the same manner and the establishment of new fortified posts in the Peshawar plain, immediate opening of the main valleys leading out of Tibet and the construction of roads for their

It will be seen that the events of the summer of 1979 put the policy to a severe test, and that its successful operation in the emergency was especially assisted by the Royal Air Force. The resultant position appears, then, to be that the control of the tribes, where the policy has already been expressed in road building and in the establishment of suitable garrisons, is effective that the political and military ground organization with which the policy is supported brings about the introduction of the ameliorative influence of civilization, and that the rapidity and success with which the Royal Air Force can operate over the hills, tends to diminish the amount of ground force necessary. On the other hand, the two descents of the Afriids upon the plain and their return to their homes without great loss, despite all that the Royal Air Force and large bodies of troops could do, indicate the capacity for mischief which lies in the hands of the Tirah tribes, and must remain there so long as the Policy is not extended over their highlands.

The relations of Afghanistan with the Indian Empire were for long dominated by one main consideration—the relation of Afghanistan to a Russian invasion of India. All other considerations were of secondary importance. For nearly three-quarters of a century the attitude of Great Britain toward successive Amirs has been dictated by this one factor. It was in order to prevent Afghanistan from coming under the influence of Russia that the first Afghan War of 1838 was fought—the most melancholy episode in Indian frontier history. It was because a Russian envoy was received at Kabul whilst the British representative was turned back at Ali Masjid that the Afghan War of 1878 was waged. After that the whole end of British policy toward Afghanistan was to build up a strong independent State, friendly to Britain, which would act as a buffer against Russia and so to order our frontier policy that we should be in a position to move large forces up, if necessary, to support the Afghans in resisting aggression.

A knowledge of the trans frontier geography of India brought home to her administrators the conviction that there were only two main gates to India—through Afghanistan, the historic route to India, along which successive invasions have poured, and by way of Sistan. It was the purpose of British policy to

close them, and of Russia to endeavour to keep them at any rate half open To this end, having pushed her trans-Persian railway to Samar-kand, Russia thrust a military line from Merv to the Kushkinkay Post, where railway material is collected for its immediate prolongation to Herat Later, she connected the trans-Siberian railway with the trans-Caucasian system, by the Orenburg-Tashkent line, thus bringing Central Asia into direct touch with her European magazines Nor has Great Britain been idle A great military station has been created at Quetta This is connected with the Indian railway system by lines of railway which climb to the Quetta Plateau by the Bolan Pass and through the Chappir Rift, lines which rank amongst the most picturesque and daring in the world From Quetta the line has been carried by the Khojak tunnel through the Khwaja Amran Range, until it leads out to the Afghan Border at New Chaman, where it opens on the route to Kandahar The material is stocked at New Chaman which would enable the line to be carried to Kandahar in sixty days In view of the same menace the whole of Baluchistan has been brought under British control Quetta is now one of the great strategical positions of the world, and nothing has been left undone which modern military science can achieve to add to its natural strength In the opinion of many military authorities it firmly closes the western gate to India, either by way of Kandahar, or by the direct route thro Selstan

Further east, the Indian railway system was carried to Jamrud and by the autumn of 1925 up the Khyber Pass to Landi Kotal and down the other side of the Pass to Landi Khana. A first class military road sometimes double, sometimes treble, also threads the Pass to our advanced post at Landi Kotal, and then descends until it meets the Afghan frontier at Landi Khana. Later, a commencement was made with the Lol Shilman Railway, which, starting from Peshawar, was designed to penetrate the Mullagori country and provide an alternative advance to the Khyber for the movement of British troops for the defence of Kabul. For unexplained reasons, this line was suddenly stopped and is now thrust in the air. In this wise the two Powers prepared for the great conflict which was to be fought on the Kandahar-Ghazni-Kabul line.

Relations with India

Between the advanced posts on either side stands the Kingdom of Afghanistan. The end of British policy has been to make it strong and friendly. In the first particular it has early and largely succeeded. The second aim may now also be said to have been attained. When the late Abdurrahman was invited to ascend the throne, as the only means of escape from the tangle of 1879, none realised his great qualities. Previously the Amir of Afghanistan had been the chief of a confederacy of clans. Abdurrahman made himself master in his own kingdom. By means into which it is not well closely to enter, he beat down opposition until none dared lift a hand against him. Aided by a British subsidy of twelve lakhs of rupees a year increased to eighteen by the Durand Agreement of 1893, and subsequently to over 20 lakhs, he established a strong standing army and set up arsenals under foreign supervision to furnish it with arms and ammunition. Step by step his position was regularised. The Anglo-Russian Boundary Commission,—which nearly precipitated war over the Penjeh episode in 1886,—determined the northern boundaries. The Pamirs Agreement delimited the borders amid those snowy heights. The Durand Agreement settled the border on the British side, except for a small section to the west of the Khyber, which remained a fruitful source of trouble between Afghanistan and ourselves until 1919, when the Afghan claims and action upon the undemarcated section led to war. That section was finally surveyed and the frontier determined shortly after the conclusion of peace with Afghanistan. Finally the McMahon award closed the old feud with Persia over the distribution of the waters of the Helmand in Seistan. It was estimated by competent authorities that about the time of Abdurrahman's death, Afghanistan was in a position to place in the field, in the event of war, one hundred thousand well-armed regular and irregular troops, together with two hundred thousand tribal levies, and to leave fifty thousand regulars and irregulars and a hundred thousand levies to maintain order in Kabul and the provinces. But if Afghanistan were made strong, it was not made friendly. Abdurrahman Khan distrusted British policy up to the day of his

death. All that can be said is that he distrusted it less than he distrusted Russia, and if the occasion had arisen for him to make a choice, he would have opposed a Russian advance with all the force at his disposal. He closed his country absolutely against all foreigners, except those who were necessary for the supervision of his arsenals and factories. He refused to accept a British Resident, on the ground that he could not protect him, and British affairs were entrusted to an Indian agent, who was in a most equivocal position. At the same time he repeatedly pressed for the right to pass by the Government of India and to establish his own representative at the Court of St James.

Afghanistan and the War—These relations were markedly improved during the reign of His Majesty the Amir Habibullah Khan. It used to be one of the trite sayings of the Frontier that the system which Abdurrahman Khan had built up would perish with him, for none was capable of maintaining it. Habibullah Khan more than maintained it. He visited India soon after his accession and acquired a vivid knowledge of the power and resources of the Empire. He strengthened and consolidated his authority in Afghanistan itself. At the outset of the war he made a declaration of his complete neutrality. It is believed—a considerable reticence is preserved over our relations with Afghanistan—that he warned the Government of India that he might be forced into many equivocal acts, but that they must trust him, certainly his reception of Turkish, Austrian and German "missions" at Kabul, at a time when British representatives were severely excluded, was open to grave misconstruction. But a fuller knowledge induced the belief that the Amir was in a position of no little difficulty. He had to compromise with the fanatical and anti-British elements amongst his own people, inflamed by the Turkish preaching of a jihad, or holy Islamic war. But he committed no act of hostility, as soon as it was safe to do so he turned the members of these missions out of the kingdom. At the end of the war his policy was completely justified: he had kept Afghanistan out of the war, he had adhered to the winning side, his authority in the kingdom and in Central Asia was at its zenith.

Murder of the Amir—It is believed that if he had lived Habibullah Khan would have used this authority for a progressive policy in Afghanistan, by opening up communications and extending his engagements with India. He was courted by the representatives of Persia and the Central Asian States as the possible rallying centre of a Central Asian Islamic confederation. At this moment he was assassinated on the 20th February 1919. The circumstances surrounding his murder have never been fully explained, but there is strong ground for the belief that it was promoted by the reactionaries who had harassed him all his reign. These realised that with his vindication by the war their time of reckoning had come; they anticipated it by suborning one of his aides to murder him in his sleep. His brother, Nasrullah Khan, the nominee of the fanatical element, was proclaimed Amir at Telahabad in his stead, but public opinion in Afghanistan

revolted at the idea of the brother seizing power over the corpse of the murdered man. His sons, Hayat and Amanullah, were not disposed to waive their heritage. Amanullah was at Kabul, controlling the treasury and the arsenal and supported by the Army. Nasrullah found it impossible to make head against him and withdrew. The new Amir, Amanullah, at once communicated his accession to the Government of India and proclaimed his desire to adhere to the traditional policy of friendship. But his difficulties at once commenced, he had to deal with the war party in Afghanistan, he was confronted with the dissatisfaction arising from the manner in which the murderers of Habibullah had been dealt with, the fanatical element was exasperated by the imprisonment of Nasrullah, and the Army was so incensed that it had to be removed from Kabul and given occupation to divert its thoughts. A further element of complexity was introduced by the political situation in India. The agitation against the Rowlatt Act was at its height. The disturbances in the Punjab and Gujarat had taken place. Afghan agents in India, of whom the most prominent was Ghulam Hyder Khan, the Afghan postmaster at Peshawar, fanned Afghanistan with exaggerated accounts of the Indian unrest. The result of all this was to convince the Amir that the real solution of his difficulties was to unite all the disturbing elements in a war with India. On the 25th April his troops were set in motion and simultaneously a stream of anti-British propaganda commenced to flow from Kabul and open intrigue was started with the Frontier tribes on whom the Afghans placed their chief reliance.

Speedy Defeat—The war caught the Army in India in the throes of demobilisation and with a large proportion of the seasoned troops on service abroad. Nevertheless the regular Afghan Army was rapidly dealt with. Strong British forces moved up the Khyber and seized Dacca. Jelalabad was repeatedly bombed from the air and also Kabul. Nothing but a shortage of mechanical transport prevented the British forces from seizing Jelalabad. In ten days the Afghans were severely defeated. On the 14th May they asked for an Armistice. With the usual Afghan spirit of haggling, they tried to water down the conditions of the armistice, but as they were met with an uncompromising emphasis of the situation they despatched representatives to a conference at Rawalpindi on the 26th July. On the 8th August a Treaty of Peace was signed which is set out in the Indian Year Book, 1923, pp 198-199.

Post-War Relations—It will be seen that under this Treaty the way was paved for a fresh engagement six months afterwards. During the hot weather of 1920 there were prolonged discussions at Mussorie between Afghan Representatives and British officials under Sir Henry Dobbs. These were private, but it is believed that a complete agreement was reached. Certainly after an interchange of Notes which revealed no major point of difference it was agreed that a British Mission should proceed to Kabul to arrange a definite treaty of peace. This Mission crossed the Border in January 1921 and entered Kabul where a peace treaty was signed.

The main points of the Treaty are set out in the Indian Year Book, 1923, pp 197, 198-199.

Afghanistan after the War—Since the war the relations between Afghanistan and Great Britain have been good and improving. There were painful episodes in 1923 when a murder gang from the tribal territory on the British side of the Frontier committed raids in British India, murdering English people and kidnapping English women and then took refuge in Afghanistan. In course of time this gang was broken up. His Majesty the King of Afghanistan had troubles within his own borders which have made him glad of British help. The main object of his government was to strengthen the resources of the country and to bring it into closer relation with modern methods of administration. But Afghanistan is an intensely conservative country and no changes are popular, especially violent was the opposition to a secular form of administration and education. The direct result was a formidable rebellion of Mangals and Zadrans in the Southern Provinces, and serious reverses to the regular troops sent against the rebels. At one time the position was serious, but the rebels were not sufficiently united to develop their successes, and with the aid of aeroplanes and other assistance afforded by the Government of India the insurrection was broken. Whilst this assistance was appreciated, the whole business gave a serious set-back to the reforms initiated by His Majesty, he had to withdraw almost the whole of his administrative code and to revert to the Mahomedan Law which was previously in force.

Bolshevik Penetration—Taking a long view, a much more serious development of the policies of Afghanistan, at the period to which the foregoing notes apply was the penetration of the Bolsheviks. These astute propagandists have converted the former Trans-Caspian States of Tsarist Russia into Soviet Republics, where the rule of the Bolsheviks is much more drastic and disruptive than was that of what was called the despotism of the Romanoffs. The object of this policy is gradually to sweep into the Soviet system the outlying provinces of Persia, of China and of Afghanistan. In Persia this policy was foiled by the vigour of the Sipar Salah, Reza Khan, since declared Shah. In Chinese Turkestan it is pursued with qualified success. In Afghanistan it also made certain progress. The first step of the Bolsheviks was to extend the Soviet Republics of Tajikistan, Uzbekia and Turkmanistan so as to absorb all Northern Afghanistan. This was later, apparently, abandoned for the moment for a more gentle penetration. Large subsidies, mostly delivered in kind, were given to Afghanistan. Telegraph lines were erected all over the country, roads were constructed, large quantities of arms and ammunition were supplied, whilst an air force with Russian pilots and mechanics was created and was largely developed. In return the Bolsheviks received important trading facilities. The whole purpose of this policy was ultimately to make it possible to attack Great Britain in India through an absorbed Afghanistan.

It is very doubtful if the Amir and his advisers were deceived by these practices, and whether they did not pursue the simple plan of taking

all they could get without the slightest intention of handing themselves over to the Bolsheviks. But it is easier to let the Bolshevik in than to get him out, friends of the Afghans were asking themselves whether the Amir was not nourishing vipers in his bosom. Towards the end of 1925 and in the early part of 1926 there was a rude awakening. The Northern Frontier of the country has always been unsettled because of the shifting courses of the Oxus. In December Bolshevik forces captured with violence the Afghan post of Darkabad, killing one soldier. These events aroused great indignation at Kabul and were denounced by the Amir *coram publico*. There is no little evidence to show that though the form of government has changed in Russia the aims of Russian policy are the same. It used to be said that the test of Russian good faith under the Anglo-Russian Agreement would be the attitude of Petrograd towards the extension of the Orenberg-Tashkent railway to Termez. That line has been constructed by the Bolsheviks. The Afghans have had their eyes opened.

Russo-Afghan Treaty—Outwardly the relations between the two States are friendly. In December 1926 the Afghan papers published the text of a new treaty concluded with Soviet Russia, which was signed on August 31st, but it provided that it should in no way interfere with the secret treaty signed in Moscow on February 28th, 1921. The principal clauses of this treaty, as disclosed in the Afghan papers, are as follows—

Clause 1—In the event of war or hostile action between one of the contracting parties and a third power or powers, the other contracting party will observe neutrality in respect of the first contracting party.

Clause 2—Both the contracting parties agree to abstain from mutual aggression, the one against the other. Within their own dominions also they will do nothing which may cause political or military harm to the other party. The contracting parties particularly agree not to make alliances or political and military agreements with any one or more other powers against each other. Each will also abstain from joining any boycott or financial or economic blockade organized against the other party. Besides this in case the attitude of a third power or powers is hostile towards one of the contracting parties, the other contracting party will not help such hostile policy, and, further, will prohibit the execution of such policy and hostile actions and measures within its dominions.

Clause 3—The high contracting parties acknowledge one another's Government as rightful and independent. They agree to abstain from all sorts of armed or unarmed interference in one another's internal affairs. They will decidedly neither join nor help any one or more other powers which interfere in or against one of the contracting Governments. None of the contracting parties will permit in its dominions the formation or existence of societies and the activities of individuals whose object is to gather armed force with a view to injuring the other's independence, or otherwise such activities will be checked. Similarly, neither of the con-

tracting parties will allow armed forces, arms, ammunition, or other war material, meant to be used against the other contracting party to pass through its dominions.

Clause 6—This treaty will take effect from the date of its ratification, which should take place within three months of its signature. It will be valid for three years. After this period it will remain in force for another year provided neither of the parties has given notice six months before the date of its expiry that it would cease after that time.

On March 23rd there was also signed in Berlin a treaty between Germany and Afghanistan which amounted to no more than the establishment of diplomatic relations.

A British Minister is established in Kabul as well as the representatives of other European States. The representatives of Afghanistan are established in India and in London, and at some of the European capitals. The various subsidiary agreements under the Treaty have been carried into effect.

The King's Tour—In the closing months of 1927 His Majesty King Amanullah, accompanied by the Queen and a staff of officials, commenced a long tour to India and Europe. It is understood that this was one of the cherished ambitions of his father, King Habibullah, who was assassinated in 1919. King Amanullah, when he set out, was warmly welcomed in India and received a great popular greeting in Bombay both from his co-religionists and from members of other communities, who forgot the invasion of India in 1919. He then took ship to Europe. He was the guest of His Majesty King George V in London, and visited the principal European capitals. He made a State visit to Turkey, and returned to Afghanistan by way of Soviet Russia and Persia. A series of treaties with the governments of the countries visited was announced and the King returned to Kabul in the late summer of 1928, the tour having been unclouded by untoward incident. Afghanistan was peaceful during his long absence.

Reforming Zeal—King Amanullah returned to his realm full of reforming zeal. He was much impressed by the political and social institutions of the western lands he visited, and in particular by the dramatic forcefulness with which Mustapha Kemal Pasha had driven Turkey along the path of "reform," or perhaps it would be more correct to say westernisation. In this he was encouraged by the Queen, who was desirous of seeing the women of Afghanistan enjoy some of the freedom and opportunity won by and for the women of the West. Edict after edict was issued, changing the whole structure of Afghan society. New codes and taxes were imposed. It was proposed that women should emerge from their seclusion and doff the veil, the co-education of boys and girls was prescribed, in September Government officials were forbidden to practise polygamy, in October European dress was ordered for the people of Kabul. At the same time, the pay of the regular troops fell into arrear.

With every appreciation of the spirit and direction of these changes, friends of His Majesty advised the King to moderate the pace. They reminded him that in 1924 far less drastic changes had brought serious trouble in their train. In May of that year the "Lame Mullah" raised the standard of rebellion amongst the Gilzai and Mangal clansmen of Khost. The Mullahs were openly active against the King and His Majesty was equally frank in his hostility to them. Possibly also well-wishers suggested that what was possible in Turkey, after centuries of close contact with the West, and where the ground had been prepared by missionary effort and a long struggle for the emancipation of women, might be less easy in Afghanistan, where there had been no contact with the western world.

A change of Kings.—Events moved rapidly in 1929. A notorious north Afghan budmash, Bacha-i-Saqqao, raised the standard of revolt and inflicted severe losses on the Afghan Regular troops, discontented as they were by arrears of pay. Day by day the Afghan representatives in various parts of the world issued messages asserting that the rebels had been destroyed, and a rapid series of pronouncements declared the withdrawal of all the reforms and the establishment of a Council of Provincial Representatives. Communications with the outer world were broken. King Amanulla and his family fled from Kabul to Kandahar, and then from Kandahar via Quetta to Bombay where they took ship to Europe. King Amanulla on his arrival at Rome entered into possession of the Afghan Legation, where he remained. Bacha-i-Saqqao declared himself King of Afghanistan, and for a few months held his position in Kabul. Without money, administrative experience or a disciplined following, his throne was a thorny one and he was harassed by constant attacks. The Royal Air Force in India meanwhile went to the rescue of the British Nationals beleaguered in and around Kabul and in a series of brilliant

flights evacuated all without the slightest hitch. The most formidable of the new king's adversaries were led by General Nadir Khan, a scion of the old ruling house, with a wide knowledge of the world. Heavy fighting took place. Fortunes varied. Nadir Khan almost gave up his chances as finally lost. But a band of Wazirs from the British side of the border attracted by prospects of loot, joined Nadir and finally seized Kabul in his name and interest. Nadir Khan thus became victor and shortly afterwards, at the wish of the Afghans, Bacha-i-Saqqao was executed with other rebels, and when the year closed Nadir Khan was to all seeming in firm possession of the Kingdom. He despatched members of his family to the principal Afghan Legations in Europe. A Shinwari rising near the exit from the Khyber Pass took place in February 1930, and was repressed with unexpected success and vigour. There followed a serious rebellion in Kohistan, Bacha-i-Saqqao's country. This also was promptly quelled. And thereafter Nadir Shah has ruled without challenge. He has devoted himself to the reorganisation of his Army. England was strictly neutral during the successive stages of the revolution, but promised support to Afghanistan to help her maintain internal peace when she had restored it and this promise was fulfilled by the provision of an interest free loan of £200,000 to King Nadir and by the supply of rifles and ammunition to him. He has given evidence of his friendliness towards Britain and India. He co-operated effectively to prevent tribes on his side of the Frontier joining those on the British side against the Government of India in response to the Congress agitation in the summer of 1930. The trade routes have been re-opened and the new King has again taken up Amanullah's power of reform but in a statesmanlike manner which carries the Mullah's along with him.

British Representative—Sir R. R. Maconochie,
K. B. E., C. I. E.

VII.—TIBET.

Recent British policy in Tibet is really another phase in the long-drawn-out duel between Great Britain and Russia in Central Asia. The earliest efforts to establish communication with that country were not, of course, inspired by this apprehension. When in 1774 Warren Hastings despatched Bogle on a mission to the Tashi-Lama of Shigatse,—the spiritual equal if not superior, of the Dalai Lama of Lhasa—his desire was to establish facilities for trade, to open up friendly relations with a Power which was giving us trouble on the frontier, and gradually to pave the way to a good understanding between the two countries. After Warren Hastings' departure from India the subject slept, and the last Englishman to visit Lhasa, until the Younghusband Expedition of 1904, was the unofficial Manning. In 1885, under the inspiration of Colman Macaulay, of the Bengal Civil Service, a further attempt was made to get into touch with the Tibetans, but it was abandoned in deference to the opposition of the Chinese, whose suzerainty over

Tibet was recognised, and to whose view until the war with Japan, British statesmen were inclined to pay excessive deference. But the position on the Tibetan frontier continued to be most unsatisfactory. The Tibetans were aggressive and obstructive, and with a view to putting an end to an intolerable situation, a Convention was negotiated between Great Britain and China in 1890. This laid down the boundary between Sikkim and Tibet, it admitted a British protectorate over Sikkim, and paved the way for arrangements for the conduct of trade across the Sikkim-Tibet frontiers. These supplementary arrangements provided for the opening of a trade mart at Yatung, on the Tibetan side of the frontier, to which British subjects should have the right of free access, and where there should be no restrictions on trade. The agreement proved useless in practice, because the Tibetans refused to recognise it, and despite their established suzerainty, the Chinese Government were unable to secure respect for it.

Russian Intervention.

This was the position when in 1899 Lord Curzon, Viceroy of India, endeavoured to get into direct touch with the Tibetan authorities. Three letters which he addressed to the Dalai Lama were returned unopened, at a time when the Dalai Lama was in direct intercourse with the Tsar of Russia. His emissary was a Siberian Dorjjeff, who had established a remarkable ascendancy in the counsels of the Dalai Lama. After a few years' residence at Lhasa Dorjjeff went to Russia on a confidential mission in 1899. At the end of 1900 he returned to Russia at the head of a Tibetan mission of which the head was officially described in Russia as "the senior Tsanite Khoimba attached to the Dalai Lama of Tibet." This mission arrived at Odessa in October 1900, and was received in audience by the Tsar at Livadia. Dorjjeff returned to Lhasa to report progress, and in 1901 was at St Petersburg with a Tibetan mission, where as bearers of an autograph letter from the Dalai Lama they were received by the Tsar at Peterhoff. They were escorted home through Central Asia by a Russian force to which several Intelligence Officers were attached. At the time it was rumoured that Dorjjeff had, on behalf of the Dalai Lama, concluded a treaty with Russia, which virtually placed Tibet under the protectorate of Russia. This rumour was afterwards officially contradicted by the Russian Government.

The Expedition of 1904

In view of these conditions the Government of India, treating the issue of Chinese suzerainty over Tibet as a constitutional fiction, proposed in 1903, to despatch a mission, with an armed escort, to Lhasa to discuss the outstanding questions with the Tibetan authorities on the spot. To this the Home Government could not assent, but agreed, in conjunction with the Chinese Government, to a joint meeting at Khamba Jong, on the Tibetan side of the frontier. Sir Francis Younghusband was the British representative, but after months of delay it was ascertained that the Tibetans had no intention of committing themselves. It was therefore agreed that the mission, with a strong escort, should move to Gyantse. On the way the Tibetans developed marked hostility, and there was fighting at Tuna, and several sharp encounters in and around Gyantse. It was therefore decided that the mission should advance to Lhasa, and on August 3rd, 1904, Lhasa was reached. There Sir Francis Younghusband negotiated a convention by which the Tibetans agreed to respect the Chinese Convention of 1890, to open trade marts at Gyantse, Gartok and Yatung, to pay an indemnity of £500,000 (seventy-five lakhs of rupees), the British to remain in occupation of the Chumbi Valley until this indemnity was paid off at the rate of a lakh of rupees a year. In a separate instrument the Tibetans agreed that the British Trade Agent at Gyantse should have the right to proceed to Lhasa to discuss commercial questions, if necessary.

Home Government intervenes

For reasons which were not apparent at the time, but which have since been made clearer,

the Home Government were unable to accept the full terms of this agreement. The indemnity was reduced from seventy-five lakhs of rupees to twenty-five lakhs, to be paid off in three years, and the occupation of the Chumbi Valley was reduced to that period. The right to despatch the British Trade Agent to Lhasa was withdrawn. Two years later (June 1906) a Convention was concluded between Great Britain and China regulating the position in Tibet. Under this Convention Great Britain agreed neither to annex Tibetan territory, nor to interfere in the internal administration of Tibet. China undertook not to permit any other foreign State to interfere with the territory or internal administration of Tibet. Great Britain was empowered to lay down telegraph lines to connect the trade stations with India, and it was provided that the provisions of the Convention of 1890, and the Trade Regulations of 1893, remained in force. The Chinese Government paid the indemnity in three years, and the Chumbi Valley was evacuated. The only direct result of the Mission was the opening of the three trade marts and the establishment of a British Trade Agent at Gyantse.

Chinese Action.

The sequel to the Anglo-Russian Agreement was dramatic, although it ought not to have been unexpected. On the approach of the Younghusband Mission the Dalai Lama fled to Urga, the sacred city of the Buddhists in Mongolia. He left the internal government of Tibet in confusion, and one of Sir Francis Younghusband's great difficulties was to find Tibetan officials who would undertake the responsibility of signing the Treaty. Now the suzerainty of China over Tibet had been explicitly reaffirmed. It was asserted that she would be held responsible for the foreign relations of Tibet. In the past this suzerainty having been a "constitutional action," it was inevitable that China should take steps to see that she had the power to make her well respected at Lhasa. To this end she proceeded to convert Tibet from a vassal state into a province of China. In 1908 Chao Erh feng, Acting Viceroy in the neighbouring province of Szechuen, was appointed Resident in Tibet. He proceeded gradually to establish his authority, marching through eastern Tibet and treating the people with great severity. Mean time the Dalai Lama, finding his presence at Urga, the seat of another Buddhist Pontiff, irksome, had taken refuge in Si-ning. Thence he proceeded to Peking, where he arrived in 1908, was received by the Court, and despatched to resume his duties at Lhasa. Moving by leisurely stages, he arrived there at Christmas, 1909. But it was soon apparent that the ideas of the Dalai Lama and of the Chinese Government had little in common. The Dalai Lama expected to resume the temporal and spiritual despotism which he had exercised prior to 1904. The Chinese intended to deprive him of all temporal power and preserve him as a spiritual pope. The Tibetans had already been exasperated by the pressure of the Chinese soldiery. The report that a strong Chinese force was moving on Lhasa so alarmed the Dalai Lama that he fled from Lhasa, and by the irony of fate sought a refuge in India. He

was chased to the frontier by Chinese troops, and took up his abode in Darjeeling, whilst Chinese troops overran Tibet.

Later Stages

The British Government, acting on the representations of the Government of India, made strong protests to China against this action. They pointed out that Great Britain, while disclaiming any desire to interfere with the internal administration of Tibet, could not be indifferent to disturbances in the peace of a country which was a neighbour on intimate terms with other neighbouring States on our frontier, especially with Nepal, and pressed that an effective Tibetan Government be maintained. The attitude of the Chinese Government was that no more troops had been sent to Tibet than were necessary for the preservation of order, that China had no intention of converting Tibet into a province, but that being responsible for the good conduct of Tibet, she must be in a position to see that her wishes were respected by the Tibetans. Finally, the Chinese remarked that the Dalai Lama was such an impossible person that they had been compelled again to depose him. Here the matter might have rested, but for the revolution in China. That revolution broke out in Szechuen, and one of the first victims was Chao Erh-feng. Cut off from all support from China, surrounded by a hostile and infuriated populace, the Chinese troops in Tibet were in a hopeless case, they surrendered, and sought escape not through China, but through India, by way of Darjeeling and Calcutta. The Dalai Lama returned to Lhasa, and in 1913, in the House of Lords on July 28, Lord Morley stated the policy of the British Government in relation to these changes. He said the declaration of the President of the Chinese Republic saying that Tibet came within the sphere of Chinese internal administration, and that Tibet was to be regarded as on an equal footing with other provinces of China, was met by a very vigorous protest from the British Government. The Chinese Government subsequently accepted the principle that China is to have no right of active intervention in the internal administration of Tibet, and agreed to the constitution of a conference to discuss the relation of the three countries. This Convention met at Simla when Sir Henry McMahon, Foreign Secretary to the Govern-

ment of India, Mr Ivan Chen, representing China, and Mr Long Chen Shatra, Prime Minister to the Dalai Lama, threshed out these issues. Whilst no official pronouncement has been made on the subject, it is understood that a Convention was initiated in June which recognised the complete autonomy of Tibet proper, with the right of China to maintain a Resident at Lhasa with a suitable guard. A semi-autonomous zone was to be constituted in Eastern Tibet, in which the Chinese position was to be relatively much stronger. But this Convention, it is understood, has not been ratified by the Chinese Government, owing to the difficulty of defining Outer and Inner Tibet, and in 1918 Tibet took the offensive and threw off the last vestiges of Chinese suzerainty. When the Chinese province of Szechuan went over to the South, the Central Government at Peking was unable to finance the frontier forces or to withstand the Tibetan advance, which was directed from Lhasa and appeared to be ably managed. After the Tibetan army had occupied some towns on the confines of the Szechuan marshes, hostilities were suspended and an armistice was concluded.

From what has gone before, it will be seen that the importance which formerly attached to the political condition of Tibet was much less a local than an external question, and was influenced by our relations with Russia and China rather than with our relations with Tibet. Russia having relapsed into a state of considerable confusion, and China having relapsed into a state of absolute confusion these external forces have disappeared, and Tibet no longer looms on the Indian political horizon. The veil has been drawn afresh over Lhasa, and affairs in that country pursue an isolated course, with this considerable difference. The Dalai Lama is now on terms of the greatest cordiality with the Government of India. In 1920 he requested that a British officer should be sent to discuss with him the position in Central Asia brought about by the Revolution in Russia and the collapse of Government in China, and Mr Bell, C. M. G., I. C. S., Political Officer in Sikkim, was deputed for this purpose. In 1922 telephonic communication between Lhasa and India was established.

British Trade Agent, Gyantse and Yatun — Captain A. A. Russell

VIII—THE NORTH-EASTERN FRONTIER.

The position on the northern frontier has been considered as if the British line were contiguous with that of Tibet. This is not so. The real frontier States are Kashmir, Nepal, Sikkim and Bhutan. From Chitral to Gilgit, now the northernmost posts of the Indian Government, to Assam, with the exception of the small wedge between Kashmir and Nepal, where the British district of Kumaon is thrust right up to the confines of Tibet for a distance of nearly fifteen hundred miles there is a narrow strip of native territory between British India and the true frontier. The first of these frontier States is Kashmir. The characteristics of this State are considered under Indian States

(q v), it is almost the only important Native State in India with frontier responsibilities and it worthily discharges them through the agency of its efficient Indian State troops—four regiments of Infantry and two Mountain Batteries, composed mainly of the Rajput Dogras, who make excellent fighting material. One of the most important trade routes with Tibet passes through Kashmir—that through Ladak. Then we come to the long narrow strip of Nepal. This Gurkha State stands in special relation with the British Government. It is for all practical purposes independent, and the British Resident at Khatmandu exercises no influence on the internal administration. The governing

machine in Nepal is also peculiar. The Mahara) Dhira), who comes from the Sesodia Rajput clan, the bluest blood in India, takes no part in the administration. All power vests in the Prime Minister, who occupies a place equivalent to that of the Mayors of the Palace, or the Shoguns of Japan. The present Prime Minister, Sir Chandra Shamsher, has visited England, and has given conspicuous evidence of his attachment to the British Government. Nepal is the main Indian outpost against Tibet or against Chinese aggression through Tibet. The friction between the Chinese and the Nepalese used to be frequent, and in the eighteenth century the Chinese marched an army to the confines of Khatmandu—one of the most remarkable military achievements in the history of Asia. Under the firm rule of the present Prime Minister Nepal has been largely free from internal disturbance, and has been raised to a strong bulwark of India. Nepal is the recruiting ground for the Gurkha Infantry, who form such a splendid part of the fighting arm of the Indian Empire. Beyond Nepal are the smaller States of Bhutan and Sikkim, whose rulers are Mongolian by extraction and Buddhists by religion. In view of Chinese aggressions in Tibet, the Government of India in 1910 strengthened their relations with Bhutan by increasing their subsidy from fifty thousand to a lakh of rupees a year, and taking a guarantee that Bhutan would be guided by them in its foreign relations. Afterwards China was officially notified that Great Britain would protect the rights and interests of these States. At the request of the Nepalese Government a British railway expert was deputed to visit the country and advise on the best means of improving communications with India. As the result of his report the Nepalese Government have decided to construct a light railway from Bhichhakhori to Raxaul. Great success has attended the orders passed by the Nepalese Government abolishing slavery.

Assam and Burma

We then come to the Assam border tribes—the Dasas, the Miris, the Abors and the Mishmis. Excepting the Abors none of these tribes has recently given trouble. The murder of Mr Williamson and Dr Gregorson by the Minyong Abors in 1911 made necessary an expedition to the Dihang valley of the Abor country on the N. E. frontier. A force of 2,500 and about 400

military police was employed from October 1911 to April 1912 in subduing the tribe. After two or three small actions the murderers were delivered up. The cost of the expedition was Rs. 21,00,000. At the same time friendly missions were sent to the Mishmi and Miri countries. Close contact with these forest-clad and leech-infested hills has not encouraged any desire to establish more intimate relations with them. The area occupied by the Nagasares runs northwards from Manipur. The Nagasares, a Tibeto-Burman people, devoted to the practice of head hunting, which is still vigorously prosecuted by the independent tribes. The Chin Hills is a tract of mountainous country to the south of Manipur. The corner of India from the Assam boundary to the northern boundary of the Shan States is for the most part included in the Myitkyina and Bhamo districts of Burma. Over the greater part of this area, a labyrinth of hills in the north, no direct administrative control is at present exercised. It is peopled by the Shans and the Kachins. Civilisation is said to be progressing and steps have been taken to prevent encroachments from the Chinese side. There is a considerable trade with China through Bhamo. On the Eastern frontier of Burma are the Shan States, with an area of fifty thousand square miles and a population of 1,800,000. These States are still administered by the Sawbwas or hereditary chiefs, subject to the guidance of Superintendents and Assistant Superintendents. The Northern Shan Railway to Lashio, opened in 1903, was meant to be a stage in the construction of a direct railway link with China, but this idea has been put aside, for it is seen that there can never be a trade which would justify the heavy expenditure. The Southern Shan States are being developed by railway connection. The five Karenni States lie on the frontier south of the Shan States. South of Karenni the frontier runs between Siam and the Tenasserim Division of Burma. The relations between the Indian Government and the progressive kingdom of Siam are excellent. A notable humanitarian development of recent years is the success of the measures to abolish slavery in the Hukawng Valley. In this remote place in the north-east of Burma a mild system of slavery existed, but in response to the initiative and pressure of British officers they were all freed by April 1920.

Railways to India.

The project of linking Europe and Asia by a railway running eastwards through Asia Minor has fascinated men's minds for generations. The plans suggested have, owing to the British connection with India, always lain in the direction of lines approaching India. More than 40 years ago a Select Committee of the House of Commons sat for two years to consider the question of a Euphrates Valley railway. The Shah of Persia applied to the British Foreign Office for the investment of British capital in Persian railway construction many years before the end of the nineteenth century. A proposal was put forward in 1895 for a line of 1,000 miles from Cairo and Port Said to Kowet, at the head of the Persian Gulf. While these projects were in the air, German enterprise stepped in and made a small beginning by constructing the Anatolian railway system. Its lines start from Scutari, on the southern shore of the Bosphorus, opposite Constantinople, and serve the extreme western end of Asia Minor. And upon this foundation was based the Turkish concession to Germans to build the Baghdad Railway.

Meanwhile, Russia was pushing her railways from various directions into the Central Asian territory running along the northern frontiers of Persia and Afghanistan to the borders of Chinese Turkestan. The construction of a Trans-Persian railway, connecting India, across Persia with the Russian lines between the Black Sea and the Caspian Sea came to the forefront after the conclusion of the historic Anglo-Russian agreement regarding Persia.

The Germans pushed forward their Baghdad railway project with a calculating shrewdness arising from their estimate of the value it would possess in their grand aim to overthrow the British Empire. The outbreak of the great war and the success of the Germans in inveigling Turkey into it saw the final stages of the construction of the railway pressed forward with passionate energy. Thus, before the overthrow of the Turks and Germans in Asia Minor and of the Germans in France the railway was completed and in use from Scutari across Anatolia, over the Taurus Mountains to Aleppo and thence eastward across the Euphrates to a point between Nisibin and Mosul. The Germans had also by that time constructed a line to Baghdad at the eastern end of the route, northwards from Baghdad to a point a considerable distance beyond Samarra.

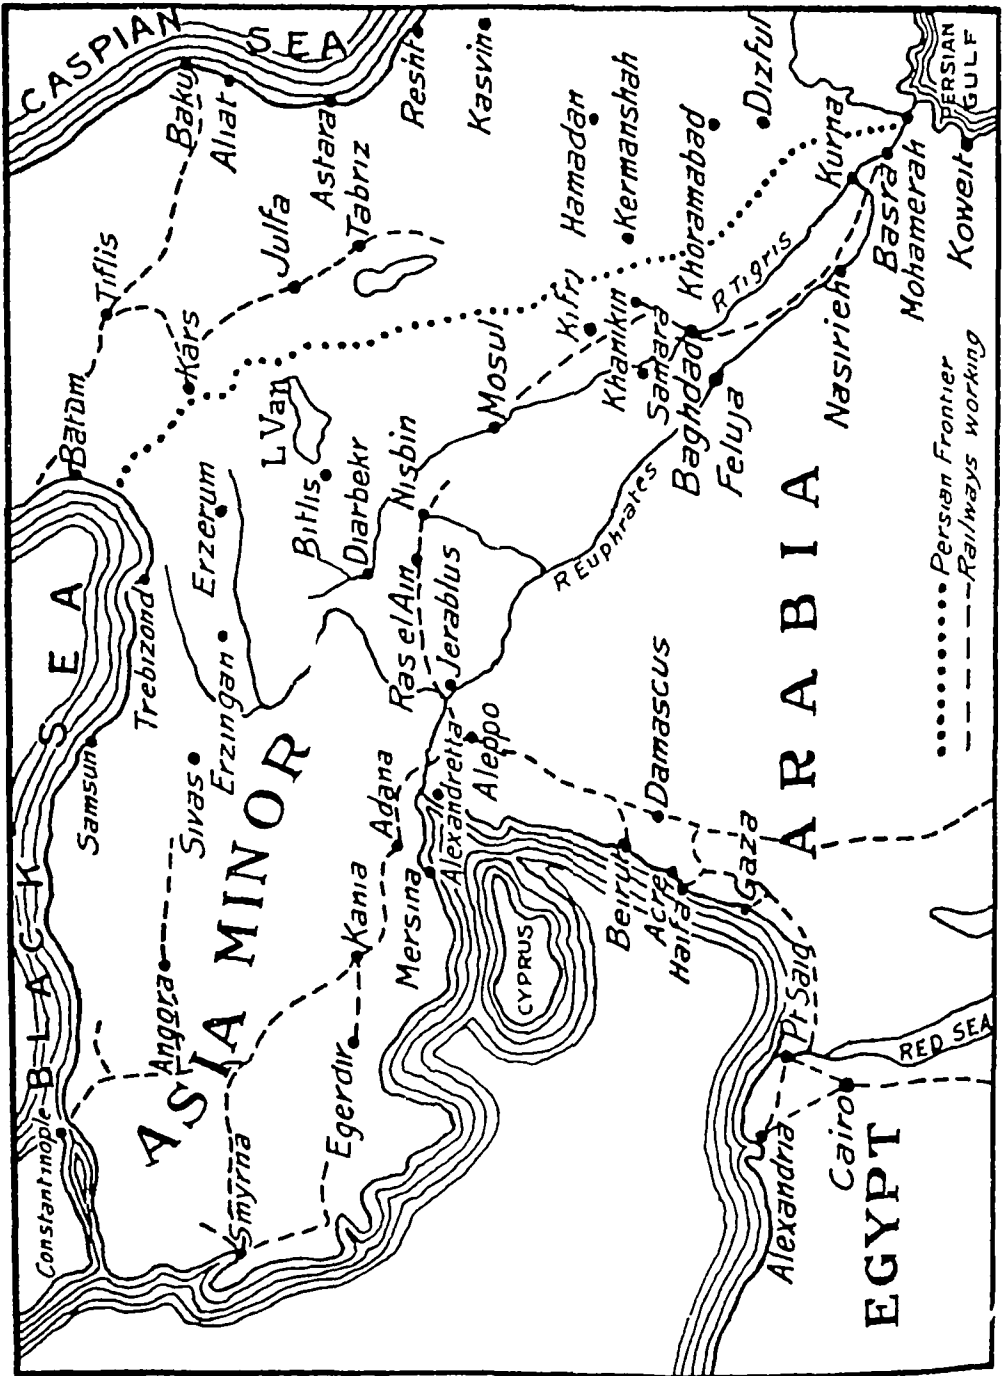

The war compelled the British to undertake considerable railway development northward from Basra, the port at the mouth of the Shat-el-Arab, the broad stream in which the Tigris and Euphrates, after their junction, flow into the head of the Persian Gulf. The system consists of a metre-gauge line from Basra etc Naearieh, on the Euphrates, thence northwards to Baghdad, the line passing a considerable distance westward to Kut-l-Amara, of historic fame. From Baghdad the line runs eastward approximately to the foot of the pass through which the Persian road crosses the frontier of that country. A line branches

off in the neighbourhood of Kifri in the direction of Mosul. A line also runs westward from Baghdad to Fehija, on the Euphrates. With the Turkish Nationalists in control of Anatolia any question of the completion of the through Baghdad line is indefinitely delayed.

The Trans-Persian line to join the Russian Caucasian system and the Indian railways first assumed proportions of practical importance in the winter of 1911. Both the Russian and the Indian railway systems were by then well developed up to the point likely to be the terminus of a Trans-Persian line. The Russian system reached Julfa, on the Russo-Persian frontier in the Caucasus. During the war this line has been carried thence southward into the region east and south east of Lake Urumi. The Indian railway system, on the borderland of India and Persia, was similarly much extended and improved during the war. A new agreement which was negotiated between England and Persia specially provided for British assistance in the development of Persian natural resources and particularly for the extension and improvement of Persian roads suitable for motor traffic but the agreement came to naught.

There remains the possibility of linking the Russian and Indian railway system by way of Afghanistan. The suggestion has often been made in recent years that the Russian line from Merv to Herat, on the northern frontier of Afghanistan, should be linked to the Indian line which proceeds from Quetta to the Afghan border on Chaman. The distance between the railway heads is about 250 miles. But there have always for strategic reasons been strong military objections to the railway across Afghanistan and after the death of the late Amir Habibullah the Afghan Government flatly opposed any suggestion for carrying the Indian or Russian railway system within their borders. What the present Afghan Government think about the matter was not shown up to the time this article was written, but the strange situation in Central Asia and beyond the Indian North-West Frontier does not suggest the early removal of the strategic difficulties. The completion of a broad-gauge line extending the Indian railway system through the Khyber Pass to Landi Khana, at its western extremity, opens a prospect of further possible rail connections with Afghanistan.

Britain's special interests in regard to Persian communications have hitherto primarily been associated with lines running inland from the Persian Gulf, to supersede the old mule routes. Special importance has for many years been attached to schemes for a railway from Mohammerah, at the opening of the Karun Valley, where the Karun River runs into the Shat-el-Arab, just below Basra, northwards into the rich highland country of Western Persia where the valuable West Persian oil wells also lie. Britain has long established special relations with the Karun Valley and has a large trade there.

The Army.

The great sepoy army of India originated in the small establishments of guards, known as peons, enrolled for the protection of the factories of the East India Company, but sepoys were first enlisted and disciplined by the French, who appeared in India in 1665. Before this detachments of soldiers were sent from England to Bombay, and as early as 1665 the first fortified position was occupied by the East India Company at Armagon, near Masulipatam. Madras was acquired in 1640, but in 1654 the garrison of Fort St George consisted of only ten men. In 1661 Bombay was occupied by 400 soldiers, and in 1668 the number was only 285 of whom 93 were English and the rest French, Portuguese and Indians.

After the declaration of war with France in 1744 the forces were considerably increased, but this did not prevent the French capturing Madras in 1746. Following the French example, the English raised considerable sepoy forces and largely increased the military establishments. In 1748 Major Stringer Lawrence landed at Fort St David to command the forces of the Company. The English foothold in India was then precarious and the French under Duplex were contemplating fresh attacks. It became necessary for the English Company to form a larger military establishment. The new commandant at once set about the organisation and discipline of his small force, and the garrison was given a company formation. This was the beginning of the regular Indian Army of which Lawrence subsequently became Commander-in-Chief. In Madras the European companies were developed into the Madras Fusiliers, similar companies in Bengal and Bombay became the 1st Bengal and 1st Bombay Fusiliers. The native infantry were similarly organised by Lawrence and Clive. By degrees Royal Regiments were sent to India, the first being the 39th Foot, which arrived in 1754.

Struggle with the French—From this time for a century or more the army in India was engaged in constant war. After a prolonged war with the French, whom Duplex had by 1750 raised to the position of the leading power in India, the efforts of Stringer Lawrence, Clive, and Eyre Coote completed the downfall of their rivals, and the power of England was established by the battle of Plassey in Bengal, and at Wandewash in Southern India, where the French were finally defeated in 1761. A number of independent States, owing nominal allegiance to the Emperor at Delhi, had risen on the decline of the Mughal Empire, some ruled by Mahratta Princes and others by Musalman adventurers such as Hyder Ali of Mysore. A prolonged struggle ensued with the latter and his son and successor Tipu Sultan, which ended only with the defeat and death of Tipu and the capture of Seringapatam in 1799.

Reorganisation of 1796—In 1796 the Indian armies, which had been organised on the Presidency system, were reorganised. The European troops were 13,000 strong and

the Indians numbered some 67,000, the infantry being generally formed into 75 regiments of two battalions each. In Bengal, regiments were formed by linking existing battalions of ten companies each with large establishments of English officers. The Madras and Bombay armies were at the same time reorganised on similar lines, and cavalry and artillery companies were raised.

In 1798, the Marquis Wellesley arrived as Governor-General firmly imbued with the necessity of destroying the last vestiges of French influence. In pursuance of this policy he reduced Mysore, where Tipu was intriguing with the French, and then turned his attention to the Mahratta States, in which Sindhia had established power over the Mughal Emperor at Delhi by means of a large regular army officered by Europeans under the French adventurer Perron. In campaigns against Sindhia in Hindustan by a British Army under General Lake, and in the Deccan against that prince and the Raja of Berar by an army under General Wellesley, afterwards Duke of Wellington, the power of these Chiefs was broken in the battles of Laswari and Assaye. French influence was finally destroyed, and the Mughal Emperor was released from the domination of the Mahrattas. Subsequently Holkar also was reduced, and British power established on a firm footing.

Mutiny at Vellore—The Indian Army had been from time to time subject to incidents of mutiny which were the precursors of the great cataclysm of 1857. The most serious of these outbreaks occurred at the fort of Vellore in 1806 when the native troops suddenly broke out and killed the majority of the European officers and soldiers quartered in the fort, while the striped flag of the Sultan of Mysore, whose sons were confined there, was raised upon the ramparts. The mutiny was suppressed by Colonel Gillespie, who galloped over from Arcot at the head of the 19th Light Dragoons, blew in the gate of the fort, and destroyed the mutineers. This retribution put a stop to any further outbreaks in the army.

Overseas Expeditions—Several important overseas expeditions were undertaken in the early part of the nineteenth century. Bourbon was taken from the French Ceylon and the Spice Islands were wrested from the Dutch, and Java was conquered in 1811 by a force largely composed of Bengal troops which had volunteered for this service.

In 1814, the Nepal War took place in which the brave Gillespie, who had distinguished himself in Java, was killed when leading the assault on the fort of Kalunga. The Gurkhas were overcome in this war after offering a stout resistance.

In 1817, hostilities again broke out with the Mahrattas, who rose against the British during the progress of operations against the Pindaris. Practically the whole army took the field and all India was turned into a vast camp. The

and their army was taken over by the Crown. At this time the army was organized into three armies, viz. Bengal, Bombay and Madras, the total strength being 65,000 British and 140,000 Indian troops.

Several minor reorganizations took place during the following years, such as the linking of three Regiments together and the raising of Class Regiments and Companies. In 1895 the next large reorganization took place. This was the abolition of the three Armies and the introduction of the command system. Four Commands were formed, viz. Punjab, Bengal, Madras and Bombay.

Lord Kitchener's Scheme—This system lasted until 1904 when under Lord Kitchener's re-organization the Madras Command was abolished and the Army divided into three Commands—the Northern, Eastern and Western, corresponding to the Punjab, Bombay and Bengal Commands.

In 1907, Lord Kitchener considered that consequent on the delegation of administrative powers to Divisional Commanders, retention of such powers by Lieutenant-Generals of Commands led to delay in the despatch of business. The Command system was therefore abolished and India was divided into two Armies—the Northern and Southern—each under a General Officer who was responsible for the command, inspection and training of the troops but was given no administrative responsibilities.

Early in the War both Army Commanders took the field and were not replaced until 1916 and 1917 when both had practically the same functions as their predecessors. It was now realised that administration was being unduly centralised at Army Headquarters and the machinery was becoming clogged with unnecessary details. To secure efficiency at A. H. Q., therefore, a certain measure of decentralisation was carried out in 1918. With the alteration of the designation "Army" to "Command" at this time, a considerable increase was made in the administrative staffs of the two Commands and the General Officers Commanding were given powers to deal with all administrative questions other than those dealing with matters of policy, new principles or war.

The commands were increased to four in 1920, each under a General Officer Commanding-in-Chief.

Present System of Administration

The essential features of the Army, as constructed on its present basis, will be found in "The Army in India and its Evolution," a publication issued in 1924 with the authority of the Government of India.

The Secretary of State, as one of His Majesty's ministers, has a special responsibility and authority in regard to the military administration in India.

The Secretary of State's principal adviser on Indian military affairs is the Secretary in the Military Department of the India Office. The post is filled by a senior officer of the Indian Army with recent Indian experience. The appointment is at present held by Major-General S. F. Muspratt, C.B., C.S.I., C.I.E., D.S.O., who was formerly Deputy Chief of the General Staff in India from December 1929 to September 1931. The Military Secretary

is assisted by one first grade staff officer, selected from the Indian Army in order that he may keep in touch with the current Indian affairs, the Military Secretary is expected to visit India during the tenure of his office. In addition, by a practice which has obtained for many years, a retired Indian Army officer of high rank has a seat upon the Secretary of State's Council.

The superintendence, direction and control of the civil and military government of India are vested in the Governor-General in Council, who is required to pay due obedience to all such orders as he may receive from the Secretary of State. The Viceroy's Executive Council exercise in respect of Army administration the same authority and functions as they exercise in respect of other departments of the Government, in the first phase of the representative institutions conferred upon India by the Montagu-Chelmsford Reform; Scheme, Army expenditure and the direction of military policy have been excluded from the control of the Indian Legislature.

The Commander-in-Chief—The next authority in the chain of administrative arrangements is His Excellency the Commander-in-Chief, who by custom is also the Army Member of the Viceroy's Executive Council. The appointment is held by His Excellency General Sir Philip W. Chetwode, Bart., G.C.B., K.C.M.G., D.S.O., British Service, who succeeded Field Marshal Sir William Birdwood. He is also a member of the Council of State. All the work connected with the administration of the Army, the formulation and execution of the military policy of the Government of India, the responsibility for maintaining every branch of the Army, combatant and non-combatant in a state of efficiency, and the supreme direction of any military operations based upon India are centred in one authority,—the Commander-in-Chief and Army Member. In addition, he administers the Royal Indian Marine and the Royal Air Force in India. The Commander-in-Chief is assisted in the executive side of his administration by 4 Principal Staff Officers, viz., the Chief of the General Staff, the Adjutant-General, the Quartermaster-General and the Master-General of Ordnance.

The Army Department—The Department is administered by a Secretary who, like other Secretaries in the civil departments, is a Secretary to the Government of India as a whole, possessing the constitutional right of access to the Viceroy, he is also for the purposes of Sub-section 4, Section 26 of the Regimental Debts Act, 1893 (56 Vict. C. 5) and the Regulations made thereunder Secretary to the Government of India in the Military Department, and for purposes of the Royal Indian Marine, Secretary to the Government of India in the Marine Department. He also exercises the powers vested in the Army Council by the Geneva Convention Act, 1911, so far as that Act applies to India under the Order in Council No. 1551 of 1915. He is assisted by a Deputy Secretary, a Director of Military Lands and Cantonments, three Assistant Secretaries, (one of whom is also Secretary of the Indian Soldiers' Board).

The Army Department deals with all army service papers, and also the administrative of the Royal Indian Marine and the Royal Air Force in India in so far as questions requiring the orders of the Government of India are concerned. The Army Department Secretariat has no direct relations with commanders of troops or the staffs of formations subordinate to Army Headquarters. It has continuous and intimate relations with Army Headquarters in all administrative matters and is responsible for the administration of Cantonments, the estates of officers and officers and the compilation of the Indian Army List. The Army administration is operated in the Legislature by the Army Member in the Council of State, and by the Army Secretary in the Legislative Assembly.

The Military Council—is composed of the Commander-in-Chief as President, and the following members: namely, The Chief of the General Staff as Vice President, the Adjutant-General, the Quartermaster-General, the Master-General of Ordnance, the Air Officer Commanding Royal Air Force, the Secretary to the Government of India in the Army Department and the Financial Adviser Military Finance representing the Finance Department of the Government of India. It is mainly an advisory body constituted for the purpose of assisting the Commander-in-Chief in the performance of his administrative duties. It has no collective responsibility. It meets when convened by the Commander-in-Chief for the consideration of cases of sufficient importance and difficulty to require examination in conference. The heads of the minor independent branches of Army Headquarters and the directors of technical services attend when required.

Military Territorial Areas

Indian Territory is divided in four commands each under a General Officer Commanding-in-Chief and the Independent District of Burma under a Commander. The details of the organization are given in the table on the next page and it will be seen that Commands comprise 14 districts, 4 Independent Brigade Areas and 31 Brigades and Brigade Areas. The Northern Command, with its headquarters at Murree, coincides roughly with the Punjab and North-West Frontier Province; the Southern Command with headquarters at Poona, coincides roughly with the Bombay and Madras Presidencies and part of the Central Provinces and Rajputana, the Eastern Command, with headquarters at Naini Tal, coincides roughly with the Bengal Presidency and the United Provinces, the Western Command, whose headquarters are at Quetta, covers Sind and Baluchistan.

The General Officer Commanding-in-Chief of each command is responsible for the command, administration, training and general efficiency of the troops stationed within his area, and also for all internal security arrangements.

Apart from the four commands, the only formation directly controlled by Army Headquarters is the Burma district which, mainly because of its geographical situation, cannot conveniently be included in any of the four command areas. The Aden Independent Brigade which was under the administrative control of the Government of India was transferred to the administrative control of His

Majesty's Government from the 1st April 1927.

The distribution of the troops allotted to the commands and districts has been determined by the principle that the striking force must be ready to function in war, commanded and constituted as it is in peace. With this end in view, the Army in India is now regarded as comprising three categories of troops:

- (1) Covering Troops,
- (2) The Field Army,
- (3) Internal Security Troops.

The role of the Covering Force is to deal with minor frontier outbreaks and, in the event of major operations, to form a screen behind which mobilization can proceed undisturbed. The force consists of approximately 12 Infantry Brigades with a due proportion of other arms.

The Field Army consists of 4 Divisions and 4 Cavalry Brigades. The Field Army is India's striking force in a major war.

Army Headquarters

The organization of the Army Headquarters with the Commander in Chief as the head, is founded upon four Principal Staff Officers charged with the administration of—

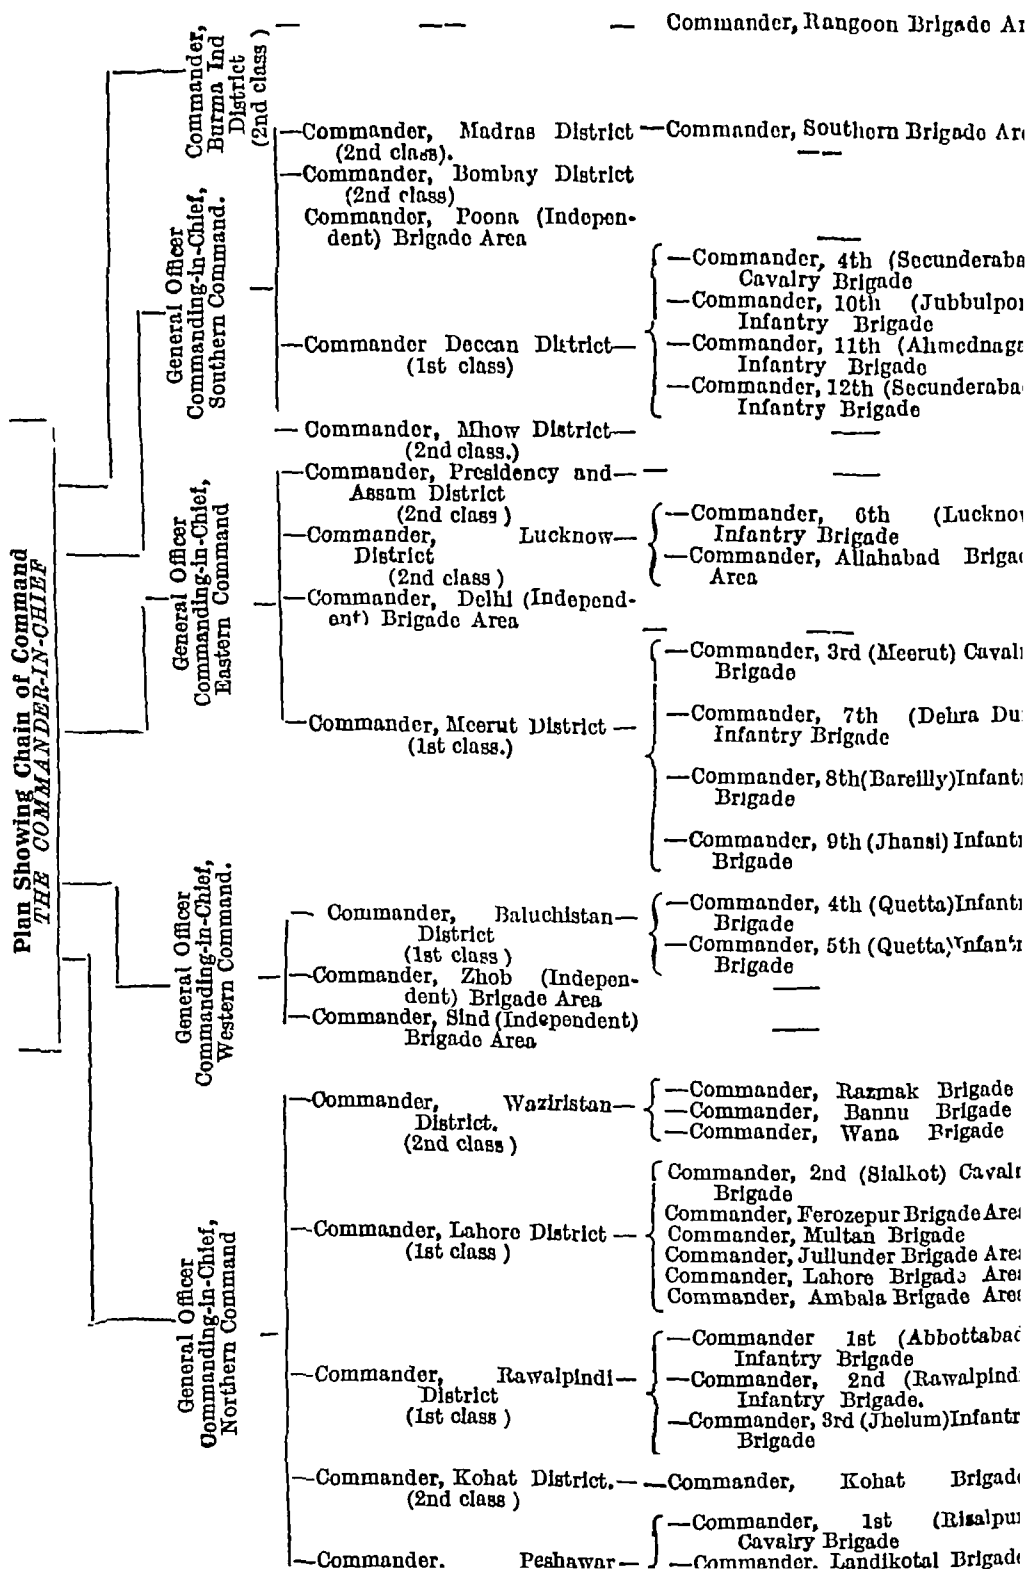

- (a) The General Staff Branch,
- (b) The Adjutant-General's Branch,
- (c) The Quartermaster-General's Branch
- (d) The Master-General of Ordnance Branch.

The General Staff Branch deals with military policy, with plans of operations for the defence of India, with the organization and distribution of the army for internal security and external war, the administration of the General Staff in India, the supervision of the training of the military forces for war, their use in war, the organization and administration of the general staff in India, the education of officers, the supervision of the education of warrant and non-commissioned officers and men of the Army in India, and inter-communication services.

The Adjutant-General's Branch deals with all matters appertaining to the raising, organising and maintenance of the military forces in officers and men, the peace distribution of the army, discipline, pay and pensions, martial, military and international law, medical and sanitary matters affecting the Army in India, personal and ceremonial questions, prisoners of war, recruiting, mobilization and demobilization. The Judge Advocate General forms part of the Branch. The Director of Medical Services in India, who was independent before the war, is now included in the Adjutant-General Branch.

The Quartermaster-General's Branch is concerned with the specification, provision, inspection, maintenance and issue of supplies, i.e., foodstuffs, forage, fuel, etc., and is responsible for the following Services—Transportation, Movements, Quartering, Supply and Transport, Military Farms, Remounts, Veterinary, Garrison and Regimental Institutes. Also for the purchase of grains and of minor supplies not provided in bulk by the authority responsible for production and provision.

The Master General of Ordnance Branch controls the ordnance and clothing factories is concerned with the provision, inspection, maintenance and issue of equipment and ordnance stores, clothing, and necessaries and conducts all matter relating to contracts in respect of food-stuffs, &c., and supply in bulk of general stores and materials. The Master General is also responsible for the designs

inspection and supply of guns, carriages, tools, small arms, machine guns, ammunition, chemical warfare appliances, etc. He also deals with questions regarding patents, royalties and inventions.

There are other branches of Army Headquarters administered by officers who are not classified as Principal Staff Officers, but are not directly subordinate to any of the four Principal Staff Officers.

These are

(1) The Military Secretary, usually a Major-General, who deals with the appointment, promotion and retirement of officers holding the King's Commission, the selection of officers for staff appointments, and the appointment of officers to the Army in India Reserve of Officers. He is also the Secretary of the Selection Board.

(2) The Engineer-in-Chief, also a Major-General and head of the Corps of Royal Engineers in India. He is responsible for Engineer operations and Engineer Services during war and peace, the preparedness for war of the Engineering services. The supply of Engineer stores during war and peace. The construction and maintenance of all military works and the constructional efficiency, accuracy and economy of all projects and designs.

In addition to the above, the Army Headquarters staff includes certain technical advisers, viz., the Major-General, Cavalry, the Major-General, Royal Artillery, the Brigadier, Royal Engineers, the Signal Officer in Chief, the Adviser and Secretary Board of Examiners and the Inspector of Physical Training.

Regular British Forces in India

The British cavalry and British infantry units of the army in India are units of the British service. No individual British service unit is located permanently in India. Units of the British Army are detailed for a tour of foreign service, of which the major part is as a rule spent in India. In the case of British infantry battalions the system is that one battalion of a regiment is normally on home service while the other is overseas. In the case of British cavalry the same arrangement cannot be applied, as one unit only comprises the regiment.

In Great Britain, in peace time, units are maintained at an establishment smaller than that required for war. In India, the peace establishments exceed the war establishments in view of the fact that reserves of British personnel do not exist, and reinforcements must be obtained from Great Britain.

British Cavalry—There are 5 British cavalry regiments in India. The establishment of a British cavalry regiment is 27 officers and 571 other ranks.

British Infantry—The present number of British infantry battalions in India is 45, each with an establishment of 28 officers and 882 other ranks.

In 1921, an important change was made in the composition of a British infantry battalion in India by the inclusion of a proportion of Indian combatant ranks. Battalions had always maintained a quota of Indian followers, but up to 1921 the combatant personnel was entirely British. In 1921, on the abolition of the Machine Gun Corps, eight machine guns were

included in the equipment of a British infantry battalion. This number was increased to twelve in 1927. The peace establishment of Indian combatant personnel is fixed at one Indian officer and 230 Indian other ranks. The Indian platoon, as it is called, is transferred *en bloc* to another British battalion when the battalion to which it was originally attached proceeds on relief out of India.

Royal Artillery—Indians are employed as drivers and artificers in the Royal Horse Artillery and in field and medium batteries, as drivers, gunners and artificers in mountain batteries, and as gunners in heavy batteries.

The peace organisation of the artillery at the present day is as follows:

Royal Horse Artillery—Comprises four independent batteries. Each battery is armed with six 13-pounder guns.

Field (Higher and Lower Establishment) Brigades—Six brigades on the higher establishment, each consisting of headquarters and four batteries. Three brigades on the lower establishment, each consisting of headquarters and four batteries. All brigades (excepting the mechanised one) consist of two batteries, each armed with six 18 pounder guns, and two batteries each with six 4.5" howitzers or three batteries, each armed with six 18 pounder guns, and one battery with six 4.5" howitzers. The mechanised brigade consists of two batteries armed with six 18-pounder guns, and two batteries armed with six 4.5" howitzers.

Field (Reinforcement) Brigade—The reinforcement brigade consists of two double batteries, each armed with six 18-pounder guns, and two 4.5" howitzers.

The 1st Field Brigade and 2nd Divisional Ammunition Column, Royal Artillery are mechanised. Other Royal Artillery units will be mechanised in due course.

Ammunition Columns—Two Divisional ammunition columns are maintained for the artillery of the first and second divisions, and one field ammunition column for the covering force brigade on the frontier. These are all mechanised.

Indian Mountain Brigades—Six brigades, each consisting of headquarters, one British light and three Indian mountain batteries, also one unbrigaded mountain battery and one mountain Artillery Section for Chitral. All batteries are armed, with four 3.7" howitzers. The armaments of the Frontier posts at Kohat, Fort Lockhart, Idak, Wana, Thal, Chaman, Hindubagh, Malakand, Landi Kotal, Shagai, Chakdara and Fort Sandeman are also manned by personnel of Indian Mountain Brigades R. A.

Medium Brigades—Two brigades, each consisting of one horsedrawn and three tractor drawn batteries. Three batteries in each brigade, are armed with 6" howitzers, and one battery with 60-pounder guns.

Heavy Brigade—Headquarters and one battery at Bombay, and one battery at Karachi.

Anti-Aircraft—One battery, located at Bombay. This is armed with eight 3 inch, 20 cwt guns.

Artillery Training Centres—One centre at Muttra, for Indian ranks of R H A and of field and medium batteries and another centre at Ambala for Indian ranks of mountain batteries. These centres were created for the recruitment and training of Indian personnel. There is also a R A Boys' Depot at Bangalore.

Engineer Services

The Engineer-in-Chief—The head of the Corps of Royal Engineers in India is directly responsible to His Excellency the Commander-in-Chief. The Engineer-in-Chief is not a Staff Officer, but the technical adviser of the Commander-in-Chief on all military engineering matters and is responsible for

(1) Engineer operations and engineer services during war and peace

(2) The preparedness for war of the engineering services

(3) The supply of engineer stores during war and peace

(4) The execution and maintenance of all military works

(5) The constructional efficiency, accuracy and economy of all projects and designs submitted by him

The Organisation—The Engineer organisation of the Army consists of two main branches, viz, the "Sappers and Miners" and "Pioneers" and the Military Engineer Services

The composition of the Corps of Sappers and Miners is as follows

Queen Victoria's Own Madras Sappers and Miners, with headquarters at Bangalore. King George's Own Bengal Sappers and Miners, with headquarters at Roorkee. Royal Bombay Sappers and Miners, with headquarters at Kirkee.

The personnel of the Corps consists of Royal Engineer officers, Indian officers holding the Viceroy's commission, a certain number of British warrant and non-commissioned officers, Indian non-commissioned officers and Indian other ranks. Each Corps is commanded by a Lieutenant-Colonel, who is assisted by two Majors, as Superintendents of Park and Instruction, an Adjutant, a Quartermaster, two Subadar-Majors, a Jemadar Adjutant and a Jemadar Quartermaster.

Field Troops are mounted units, trained to accompany cavalry, and are equipped to carry out hasty bridging, demolition and watersupply work. Field Companies are trained to accompany Infantry Divisional Headquarters' Companies are small units containing highly qualified "tradesmen" and are trained to carry out technical work in connection with field workshops. Army Troops Companies are somewhat smaller units than field companies, they are required to carry out work behind divisions, under the orders of Chief Engineers, e.g., heavy bridging work, large water-supplies, electrical and mechanical installation.

The Military Engineer Services control all military works in India, and Burma except in the case of a few small outlying military stations, which are in charge of Public Works Department. They control all works for the Royal Air Force and all major works for the Royal Indian Marine, and they are charged

with all civil works in the North-West Frontier, Province and Baluchistan under the orders, in each of these two areas, of the Chief Commissioner and Agent to the Governor-General. They also control civil works in Bangalore, under the Mysore Government.

The Engineer-in-Chief is assisted by a Deputy Engineer-in-Chief (Works) and a Deputy Engineer-in-Chief (Electrical and Mechanical). In each Command there is a Chief Engineer, while in the Northern Command a Deputy Chief Engineer administers Military and Civil works in the N W F P and is Secretary, P W D, to the Chief Commissioner. The Chief Engineer, Western Command, is the Secretary, P W D, to the Agent to the Governor-General in Baluchistan. Both at Army Headquarters and in Commands there are Staff Officers, R E, and Technical Officers. At the headquarters of each district there is a Commander, Royal Engineers, assisted in certain districts by A C S R E Officers of the Barrack Department are also employed as District Stores Officers. Garrison Engineers are in charge of brigade areas and military stations, their charges being divided into subdivisions under Sub divisional Officers. The sub-divisions are Buildings and Roads, Electrical and Mechanical, and Furniture and Stores. There are sub-overseers for Buildings and Roads and the Barrack Department subordinates in charge of Furniture and Stores are assisted by store-keepers.

Royal Air Force in India

The Royal Air Force in India is controlled by the Commander-in-Chief in India as part of the defence services of the Indian Empire. The Air Force budget is incorporated in the Military Estimates. The Commander of the Air Force, the Air Officer Commanding in India is an Air Marshal whose rank corresponds to that of a Lieutenant-General in the Army.

The headquarters of the Air Force is closely associated with Army Headquarters and is located with the latter at the seat of the Government of India. The Air Officer Commanding has a headquarters staff constituted in six branches, namely, air staff, personnel, technical, stores, medical and chief engineer. The system of staff organisation is similar to the staff system obtaining in the Army. Broadly speaking, the duties assigned to the divisions mentioned are those which are performed by the General Staff Branch, the Adjutant-General's and Military Secretary's branches, the Quartermaster-General's Branch, the Medical Directorate and the Engineer in Chief's branch respectively, of Army Headquarters.

Subordinate formations—The formations subordinate to the Royal Air Force Headquarters are—

- (i) GROUP COMMAND, comprising 2 Wing Stations of two squadrons each, on a station basis
- (ii) Wing Command comprising 2 squadrons not on a station basis
- (iii) Station Commands
- (iv) The Aircraft Depot
- (v) The Aircraft Park
- (vi) Heavy Transport Flight
- (vii) R A F Hill Depot, Lower Topa

present as an abnormal pursuit for the human being. It is carried out under conditions which differ widely from those on the ground. With the growth of aeronautics therefore, it was found necessary to create a separate department of medical science whose functions, broadly stated are to study the effect of flying upon the human constitution both mental and physical, to study also the effects of different forms of illness and physical disability upon flying efficiency and to apply in practical form the results ascertained. The essential object in view is to save life by ensuring, so far as possible that those who fly are physically and psychologically fit to do so. The present establishment of the Royal Air Force Medical Service in India consists of 12 officers and 30 airmen. The Medical Administration is controlled by the Principal Medical Officer of the rank of Group Captain, on the staff of the Air Officer Commanding the R. A. F. in India.

Regular Indian Forces.

Indian Cavalry—The present number of Indian cavalry regiments is 21.

The peace establishment of an Indian cavalry regiment comprises

14 British officers

19 Indian officers

493 Indian non-commissioned officers and men

Indian Infantry and Pioneers—The establishment of the Indian Infantry is constituted as follows

| | Battalions |
|---|------------|
| 19 Infantry regiments consisting of | 100 |
| 3 Pioneer Corps consisting of | 9 |
| 1 Independent Pioneer battalion (The Hazara Pioneers) | 1 |
| 3 Regiments of Sappers and Miners | 7 |
| 10 Gurkha regiments consisting of | 20 |
| 36 | 137 |

The normal strength of an active battalion is—

| | British Officers | Indian Officers | Indian other ranks |
|----------|------------------|-----------------|--------------------|
| Infantry | 12 | 20 | 708 |
| Pioneers | 11 | 15 | 669 |
| Gurkhas | 13 | 23 | 904 |

The strength of an infantry training battalion depends upon the number of battalions forming the regiment. The average is as follows—

British Officers 10, Indian Officers 17, and Indian other ranks 792

The strength of a Corps Headquarters of Pioneers is British Officers 8, Indian Officers 9, and Indian other ranks 306

The strength of the Independent Pioneer Battalion is British Officers 13, Indian Officers 17, and Indian other ranks 869

Reserves for these units have to be sufficient to provide for an actual shortage on mobilisation as well as for the maintenance of the mobilised unit at full strength for the first 8 months after mobilisation

Reserve.—The conditions of the reserve are as follows—

(a) There are two classes in the reserve Class A and Class B. A reservist is eligible to serve in Class A up to 10 years' combined army and reserve service, and in Class B up to 15 years' combined service.

(b) Service in the reserve is compulsory except for Gurkhas, Hazara Pioneers and transferee personnel. On enrolment a man engages to serve at least 7 years in army service, and to serve up to 15 years in combined army and reserve service, if required to do so.

(c) Reservists will be trained for not more than 1 month annually in the case of Class A, and biennially in the case of Class B. During training the reservist will receive the full pay of a serving soldier.

(d) While not under training, the reservist will receive pay as follows—

Class A, Rs 7 per mensem

Class B, Rs 4 per mensem

(e) A reservist will be discharged from the service after 15 years' combined army and reserve service, when he will receive a pension of Rs 3 per mensem, or, if he desires it, a gratuity of Rs 300 in lieu. A reservist who is invalided from the reserve is granted a gratuity varying between 3 and 6 months pay and good conduct pay according to service.

The establishment of reservists is fixed at present as follows—

| | |
|----------------------|---------------|
| Cavalry | 2,943 |
| Artillery | 2,320 |
| Sappers & Miners | 1,678 |
| Indian Signal Corps | 994 |
| Infantry | 22,680 |
| Gurkhas | 2,000 |
| Pioneers | 1,140 |
| Independent Pioneers | 81 |
| Total | 33,845 |

The Indian Signal Corps—The Corps is organised on the same lines as a Sapper and Miner Corps, with a headquarters for recruiting and training personnel, and detached field units for the various army formations. The head of the corps is the Signal Officer-in-Chief, who belongs to the Royal Corps of Signals and is attached to the General Staff Branch at Army Headquarters as a technical adviser on questions connected with signals, and is also responsible for the technical inspection of all signal units. A chief signal officer with similar functions is attached to the headquarters of each Army Command. The British portion of the Corps has now been amalgamated with the Royal Corps of Signals.

The headquarters, termed the Signal Training Centre, India, are located at Jabalpur, and are commanded by a Colonel, assisted by a staff, British and Indian, organised on very much the same lines as the headquarters of a Corps of Sappers and Miners.

treatment and care of cases amongst Indian soldiers and followers of the Indian Army for chronic diseases, such as tuberculosis, leprosy and diabetes

Indian Army Service Corps—The Indian Army Service Corps is the counterpart of the Royal Army Service Corps of the British Army. It has developed from the Commissariat Department of an earlier period, and its immediate predecessor was the Supply and Transport Corps, by which name the service was known up to 1923. The Indian Army Service Corps which is under the control of the Quartermaster-General, is constituted in three main branches, namely (a) Supply (b) Animal transport, and (c) Mechanical Transport. The latter is constituted upon a special basis, which is, generically, a sub-division of the Royal Army Service Corps organisation.

The strength of the establishment is shown by categories in the following table—

SUPPLY

| | |
|----------------------------------|--------------|
| Officers with King's commissions | 184 |
| Indian officers | 68 |
| British other ranks | 355 |
| Civilians | 750 |
| Followers | 2,776 |
| Total | 4,133 |

ANIMAL TRANSPORT

| | |
|----------------------------------|---------------|
| Officers with King's commissions | 74 |
| Indian officers | 150 |
| British other ranks | 53 |
| Indian Civilians | 123 |
| Indian other ranks | 11,271 |
| Followers | 1,620 |
| Total | 13,297 |

There are also 1,576 driver reservists

The total number of mules and camels maintained under the present organisation, including the depots and the detachment in Kashmir, are 13,981 and 4,512 respectively. There are also 183 horses, 443 ponies and 12 bullocks. Wheeled and pack transport are combined. The company on the lower establishment represent the pre-war "cadre," other companies being maintained in peace-time at full war establishment.

MECHANICAL TRANSPORT

| | |
|----------------------------------|--------------|
| Officers with King's commissions | 188 |
| Indian officers | 77 |
| British other ranks | 422 |
| Indian other ranks | 3,508 |
| Indian civilians | 458 |
| Indian artificers | 2,079 |
| Followers | 869 |
| Total | 7,601 |

There are also 2,588 reservists,

The mechanical transport establishment consists of the following—

(a) Field units—

- 11 M T Companies, consisting of 11 headquarters, 30 service sections (higher establishment), 6 service sections (lower establishment) and 10 sections in cadre
- 1 Independent section (higher establishment)
- 6 M T Companies for motor ambulance convoys consisting of 6 headquarters, 1 section (higher establishment), 11 sections (lower establishment)

(b) Maintenance units—

- 4 Heavy Repair shop
- 4 Mobile repair units
- 1 Central M T Stores Depot
- M T technical inspectorate, M T depot for training Indian drivers
- Vehicle reception depot Bannu
- Workshop section

Apart from units and vehicles employed in the conveyance of military stores, the mechanical transport service also provides motor ambulance convoys for hospitals and field medical units, and vehicles for other miscellaneous purposes. The total establishment now consists of 2,008 vehicles with 109 motor cycles.

The mechanical transport was taken over by the Indian Army Service Corps in 1927. At present the officers of the service are mainly drawn from the Royal Army Service Corps since at present there are no facilities in India for training officers in every branch of mechanical transport duties. The establishment of officers includes, however, a certain number of King's commissioned officers belonging to the Indian Army. The British subordinates of the service are drawn entirely from the Royal Army Service Corps.

The Ordnance Services which are under the M G O may be broadly described as the agency whose duty it is to supply the army with munitions of war, such as small arms, guns, ammunition and other equipment of a technical military character, and also, under an arrangement introduced in recent years, with clothing and general stores other than engineering stores. A central disposal organisation is in operation under the control of the Master General of Ordnance to dispose of the Surplus Stores and waste materials of the various services of the Army and the Royal Air Force in India to the best advantage of the State.

Army Remount Department—The following are among the most important duties for the remount service—The provision of animals for the Army in India. The enumeration throughout India of all animals available for transport in war. The animal mobilization of all units, services and departments of the army. A general responsibility for the efficiency of all the animals of the army both in peace and war. The administration of the remount squadron formed

in 1921 as a model for expansion into three squadrons on the Western Fronting operations of a direct character.

The department is organized on lines corresponding to the training system in the United Kingdom. Its composition is as follows: The Remount Directorate at Army Headquarters consisting of one Director and a Deputy Director; 4 Remount officers are attached to each Command Headquarters; 3 Superintendents of Remount Depots; 6 District Remount officers of 1st and 2nd class; and the Ahmednagar and 10 Assistant Remount officers and 8 Veterinary officers.

Veterinary Services in India.—The Veterinary services are responsible for the veterinary care, in peace and war, of animals of British troops in India cavalry and artillery. J. A. S. C. unite the remount department (excluding horse-breeding operations) etc. The veterinary services include: The establishment of Royal Army Veterinary Corps officers serving on a tour of duty in India and those of the continuous service cadre. The establishment of warrant and non-commissioned officers, India Unattached List and veterinary assistant surgeons of the Indian Army Veterinary Corps.

The Indian Army Veterinary Corps is organized in 12 sections, attached in peace time to Class I veterinary hospitals at certain important stations.

Military Farms Department.—This department, which is under the control of the Quartermaster-General consists of two branches:

(i) The military grass farms, which provide fodder for the army.

(ii) The military dairy farms, for the provision of dairy produce for hospitals, troops and families.

Educational Services.—The education of the army is under the control of the Army Educational Corps and of Indian officers, borne supernumerary to the establishment of units of the Indian Army. The establishment is as follows including training schools:—

| British officers | Indian officers | B O | I O | Civilians |
|------------------|-----------------|-----|-----|-----------|
| 55 | 62 | 187 | 67 | 287 |

Terms of service in the Indian army are as follows:—

Cavalry, 7 years' service in army and 8 years in the reserve.

Artillery, 7 years' service in army and 8 in the reserve for gunners and drivers (horse), drivers (mechanical transport) 6 years in army and 9 years in the reserve, and 4 years' service in army for Heavy Artillery personnel.

S. & M. Corps, 7 years' service in army and 8 in the reserve.

Indian Signal Corps, 7 years' service in army and 8 in the reserve.

Infantry and Pioneers (except Gurkhas, the 4th Hazara Pioneers and trans-frontier personnel of the Infantry other than Orakzais), 7 years in army service and 8 years in the reserve.

Gurkhas, Hazara Pioneers and trans-frontier personnel of Infantry, 4 years' service in army.

Indian combatant personnel of British Infantry 6 years in army.

Indian Military establishments of the Indian Army Ordnance Corps, 4 years' service in the army.

Animal transport personnel of the Indian Army Service Corps, drivers of mechanical transport and all combatants of the Army Veterinary Corps 6 years' service in army and 6 in the reserve.

All combatants in the Works Corps, 2 years' service in army.

Bandmen, musicians, trumpeters, drummers, bugler, fliers and pipers, 10 years' service in army.

Except in the case of those enrolled in the Works and of those who are non-combatants, all school masters, clerks, artificers, armourers, engine drivers, fitters, carpenters, tailors and bootmakers, 10 years' service in army.

The period laid down for service in the army is the minimum and may be extended. Combatants may be enrolled direct into the Reserve, in which case there is no minimum period of service, but no one is allowed to serve in the reserve or in any class of the reserve for a longer period than is permitted by the regulations in force.

Frontier Militia and Levy Corps.—These forces are Civil troops, i.e., they are administered and paid by the Civil authorities and not by the Army. They are, however, officered by Officers of the Regular Indian Army. These forces were raised for duty on the North West Frontier and at present consist of the following:—Kurrum Militia, Tochi Scouts, South Waziristan Scouts, Chitral Scouts, Gilgit Scouts, Zhob militia and the Melran Levy Corps.

The Auxiliary Force

After the war, the question of universal training for European British subjects came up for consideration, and it was decided that in India, as elsewhere in the Empire, the adoption of compulsory military service would be undesirable. It was recognised, however, that India needed some adequate auxiliary force, if only on a voluntary basis, that could be trained to a fairly definite standard of efficiency, and in the result, an Act to constitute an Auxiliary Force for service in India was passed in 1920. Under this Act membership is limited to European British subjects, and the liability of members for training and service is clearly defined. Military training is graduated according to age, the more extended training being carried out by the younger members, the older members being obliged to fire a musketry course only. It was laid down that military service should be purely local. As the form of service that would be most suitable varies largely according to localities, the local military authorities, acting in consultation with the advisory committee of the Auxiliary Force area, were given the power of adjusting the form of training to suit local conditions.

The Auxiliary Force comprises all branches of the service, cavalry, artillery, engineers, infantry—in which are included railway bat-

tallions,—machine gun companies, a Signal Company, and the Medical and Veterinary Corps Units of the Auxillary Force are under the command of the local military authority, and the latter has the power of calling them out for service locally in a case of emergency. Their role is to assist in home defence. Training is carried on throughout the year. Pay at a fixed rate is given for each day's training and, on completion of the scheduled period of annual training, every enrolled member of the force is entitled to a certain bonus. Men enrol in the Auxillary Force for an indefinite period. An enrolled person is entitled to claim his discharge on the completion of four years' service or on attaining the age of 45 years. Till then he can only be discharged on the recommendation of the advisory committee of the area.

The duties connected with the Defence Light Sections at Calcutta, Bombay, Karachi and Rangoon are performed by the Field Companies R E (A F I) at those stations, assisted by Indian ranks of Sapper and Miner Units.

Indian Territorial Force.

The Territorial Force is one of the several aspects of the Indianisation of the military services. The force is intended to cater, amongst other things, for the military aspirations of those classes of the population to whom military service has not hitherto been a hereditary profession. It is intended, at the same time, to be a second line to and a source of reinforcement for the regular Indian army. Membership of the force for this latter reason carries with it a liability for something more than purely local service or home defence. It may, in certain circumstances, involve service overseas. The force is the direct successor of the Indian section of the Indian Defence Force created during the war. It has been modelled on the old militia in England. The essence of its scheme of organisation consists in training men by means of annual embodiment for a short period in successive years. By this means Indian Territorial Force units can be given sufficient preliminary training in peace to enable them, after a comparatively short period of intensive training, to take their place by the side of regular units in war.

The Indian Territorial Force consists at present of three main categories, provincial battallions urban units and the university training corps units. The last are recruited from the staff and students of Indian universities. They are trained all the year round by means of weekly drills during terms and a period of 15 days in camp and are equipped with a permanent staff of British instructors. On ceasing to belong to a university, a member of the corps is discharged. In the case of the university training corps units there is no liability to perform the liability to render actual military service. Their purpose is mainly educative, to inculcate discipline and form character. But, incidentally, they are expected to be a source of supply of both officers and men for the provincial and urban units.

The members of the provincial battallions accept the full liability for service which has been mentioned. Seven such battallions were constituted in the first instance. The number is

now eighteen and, though the unit establishment has not been completely filled in all cases, the movement has already achieved a greater degree of success than might have been anticipated at so early a stage. Although for the present the infantry arm only has been created with the addition of the I T F Medical Branch, the force by law may include every other army service.

Men enrol in the provincial battallions for a period of six years, the period being reduced to four years in certain cases. On the completion of the first period they can re-enrol voluntarily for further specified periods. During his first year, every man does preliminary training for one calendar month and during every year he receives one month's periodical training. Members of urban units have only a provincial liability. 4 such units were constituted in 1928 in Bombay, Madras, and the United Provinces, one of which has since been disbanded. Members enrolled for a period of 6 years and train all the year round. During his first year every man does 32 days' preliminary training, and in every subsequent year 16 days' periodical training.

The Indian State Forces.

The Indian State Forces, formerly designated "Imperial Service Troops," consist of the military forces raised and maintained by the Rulers of Indian States at their own expense and for State service. It has been the custom in emergency for State troops to be lent to the Government of India, and the Government of India have on many occasions received military assistance of great value from this source. But the rendering of such aid is entirely at the discretion of the Ruling Princes and Chiefs. Government, on the other hand, provide permanently a staff of British officers, termed "Military Advisers and Assistant Military Advisers," to assist and advise the Ruling Princes in organising and training the troops of their States.

After the war had ended, the Indian States like the Government of India, undertook a military reorganisation, which in a number of cases, has already been carried out. The principal feature of the new arrangements, as adopted more or less generally, is that in future the Indian State Forces should be composed of three categories of troops, namely

Class A—Troops in this class are organised on the present-day Indian Army system and establishments, and, with some exceptions, are armed with the same weapons as corresponding units of the regular Indian Army.

Class B—These troops consist of units which are, in most cases, little inferior in training and discipline to troops of Class A, but they are not organised on present-day Indian Army establishments. They have, as a rule, retained the system of the pre-war formations. Their standard of armament is pitched lower than that of Class A troops.

Class C—These troops consist in the main of militia formations, which are not permanently embodied. The standard of training, discipline and armament, prescribed for this class, is generally lower than the standard prescribed for Class B troops.

The authorized and actual strength of the Indian State Forces on the 1st July 1931 amounted to—

| | Authorized strength | Actual strength |
|----------------------------|---------------------|-----------------|
| Artillery | 1,432 | 1,426 |
| Cavalry | 9,262 | 8,493 |
| Infantry | 28,882 | 24,589 |
| Camel Corps | 466 | 464 |
| Motor Machine Gun Sections | 75 | 61 |
| Sappers | 1,307 | 1,162 |
| Transport Corps | 1,660 | 1,486 |
| Grand total | 43,084 | 37,081 |

Officers.

There are two main categories of officers in the Indian Army, those holding the King's Commission and those holding the Viceroy's Commission. The latter are all Indians, apart from the Gurkha officers of Gurkha battalions, and have a limited status and power of command, both of which are regulated by the Indian Army Act and the rules made thereunder. Until recent years Indians were not eligible for King's Commissions, but a limited number can now obtain such commissions, on entry into the Indian Army through the Royal Military College, Sandhurst and the Royal Military Academy, Woolwich.

King's Commissioned officers for the Indian Army are obtained from two main sources from among the cadets who pass through the Royal Military College, Sandhurst, and by the transfer to the Indian Army of officers belonging to British units. The former is the principal channel of recruitment, the latter being only resorted to when, owing to abnormal wastage or for some other special reason, requirements cannot be completed by means of cadets from Sandhurst. A third source is from among University candidates. When a cadet has qualified at Sandhurst and has received his commission, he becomes, in the first instance, an officer of the Unattached List, and is posted for a period of one year to a British battalion or regiment in India, where he receives a preliminary training in his military duties. At the end of the year, he is posted as a squadron or company officer to a regiment or battalion of the Indian Army. Administrative services and departments of the army draw their officers from combatant units, as it has hitherto been regarded as essential that every officer should, in the first instance, receive a thorough grounding in combatant duties, and acquire at first hand an intimate knowledge of the requirements of the combatant arms.

The promotion in rank of King's commissioned officers of the Indian Army is regulated by a time-scale up to the rank of Lieutenant-Colonel but is subject also to certain professional examinations and tests being successfully passed. The rank of Lieutenant-Colonel is in normal course attained at 26 years' service, promotion beyond this rank is determined by selection.

Indian Officers—One of the most momentous decisions of the Great War, so far as the Indian Army is concerned, was that which rendered Indians eligible to hold the King's commission in the army. King's commissions are obtainable by Indian gentlemen in three ways: (1) By qualifying as a cadet through the Royal Military College, Sandhurst or the Royal Military Academy, Woolwich. Examinations are held twice a year in India for the selection of suitable candidates for admission. (2) By the selection of specially capable and deserving Indian officers or non-commissioned officers of Indian regiments promoted from the ranks or those appointed direct as jemadar. These receive their commissions after training at the Royal Military College or Academy as Cadets and qualifying in the usual way. (3) By the bestowal of honorary King's commissions on Indian officers who have rendered distinguished service, but whose age and lack of education preclude their being granted the full King's commission. The first two avenues of selection mentioned afford full opportunity to the Indian of satisfying a military ambition and of enjoying a military career on terms of absolute equality with the British officer, who, as a general rule, also enters the army by qualifying at Sandhurst or Woolwich. Ten vacancies at Sandhurst and three at Woolwich are reserved annually for Indian cadets.

A further measure adopted by the Government was the establishment of the Prince of Wales' Royal Indian Military College at Dehra Dun, a Government institution for the preliminary education of Indians who desire to qualify for the King's commission in the army through the Royal Military College, Sandhurst or the Royal Military Academy, Woolwich. The arrangements so far made enable a maximum of 70 boys to be in residence at the college at any one time, and the normal course of education is planned to occupy six years. In February 1923, it was decided that eight units of the Indian Army should be completely Indianized. The units selected for Indianization were 7th Light Cavalry, 16th Light Cavalry 2nd Bn., Madras Pioneers, 4/19th Hyderabad Regiment, 5th Royal Battalion, 5th Mahratta Light Infantry, 1/7th Rajput Regiment (Q V O L I), 1/14th Punjab Regiment, 2/1st Punjab Regiment.

Training Institutions.

The following institutions exist in India for the higher training of military personnel and for the education of instructors for units—

Staff College, Quetta
 Senior Officers' School, Belgaum
 School of Artillery, Kakul
 Equestrian School, Sangor
 Small Arms Schools (India), at Pachmarhi and Ahmednagar
 Army School of Physical Training, Ambala
 Army Signal School, Poona
 Royal Tank Corps School, Ahmednagar
 Army School of Education, Belgaum
 Army School of Cookery, Poona
 Army Veterinary Schools, Ambala and Poona
 Indian Army Service Corps Training Establishment, Rawalpindi
 Indian Army Ordnance Corps School of Instruction, Kirkee

The object of these Schools is to ensure to all the units throughout the army a constant supply of officers, warrant officers, non-commissioned officers and men, provided with a thorough up-to-date knowledge of various technical subjects, and with the ability to pass on this knowledge.

Following the procedure adopted at Home, the Small Arm and Machine Gun Schools were amalgamated in February 1927. Instruction in the rifle, light gun, etc., is carried out at Pachmarhi and in the machine gun at Ahmednagar.

The King George's Royal Indian Military Schools at Shelum, Jullundur and Ajmere, and the Kitchener College, Nowgong, also exist for the education of the sons of Indian soldiers, with a view to their finding a career in the Indian Army. The latter at present assists in the training of Indian N C Os for promotion to Viceroy's Commission. The Prince of Wales's Royal Indian Military College at Dehra Dun exists for the preliminary education of Indians who desire to qualify for the King's Commission in the Army through Sandhurst or Woolwich.

Army in India Reserve of Officers—Previous to the Great War there existed what was called the Indian Army Reserve of Officers, a body of trained officers available to replace casualties in the Indian Army. The war proved that for many reasons this reserve did not fully meet requirements and in 1922 the Army in India Reserve of Officers was constituted.

The revised Regulations for the A I R O published in 1926 provide that the following gentlemen may be granted commissions in the Reserve—

- (1) Officers who having held King's commissions and retired from H M's forces
- (2) Officials, other than Military officers, serving under the Government of India or a local Government
- (3) Private gentlemen residing in India, possessing the requisite qualifications and previous training

The Reserve comprises each arm and branch of the Army and the officers are posted to definite branches and units.

All officers are required to undergo periodical training up to a maximum of 30 days a year and receive pay and allowances admissible to regular officers of the same rank and arm of the service, during training.

Members of the Auxiliary Force, India, may become "officers designate" for the grant of commissions in the A I R O, upon the calling to army service of that reserve.

Officers and officers designate receive Rs 200 annually as a retaining fee, and an outfit allowance of Rs 400, on joining.

The strength of the Reserve on the 1st January 1932 was 1,053.

Recruitment for the Reserve has been extended to Ceylon, the number to be commissioned in Ceylon being limited to 50.

The Fighting Races—The fighting classes that contribute to the composition of the Indian Army have hitherto been drawn mainly from the north of India, but the experiences

of the great war have caused some modifications in the opinions previously held as to the relative value of these and other fighting men. The numbers of the various castes and tribes enlisted in the Army have since the war undergone fluctuations, and it is not possible at present to give exact information as to their proportions. Previous to the war the Sikhs contributed very large numbers both to the cavalry and infantry, and the contribution of the Gurkhas was also large. The Sikhs, who inhabit the Punjab originated in a sect founded near Lahore by a peasant in the early part of the sixteenth century and in the course of a hundred years grew into a formidable militant power. Muhammadans of various races contribute a still larger proportion to both the cavalry and infantry. These are drawn both from the north and the south of India, as well as from beyond the Frontier. They are all excellent fighting men, hardy and warlike, who have furnished soldiers to all the great powers of India for many hundreds of years. As cavalry the Muhammadans are perhaps unequalled by any other race in the East, being good horsemen and expert men-at-arms.

Next in point of numbers are the Gurkhas of Nepal, of whom there are twenty complete battalions, which during the war were considerably increased. As fighters in the hills they are unsurpassed even by the Pathans in the North-West Frontier, but the Garhwals and Kumaonis are equally good mountaineers.

The professional military caste of India from time immemorial has been the Rajput, inhabiting not only Rajputana but the United Provinces and Oudh. Of fine physique and martial bearing, these warriors of Hindustan formed the backbone of the old Bengal Army, and have sustained the English flag in every campaign in the East. Their high caste and consequent prejudices in no respect interfere with their martial instincts and efficiency in war. They furnish many battalions. The Garhwals are Hill Rajputs, good and gallant soldiers, who have proved themselves equal to any other troops on the field of battle and have established an imperishable record in the war both in Europe and in the East. The two battalions which existed in 1914 have since been increased to four. The Jats are a fine and warlike race of Hindus found in the Delhi and Rohtak districts and adjoining territory. It was these people who held out so bravely at Bharatpur and repelled Lord Lake's army in 1805. They have proved themselves good soldiers on the battlefields of Europe. Dogras are good and steady soldiers found in the hilly districts of the Punjab. They fought well in Flanders and in Mesopotamia.

Among those who have rendered signal and gallant service in the war are the Mahrattas of the Deccan and the Konkan, who have revived the reputation held by their race in the days of Shivaji, the founder of the Mahratta Empire. It is probable that their proved efficiency in war will lead to their recruitment in larger numbers in future.

In addition to the castes that have been mentioned, other caste men from the south and other parts of India have filled the ranks of the

Pioneer regiments and Sappers and Miners, and done their duty well in every campaign in which they have been engaged

During the war the Victoria Cross was awarded for conspicuous gallantry to 2 Indian officers, 4 non commissioned officers and 6 other ranks of the Indian Army

The Military Cross was awarded to 96 Indian Officers for distinguished service rendered during the Great War and to 3 Indian Officers for service in Waziristan

A large number of Indian Officers and men were also granted Foreign decorations

Summary of India's Effort in the War — In a despatch by the Commander-in-Chief published in July, 1919, the whole operations of the Indian Army during the war are review

ed His Excellency gives in it the following figures showing the extent of India's contribution in terms of men. On the outbreak of war, the combatant strength of the Indian Army, including reservists, was 194,000 Indian ranks, enlistments during the war for all branches of the service amounted to 791,000, making a total combatant contribution of 985,000. Of this number, 552,000 were sent overseas. As regards non-combatants, the pre-war strength was 45,000, an additional 427,000 were enrolled during the war and 391,000 were sent overseas. The total contribution of Indian personnel has thus been 1,457,000, of whom 943,000 have served overseas. Casualties amounted to 106,594, which include 36,696 deaths from all causes. The number of animals sent overseas was 175,000.

Budget Expenditure on National Defence

A part of the Defence expenditure on the Indian Budget is incurred in England, the nature of such expenditure being indicated in the detailed Tables of Army, Marine and Military Engineer Services expenditure. This expenditure is met by transfer of funds from India. From the 1st April 1920 to the 31st March 1927, the accounts were prepared on the basis of the rate of 2s per rupee for the conversion of English sterling transaction into rupees. From the 1st April 1927 the accounts

are being prepared at the standard rate of 1s 6d per rupee.

As a rule, the receipts collected by the various departments are not set off against expenditure as appropriations in aid, but are shown separately on the receipts side of the budget. This is especially the case with the receipts of the Military Departments, which amount to considerable sums.

The Provincial Governments incur no expenditure for Military purposes.

SUMMARY OF DEFENCE EXPENDITURE (Gross)

THE EAST INDIES SQUADRON.

Since 1903 a squadron of the Royal Navy, known as the East Indies Squadron, has been maintained in Indian waters. It has naturally varied in strength from time to time, and of late years in particular there have been several changes in its composition, the most recent being in the direction of strengthening it, owing to the disappearance of strength in the other squadrons of the Eastern Fleet. In 1903 the squadron consisted of one second class and three smaller cruisers and four sloops or gunboats. In 1906, when the policy of withdrawal from Eastern waters was inaugurated, it consisted of two second class and two third class cruisers, and remained at this strength until 1910 when one second class cruiser was withdrawn and two smaller vessels substituted and three cruisers were lent from

the Mediterranean to assist in the suppression of the arms traffic in the Gulf. By 1913 the position of the East Indies squadron had considerably improved. The battleship *Swiftsure* had taken the place of the second class cruiser which had been flagship, and a modern second class cruiser replaced the *Perseus*.

The Squadron in 1931—The composition of the Squadron (Fourth Cruiser Squadron) is as follows—

"*Effingham*" (Flag), Cruiser 9,770 tons, "*Emerald*," Cruiser, 7,550 tons, "*Enterprise*," Cruiser 7,550 Sloops "*Folkestone*," "*Hastings*," "*Fowey*," "*Shoreham*" and "*Bideford*," Special Service vessel "*Triad*" (Senior Naval Officer, Persian Gulf) Survey Ship "*Ormonde*"

The proportion of contributions from the overseas Dominions towards naval expenditure is shown in the following table issued with the last Navy Estimates that gave details—

| Received from | Nature of Service | Total |
|--|---|---------|
| | | £ |
| India | Maintenance of His Majesty's Ships in Indian Waters . | 100,000 |
| | Indian Troop Service (on account of work performed by the Admiralty) | 3,400 |
| | Repayment on account of services rendered by His Majesty's Ships engaged in the suppression of the Arms Traffic in the Persian Gulf | 61,000 |
| Australian Commonwealth Dominion of Canada | Contributions on account of liability for Retired Pay of Officers and Pensions of Men lent from the Royal Navy | 10,800 |
| Australian Commonwealth Do | Survey of the N W Coast of Australia | 7,500 |
| Dominion of New Zealand | Maintenance of an Australasian Squadron and of a branch of the Royal Navy Reserve | 41,600 |
| | Maintenance of an Australasian Squadron and of the Imperial Navy generally, also of a branch of the Royal Naval Reserve | 100,000 |
| Union of South Africa | General maintenance of the Navy | 85,000 |
| Newfoundland | Maintenance of a branch of the Royal Naval Reserve | 3,000 |
| | Total | 415,800 |

India's Marine Expenditure

Since 1869 India has paid a contribution of varying amounts to the Imperial Government in consideration of services performed by the Royal Navy. Under existing arrangements which date from 1896-7, the subsidy of £100,000 a year is paid for the upkeep of certain ships of the East India Squadron, which may not be employed beyond prescribed limits, except with the consent of the Government of India. The expenditure amounts to nearly £400,000 annually.

The question of a new distribution of the burden of the cost of Imperial Naval defence was discussed at the Imperial Conference in London in October—November 1926. The matter appeared to be one on which the delegates could form no new decision without further consultations in their respective capitals and no resolution was passed.

The Royal Indian Marine has been reorganised so as to form the nucleus of an Indian Navy. The R I M Ship "*Dalhousie*" has been reconditioned for use as a Depot Ship. Three of the R I M Ships have been reconditioned for use as sloops of war in the P I M. A fourth sloop for the reorganised service is under construction in England.

ROYAL INDIAN MARINE

The Royal Indian Marine (The Sea Service under the Government of India) traces its origin so far back as 1612 when the East India Company stationed at Surat found that it was necessary to provide themselves with armed vessels to protect their commerce and settlements from the Dutch or Portuguese and from the pirates which infested the Indian coasts. The first two ships, the Dragon and Hoscander (or Oslander), were despatched from England in 1612 under a Captain Bosc, and since those days under slightly varying titles and of various strengths the Government in India have always maintained a sea service.

The periods and titles have been as follows —

| | |
|---------------------|-----------|
| Hon E I Co's Marine | 1612—1686 |
| Bombay | 1686—1830 |
| Indian Navy | 1830—1861 |
| Bombay Marine | 1861—1877 |
| H M Indian Marine | 1877—1892 |

Royal Indian Marine 1892, Present day

The Marine has always been most closely connected with Bombay, and in 1608 when the E India Co took over Bombay, Captain Young of the Marine was appointed Deputy Governor. From then until 1877 the Marine was under the Government of Bombay, and although from that date all the Marine Establishments were amalgamated into an Imperial Marine under the Government of India, Bombay has continued to be the headquarters and the official residence of the Director.

War Service of the Marine

1612-1717 Continuous wars against Dutch Portuguese and Pirates for supremacy of West Coast of India 1744 War with France, capture of Chandernagore, and French ship Indienne In 1756 Capture of Castle of Gheria 1774 Mahratta War, capture of Tannah Latter part of the eighteenth century, war with French and Dutch, Capture of Pondicherry, Trincomalee, Jafnapatam, Colombo, etc 1801 Egyptian campaign under Sir Ralph Abercrombie 1803 War with France 1810 Taking of Mauritius and capture of French ship in Port Louis Early part of the nineteenth century suppression of Jowasmi Pirates in the Persian Gulf 1811 Conquest of Tara 1813 Expedition against Sultan of Sambar 1817-18 Mahratta War, capture of Forts at Severndroog 1819 Expedition to exterminate piracy in the Persian Gulf 1820 Capture of Mocha 1821 Expedition against the Beni-koo-Ali Arabs 1824-26 First Burma War 1827 Blockade of Berbera and Somali Coast 1835 Defeat of Beni Yas Pirater. 1838 Expedition to Afghanistan and capture of Karachi 1838 Capture of Aden 1840-42 War in China 1843 Sindh War Battle of Meanee, capture of Hyderabad 1845-46 Maori war in New Zealand 1848-49 War in Punjab, siege of Mooltan 1852 Second Burma War, Capture of Rangoon, Martaban, Basseln, Prome and Pegu 1855 Persian War, capture of Bushire, Muhammerah and Ahwaz 1856-57 War in China 1857-59 The Indian Mutiny 1859 Capture of the Island of Beyt 1860 China War, Canton, Taku Forts, Fatshan and Peking 1871 Abyss-

sinian War 1882 Egyptian Campaign 1885 Egyptian Campaign 1886 Third Burma War 1889 Chin-Lohai Expedition 1890 Suakin Expedition 1897 Expedition to Intirbe, Mombassa in Africa 1899-1902 S African War 1900-01 Boxer Rebellion in China relief of Peking, 1902-04 Somaliland Expedition, Suppression of Arms Traffic operations, Persian Gulf, 1912-14

During the War 1914-1918 Royal Indian Marine Officers were employed on many and various duties. Royal Indian Marine Ships "DURIEUX," "HAI DINH," "NORTHBROOK," "JAWHRI," "DALHOUSIE" and "MINTO" had their guns mounted and served as Auxiliary Cruisers. Officers also served in the Royal Navy in the Grand Fleet, Mediterranean North Sea, North Red Sea and Caspian Sea Fleets.

In addition to transport duties in Indian Ports, Officers were sent to Marseilles, East Africa and Egypt for such duties, and on the entry of Turkey into the War were employed on duties towing and manning River Craft and Barges to and in Mesopotamia, and it was necessary to enlist a number of Temporary Officers, Warrant Officers and men to the numbers of approximately 240 60 and 2,000 respectively for these and other duties.

When the War Office assumed full control of operations in Mesopotamia a large number of Regular and Temporary Officers and men were seconded to the Royal Engineers and General Service respectively for duties in the Inland Water Transport which controlled all River Transport work in that country, and these officers held many important executive appointments in that unit.

The movements of all sea transports between India and the various theatres of War were controlled by Marine Officers.

Trawlers were built in the Bombay and Calcutta Dockyards and mine sweeping operations were carried out with these and launches off Bombay and elsewhere, the trawlers were also used for towing duties.

Retired Royal Indian Marine Officers were employed on naval transport duties in England and France, and also in very responsible positions with the Inland Water Transport in France.

Service in the War 1914-18—The Royal Indian Marine, though a small Service compared with the Army and Navy, played a very active and conspicuous part in the European War. These are set out in detail in the Indian Year Book for 1922 and earlier editions (*q v pp 202 et seq*).

Reorganisation Schemes—After the War the Government of India asked Admiral of the Fleet Lord Jellicoe, who was visiting India, to draw up a scheme for the reorganisation of the Service. His valuable suggestions were unfortunately too ambitious for Indian finances and could not be accepted.

Shortly afterwards the Esher Committee arrived in India to report on the Indian Army, and although the R I M was not included in

Principal Officer, Mercantile Marine Department, Bombay District, Nautical Surveyor, Mercantile Marine Department, Bombay District, Principal Engineer and Ship Surveyor, 2nd, 3rd and 4th Engineers and Ship Surveyors

CALCUTTA

Principal Officer Mercantile Marine Department, Calcutta District, Nautical Surveyor, Mercantile Marine Department, Calcutta District, Principal Engineer and Ship Surveyor, 2nd, 3rd, 4th and 5th Engineers and Ship Surveyors

MADRAS

Principal Officer, Mercantile Marine Department, Madras District, and Engineer and Ship Surveyor

BURMA

Principal Officer Mercantile Marine Department, Rangoon District, Nautical Surveyor, Mercantile Marine Department, Rangoon District, and Engineer and Ship Surveyor, Rangoon

KARACHI

Principal Officer, Mercantile Marine Department, Karachi District

ADEN

Principal Officer, Mercantile Marine Department, Aden District

CHITTAGONG

Nautical Surveyor and Engineer and Ship-Surveyor

PORT BLAIR

Engineer and Harbour Master

Agriculture.

As crops depend on the existence of plant food and moisture in the soil, so the character of the agriculture of a country depends largely on its soil and climate. It is true that geographical situation, the character of the people and other considerations have their influence which is not inconsiderable, but the limitations imposed by the nature of the soil and above all by the climate tend to the production of a certain class of agriculture under a certain given set of conditions.

The climate of India, while varying to some extent in degree, in most respects is remarkably similar in character throughout the country. The main factors in common are the monsoon, the dry winter and early summer months, and the intense heat from March till October. These have the effect of dividing the year into two agricultural seasons, the *Kharif* or Monsoon and the *Rabi* or Winter Season each bearing its own distinctive crops. Between early June and October abundant rains fall over the greater part of the continent while the winter months are generally dry, although North-Western India benefits from showers in December and January. The south of the Peninsula, and especially the Madras Presidency, however, is more truly tropical especially in the south, and depends mainly on the N.E. monsoon, here the two crop seasons can hardly be said to exist. The distribution of the rainfall throughout the year, which is of considerable importance to agriculture, is none too favourable, but is not quite so bad as is often represented. The rainfall is greatest at what would otherwise be the hottest time of the year, viz., mid-summer, and when it is most needed. It should be remembered that in a hot country intermittent showers are practically valueless as evaporation is very rapid. Heavy rainfall concentrated in a limited period, though it has its drawbacks and demands a special system of agriculture, has many advantages in hot countries.

Soils—Four main soil types can be recognised in India, viz., (1) the Red soils derived from rocks of the Archæan system which characterise Madras, Mysore and the South-East of Bombay and extend through the East of Hyderabad and the Central Provinces to Orissa, Chota Nagpur and the South of Bengal. (2) The black cotton or *regur* soils which overlie the Deccan trap and cover the greater part of Bombay, Berar and the Western parts of the Central Provinces and Hyderabad with extensions into Central India and Bundelkhand. The Madras *regur* soils though less typical are also important. (3) The great alluvial plains, agriculturally the most important tract in India as well as the most extensive, mainly the Indo Gangetic Plain embracing Sind, northern Rajputana, most of the Punjab, the plains of the United Provinces, most of Bihar and Bengal and half of Assam. (4) The laterite soils which form a belt round the Peninsula and extend through East Bengal into Assam and Burmah.

The great alluvial plains are characterised by ease of cultivation and rapid response to irrigation and manuring, broadly speaking there

are few soils in the world more suited to intensive agriculture so long as the water supply is assured. The other soils are less tractable and call for greater skill in management and are less adapted to small holdings, of these the *regur* soils are the most valuable.

Agricultural Capital and Equipment—India is a country of small holdings and the commonest type is that which can be cultivated with one pair of bullocks under local conditions. Large holdings are practically unknown, and are mainly confined to the planting industries. Farming is carried on with a minimum of capital, there being practically no outlay on fencing buildings, or implements. Many causes militate against the accumulation of capital and agricultural indebtedness is heavy and the interest on loans high. Great progress has been made by the co-operative credit movement during the last twenty years. There are now 73,000 Agricultural Credit Societies in British India with some 2,400,000 members and a working capital exceeding 26½ crores of rupees. Not only have these societies brought cheaper credit to the cultivator but they have striven to inculcate the lesson that cheap credit is only valuable if applied to productive purposes and have encouraged thrift.

Equipment—Practically all cultivation is done by bullocks and the capacity of these as draught animals varies from district to district as well as depending on the cultivator's individual circumstances. The best types in common use are capable of handling what would be considered as light single horse implements in Europe. In those tracts where irrigation is from wells, bullocks are also used for drawing water, they also drive the sugarcane crusher and tread out the grain at harvest. His implements being few, a cultivator's bullocks form by far the most important item of his movable property.

Implements are made of wood although ploughs are usually tipped with iron points, and there is a great similarity in their shape and general design. The introduction of iron ploughs has made much progress in the last few years and many hundred thousands are now in use. The levelling beam is used throughout the greater part of the country in preference to the harrow and roller, and throughout Northern India the plough and the levelling beam are the only implements possessed by the ordinary cultivator.

On black cotton soils the commonest implement is the *balhar*, a simple form of broad shape plough. Seed drills and drill hoes are in use in parts of Bombay and Madras but throughout the greater part of the country the seed is either broadcasted or ploughed in. Hand implements consist of various sizes of hoes, the best known of which are the *lodal* or spade with a blade set at an angle towards the labourer who does not use his feet in digging, and the *khurpi* or small hand hoe. Of harvesting machinery there is none, grain is separated either by treading out with oxen or beating out by hand, and winnowing by the agency of the wind. Simple reapers and winnowers are slowly coming into use in the wheat tracts. The larger iron ploughs are now a familiar sight in certain black soil areas and the use of other improved implements is growing.

Even motor tractor ploughs are now estimated to number hundreds and a few steam ploughing sets are at work reclaiming land from deep-rooted grasses.

Cultivation—Cultivation at its best is distinctly good but in the greater part of the country there is plenty of room for improvement. As in any other country success in agriculture varies greatly with the character of the people, depending largely as it does on thrift and industry. In most places considering the large population cultivation is none too good. Agriculture suffers through lack of organization and equipment. Two economic factors tend to keep down the standard of cultivation. Holdings are not only small but fragmented and the Indian laws of inheritance both perpetuate and intensify this evil. Very definite attempts are now being made in several provinces and states to amend matters and consolidate holdings but the process is necessarily slow. Secondly, cultivators rarely live on or near to their holdings but congregate in villages. The need for mutual protection is less than formerly and though tradition dies hard sub-villages are now springing up in many places. For *Rabi* crops which demand a fine seed-bed preparatory tillage consists mainly of repeated treatments with the indigenous plough (or on black soils the *Bakhar*) which serves the purpose of plough, harrow and cultivator, combined with applications of the levelling beam. Crude as these implements are, they produce in Northern India a surface mulch and moist sub-soil which is the aim of all dry-farming operations. For *Kharif* crops the preparation is much less thorough as it is essential to sow without delay. Interculture is usually inadequate. Manure is generally applied to more valuable crops like sugarcane, cotton, tobacco, etc. Seeding is either done broadcast or by drilling behind a wooden plough or drill. Thinning and spacing are not nearly so well done as they might be, and intercultivation is generally too superficial. Harvesting is done by sickle where the crops are cut whole, and there is little waste involved. At their best the ryot's methods are not ineffective but being uneconomical of both cattle and man-power, they are seldom carried out fully. The use of simple improved implements and of machines which lessen the strain on the bullocks, which the agricultural department is steadily fostering, is an important factor in raising the general standard of agriculture.

Irrigation—The concentration of the principal rainfall in less than a third of the year, which is not the sowing period of the *rabi* crops, places a very definite limit of the yield which can be obtained from the principal cereal crops. Some other crops, e.g., Sugarcane, can hardly be grown indeed without supplementary watering. With adequate irrigation the yield from the principal grain crops in Northern India is doubled even in areas where the monsoon is generous, whilst in the great canal colonies barren desert has become fertile land. The Indian canal system is by far the largest in the world and already irrigates 31 million acres of crops annually. The area will be increased shortly to 37 million acres when works under construction are completed and, when the various new canals are developed fully, will

probably reach 40 million acres. The protective effect of the canals in many areas is no less important than the enhanced yield. Protective irrigation works have made agriculture stable instead of precarious in many districts. The Indian canals are of two types—perennial and inundation—and the trend of irrigation practice is to replace the latter by the former wherever possible. The great perennial canals in the North of India draw their supply from snow-fed rivers, the inundation canals run only when the rivers rise with the melting of the snow in April-May and must close when supplies fall at the end of the monsoon. Other canals depend for their supply during the dry part of the year on water stored behind great dams thrown across suitable gorges and are in consequence less dependable than the larger snow-fed systems. Water rates are levied on the area of irrigated crops matured so that Government bears part of the risk of failure of crops. Different rates are charged for different crops and vary somewhat in different parts of India, rates are also lower when the water has to be lifted than when flow irrigation is given.

At the present time the Bombay Presidency possesses the most spectacular irrigation schemes in India—if not in the world. The Lloyd Dam at Bhatgar, 190 feet high, has the greatest cubical contents of any masonry wall in the world, the Wilson Dam at Bhandardara, impounding 272 feet of water, is far and away the highest dam in India, whilst the Sukkur Barrage in Sind across the Indus irrigates a desert whose area far exceeds that of any other scheme conceived by engineers.

Irrigation from Wells—About one quarter of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet. Their numbers have greatly increased in recent years largely through Government advances for their construction. The recurring cost of this form of irrigation has, however, greatly increased owing to the high price of draught cattle and the increasing cost of their maintenance.

All Agricultural departments are now giving increased attention to the better utilisation of underground water supplies, existing wells being improved by boring and tube wells of large capacity installed and equipped with pumping machinery.

Tank Irrigation is common in Central and Southern India. Large quantities of rain water are stored in lakes (or tanks) and distributed during the drier seasons of the year. Often the indirect effect of the tank in maintaining the sub-soil water level is as important as the direct irrigation.

Manures—Although the number of cattle maintained in India is very high and indeed excessive, there is everywhere a shortage of farm-yard manure. This is partly due to the small use of bedding, for which straw can ill be spared, and to the keeping of cattle in the open but mainly to the use of dung as the principal source of village fuel. Hence the supply of organic matter to Indian soils is deficient. Unfortunately the Indian cultivator does not possess the skill of the Chinaman in the making of composts and much valuable manurial material is wasted in every Indian village and to the detriment of sanitation. Green-manure crops

Cotton—Cotton is one of the most important commercial and export crops of India covering now some 28 million acres annually with a production of $5\frac{1}{2}$ to 6 million bales of 400 lbs. Some two million bales are consumed annually by Indian mills, the rest being exported to Japan, China and the Continent of Europe. Some $\frac{1}{3}$ of the average annual production consists of short-staple cotton of $\frac{1}{4}$ " to $\frac{3}{4}$ " staple mainly ranging round $\frac{1}{2}$ ". The remainder is medium staple cotton ranging from $\frac{3}{4}$ " to $1\frac{1}{4}$ ". The better qualities are in keen demand for Indian mills, Punjab-American and Madras Tinnevely and Karunganni being the principal long-staple cottons exported. There is no Indian cotton belt, Bombay, the Central Provinces, Hyderabad, Baroda, Madras, the Punjab and the United Provinces all have important cotton tracts producing distinct types. Sowing and harvesting seasons are equally diverse, the former extending from May to December in different parts of the country and the latter from October to May and June. Yields vary greatly, in the best irrigated tracts the normal yield is about 200 lbs. of ginned cotton per acre and yields much above these have been recorded whilst in the poorest unirrigated tracts 60 lbs. per acre is a good crop. Of recent years, as the result of the work of the Agricultural Departments and the Indian Central Cotton Committee, the quality and yield of the staple cottons has improved and also the yield and cleanliness of the short-staple tracts.

The Cotton Transport Act, the Cotton Ginning and Pressing Factories Act and the Cotton Markets Act have all been passed the instance of the Committee and are much to check the abuse of adulteration and promote better marketing. Agricultural Departments have continued their campaign of cotton improvement and, apart from improvements in methods of cultivation, improved varieties of cotton now covers over 4 million acres.

Exports—The exports of raw cotton from India by sea to foreign countries for the last 5 fiscal years (ending March 31st) were as follows in thousands of bales of 400 lbs. each) —

| Countries | 1925-26 | 1926-27 | 1927-28 | 1928-29 | 1929-30 |
|-------------------------------------|---------|---------|---------|---------|---------|
| United Kingdom | 225 | 87 | 160 | 241 | 270 |
| Other parts of the British Empire | 16 | | 7 | 7 | 5 |
| Japan | 2,084 | 1,842 | 1,235 | 1,610 | 1,630 |
| Italy | 456 | 305 | 330 | 384 | 393 |
| France | 193 | 123 | 185 | 204 | 253 |
| China (exclusive of Hong-kong, etc) | 588 | 391 | 112 | 404 | 566 |
| Belgium | 243 | 159 | 230 | 347 | 341 |
| Spain | 73 | 54 | 61 | 76 | 80 |
| Germany | 218 | 145 | 256 | 324 | 344 |
| Other countries | 127 | 96 | 110 | 115 | 179 |

Total exports from the six principal ports (Bombay, Karachi, Madras, Tuticorin, Calcutta and Rangoon), for the cotton season ending August 31st, 1930, totalled 3,959,840 bales as compared with 3,971,440 bales in 1928-29.

Sugarcane—India, though a large importer of sugar, is nevertheless one of the most important sugarcane growing countries in the world, the area under the crop being above 3 million acres. The crop is mostly grown in the sub-montane tracts of Northern India. The common varieties are thin and hard, yielding a low percentage of juice of fair quality, but these are now being rapidly replaced by seedling canes of high merit compared to those of other sugarcane-growing countries. The area under such improved varieties in Northern India has already reached about 750,000 acres and is rapidly extending. By change of variety alone an increase of 50 per cent in the yield per acre is attained by using improved cultural methods also the yield in many cases is trebled. The greater part of the Indian sugarcane crop is converted into *gur* in which form it is consumed. A considerable amount of crystallised sugar is still made by the old indigenous process and modern factories in the year 1928-29 produced 99,000 tons, the net imports of sugar in 1929-30 exceeded 939,000 tons, mainly from Java. The Coimbatore cane breeding station has produced seedling canes of high merit both in regard to tonnage and quality. These are rapidly spreading in the principal portions of the sugarcane belt and improved methods of cultivation are being adopted. The agricultural side of the problem is practically solved, though continuous effort is necessary. Certain well equipped factories are obtaining a recovery of sugar on cane which compares very favourably with that in other countries. In some portions of the sugarcane belt, cane of good quality can be produced as cheaply as in any country in the world. There is no reason why India should not be self-supporting in sugarcane products once the industry is properly organised and the question of protection for the Indian sugar industry was referred to the Tariff Board by the Government of India and its report was published in 1931.

Oilseeds—The crops classified under this heading are chiefly sesamum, linseed and the cruciferous oilseeds (rape, mustard, etc.) Although oilseeds are subject to great fluctuation in price and the crops themselves are more or less precarious by nature—they cover an immense area.

Linseed requires a deep and moist soil and is thus grown chiefly in Bengal, Bihar, the United Provinces and the Central Provinces. The crop is grown for seed and not for fibre and the common varieties are of a much shorter habit of growth than those of Europe. The yield varies greatly from practically nothing up to 500 or 600 lbs. of seed per acre. The seed is mainly exported whole but a certain amount of oil pressing is done in the country.

Sesamum or (Gingelly) is grown mostly in Peninsular India as an autumn or winter crop. About 10 per cent of the production is exported and the rest consumed locally.

The Cruciferous Oilseeds form an important group of crops in Northern India where they grow freely and attain a fair state

AGRICULTURAL PROGRESS.

Agricultural Progress—The historical aspect of agricultural development in India has recently been fully dealt with in the report of the Lillithgow Commission. The Famine Commission as long ago as 1860 made the first proposal for a separate Department of Agriculture but little resulted except the collection of agricultural statistics and other data with the object of throwing light on famine problems. The Famine Commission of 1880 by their masterly review of the possibilities of agricultural development revived interest in the matter and their proposal for a new Department for Agriculture and allied subjects in the Government of India and for provincial departments of agriculture bore fruit eventually. Dr J. A. Voelker, Consulting Chemist to the Royal Agricultural Society, was invited to visit India and his book "Improvement of Indian Agriculture" is still a valuable reference book. In 1892 an agricultural chemist to the Government of India was appointed. Provincial Departments mainly concerned themselves at first with agricultural statistics but experimental farms were opened at Saidapet in 1871, Poona in 1880, Cawnpore in 1881 and Nagpur in 1883, there were various sporadic attempts at agricultural improvement but no real beginning was made until technical agricultural officers were appointed. Of these the earliest were Mollison in Bombay (subsequently Inspector General of Agriculture), Barber and Benson in Madras, Hayman in the United Provinces and Milligan in the Punjab. In 1901, the first Inspector General of Agriculture was appointed and in the same year an Imperial Mycologist was added followed by an Imperial Entomologist in 1903. The present departments of agriculture, however, owe their existence to the foresight and energy of Lord Curzon whose famous despatch of 1903 marked the commencement of the reorganisation which took place in 1905. That scheme provided for a central research institute at Pusa, completely staffed provincial departments of agriculture with agricultural colleges and provincial research institutes and an experimental farm in each important agricultural tract. To the establishment of the Imperial Agricultural Research Institute at Pusa, Lord Curzon devoted the greater part of a generous donation of £30,000 given by Mr. Henry Phipps of Chicago to be applied to some object of public utility preferably connected with scientific research. The Indian Agricultural Service was constituted in 1906. Since that date progress has been steady and continuous. With the advent of the reforms of 1919, agriculture became a provincial transferred subject but the Government of India retained responsibility for central research institutions and for certain matters connected with the diseases and pests of plants and animals. The addition of the Imperial Institute of Animal Husbandry and Dairying (with a branch farm at Wellington), the Imperial Cattlebreeding Farm at Karnal and the Anand Creamery enabled livestock work to be carried out on a scale not possible at Pusa. The Imperial Sugarcane-breeding station at Coimbatore is yet another branch of the Imperial Agricultural Research Institute. Provincial Governments have steadily developed and strengthened their agricultural departments. The total nett ex-

penditure of provincial agricultural departments now exceeds 105 lakhs rupees annually, the nett annual expenditure on the Imperial Department of Agriculture is in the neighbourhood of 11 lakhs.

Parallel developments took place in the provision made for matters connected with animal health. The now world-famous Imperial Institute of Veterinary Research at Muktesar started in 1893 as a modest hill laboratory for research on rinderpest. It is now a fully equipped research institute which also manufactures protective sera and vaccines of which some 8 million doses are issued annually. The Civil Veterinary Department was formed in 1891 and until 1912 was under the control of the Inspector General. The departments were completely provincialised in 1919, the Government of India continuing to finance and control the Muktesar Research Institute and its branch station at Izatnagar (Bareilly).

Recent Progress—As now constituted, the Agricultural Departments include a complete organisation for bringing the results of the application of science to agriculture into the village. At one end of the scale are the agricultural colleges and research institutes—at the other thousands of village demonstration plots where the issue of improved seed, methods, implements and manures is shown under the cultivators' own conditions. Intermediate links in the chain are the experimental farms, where scientific research is translated into field practice, demonstration and seed farms and seed stores. The ascertained results of the work of the agricultural department are striking enough. More than 12 million acres are known to be under improved crops—the further area due to natural spread is indeterminable. Twenty-seven thousand improved ploughs were sold through Agriculture Departments in 1928-29 and sales through private agencies were still greater. Improved methods of cultivation and manuring are steadily spreading, work is in progress on most of the major crops and each year brings new triumphs. The present position has been authoritatively reviewed by the Royal Commission on Agriculture which reported in 1928. Recognising how much has already been done in the 20 years since the agricultural departments were created, the Commission also emphasised the enormous field for future work to which all witnesses had drawn their attention. The agricultural departments having shown that the application of science to Indian agriculture is a practical proposition and further that the individual cultivator can be reached and his methods improved, the problem is now to develop and intensify such work so that a general advance in agricultural practice will result. The many far-reaching proposals of the Commission are still under the consideration of Local Governments, but many have already been acted upon. At no time has there been a greater need for co-ordinated effort directed towards the solution of agricultural problems. Only by increased efficiency in production can India meet the situation caused by low prices for all agricultural commodities and the intense competition in world markets arising from production in excess of effective demand.

Imperial Council of Agricultural Research

over by
Institute

The Advisory Board would consist of all those whose inclusion in the Council was recommended by the Royal Commission with the exception of the representatives of the Central Legislature and the representatives of the European and Indian commercial communities, who, under the modified scheme, would be members of the Governing Body. In view of their exclusion from the Advisory Board, the universal representation would be increased from three to four and the scientific representation by the addition of the Director of the Indian Institute of Science, Bangalore, a representative of the Forest Research Institute, Dehra Dun, and a representative elected by the Indian Research Fund Association. A representative of the Co-operative Movement would also be added. The Principal Administrative Officer to the Council would be *ex officio* Chairman of the Advisory Board.

The Government of India further announced that for the lump grant of Rs. 10 lakhs recommended by the Royal Commission, the Government had decided to substitute an amount of Rs. 25 lakhs, of which Rs. 10 lakhs had been paid in 1920-21, and the balance of Rs. 15 lakhs was to be paid in 1921-22.

minimum grant annually. The annual grant would be Rs 7.25 lakhs, of which Rs 5 lakhs would be devoted to the furtherance of the scientific objects of the Council and the remaining Rs 2.25 lakhs to the cost of its staff and secretariat. The Council would have an entirely free hand in regard to the expenditure of the grants made to it for scientific purposes subject to the condition that no liability in respect of such matters as leave or pension contributions after the research for which the grant had been given would be incurred. In regard to the grant to meet the cost of staff, establishment etc., the Council would be in the same position as a Department of the Government of India Secretariat.

The Council has since been constituted a separate Department of the Government of India for the purpose of administering this grant.

The Government of India also stated their decision that the Council should not be constituted under an Act of the Imperial Legislature as recommended by the Royal Commission but should be registered under the Registration of Societies Act, XXI of 1860. In pursuance of this decision, a meeting of those who would constitute the Society was held at Simla in June, 1929, to consider the terms of a memorandum of association and the Rules and Regulations. At that meeting, it was announced that His Exalted Highness the Nizam's Government had offered a donation of Rs 2 lakhs to the funds of the Council. This offer was gratefully accepted and the Revenue Member of the Nizam's Government has been added to the Governing Body, the Directors of Agriculture and of Veterinary Services becoming members of the Advisory Board. The three last named members vacated their seats owing to the dissolution of the Council of State and the League Assembly and their places will be filled up by the election of new members.

Other additions have since been made to the Advisory Board and the present constitution of the Council is now as shown below—

The Vice-Chairman of the Council is Sir T. Vijayaraghavacharya, KBE, late member of the Public Service Commission. The Agricultural Expert is Mr B. C. Burt, CIE, MBE, late Director of Agriculture, Bihar and Orissa, and the Animal Husbandry Expert, Col A. Oliver, CB, CMG, FRCVS. The Secretary to the Council is Mr M. S. A. Hydari, ICS, (Madras).

Work of the Council—The first important step taken by the Council after its formal constitution was the appointment of a Committee to examine and report on the measures to be taken for strengthening and developing the sugar industry. This Committee has presented an *interim* report, which was considered at the first meeting of the Council which was held at Pusa from the 2nd to the 7th December 1929. The Governing Body then decided that the Government of India should be asked to refer the general question of the import duties on sugar for investigation by the Indian Tariff Board and to take immediate action for the conversion of the present *ad valorem* duty on lower trade sugar into a

specific duty in order to prevent unfair competition with Indian gur. The first of these recommendations has been accepted by the Government of India and an investigation by the Tariff Board is now in progress. Other decisions on this subject were that Rs 8,000 should be granted to the United Provinces, Bihar and Orissa and the Punjab for experiments, in devising satisfactory small power sugarcane crushing mill, that a prize of Rs 20,000 should be awarded to any individual or firm for the invention of a satisfactory small power sugarcane crushing power mill and that the appointment of a Technologist should be sanctioned.

On the recommendation of the Advisory Board, a special sub-committee of that Board was constituted to investigate the measures required to deal with the locust problem. Another sub-committee was appointed to investigate the problems relating to the conservation of indigenous manurial resources and the development of the use of indigenous fertilisers and the preparation of a programme of research on fertilisers. The Governing Body accepted a Resolution of the Advisory Board that a whole-time officer should be employed to study and report on the conditions under which hemp is marketed in the Provinces concerned. It was decided to recommend to the Government of India that the Board of Agriculture, a meeting of which was held at Pusa after the meeting of the Imperial Council of Agricultural Research, should be known in future as the Board of Agriculture and Animal Husbandry, that it should be convened under the auspices of the Imperial Council of Agricultural Research and that it should be divided into two branches (a) crops and soils and (b) animal health and husbandry, each branch meeting biennially. This recommendation has been accepted by the Government of India and the Board of Agriculture has been reconstituted accordingly. A grant of Rs 45,000 to Dr K. C. Mehta, Professor of Botany, Agra College, for an investigation into "Rusts of wheat and barley" was sanctioned and it was also decided that two Indians should be selected and sent at once to England for training in cinema production at the expense of the Empire Marketing Board provided the men selected agreed to serve the Council for a period of three years after their return to India.

The first business at the second meeting of the Governing Body which was held at Simla on July 26th and 30th, 1930, was to lay down the principles which should govern the grants made by the Council. It was decided that schemes sanctioned by the Council should be of all-India importance, that, ordinarily, the land and buildings required for them should be provided by the Government or Governments concerned, the Council making a grant for equipment and staff alone, that, ordinarily, the Government or Governments interested should bear a part of the recurring expenditure involved, that assistance should normally be limited in the first instance to five years, and that a scheme other than one submitted by the Government of India or a local Government should normally have the support of the Government of the Province from which it emanates. On the agricultural side schemes for the establishment

AGRICULTURAL PRODUCE.

The following table shows the area under the principal crops, in British India, and their territorial distribution for 1929-30. The sown area is always greater than the area of cultivated land, owing to double cropping. The figures represent acres —

| Province. | Rice. | Wheat | Barley | Other Food Grains and Pulses | Total Food Grains and Pulses | Oilseeds | Sugar | Cotton | Jute | Total Area sown | Net area sown after deducting Area sown more than once |
|-----------------------------|------------|------------|-----------|------------------------------|------------------------------|------------|-----------|------------|-----------|-----------------|--|

Irrigation.

The chief characteristics of the Indian rainfall are its unequal distribution over the country, its irregular distribution throughout the seasons and its liability to failure or serious deficiency. The normal annual rainfall varies from 460 inches at Cherrapunji in the Assam hills to less than three inches in Upper Sind. The greatest rainfall actually measured at any station in any one year was 905 inches, recorded at Cherrapunji in 1861, while at stations in Upper Sind it has been nil. There are thus portions of the country which suffer as much from excessive rainfall as others do from drought.

The second important characteristic of the rainfall is its unequal distribution throughout the seasons. Except in the south east of the peninsula, where the heaviest precipitation is received from October to December, by far the greater portion of the rainfalls during the south-west monsoon, between June and October. During the winter months the rainfall is comparatively small, the normal amount varying from half an inch to two inches, while the hot weather, from March to May or June, is practically rainless. Consequently it happens that in one season of the year the greater part of India is deluged with rain and is the scene of the most wonderful and rapid growth of vegetation, in another period the same tract becomes a dreary, sun-burnt waste. The transition from the latter to the former stage often occurs in a few days. From the agricultural point of view the most unsatisfactory feature of the Indian rainfall is its liability to failure or serious deficiency. The average annual rainfall over the whole country is about 45 inches and there is but little variation from this average from year to year, the greatest recorded being only about seven inches. But if separate tracts are considered, extraordinary variations are found. At many stations annual rainfalls of less than half the average are not uncommon, while at some less than a quarter of the normal amount has been recorded in a year of extreme drought.

Scarcity—Classing a year in which the deficiency is 25 per cent as a dry year and one in which it is 40 per cent as a year of severe drought, the examination of past statistics shows that, over the precarious area, one year in five may be expected to be a dry year and one in ten a year of severe drought. It is largely in order to remove the menace of these years that the great irrigation systems of India have been constructed.

Government Works—The Government irrigation works of India may be divided into two main classes, those provided with artificial storage, and those dependent throughout the year on the natural supplies of the rivers from which they have their origin. In actual fact, practically every irrigation work depends upon

storage of one kind or another but, in many cases, this is provided by nature without man's assistance. In Northern India, upon the Himalayan rivers, and in Madras, where the cold weather rains are even heavier than those of the south-west monsoon, the principal non-storage systems are found.

The expedient of storing water in the monsoon for utilization during the subsequent dry weather has been practised in India from time immemorial. In their simplest form, such storage works consist of an earthen embankment constructed across a valley or depression, behind which the water collects, and those under Government control range from small tanks irrigating only a few acres each to the huge reservoirs recently completed in the Deccan which are capable of storing over 20,000 million cubic feet of water. By gradually escaping water from a work of the latter type, a supply can be maintained long after the river on which the reservoir is situated would otherwise be dry and useless.

The Three Classes—Previously all irrigation works were divided into three classes: Productive, Protective and Minor, but during the triennium 1921-24 the method of determining the source from which the funds for the construction of Government works was provided was changed, and now all works, whether major or minor, for which capital accounts are kept, have been re-classified under two heads, Productive and Unproductive, with a third class embracing areas irrigated by non-capital works. The main criterion to be satisfied before a work can be classed as productive is that it shall, within ten years of the completion of construction, produce sufficient revenue to cover its working expenses and the interest charges on its capital cost. Most of the largest irrigation systems in India belong to the productive class. The total capital outlay direct and indirect on irrigation and navigation works, including works under construction, amounted at the end of the year 1920-30 to Rs 130 crores.

Unproductive works are constructed primarily with a view to the protection of precarious tracts and to guard against the necessity for periodical expenditure on the relief of the population in times of famine. They are financed from the current revenues of India, generally from the annual grant for famine relief and insurance, and are not directly remunerative, the construction of each such work being separately justified by a comparison of the value of each acre protected (based upon such factors as the probable cost of famine relief, the population of the tract, the area already protected and the minimum area which must be protected in order to tide over a period of severe drought) with the cost of such protection.

Nearly one eighth of the whole area irrigated in India from Government works is effected by minor works for which no capital account is kept

Growth of Irrigation—There has, during the last fifty years, been a steady growth in the area irrigated by Government irrigation works. From 10½ million acres in 1878-79 the area annually irrigated rose to 19½ million acres at the beginning of the century, and to 28 million acres in 1919-20, the record year up to that date. This record was, however, again surpassed in the year 1929-30 when the total area irrigated by all classes of works in India, excluding the Indian States, amounted to 31½ million acres.

The main increase has been in the class of productive works which irrigated 4½ million acres in 1878-79 and rose to 20,756,209 acres in 1929-30. During the year 1929-30 the areas irrigated by productive and unproductive works amounted to 23,05,675 acres and 4,491,677 acres respectively.

The area irrigated in 1929-30 was largest in the Punjab, in which province 11,687,622 acres were irrigated during the year. In addition about 1,212,000 acres were irrigated from channels which although drawing their supplies from British canals, lie wholly in the Indian States. The Madras Presidency came next with an area of 7 million acres, followed by the United Provinces with nearly 4½ million and Sind with 3½ million acres.

Capital and Revenue—The total capital invested in the works has risen from Rs. 42,36 lakhs in 1900-01 to Rs. 130 crores in 1929-30. As regards revenue, the Government irrigation works of India, taken as a whole, yield a return of nearly 5½ per cent on the capital invested in them, this is a satisfactory result as Rs. 44 crores of the total have been spent on unproductive works, most of which return less than 1 per cent. The capital outlay also includes expenditure on a number of large works under construction, which have not yet begun to earn revenue.

Charges for Water—The charges for water are levied in different ways in the various provinces. In some, notably in Sind, the ordinary land revenue assessment includes also the charge for water, 9/10ths of this assessment being regarded as due to the canals. In others, as in parts of Madras and Bombay, different rates of land revenue are assessed according to whether the land is irrigated or not, and the assessment upon irrigated land includes also the charge for water. These methods may

however be regarded as exceptional. Over the greater part of India water is paid for separately, the area actually irrigated is measured, and a rate is charged per acre according to the crop grown. Lower rates are often levied in cases where irrigation is by "lift", that is to say where the land is too high for the water to flow on to it by gravity and consequently the cultivator has to lift it on to his field.

Various other methods of assessment have been tried such as by renting outlets for an annual sum, or by charging according to the volume of the water used, but these have never been successful. The cultivator fully understands the principle of "No crops, no charge" which is now followed as far as possible in canal administration, but has no confidence in a system under which his liability for water rate is independent of the area and quality of his crop.

The rates charged vary considerably with the crop grown, and are different in each province and often upon the several canals in a single province. Thus in the Punjab, they vary from Rs. 7-8-0 to Rs. 12 per acre for sugarcane, from Rs. 4 to Rs. 7-8-0 per acre for rice, from Rs. 3-4-0 to Rs. 5-4-0 per acre for wheat, from Rs. 3 to Rs. 4-4-0 per acre for cotton and from Rs. 2 to Rs. 3-4-0 per acre for millets and pulses. Charge is made for additional water-lings. Practically speaking, Government guarantees sufficient water for the crop and gives it as available. If the crop fails to mature, or if its yield is much below normal, either the whole or part of the irrigation assessment is remitted.

A somewhat different system, the long lease system, is in force in parts of Bengal and the Central Provinces under which the cultivators pay a small rate for a term of years whether they take water or not. In these provinces where the normal rainfall is fairly high, it is always a question whether irrigation will be necessary at all, and if the cultivators have to pay the full rate, they are apt to hold off until water becomes absolutely essential, and the sudden and universal demand then usually exceeds the supply. By paying a reduced rate every year for a term of years they become entitled to water when required, consequently there is no temptation to wait till the last possible moment, and the demand is much more evenly distributed throughout the season.

Taken as a whole, irrigation is offered on extremely easy terms, and the water rates represent only a very small proportion of the extra profit which the cultivator secures owing to the water he receives.

Triennial Comparisons—The average area irrigated in British India by Government works of all classes during the triennium 1924-27 was nearly 28 million acres and this figure increased to very nearly 30 million acres during the triennium 1927-30.

The results obtained in each province are given in the table below —

| Provinces | Average area irrigated
in triennium
1925-28 | Triennium
1927-30 |
|------------------------------|---|----------------------|
| Madras | 7,205,587 | 7,277,967 |
| Bombay (Deccan) | 4,105,336 | 4,06,718 |
| Sind | 3,345,370 | 3,579,592 |
| Bengal | 97,182 | 90,051 |
| United Provinces | 2,608,265 | 3,639,867 |
| Punjab | 10,412,730 | 11,200,550 |
| Burma | 1,939,023 | 1,994,321 |
| Bihar and Orissa | 930,112 | 937,067 |
| Central Provinces | 117,850 | 400,438 |
| North-West Frontier Province | 369,313 | 403,064 |
| Rajputana | 21,220 | 31,984 |
| Baluchistan | 22,319 | 22,407 |
| Total | 27,973,152 | 29,954,059 |

Productive Works — Taking productive works only, a triennial comparison is given in the following table. It will be seen that the average area irrigated by such works during the triennium was one-and-a-half million acres more than in the previous period.

| Provinces | Average area irrigated
in previous triennium
1924-27 | Average area irrigated
in triennium
1927-30 |
|------------------------------|--|---|
| Madras | 3,732,271 | 3,821,815 |
| Bombay-Deccan | 2,699 | 2,4637 |
| Sind | 2,894,468 | 2,061,519 |
| United Provinces | 2,462,061 | 3,43,06 |
| Punjab | 9,755,740 | 10,775,794 |
| Burma | 1,531,403 | 1,378,393 |
| Central Provinces | 153,042 | 21,889 |
| North-West Frontier Province | 2,00,413 | 207,750 |
| Total | 26,732,997 | 22,202,303 |

Taking the productive works as a whole, the capital invested in them was, at the end of 1929-30, Rs 86 crores. The net revenue for the year was Rs 692 lakhs giving a return 8.04 per cent as compared with 9 per cent in 1918-19 and 9½ per cent in 1919-20. In considering these figures it must be remembered that the capital invested includes the expenditure upon several works which have only lately come into operation and others which are under construction, which classes at present contribute little or nothing in the way of revenue, and moreover only receipts from water rates and a share of the enhanced land revenue due to the introduction of irrigation are credited to the canals, so that the returns include nothing on account of the large addition to the general revenues of the country which follows in the wake of their construction.

Unproductive Works—Turning now to the unproductive works, the areas irrigated in the various provinces during the triennium were as below —

| Province | Average area irrigated
in previous triennium
1924-27 | Average area irrigated
in triennium
1927-30 |
|------------------------------|--|---|
| Madras | 271,455 | 266,849 |
| Bombay-Deccan | 277,709 | 239,278 |
| Sind | 527,737 | 831,722 |
| Bengal | 72,381 | 67,802 |
| United Provinces | 207,312 | 252,643 |
| Punjab | 213,613 | 424,756 |
| Burma | 268,110 | 539,253 |
| Bihar and Orissa | 889,733 | 904,303 |
| Central Provinces | 230,280 | 323,482 |
| North-West Frontier Province | 156,911 | 195,314 |
| Rajputana | 23,272 | 31,984 |
| Baluchistan | 22,070 | 22,407 |
| Total | 3,191,588 | 4,109,793 |

Non-capital Works—The results obtained from the non-capital works are given below —

| Provinces | Average area
irrigated in pre-
vious triennium
1924-27 | Average area irri-
gated in triennium
1927-30 |
|-------------------|---|---|
| Madras | 3,174,731 | 3,189,303 |
| Bombay-Deccan | 157,025 | 164,833 |
| Sind | 87,279 | 86,351 |
| Bengal | 22,135 | 22,252 |
| United Provinces | 8,006 | 14,717 |
| Punjab | 349,768 | Nil |
| Burma | 72,870 | 76,676 |
| Bihar and Orissa | 2,246 | 2,764 |
| Central Provinces | 45,689 | 45,067 |
| Total | 3,919,749 | 3,601,963 |

Capital Outlay—The total capital outlay, direct and indirect, on irrigation and navigation works, including works under construction, amounted at the end of 1929-30 to Rs 130 crores. The gross revenue for the year was Rs 12,94 lakhs, and the working expenses Rs 5,86 lakhs, the net return on capital was therefore 5.44 per cent. Of the several provinces, the return on the capital outlay invested in productive works was highest in the Punjab, where the canals yielded 13.61 per cent

In Madras the percentage of return was 7.70 while in the United Provinces a return of 5.90 per cent was realised. In considering these figures it must be remembered that the capital invested includes considerable expenditure upon three projects of the first magnitude viz, the Sarda Oudh canals, the Lloyd Barrage project and the Cauvery (Mettur) project which were under construction and contributed little or nothing in the way of revenue.

Irrigated Acreage—A comparison of the acreage of crops matured during 1929-30 by means of Government irrigation systems with the total area under cultivation in the several provinces is given below —

| Provinces | Net area cropped | Area irrigated by Government irrigation works | Percentage of area irrigated to total cropped area | Capital cost of Government irrigation & Navigation works to end of 1929-30
In lakhs of rupees | Estimated value of crops raised on areas receiving State irrigation
In lakhs of rupees |
|-------------------------------|--------------------|---|--|--|---|
| Madras | 30,250,000 | 7,381,000 | 18.8 | 16.60 | 28.10* |
| Bombay-Deccan | 34,201,000 | 112,000 | 1.2 | 28.81 | 1.19 |
| Sind | 1,848,000 | 3,805,000 | 78.5 | | 8.06 |
| Bengal | 27,833,000 | 82,000 | 0.3 | 4.60 | 47 |
| United Provinces | 41,575,000 | 4,494,000 | 10.8 | 24.35 | 2,458 |
| Punjab | 30,051,000 | 11,087,000 | 37.8 | 32.04 | 44.22 |
| Burma | 17,775,000 | 2,053,000 | 11.5 | 6.51 | 8.45 |
| Bihar and Orissa | 30,387,000 | 886,000 | 2.9 | 6.28 | 6.40 |
| Central Provinces | 18,060,000 | 376,000 | 2.1 | 6.43 | 2.02 |
| North-West Frontier Provinces | 2,885,000 | 418,000 | 14.5 | 2.01 | 2.06 |
| Rajputana | 344,000 | 32,000 | 9.2 | 35 | 12 |
| Baluchistan | 390,000 | 22,000 | 5.4 | 31 | 5 |
| Total | 248,613,000 | 31,648,000 | 12.7 | 1,30.27 | 1,27.81 |

* Exclusive of the value of crops raised on some 3 million acres irrigated by non-capital works,

New Works—There major works of exceptional importance are the **Sukkur Barrage** and Canals in Sind, the **Cauvery** (Mettur) project in Madras, and the **Sutlej Valley Canals** in the Punjab. The **Sukkur Barrage**, which was opened by His Excellency the Viceroy early in 1932, is the greatest work of its kind in the world, measuring 4,725 feet between the faces of the regulators on either side. The total cost of the scheme is estimated at Rs 20 crores which the barrage accounts for about Rs 6 crores & the canals for Rs 14 crores. A gross area of 7½ million acres is commanded, of which 6½ million acres is cultivable and an annual area of irrigation of 5½ million acres is anticipated, of which 2 million acres represent existing inundation irrigation which will be given an assured supply by the new canals. The ultimate annual net revenue forecasted as obtainable from the project, after paying working expenses, is Rs 104 lakhs, which represents a return of 10 per cent on capital. This is the return from water rates alone, but a further large increase in general revenues may safely be reckoned upon from the area of 3 million acres of waste which will be brought under cultivation. There will be increases on this account under practically every head of revenue, such as railways, customs, stamps, excise and the like, not to mention the addition to the country's wealth owing to the production, on land at present barren, of crops to the value of Rs 2,500 lakhs per annum.

The **Sutlej Valley Works** consist of four weirs, three on the Sutlej and one on the Panjab, as the **Chenab** is called below its junction with the Sutlej, with twelve canals taking off from above them. The total area to be irrigated is 5,108,000 acres, or nearly 8,000 square miles. Of this, 2,075,000 acres are perennial and 3,033,000 acres non-perennial irrigation. 1,942,000 acres are in British territory, 2,825,000 acres in Bahawalpur and 341,000 acres in Bikaner.

The total cost of the scheme was estimated at

Rs 1,460 lakhs. Upon this a return of 12½ per cent is anticipated from water-rates alone. But the scheme has another, and even more important source of revenue. On the introduction of irrigation, no less than 3½ million acres of desert waste, the property of the three parties concerned at present valueless will become available for colonisation and sale. It is customary, in the *pro-forma* accounts of irrigation projects, to credit a scheme with the interest on the sale proceeds of Crown waste lands rendered cultivable by its construction, if this is included, the annual return on the works will amount to nearly 38 per cent. It bids fair, indeed, to rival the Lower **Chenab Canal**, the return from which was more than 60 per cent in 1929-30. These anticipations may need modification, however, in view of the fact that a revised estimate for the project amounts to Rs 2,376 lakhs.

The **Cauvery Reservoir project**, which will cost nearly 6½ crores of rupees and will extend irrigation to a new area of 301,000 acres, is making satisfactory progress. In Bombay Presidency the **Bhandardara Dam**, 270 feet in height, was completed at the end of 1925 and the **Bhatnagar Dam** at the end of 1928. The **Damodar River (Canal)** project, which will irrigate 180,000 acres of rice lands in the Burdwan and Hooghly Districts of Bengal was commenced during the year 1926-27. Excellent progress has been made with the **Sarda-Oudh Canals** in the United Provinces and the system was inaugurated by H. E. the Viceroy in the autumn of 1928. This project will irrigate more than a million acres.

A comprehensive irrigation programme extending over a period of 14 years is under investigation in the Central Provinces. The possibility of increasing irrigation in the North-West Frontier Province is receiving attention, whilst in Bombay Presidency there is a proposal to increase the supply in **Lake Fife** either by raising the present dam or by constructing subsidiary storage dams in branch valleys.

Meteorology.

The meteorology of India like that of other countries is largely a result of its geographical position. The great land area of Asia to the northward and the enormous sea expanse of the Indian Ocean to the southward are determining factors in settling its principal meteorological features. When the Northern Hemisphere is turned away from the sun, in the northern winter, Central Asia becomes an area of intense cold. The meteorological conditions of the temperate zone are pushed southward and we have over the northern provinces of India the westerly winds and eastward moving cyclonic storms of temperate regions, while, when the Northern Hemisphere is turned towards the sun, Southern Asia becomes a super-heated region drawing towards it an immense current of air which carries with it the enormous volume of water vapour which it has picked up in the course of its long passage over the wide expanse of the Indian Ocean, so that at one season of the year parts of India are deluged with rain and at another persistent dry weather prevails.

Monsoons—The all-important fact in the meteorology of India is the alternation of the seasons known as the summer and winter monsoons. During the winter monsoon the winds are of continental origin and hence, dry, fine weather, clear skies, low humidity and little air movement are the characteristic features of this season. The summer rains cease in the provinces of the North-West Frontier Province and the Punjab about the middle of September after which cool westerly and northerly winds set in over that area and the weather becomes fresh and pleasant. These fine weather conditions extend slowly eastward and southward so that by the middle of October, they embrace all parts of the country except the southern half of the Peninsula, and by the end of the year have extended to the whole of the Indian land and sea area, the rains withdrawing to the Equatorial Belt. Thus the characteristics of the cold weather from October to February over India are—Westerly winds of the temperate zone over the extreme north of India, to the south of these the north-east winds of the winter monsoon or perhaps more properly the north-east Trades and a gradually extending area of fine weather which, as the season progresses, finally embraces the whole Indian land and sea area. Two exceptions to these fine weather conditions exist during this period, viz., the Madras coast and the north-west of India. In the former region the north-east winds which set in over the Bay of Bengal in October coalesce with the damp winds of the retreating summer monsoon, which current curves round over the Bay of Bengal, and blowing directly on to the Madras coast gives to that region the wettest and most disturbed weather of the whole year, for while the total rainfall for the four months June to September, i.e., the summer monsoon, at the Madras Observatory amounts to 15.36 inches the total rainfall for the three months October to December amounts to 29.48 inches. The other region in which the weather is unsettled, during

this period of generally settled conditions, is North-west India. This region during January, February and part of March is traversed by a succession of shallow storms from the westward. The number and character of these storms vary very largely from year to year and in some years no storms at all are recorded. In normal years, however, in Northern India periods of fine weather alternate with periods of disturbed weather (occurring during the passage of these storms) and light to moderate and even heavy rain occurs. In the case of Peshawar the total rainfall for the four months, December to March, amounts to 5.26 inches while the total fall for the four months, June to September, is 4.78 inches, showing that the rainfall of the winter is, absolutely, greater in this region than that of the summer monsoon. These two periods of subsidiary "rains" are of the greatest economic importance. The fall in Madras is, as shown above, of considerable actual amount, while that of North-west India though small in absolute amount is of the greatest consequence as on it largely depend the grain and wheat crops of Northern India.

Spring Months—March to May and part of June form a period of rapid continuous increase of temperature and decrease of barometric pressure throughout India. During this period there occurs a steady transference northward of the area of greatest heat. In March the maximum temperatures, slightly exceeding 100° occur in the Deccan, in April the area of maximum temperature, between 100° and 105°, lies over the south of the Central Provinces and Gujarat, in May maximum temperatures, varying between 105° and 110°, prevail over the greater part of the interior of the country while in June the highest mean maximum temperatures exceeding 110° occur in the Indus Valley near Jacobabad. Temperatures exceeding 120° have been recorded over a wide area including Sind, Rajputana, the West and South Punjab and the west of the United Provinces, but the highest temperature hitherto recorded is 126° registered at Jacobabad on June 12th, 1897. During this period of rising temperature and diminishing barometric pressure, great alterations take place in the air movements over India, including the disappearance of the north-east winds of the winter monsoon, and the air circulation over India and its adjacent seas, becomes a local circulation, characterised by strong hot winds down the river valleys of Northern India and increasing land and sea winds in the coast regions. These land and sea winds, as they become stronger and more extensive, initiate large contrasts of temperature and humidity which result in the production of violent local storms. These take the forms of dust storms in the dry plains of Northern India and of thunder and hailstorms in regions where there is inter-action between damp sea winds and dry winds from the interior. These storms are frequently accompanied with winds of excessive force, heavy hail and torrential rain and are on that account very destructive.

a debatable area running roughly from Hissar in the Punjab through Agra, Allahabad and part of Chota Nagpur to Orissa, where neither current of the monsoon prevails. In this area the rainfall is uncertain and would probably be light, but that the storms from the Bay of Bengal exhibit a marked tendency to advance along this track and to give it heavy falls of occasional rain.

The total rainfall of the monsoon period (June to September) is 100 inches over part of the west coast, the amount diminishes eastward, is below 20 inches over a large part of the centre and east of the Peninsula and is only 5 inches in South Madras, it is over 100 inches on the Tenasserim and South Burma coast and decreases to 20 inches in Upper Burma, it is over 100 in the north Assam Valley and diminishes steadily westward and is only 5 inches in the Indus Valley.

The month to month distribution for the whole of India is —

| | | | | |
|-----------|----|----|------|--------|
| May | . | .. | 2 6 | inches |
| June | .. | . | 8 3 | " |
| July | .. | . | 11 0 | " |
| August | .. | . | 10 5 | " |
| September | . | . | 7 2 | " |
| October | . | . | 3 2 | " |

Cyclonic storms and cyclones are an almost invariable feature of the monsoon period. In the Arabian Sea they ordinarily form at the commencement and end of the season, viz, May and November, but in the Bay they form a constantly recurring feature of the monsoon season. The following gives the total number of storms recorded during the period 1877 to 1901 and shows the monthly distribution —

| | | | | | | |
|---------------|------|-----|-----|-----|-----|------|
| | Jan | Feb | Mar | Apr | May | June |
| Bay of Bengal | . | . | 1 | 4 | 13 | 28 |
| | July | Aug | Sep | Oct | Nov | Dec |
| Bay of Bengal | 41 | 36 | 45 | 34 | 22 | 8 |

(For monsoon of 1931, see page 312)

INDIA METEOROLOGICAL DEPARTMENT.

The India Meteorological Department was instituted in 1875 to combine and extend the work of various provincial meteorological services which had sprung up before that date. The various duties which were imposed on the department at the time of its formation were from time to time supplemented by new duties. The main existing functions, more or less in the historical order in which they were assumed, may be briefly summarised as follows —

(a) The issue of warnings to ports and coastal districts of the approach of disastrous storms. Since the introduction of wireless telegraphy this has been extended to include the issue of storm warnings to ships in Indian seas.

(b) The maintenance of systematic records of meteorological data and the publication of climatological statistics. These were originally undertaken in order to furnish data for the investigation of the relation between weather and disease.

(c) The issue to the public of up to date weather reports and of rainfall forecasts. These duties were originally recommended by a

| | | | | | | |
|-------------|------|-----|-----|-----|-----|------|
| | Jan | Feb | Mar | Apr | May | June |
| Arabian Sea | .. | .. | .. | 2 | 15 | |
| | July | Aug | Sep | Oct | Nov | Dec |
| Arabian Sea | 2 | .. | 1 | 1 | 6 | .. |

The preceding paragraphs give an account of the normal procession of the seasons throughout India during the year, but it must be remembered, that every year produces variations from the normal, and that in some years these variations are very large. This is more particularly the case with the discontinuous element rainfall. The most important variations in this element which may occur are —

- (1) Delay in the commencement of the rains over a large part of the country, this being most frequent in North Bombay and North-west India.
- (2) A prolonged break in July or August or both.
- (3) Early termination of the rains, which may occur in any part of the country.
- (4) The determination throughout the monsoon period of more rain than usual to one part and less than usual to another part of the country. Examples of this occur every year.

About the middle of September fine and fresh weather begins to appear in the extreme north-west of India. This area of fine weather and dry winds extends eastward and southward, the area of rainy weather at the same time contracting till by the end of October the rainy area has retreated to Madras and the south of the Peninsula and by the end of December has disappeared from the Indian region, fine clear weather prevailing throughout. This procession with the numerous variations and modifications which are inseparable from meteorological conditions repeats itself year after year.

Committee of Enquiry into the causes of famine in India.

(d) Meteorological researches of a general character, but particularly regarding tropical storms and the forecasting of monsoon and winter rainfall.

(e) The issue of seasonal rainfall forecasts.

(f) The issue of telegraphic warnings of heavy rainfall by special telegrams to district officers (on departmental warning lists (e.g., canal and railway engineers), and by means of the ordinary daily weather telegrams to the public in general.

(g) Supply of meteorological, astronomical and geophysical information in response to enquiries from officials, commercial firms or private individuals.

(h) Technical supervision of rainfall registration carried out under the control of provincial Government authorities.

(i) The study of temperature and moisture conditions in the upper air by means of instrument carrying balloons and of upper winds by pilot balloons.

(3) The issue of weather reports and warnings to air craft

(4) Special investigations at the Airship Base Karachi. In addition to these meteorological duties the India Meteorological Department* was from time to time made responsible for various other important duties, such as—

(1) Determination of time in India and the issue of time signals, also the determination of errors of chronometers for the Royal Indian Marine and the Royal Navy

(2) Observations and researches on terrestrial magnetism at Bombay

(3) Regular study (mainly by spectroscopic examination) of the sun at the Solar Physics Observatory at Kodakanal

(4) Maintenance of seismological instruments at various centres

Organisation prior to the demands of aviation.—It is necessary to note that practical meteorology implies a meteorological organisation, not merely individual meteorologists relying upon their own personal and purely local observations. The making of a single forecast in any of the larger meteorological offices of the world requires the organised co-operation of some hundreds of persons. In India some 250 observers co-operate daily to take simultaneous observations at about 200 separate places and hand in their reports to telegraphists, who transmit them to centres, where for rapid assimilation clerks decode them and chart them on maps; meteorological experts then draw therefrom the conclusions on which their forecasts are based. There are other observatories which take observations for climatological purposes, but do not telegraph them.

As aviation has been and still is making rapidly increasing demands on meteorologists in India, it is easier to understand the constitution and needs of the department if we first consider the organisation prior to the demands of aviation. In order to carry out the functions imposed upon it, the department had a central office, five principal sub-offices and 26 pilot balloon observatories and supervised 270* weather observatories, principally of the third class distributed over a region stretching from Persia, Aden and Zanzibar on the west to Burma on the east. A brief summary is given below of the work at each of the principal observatories and offices—

Headquarters Office, Poona.—The general administration of the department is carried on by the headquarters office in Poona. It receives the telegraphic reports of morning observations collected at practically all pilot balloon and 1st, 2nd, 3rd and 5th class observatories and issues daily a telegraphic summary of general weather conditions with forecasts of probable changes in weather during the next twenty-four hours. It serves as the main forecasting centre for

the Indian area and prepares and publishes the Daily, Weekly and Monthly Weather Reports and an Annual volume entitled the "India Weather Review." It undertakes the issue of heavy rain warnings for practically the whole country excepting north-east India, and the issue of warnings for storms in the Arabian Sea. It is responsible for practically all climatological work in India and for the design, specification, test and supply of special meteorological instruments. On its transfer from Simla to Poona the headquarters office was equipped as an upper air observatory and a first class weather observatory and has also been designed to provide facilities for research in theoretical and practical meteorology.

Meteorological Office and Observatory, Alipore, Calcutta.—The Alipore office serves as a regional forecast centre and is responsible for the publication of the Calcutta Daily Weather Report for north-east India, for storm warning in the Bay of Bengal and heavy rainfall warning in north-east India. It has complete charge of all 2nd, 3rd, 4th and 5th class observatories in north-east India (from Assam to Orissa), while its other duties consist in supplying all weather observatories with ordinary instruments and stores, keeping a stock of such instruments, and supplying time signals by time ball to the Port of Calcutta and by wireless to shipping at sea. It is also a first class weather observatory, pilot balloon observatory and seismological station.

Upper Air Observatory, Agra.—Agra Observatory is the headquarters of upper air work in India. It is responsible for maintaining all the pilot balloon observatories in India and neighbouring countries and supplying them with necessary equipment for carrying on daily pilot balloon observations and supervising their work. All data from pilot balloon observatories are collected, checked and statistically summarised at Agra. This observatory is also the principal centre of upper air research work in India. There is a seismological station attached to this observatory.

Colaba and Alibag Observatories.—These observatories specialise in the study of geophysics, particularly terrestrial magnetism and seismology, and in addition carry on the duties of a first class weather observatory. They take star or sun observations for the determination of time and are responsible for the time-ball service at the Bombay Harbour and the rating of chronometers belonging to the Royal Indian Marine and Royal Navy.

Kodakanal.—The Observatory at Kodakanal specialises in the study of the physics of the sun, and is specially equipped for spectroscopic observations and research. This observatory also undertakes the duties of a first class weather observatory and a seismological station.

* The actual numbers were 10 first class, 2 second class, 200 third class, 29 each fourth and fifth class. A first class weather observatory continuously recording pressure, temperature, rainfall, in addition to instruments read by eye, is taken two or three times daily and centres. A third class observatory takes by telegram to one or more forecasting centres does not telegraph. A fourth class observatory and rainfall or (b) of temperature and rainfall and telegraphs only rainfall amounts. A second class weather observatory observations (a) daily at 8 hours and sends the data or (b) twice daily at 10 hours and 16 hours, but records observations (a) only, while a fifth class weather observatory records

Madras—The most important duty of the Observatory is the supply of time by time ball signal to local shipping and to the whole civil population of India by telegraphic signal throughout the Indian telegraph system. The observatory issues the *Madras Daily Weather Report* throughout the year and in addition carries out the duties of a first class surface observatory and of a pilot balloon station.

Special organisation to meet the needs of aviation—The above represented the activities of the department prior to the introduction of aviation in India. With the development of civil and military aviation and rather rapid expansion of their activities in recent years fresh duties of a different character devolved upon the department and necessitated a more or less complete overhaul of the pre-existing arrangements.

Definite recommendations regarding the nature of information to be supplied to aircraft, the exhibition of current weather information at aerodromes and the meteorological organisation of international airways have been embodied in Annex G of the International Convention of Air Navigation. In accordance with these recommendations, expert meteorologists should be stationed at aerodromes at reasonable intervals along the airway to supply *en clair* to the aviation personnel current information and forecasts of weather conditions along the routes up to the next aerodrome of the same class. Forecast centres should be established at least at each main aerodrome along aerial routes and forecasts prepared at such centres should be transmitted to the other aerodromes for the information of pilots. These recommendations involve the opening up of new forecast centres in India. Other recommendations refer to hours and kind of observations and manner of codifying them.

A comparison of the practices in Europe and the United States of America and various International recommendations with the past Indian programme of telegraphing observations once daily shows that at each observatory in India fuller and more frequent observations should be taken and be made available to aviators in internationally approved codes, and that the number of observatories should be increased.

It has therefore become necessary to arrange for the preparation of **two weather charts per day** at such regional forecast centres in India as are specially concerned with aviation, to raise to 2nd class status most of the existing weather observatories reporting to these centres and to create some new observatories*. Further, on account of the fuller observations required, new instructions for observers have been drawn up, new registers for the recording of observations and new telegraphic codes more in conformity with international agreement and suited

to the changed method of reporting of observations have been prepared. These have been introduced at observatories from the Persian Gulf to north west India and will be introduced elsewhere as air routes extend.

The forecast centres already started or proposed to meet the needs of aviators are Quetta, Peshawar, Karachi, Delhi and Rangoon, while work at the existing offices at Calcutta and Poona will require to be extended.

Quetta and Peshawar—Aviation on a regular basis was first started in this country by the Royal Air Force in north west India, and the necessity for opening local forecast centres was first experienced there. Two forecast centres were accordingly started four years ago at Quetta and Peshawar, each under an R.A.F. Meteorologist who was entrusted with the charge of issuing forecasts of weather over the Lahore-Peshawar-Quetta-Karachi air routes for R.A.F. aeroplanes and detailed local forecasts and warnings each for his own immediate neighbourhood. The Meteorological Department supplies instruments for the use of the R.A.F. Meteorologists, meets the cost of the staff of clerks and observers at each centre and supplies data by telegram from its observatories. The technical work done at these stations is supervised by the Director-General of Observatories.

Karachi—For civil aviation preparations had to be made for the first time by the department in aid of the Cilio Karachi aeroplane service. A new forecast centre was established at Karachi, its initial function being the issue of weather reports and forecasts for the flying section Karachi to Charhar. In connection with the larger Imperial Airship Scheme which has its own distinctive demands on meteorological services, India was asked to undertake responsibility for supplying information for the section extending from Basra to Karachi. Necessary schemes were drawn up and Government decided that action should be taken in three distinct and separate stages. As a result of the preliminary scheme, additional surface observatories were established along the flying route, and pilot balloon observatories to determine the upper air currents were started at Bahrain, Muscat and Gwadar, thus enabling the Karachi Office to gather and study an increased supply of weather information from the Arabian and Mekran coasts. Arrangements were made for the preparation of two charts daily at Karachi, based on 4 and 14 hours G.M.T.† observations telegraphed from stations in the Persian area and parts of north-west India.

In order to meet the requirements of the **London-Karachi Air Mail Service** arrangements were completed for issuing through the Karachi Civil Wireless Station synoptic weather broadcasts on short wave at regular intervals, also for supplying weather reports by wireless to aeroplanes in flight and for receiving synoptic broadcasts from Baghdad and Egypt. The forecast office is temporarily located in Karachi.

* In connection with the Bushire to Rangoon aviation schemes 10 new pilot balloon observatories and 30 new weather observatories have been started or proposed, while a change in the status of more than half the existing 3rd class observatories has been proposed. If these schemes are sanctioned the numbers of observatories will be 13 first, 175 second, 67 third, 29 fourth and 22 fifth class observatories.

† Greenwich Mean Time. Add 5½ hours to convert to Indian Standard Time.

cantonment and will be transferred to Drigh Road civil aerodrome, when buildings are provided there. Meanwhile a first class weather observatory and pilot balloon station have been started at Drigh Road. The weather observatories in Persia and Arabia and along the Mekran coast are under the charge of the Meteorologist at Karachi.

On the newly-opened Karachi Delhi air route, the Karachi forecast centre is responsible for weather reports and forecasts between Karachi and Jodhpur.

Delhi—A forecast centre has recently been opened at Delhi and will be specially responsible for the supply of weather reports and forecasts to aviators between Jodhpur and Allahabad or Gaya. A pilot balloon and first class weather observatory is attached to this office.

Calcutta—In connection with the Delhi Calcutta and Calcutta-Bangalore air routes, proposals have been made to extend the existing duties of this centre. It will become responsible for weather reports and forecasts to aviators between Allahabad or Gaya and Akyab.

Rangoon—The establishment of a new forecast centre and first class observatory at Rangoon under a trained Meteorologist has been proposed. If sanctioned, it will become responsible for weather reports and forecasts to aviators between Akyab and Victoria Point.

Poona—The Poona office is at present responsible for weather reports and forecasts to aviators on routes outside northern India.

Investigational work—Beside the routine duties such as issue of weather reports, forecasts and warnings of storms and heavy rain, the Indian Meteorological Department has under taken during recent years a number of investigations in theoretical and practical meteorology and other allied subjects, the most important among them is the study of the free atmosphere over the country by means of various types of balloons. The Agra observatory and its stations, the number of which has grown rapidly in the last two or three years, and is over 30 at present observe and record wind velocities in the upper layers of the atmosphere. The data are not only of great value in connection with weather forecasting and storm warning but have also proved useful for forecasting of seasonal rainfall. A method of forecasting the winter rainfall in northern India from upper air data is being developed and is already in tentative use in the department.

Measurements of pressure, temperature and humidity up to heights of 50,000 feet by means of sounding balloons are a fairly recent addition to the work at Agra station and have been carried on since 1925. A number of other stations have been established for the purpose of extending the range of the

stratosphere is about 12 miles above sea level in the India latitudes. It appears that although the lowest temperature over the surface of the earth occurs near the poles, the lowest free air temperatures occur at heights of about 12 miles above the equatorial regions, thus giving rise to the apparently paradoxical truism that the coldest air lies over the equator.

At the Poona Weather Office modern European theories of meteorology have been applied to the study of Indian weather charts. The physical aspects of weather were studied and attempts were made to recognise masses of air having different histories and physical properties. Diagnosis of weather charts by such means has been frequently successful and the new ideas have been found helpful in forecasting under Indian conditions.

Other scientific activities of the Department consist in the semi-meteorological records at airport centres, magnetic work at Alibab and Bombay, and Solar Physics observations at the Kodalkanal observatory. A careful study has been made at Bombay of microtisms which are believed to be due to sea waves and appear to furnish early indications of the existence of disturbed weather out at sea. Other interesting experiments on geophysical subjects have been undertaken or completed at Bombay in recent years. Recently the observatory at Kodalkanal has undertaken the collection of spectrograms for the determination of the amount of ozone in the upper air by means of a Dobson's spectrograph which has been loaned to the observatory.

With a view to study the origin and nature of north-westers, the violent local storms which almost every year cause considerable loss of life and property in north-east India, a series of detailed weather observations in that area were drawn up in 1927. The details of the observations were worked out at Calcutta and the results are being published since the beginning of 1928. A special expedition was arranged to study the upper air conditions over Bengal during the last north-western season.

At Karachi arrangements have been made for the study of special weather conditions in connection with the monsoon. It is an important problem for the study of the monsoon of air by which the monsoon is modified and it is a problem which has been studied at the first station of the monsoon. The study of the monsoon is a problem which has been studied at the first station of the monsoon. The study of the monsoon is a problem which has been studied at the first station of the monsoon.

Famine.

To the student of Indian administration nothing is more remarkable than the manner in which great problems arise, produce a corresponding outburst of official activity to meet them and then fall into the background. This general truth is illustrated by a study of the history of famine in India. For nearly forty years it was the bogey of the Indian administrator. The forecasts of the rains were studied with acute anxiety. The actual progress of the rains was followed with no less anxiety, and at the first signs of a bad or poor season the famine relief machine was furnished up and prepared for any emergency. The reason for this is clear if we examine for a brief space the economic condition of the Indian peasantry. Nearly three-quarters of the people are directly dependent on agriculture for their daily bread. Very much of this agriculture is dependent on the seasonal rains for its existence. Immense areas in the Bombay Presidency, Madras, the United Provinces and Central India are in a region of erratic and uncertain rainfall. The rainy season is short and if for any natural reason there is a weakness, or absence, of the rain-bearing currents, then there is either a poor harvest or no harvest at all. In Western lands everyone is acquainted with the difference between a good and a poor season, but western countries offer no parallel to India, where in an exceptionally bad year wide tracts of thickly populated land may not produce even a blade of grass. In the old days there were no railways to distribute the surplus of one part of India to the districts where the crop had failed. There were often no roads. The irrigation works were few and were themselves generally dependent on the rainfall for their reserves. The people lived from hand to mouth and had no store of food to fall back upon. Nor had they any credit. In the old days then they died. Commencing with the Orissa famine in 1865-67 the Government of India assumed responsibility for the saving of human life in such crises. After the famine of 1899-1900 this responsibility was also shouldered by the Indian States. Stage by stage this responsibility was expressed in the evolution of a remarkable system of famine relief covering the whole field. But now that machinery has reached a remarkable degree of perfection, it is rusting in the official armouries, because the conditions have changed. The whole of India is covered with a network of railways, which distributes the produce of the soil to the centres where food is required. The extension of irrigation has enormously increased the product of the soil and rendered large areas much less dependent on the monsoon rainfall. At the same time the scientific study of the problems of Indian agriculture has raised the capacity of even the "dry" zones. The peasantry has accumulated a certain reserve against the rainless days from the prosperity which accompanied the period of high prices. The rapid spread of the co-operative credit movement has mobilised and strengthened rural credit. The spread of manufacturing enterprise has

lightened the pressure on the soil. The relation of famine to the question of Indian administration has therefore changed. In an exceptionally bad year it may create administrative difficulties, it has ceased to be an administrative and social problem.

Famine under Native Rule.

Famines were frequent under Native rule, and frightful when they came. "In 1630," says Sir William Hunter, in the History of British India, "a calamity fell upon Gujarat which enables us to realise the terrible meaning of the word famine in India under Native rule. Whole cities and districts were left bare of inhabitants." In 1631 a Dutch merchant reported that only eleven of the 260 families at Swally survived. He found the road thence to Surat covered with bodies decaying on the highway where they died, there being none to bury them. In Surat, that great and crowded city, he could hardly see any living persons, but "the corpses at the corner of the streets lie twenty together, nobody burying them. Thirty thousand had perished in the town alone. Pestilence followed famine." Further historical evidence was adduced by Sir Theodore Morrison in his volume on the Economic Transition of India. It has come to be seen that whilst railways have checked the old-fashioned practice of storing grain in the villages they have made the reserves, where they exist, available for the whole of India. In India there is now no such thing as a food famine, the country always produces enough food for the whole of the population, famine when it comes is a money famine and the task of the State is confined to providing the means for those affected by drought to earn enough to buy food. The machinery whereby this is done will be examined after we have seen the experiences through which it was evolved.

History of Recent Famines

The Orissa famine of 1865-67 may be taken as the starting point because that induced to first great and organised effort to combat distress through State agency. It affected 180,000 square miles and 47,500,000 people. The Bengal Government was a little slow in appreciating the need for action, but late food was poured into the district in prodigious quantities. Thirty-five million units were relieved (a unit is one person supported for one day) at a cost of 95 lakhs. The mortality was very heavy, and it is estimated that a million people or one-third of the population, died in Orissa alone. This was followed by the Madras famine of 1866, and the famine in Western India of 1868-70. The latter famine introduced India to the great migration from Marwar which was such a distinguishing feature of the famine of 1899-1900, it is estimated that out of a total population of a million and a half in Marwar, one million emigrated. There was famine in Behar in 1873-74, then came the great South Indian Famine of 1876-78. This affected Madras, Mysore, Hyderabad and Bombay for

two years and in the second year extended to parts of the Central and United Provinces and to a small tract in the Punjab. The total area affected was 257,000 square miles and the population 58,500,000. Warned by the excessive expenditure in Behar and actuated by the desire to secure economy the Government relief programme was not entirely successful. The excess mortality in this famine is said to have been 5,250,000 in British territory alone. Throughout British India 700,000,000 units were relieved at a cost of Rs 8½ crores. Charitable contributions from Great Britain and the Colonies aggregated Rs 8 lakhs.

The Famine Codes

The experiences of this famine showed the necessity of placing relief on an organised basis. The first great Famine Commission which sat under the presidency of Sir Richard Strachey, elaborated the Famine Codes, which amended to meet later experience, form the basis of the famine relief system to day. They recommended (1) that employment should be given on the relief works to the able-bodied, at a wage sufficient for support, on the condition of performing a suitable task, and (2) that gratuitous relief should be given in their villages or in poor houses to those who are unable to work. They recommended that the food supply should be left to private agency, except where that was unequal to the demands upon it. They advised that the land owning classes should be assisted by loans, and by general suspensions of revenue in proportion to the crop failure. In sending a Famine Code to the provincial governments, the Government of India laid down as the cardinal feature of their policy that the famine wage "is the lowest amount sufficient to maintain health under given circumstances. Whilst the duty of Government is to save life, it is not bound to maintain the labouring population at its normal level of comfort." Provincial codes were drawn up, and were tested by the famine of 1896-97. In that 307,000 square miles were affected, with a population of 69,500,000. The numbers relieved exceeded 4,000,000 at the time of greatest distress. The cost of famine relief was Rs 7½ crores, revenue was remitted to the extent of Rs 1½ crore, and loans given aggregating Rs 1½ crore. The charitable relief fund amounted to about Rs 12 crore, of which Rs 1½ crore was subscribed in the United Kingdom. The actual famine mortality in British India was estimated at 750,000. The experiences of this famine were examined by a Commission under Sir James Lyall, which reported that the success attained in saving life and the relief of distress was greater than had ever been recorded in famines, comparable with it in severity, and that the expense was moderate. But before the Local Governments had been given time to digest the proposals of this Commission or the people to recover from the stock, the great famine of 1899-1900 supervened.

The Famine of 1899-1900

This famine affected 475,000 square miles with a population of 59,500,000. In the Central Provinces, Berar, Bombay, Ajmer, and the Hissar district of the Punjab famine was acute. It was intense in Rajputana, Baroda, Central

India, Hyderabad and Kathiawar. It was marked by several distinctive features. The rainfall over the whole of India was in extreme defect, being eleven inches below the mean. In several localities there was practically no rain. There was in consequence a great fodder famine, with a terrible mortality amongst the cattle. The water supply was deficient, and brought a crop of difficulties in its train. Then districts like Gujarat, where famine had been unknown for so many years that the locality was thought to be famine immune, were affected, the people here being softened by prosperity, clung to their villages, in the hope of saving their cattle, and came within the scope of the relief works when it was too late to save life. A very large area in the Indian States was affected, and the Marwaris swept from their impoverished land right through Central India like a horde of locusts, leaving desolation in their train. For these reasons relief had to be given on an unprecedented scale. At the end of July 4,500,000 persons were supported by the State, Rs. 10 crores were spent on relief, and the total cost was estimated at Rs 15 crores. The famine was also marked by a widespread acceptance by Indian States of the duty hitherto shouldered by the Government of India alone—the supreme responsibility of saving human life. Aided by loans to the extent of Rs 3½ crores, the Indian States did a great deal to bring their administration into line with that in British India. Although actual deaths from starvation were insignificant, the extensive outbreaks of cholera and the devastating epidemic of malaria which followed the advent of the rains induced a famine mortality of approximately a million. The experiences of this famine were collated by the Commission presided over by Sir Antony MacDonnell. This Commission reported that taking the famine period as a whole the relief given was excessive, and laid down certain modified lines. The cardinal feature of their policy was moral strategy. Pointing out that if the people were assisted at the start they would help themselves, whilst if their condition were allowed to deteriorate it proceeded on a declining scale, they placed in the forefront of their programme the necessity of "putting heart into the people." The machinery suggested for this purpose was the prompt and liberal distribution of taccavi loans, the early suspension of revenue, and a policy of prudent boldness, starting from the preparation of a large and expansive plan of relief and secured by liberal preparations, constant vigilance, and a full enlistment of non-official help. The wage scale was revised, the minimum wage was abolished in the case of able-bodied workers, payments by results were recommended, and proposals were made for saving cattle.

The modern system

The Government of India are now in possession of complete machinery to combat the effects of drought. In ordinary times Government is kept informed of the meteorological conditions and the state of the crops, programmes of suitable relief works are kept up-to-date, the country is mapped into relief circles, reserves of tools and plant are stocked

If the rains fall, policy is at once declared non-officials are enlisted, revenue suspended and loans for agricultural purposes made. Test works are then opened, and if labour in considerable quantities is attracted, they are converted into relief works on Code principles. Poor houses are opened and gratuitous relief given to the infirm. On the advent of the rains the people are moved from the large works to small works near their villages, liberal advances are made to agriculturists for the purchase of plough, cattle and seed. When the principal autumn crop is ripe, the few remaining works are gradually closed and gratuitous relief ceases. All this time the medical staff is kept in readiness to deal with cholera which so often accompanies famine, and malaria, which generally supervenes when the rains break.

Famine Protection

Side by side with the perfection of the machinery for the relief of famine has gone the development of famine protection. The Famine Commission of 1880 stated that the best, and often the only means of securing protection from the extreme effects of famine and drought, are railways and irrigation. These are of two classes, productive and protective. Productive works being estimated to yield profits which will pay interest and sinking fund charges are met from loans, protective works, which do not pay, directly from revenue. In order to guarantee that there should be continuous progress with protective works the Famine Insurance Grant was instituted in 1876. It was decided to set apart from the general revenues Rs. 1½ crores annually or million sterling. The first charge on this is famine relief, the second protective works, the third the avoidance of debt. The chain of protective railways is now practically complete. Great progress is being made with protective irrigation. Acting on the advice of the Irrigation Commission an elaborate programme of protective irrigation works has been constructed, particularly in the Bombay Deccan—the most famine-susceptible district in India—and in the Central Provinces.

Under the Statutory Rules framed under the Government of India Act of 1919 Provincial Governments (except Burma and Assam) are required to contribute from their resources a fixed sum every year for expenditure on famine. These annual assignments can be expended on relief of famine only, the sum not required for this purpose is utilised in building up a Famine Relief Fund. The Fund provides, as its main and primary object, for expenditure on Famine Relief proper, the word "Famine" being held to cover famine due to drought or other natural calamities. The balance at the credit of the Fund is regarded as invested with the Governor-General-in-Council and is available for expenditure on famine, when necessary and, under certain restrictions on protective and other works for relief of famine.

The Outlook

Such in brief is the official programme and organisation which has been built up out of the experience and practice of the past. Yet everything goes to show that Government activity to save human life will never be

wanted in the future on the colossal scale of former times, even so recently as 1929-1930. Each succeeding failure of the rains indicates that there has been in silent progress an economic revolution in India. In the year 1918 the rains failed more seriously and over a wider area than during any monsoon in the recent history of India. The deficiency in the rainfall was more marked than in the great famine of 1897. Yet such was the increased resisting power of the people that instead of a demand for State relief from over five millions the maximum number at any time in receipt of public assistance was never so large as six hundred thousand. The shock to the social life of the community was insignificant, the effects of the drought completely disappeared with the good rains of the following year.

Increased Resisting Power

The causes of this economic change in the conditions of India, whose influence is widespread are many. We can only briefly indicate them here. There is a much greater mobility in Indian labour. Formerly when the rains failed the ryot clung to his village until State relief in one form or another was brought almost to his door. Now at the first sign of the failure of the rains he jirds up his loins and goes in search of employment in one of the industrial centres, where the supply of labour is, when general economic conditions are normal, rarely equal to the demand, or on the constructional works which are always in progress either through State or private agency in the country. Then the ryot generally commands some store of value, often misnamed a hoard. The balance of exports in favour of India in normal times is approximately £50 millions a year. The gold and silver bullion in which this is largely liquidated is distributed all over the country, in small sums or in ornaments, which can be drawn upon in an emergency. The prodigious coining of rupees during the last two years of the war, and the continuous absorption of gold by India, represent small diffused savings, which take this form owing to the absence of banking institutions and lack of confidence in the banking system. There has been a large extension of irrigation. More than one-third of the land in the Punjab is now under irrigation, and in other Provinces, particularly in the famine-susceptible tracts of the Bombay Deccan, irrigation works have been constructed, which break the shock of a failure of the rains. The natural growth of the population was for some years reduced by plague and famine diseases, followed by the great influenza epidemic of 1918-19, which swept off five millions of people. This prevented the increase of congestion, but brought some areas particularly in the Indian States, below their former population supporting capacity. (The 1931 census showed an increase of over 30 million in the population since 1921.) The increase of railways distributes the resources of the country with ease, the spread of the co-operative credit movement has improved rural credit. Finally, there is the considerable development of manufacturing industry, which is generally short of labour and helps to absorb the surplus of a famine year. Whilst the Government is completely equipped with a famine code, there is no reason to suppose that there will ever recur such an emergency as

The following statement shows the income and expenditure of the Trust during the past nineteen years, the figures at the end of 1920 being the latest available for a complete year

| Year | Income | EXPENDITURE | | | | | | | | | | Total Expenditure |

(a) Includes a bequest of Rs 20,545

(b) Includes Rs 3,306 refunded from the grant made in 1900 for the maintenance of Rajputana Orphans

(c) Re-presents refunds from grants made in previous years

(d) Includes Rs 182 and Rs 25,000 refunded from the grants made in 1927 to Bihar and Orissa and Bombay respectively

(e) In addition a sum of Rs 25,000 being the surplus balance of the grant made in 1927 to the Bombay Central Flood Relief Fund, was allowed to be transferred to the Bombay Government for relief of distress in Sind

that of 1899 Famine can now be efficiently met by the liberal distribution of tagavi, the suspension and remission of the land revenue demand, the relief of the aged and others who cannot work, the provision of cheap fodder for the cattle, with possibly some assistance in transporting the affected population of the famine-affected tract to the industrial centres

The increased resisting power of the people was effectively demonstrated during the famine of 1920-21, which was due to the failure of the monsoon towards the end of the year 1920. The distress which appeared in the end of 1920 persisted during the early months of 1921 and regular famine was declared in parts of Madras, Bombay, Central Provinces and Baluchistan. Local distress prevailed also in Bengal, Punjab and Central India. The largest number of persons on relief of all kinds did not exceed 0.45 million which was considerably less than 3% of the total population of the area affected by the failure of the monsoon.

The Indian People's Famine Trust

Outside the Government programme there is always scope for private philanthropy especially in the provision of clothes, help for the superior class poor who cannot accept Government aid, and in assisting in the rehabilitation of the cultivators when the rains break. At every great famine large sums have been subscribed, particularly in the United Kingdom, for this purpose, and in 1899-1900 the people of the United States gave generous help. With the idea of providing a permanent famine fund, the Maharaja of Jaipur gave in 1900 a sum of Rs 15 lakhs, in Government securities to be held in trust for the purposes of charitable relief in seasons of general distress.

This Trust in a few years became swollen to Rs 28,10,000 and has ever since been maintained at that figure. It is officially called the Indian People's Famine Trust, and was constituted under the charitable endowment Act, 1890. The income of the Trust is administered by a board of management consisting of 13 members appointed from different provinces and Indian States. Sir Ernest Burdon, Kt., C.S.I., C.I.E., I.C.S., Auditor General in India, is the Secretary & Treasurer of the Trust. The money is invested and the principal never taken for expen-

diture. The income from it is utilised for relief work as necessary and unexpended balances are temporarily invested, so as to make available in years of trouble savings when expenditure is not necessary. The temporary investments—in Government Securities—at the end of 1930 stood at Rs 3,88,716-4-0 and the cash balance at the same time was Rs 37,687-8-2, so that the total available for expenditure at the commencement of 1931 was Rs 4,14,000. The returns for 1931 were not complete when this chapter was revised.

The whole conditions to meet which the Trust was founded have changed in recent years. This is the result of the improved policy of Government in regard to famine relief and of the difference in the meaning of the word famine in consequence of the improvement of transport communications and other factors affected by modern progress. An area stricken by failure of seasonal rains now obtains supplies from other regions in a manner impossible before the development of railways and of modern marketing practice and Government help its people by loans given direct or through Co-operative Societies to tide them over the period of scarcity. The experience of successive visitations of scarcity in different parts of the country also proves that the general economic progress of the people makes them able to meet temporary periods of stress in a manner formerly unimaginable. Famine in the old terrible sense of the term has in fact ceased to occur. This was well illustrated by the events of 1919, when the land suffered from a failure of the rains more general throughout India and worse in degree than any previously recorded by the Meteorological Department but the crisis was borne with a minimum of suffering. The demands upon the Famine Trust have consequently so greatly diminished in their original sense that hardly any money is now distributed from it for the relief of famine in the proper sense of the word, resulting from rain failure and expenditure has mainly become grants of assistance to sufferers from floods. The total expenditure upon real famine in the old sense was only Rs 50,000 during the year 1929, while expenditure on relief of distress caused by floods was Rs 4,75,000 in the same year. The terms of the Trust fortunately, permit of management on lines according with modern needs.

Hydro-Electric Development.

India promises to be one of the leading countries of the world in regard to the development of hydro-electric power and great strides in this direction have already been made. India not only specially lends itself to projects of the kind, but peremptorily demands them. Cheap motive power is one of the secrets of successful industrial development and the favourable initial conditions caused by the war, the enthusiasm for industrial development which has seized nearly all classes of educated Indians, and the special attention which the circumstances of the war have compelled Government to direct towards the scientific utilisation of Indian natural resources all point to a rapid growth of industrial enterprise in all parts of India within the next few years. Indeed, the process, for which sound foundations had been laid before the war, is now rapidly under way. India is severely handicapped compared with other lands as regards the generation of power by the consumption of fuel, coal or oil. These commodities are all difficult to obtain, and costly in India except in a few favoured areas. Coal supplies, for example, are chiefly centred in Bengal and Chota Nagpur and the cost of transport is heavy. Water power and its transmission by electricity offer, on the other hand, immense possibilities, both as regards the quantity available and the cheapness at which the power can be rendered, in all parts of India.

Water power schemes, pure and simple, are generally difficult in India, because the power needs to be continuous, while the rainfall is only during a small portion of the year. Perennial rivers with sufficient water throughout the year are practically non-existent in India. Water, therefore, must be stored for use during the dry season. Favourable sites for this exist in many parts in the mountainous and hilly regions where the heaviest rainfalls occur and the progress already made in utilising such opportunities by the electrical transmission of power affords high encouragement for the future. Further, hydro-electric schemes can frequently be associated with important irrigation projects, the water being first used to drive the turbines at the generating stations, and then distributed over the fields.

The Industrial Commission emphasized the necessity for a Hydrographic Survey of India. On this recommendation the Government of India in 1918 appointed the late Mr G T Barlow, C.I.E., then Chief Engineer, Irrigation Branch, United Provinces, to undertake the work, associating with him Mr J W Meares, M.I.C.E., Electrical Adviser to the Government of India. Mr Barlow died, but Mr Meares issued a preliminary report in September, 1919, summarising the present state of knowledge of the problem in India and outlining a programme of investigation to be undertaken in the course of the inquiry. Mr Meares showed that industries in India now absorb over a million horse

power, of which only some 285,000 h.p. is supplied by electricity from steam, oil or water. The water power so far actually in slight amounts to 1½ million horse-power, but this excludes practically all the great rivers, which are at present uninvestigated. Thus the minimum flow of the seven great rivers eastward from the Indus is stated to be capable of giving not less than three million horse-power for every thousand feet of fall from the Himalayas, while similar considerations apply to rivers in other parts. Some doubt is expressed as to the estimate of seven million horse-power in the Irrawaddy and Chindwin rivers, given in the report of the London Conjoint Board of Scientific Studies.

The Report points out that the Bombay Presidency holds a unique position owing to its great existing and projected schemes at Lonavla, the Andhra Valley, the Nila Mula and the Koyna Valley and has the still greater advantage of possessing a firm ready to develop its resources.

Bombay Hydro-Electric Works

The greatest water-power undertakings in India—and in some respects the greatest in the world—are the Tata hydro-electric schemes recently brought to fruition, and constantly undergoing expansion, for the supply of power in the city of Bombay. Bombay is after London the most populous city in the British Empire and it is the largest manufacturing town in Asia. Its cotton mills and other factories use over 100,000 horse power of mechanical energy and until a year or two ago this was almost entirely provided by steam, generated by coal coming from a distance—mostly Bengal. The Tata Hydro-Electric Power Scheme, now an accomplished fact, marked one of the big steps forward made by India in the history of its industrial development. It was the product of the fertile brain of Mr David Gostling, one of the well known characters of Bombay, nearly a generation ago. The exceptional position of the Western Ghats, which rise 2,000 feet from sea-level which a very short distance of the Arabian Sea, and force the monsoon as it sweeps to land, to break into torrential rain at the mountain passes was taken full advantage of and the table lands behind the Ghats form a magnificent catchment area to conserve this heavy rainfall. In Mr Gostling pressed the scheme on the attention of Mr Jamsetji Tata for years, and with perseverance collected data which he laid before that pioneer of the larger industries in India. He summoned the aid of experts from England to investigate the plan. The scheme was fully considered for six long years. Meanwhile both Mr J N Tata and Mr David Gostling passed away, but the sons of the former continued the work of their father and on Mr Gostling's death, Mr R B Joyner's aid was sought to work out the hydraulic side of the undertaking.

The scheme completed, a syndicate secured the license from Government and an endeavour was made to enlist the support of financiers of England who tried to impose terms which were not acceptable. Meanwhile, the attention of Sir George Clarke (now Lord Sydenham), then Governor of Bombay, and an engineer of distinction himself, was drawn to the scheme. The interest shown by him drew the attention of Indian Chiefs in the Presidency of Bombay, and outside it to its possibilities, funds flowed in and a company was started.

The hydro electric engineering works in connection with the project are situated at and about Lonavla above the Bhor Ghat. The rainfall is stored in three lakes at Lonavla, Walwhan and Shiravta, whence it is conveyed in masonry canals to the forebay or receiving reservoir. The power-house is at Khopoli, at the foot of the Ghats, whither the stored water is conveyed through pipes, the fall being one of 1,725 feet. In falling from this height the water develops a pressure of 750 lbs per square inch and with this force drives the turbines or water wheels. The scheme was originally restricted to 30,000 electrical horse power, but the Company, in view of the increasing demand for power from the Bombay mills, decided to extend the works by building the Shiravta Dam, the capacity of the scheme being increased to more than 40,000 electrical horse power. The works were formally opened by H. E. the Governor of Bombay on the 8th February 1915. At present there are about 44 mills with motors of the aggregate B. H. P. of 55,000 H. P. in service. In addition to the cotton and flour mills which have contracted to take supply from the Company for a period of ten years, an agreement has been completed whereby the Tata Hydro-Electric Company, the Andhra Valley Power Supply Company and the Tata Power Company between them supply the whole of the electric power required by the Bombay Electric Supply and Tramways Company, Limited, and also the power for the electrification of the Harbour Branch and Bombay-Kalyan section of the G. I. P. Railway. There remain many prospective buyers of electrical energy and the completion of the Company's full scheme will not suffice for all such demands. Besides the Bombay cotton mills, which alone would require about 100,000 horse power there are, for instance, tramways, with possibilities of suburban extensions. The probable future demand is roughly estimated at about 160,000 H. P. Recently the Company has embarked upon a considerable scheme of extensions, these involving the impounding of a fourth lake at Kundley, near Lonavla, the duplication of the pipeline and the installation of additional machinery at the power house at Khopoli.

Investigations undertaken by Mr. H. P. Gibbs, with a view to further developing the electrical supply led to the discovery of a highly promising water storage site in the valley of the Andhra River, situated near the present lakes previously overlooked, as altogether different treatment and design were required. In this instance the draw off point is 11 miles upstream from the dam and at a level 112 ft. above the lowest river bed level at the

dam. The water is taken through a tunnel 8,700 ft long driven in solid trap rock through the scarp of the ghats of which the pressure pipes are an extension. Seventy feet of the upper water in the lake can be drawn off comprising 75 per cent of the total amount of water stored both above and below draw off level. A scheme was prepared to be carried out by a separate company and providing for holding up the Andhra River by a dam, about a third of a mile long and 192 feet high, at Tokernadi. This dam holds up a lake nearly twelve miles long, the further end of which approaches the brink of the Ghats at Khand. Here, a tunnel, a mile and a quarter long, carries the water to the surge chamber, whence it enters the pipes for a vertical drop of about 1,750 feet to the generating station at Bhivpuri, about 17 miles from the generating station at Khopoli. The scheme is designed to yield 100,000 horse power in its full development. Power is being supplied to some thirty factories in Bombay absorbing roughly 40,000 electrical horse-power, as well as to the Bombay Electric Supply and Tramways Company and to the G. I. P. Railway for the first stage of their electrification scheme.

Just as the Andhra project has been developed as a northward extension of the original scheme, so a southward development also originated by Mr. Gibbs and developable on lines similar to those of the Andhra project is now practically completed under the name of the Nila Mula scheme, the name arising from the fact that the valleys of the Nila and Mula rivers are being dammed for the conservation of water for it. A company entitled The Tata Power Co., Ltd., was floated in the autumn of 1919.

A lake having an area of sixteen square miles and a catchment area of 112 square miles has been formed at Mulshi by the erection of a masonry dam 4,100 feet in length and 158 feet in height. At the end of the lake opposite to the site of the dam, a tunnel has been cut through the Western Ghats to a total length of 14,500 feet, at the further end of which the water enters the pipe line and descends to the turbine power house at Bhira, 1,750 feet below. The head of water is sufficient to generate 150,000 electrical horse-power at 11,000 volts, and after being transformed up to 110,000 volts the current is transmitted to the receiving station at Dharavi, Bombay, through an overhead line approximately 80 miles in length. Five generating units each of 30,000 electrical horse-power are being erected, and of these two are already in commercial operation. The power will be absorbed by mills, factories and local area not yet electrified in Bombay and suburbs as well as by the B. B. & C. I. Railway's suburban service. The G. I. P. Railway's electrified service within thirty miles of Bombay and the overgrowing needs of the B. E. S. & T. Company.

Nearly 100 miles southward of this Messrs. Tata propose to erect two dams in the huge valley of the Koyna river, proposed by Mr. A. T. Arnall and developable on lines similar to the two projects by Mr. Gibbs above mentioned, partly to supply power to Bombay and partly to develop a great assembly of electro-chemical industries near the power installation. The prelimi-

nary investigations for this scheme are still proceeding. The catchment area for the lake will be 346 square miles and there will be a total storage after the rains of 112,600 million cubic feet, which will be sufficient to supply a normal load of 350,000 horse power for 8,000 hours per year. The preliminary estimates provided for a capital of Rs 810 lakhs to carry out the scheme.

Mysore Installation

The first hydro electric scheme undertaken in India or, indeed, in the East, was that on the River Cauvery, in Mysore State, which was inaugurated, with generating works at Sivasamudram, in 1902. The Cauvery rises in the British district of Coorg, and flows right across Mysore. The first object with which the installation was undertaken was the supply of power to the goldfields at Kolar. These are 92 miles distant from Sivasamudram and for a long time this was the longest electrical power transmission line in the world. Current is also sent to Bangalore, 59 miles away, where it is used for both industrial and lighting purposes.

The initial undertaking has constantly been expanded since its inauguration, so that its total capacity, which was at first 6,000 horse power, is now approximately 25,000 h p. This is the maximum obtainable with the water which the Cauvery affords and, therefore with the number of consumers, large and small, rapidly increasing, the necessity of a completely new installation elsewhere, to be operated in parallel with or separately from that at Sivasamudram, has been recognised. Two projects offer themselves. The first would involve the use of the River Shimsha, a tributary of the Cauvery which has natural falls, and the second, known as the Mekadatu project, would have its power house on the Cauvery, 25 miles down-river from Sivasamudram and just within the borders of Mysore State, adjacent to the Madras Presidency. The head of water available at Sivasamudram is 400 feet, that on the Shimsha 618 feet net, which would generate 39,500 h p. At Mekadatu the Cauvery runs in rapids and a dam and a channel 20,000 feet long with a 22½ feet bed would be necessary. There would be three generating units, each giving an output of 4,000 h p. Future extensions yielding an additional 8,000 h p could be made. The progressive spirit which has marked the management of the works since their inception now characterises the manner in which the problem of further extensions are being considered.

Works in Kashmir

A scheme of much importance from its size, but more interesting because of the developments that may be expected from it than for the part which its current supply already plays in the life of the countryside, is one installed a few years ago by the Kashmir Durbar, utilising the River Jhelum, near Baramulla, which lies thirty-four miles north-west of Srinagar. The head works of the Jhelum power installation are situated six and a half miles from the power

house and the main connection between the two is a great timber flume. These works and the forebay at the delivery end of the flume have a capacity for carrying water sufficient for the generation of 20,000 electrical horse power. Four pipes 600 feet long lead from the forebay to the power house, and from forebay to water-wheel there is an effective head of 395 feet. There are four vertical waterwheels, each coupled on the same shaft to a 1,000 k w, 3-phase, 2,300 volt, 25-period generator running at 500 r p m, and each unit is capable of taking a 25 per cent overload, which the generator end is guaranteed to maintain with safety for two hours. The power house is of sufficient capacity to allow of 15,000 k w generating plant being installed within it. Two transmission lines run side by side as far as Baramulla, 21 miles distant, at which point one terminates. The other continues to Srinagar, a further 34 miles. The installation at Baramulla was originally utilised for three floating dredgers and two floating derricks, for dredging the river and draining the swampy countryside and rendering it available for cultivation, but these operations have temporarily been curtailed, so that only one dredger is now in operation. The lighting of Baramulla has been taken in hand with satisfactory results and it is expected that the lighting demand will rapidly increase and that a small demand for power will soon spring up. At Srinagar, the line terminates at the State silk factory, where current is supplied not only for driving machinery and for lighting, but for heating. The greater part of Srinagar city is now electrically lighted and during the past year a motor load of over 100 k w has been connected with the mains, motors being hired out to consumers by the Electrical Department. This step was taken with a view to educating the people in the use of electric power and it has been entirely successful.

Recent Progress

Apart from the development of the three projects in the Bombay Presidency the past few years have witnessed comparatively little progress in hydro-electric works. Construction is proceeding, however, on the Mandi Project in the Punjab, which will utilize the water of the Uhl river for the generation of power with which a large number of towns in that province will be electrified. The scheme has been formulated in three stages. The first will develop 48,000 horse power from the ordinary discharge of the river, the second involves the formation of a storage reservoir by the construction of a dam and would double the electrical output, whilst the third would utilize the same water several miles down-stream and provide an additional 84,000 horse-power. Only the first stage is at present being constructed. Another interesting project is the hydro electric grid scheme in the United Provinces which will carry electric power to a large number of towns and villages and will, it is anticipated, assist greatly in the development of rural areas.

A small plant was completed and put into operation at Naini Tal during 1923, and the erection of another small plant was commenced

at Shillong, but otherwise there is nothing to record. It is interesting to note, however, that preliminary investigations are proceeding with a view to the erection of hydro electric plants in various parts of India. In the tea districts of Kaimpong and Kurseong, for example, it is proposed to harness a promising water-power site and to supply current to an important area in which are situated more than two hundred tea factories.

The Suttie Hydro-Electric Project, at one time appeared to be one of the most promising propositions in the country, but owing to financial considerations it has now been indefinitely shelved. In Southern India a large number of sites have been investigated, and of these one on the Pkara river in the Nilgiris and another on the Kallar river on the borders of Travancore have been selected for development if and when the financial considerations can be satisfactorily settled. The Pkara river scheme is of some magnitude and it is estimated that upwards of 50,000 horse power will be available for electro-chemical industries which it is proposed to establish at Calicut on the West Coast. The Kallar river project is very much smaller, but it is interesting in being a scheme in which the Government of Madras and the Travancore Darbar will be jointly responsible, for the power house will be located on the British side of the river and the current

transmitted to and distributed in Travancore State. Finally, there is a big combined project of hydro electrification and irrigation in Hyderabad State. This scheme is still very much in the air, but the fact that it is under consideration is worthy of being placed on record in view of the somewhat unusual circumstance in India, that the fall water from the turbines will be made available for agricultural purposes and not allowed to run to waste.

The fact that the Bombay Electric Supply and Tramways Company has shut down its steam driven generating plant and now takes its supply in bulk from the various Tata companies has been recorded above, and it is of more than passing interest to note that the Poona Electric Supply Company has recently adopted a similar course. This is a phase of hydro-electric distribution which is quite in its infancy in India, but it is possible to foresee the time when every village within a couple of hundred miles of a hydro electric power station will receive its supply of electric current in bulk, thus greatly reducing capital and administrative charges and minimizing the price of current to the consumer. It is a system which has become something of a fine art in California, where current is transmitted by overhead wires for many hundreds of miles at a pressure of 200,000 volts, or double the pressure commonly employed in India for overhead long-distance transmission.

Local Self-Government.

A field of the administration of India profoundly affected by the Reforms of 1919 is that of local government. This is one of the subjects transferred to Indian ministers, and under their leadership considerable developments have been essayed. On the whole, the progress of local government in India for the past quarter of a century has been disappointing. The greatest successes have been won in the Presidency towns, and particularly by the Municipality of Bombay. The difficulties in the way of progress were manifest. Local government had to be a creation—the devolution of authority from the Government to the local body, and that to a people who for centuries had been accustomed to autocratic administration. Again, the powers entrusted to local bodies were insignificant and the financial support was small. There are however many indications that the dry bones of the moribund are stirring.

Throughout the greater part of India, the village constitutes the primary territorial unit of Government organisation, and from the villages are built up the larger administrative entities—tahsils, sub divisions, and districts.

"The typical Indian village has its central residential site, with an open space for a pond and a cattle stand. Stretching around this nucleus lie the village lands, consisting of a cultivated area and (very often) grounds for grazing and wood cutting. The inhabitants of such a village pass their life in the midst of these simple surroundings, welded together in a little community with its own organisation and government, which differ in character in the various types of villages. Its body of detailed customary rules and its little staff of functionaries, artisans and traders. It should be noted, however, that in certain portions of India, e.g., in the greater part of Assam, in Eastern Bengal, and on the west coast of the Madras Presidency, the village as here described does not exist, the people living in small collections of houses or in separate homesteads."—(*Gazetteer of India*)

The villages above described fall under two main classes, viz.—

Types of Villages—“(1) The ‘severalty’ or *raiyatwari* village which is the prevalent form outside Northern India. Here the revenue is assessed on individual cultivators. There is no joint responsibility among the villagers, though some of the non-cultivated lands may be set apart for a common purpose, such as grazing, and waste land may be brought under the plough only with the permission of the Revenue authorities, and on payment of assessment. The village government vests in a hereditary headman, known by an old vernacular name, such as *patel* or *reddi*, who is responsible for law and order, and for the collection of the Government revenue. He represents the primitive headship of the tribe or clan by which the village was originally settled.”

“(2) The joint or landlord village, the type prevalent in the United Provinces, the Punjab and the Frontier Province. Here the revenue was formerly assessed on the village as a whole,

its incidence being distributed by the body of superior proprietors, and a certain amount of collective responsibility still, as a rule, remains. The village sites owned by the proprietary body, who allow residences to the tenantry, artisans, traders and others. The waste land is allotted to the village, and, if wanted for cultivation, is partitioned among the shareholders. The village government was originally by the *punchayet* or group of heads of superior families. In later times one or more headmen have been added to the organisation to represent the village in its dealings with the local authorities, but the artificial character of this appointment, as compared with that which obtains in a *raiyatwari* village is evidenced by the title of its holder, which is generally *lambardar*, a vernacular derivative from the English word ‘number’. It is this type of village to which the well-known description in Sir H. Maine's *Village Communities* is alone applicable, and here the co-proprietors are in general a local oligarchy with the bulk of the village population as tenants of labourers under them.”

Village Autonomy—The Indian villages formerly possessed a large degree of local autonomy, since the native dynasties and their local representatives did not, as a rule, concern themselves with the individual cultivators, but regarded the village as a whole, or some large landholder as responsible for the payment of the Government revenues, and the maintenance of local order. This autonomy has now disappeared owing to the establishment of local, civil and criminal courts, the present revenue and police organisation, the increase of communications, the growth of individualism, and the operation of the individual *raiyatwari* system, which is extending even in the north of India. Nevertheless, the village remains the first unit of administration, the principal village functionaries—the headman, the accountant and the village watchman—are largely utilised and paid by Government, and there is still a certain amount of common village feeling and interests.

Punchayets—For some years there was an active propaganda in favour of reviving the village council tribunal, or *Punchayet* and the Decentralisation Commission of 1908 made the following special recommendations—

“While, therefore, we desire the development of a *punchayet* system, and consider that the objections urged thereto are far from insurmountable, we recognise that such a system can only be gradually and tentatively applied, and that it is impossible to suggest any one and definite method of procedure. We think that a commencement should be made by giving certain limited powers to *Panchayat* in the village in which circumstances are favourable by reason of homogeneity of race, caste, language, and freedom from internal dissension. The power might be increased gradually by a warrant, and rather more than a year would be required to apply the system to the whole country. Such a plan, which would be in operation by the year, will require great care and attention.”

much patience, and judicious discrimination between the circumstances of different villages, and there is a considerable consensus of opinion that this new departure should be made under the special guidance of sympathetic officers."

This is, however, still mainly a question of future possibilities, and for present purposes it is unnecessary to refer at greater length to the subject of village self-government. Various measures have been passed, but it is too early to say what life they have. The Punjab Government has passed a Village Panchayat Act, which enables Government to establish in a village, a system of councillors to whom certain local matters, including judicial power, both civil and criminal of a minor character, may be assigned. In Bihar a Village Administration Act has been passed for the administration of village affairs by villagers themselves, including minor civil and criminal cases. Other Governments are taking steps in the same direction.

Municipalities—The Presidency towns had some form of Municipal administration, first under Royal Charters and later under statute, from comparatively early times, but outside of them there was practically no attempt at municipal legislation before 1842. An Act passed in that year for Bengal, which was practically inoperative, was followed in 1850 by an Act applying to the whole of India. Under this Act and subsequent Provincial Acts a large number of municipalities was formed in all provinces. The Acts provided for the appointment of commissioners to manage municipal affairs, and authorised the levy of various taxes, but in most Provinces the commissioners were all nominated, and from the point of view of self-government, these Acts did not proceed far. It was not until after 1870 that much progress was made. Lord Mayo's Government, in their Resolution of that year introducing the system of provincial finance, referred to the necessity of taking further steps to bring local interest and supervision to bear on the management of funds devoted to education, sanitation, medical charity, and local public works. New Municipal Acts were passed for the various Provinces between 1871 and 1874, which, among other things, extended to the elective principle, but only in the Central Provinces was popular representation generally and successfully introduced. In 1881-2 Lord Ripon's Government issued orders which had the effect of greatly extending the principle of local self-government. Acts were passed in 1883-4 that greatly altered the constitution, powers, and functions of municipal bodies, a wide extension being given to the elective system, while independence and responsibility were conferred on the committees of many towns by permitting them to elect a private citizen as chairman. Arrangements were made also to increase municipal resources and financial responsibility, some items of provincial revenue suited to and capable of development under local management being transferred, with a proportionate amount of provincial expenditure, for local objects. The general principles thus laid down have continued to govern the administration of municipalities down to the present day.

The Present Position—There are some 777 Municipalities in British India, with something

over 19 million people resident within their limits. Of these municipalities, roughly 710 have a population of less than 50,000 persons and the remainder a population of 50,000 and over. As compared with the total population of particular provinces, the proportion resident within municipal limits is largest in Bombay, where it amounts to 20 per cent, and is smallest in Assam where it amounts to only 2 per cent. In other provinces it varies from 4 to 9 per cent of the total population. Turning to the composition of the Municipalities, considerably more than half of the total members are elected and there is a steady tendency to increase this proportion. Ex-officio members are only 7 per cent, and nominated 25 per cent. Elected members are almost everywhere in a majority. Taking all municipalities together, the non-officials outnumber the officials by nearly six to one. The functions of municipalities are classed under the heads of Public Safety, Health, Convenience and Instruction. For the discharge of these responsibilities, there is a municipal income of Rs 14.03 crores derived principally from taxation, just over one-third coming from municipal property, contributions from provincial revenues and miscellaneous sources. Generally speaking, the income of municipalities is small, the four cities of Calcutta, Bombay, Madras and Rangoon together providing nearly 40 per cent of the total. The heaviest items of this expenditure come under the heads of "Conservancy" and "Public Works" which amount to 15 per cent and 14 per cent respectively, "Water supply" comes to 13 per cent, "Drainage" to 6 per cent and "Education" to no more than 8 per cent. In some localities the expenditure on education is considerably in excess of the average. In the Bombay Presidency, excluding Bombay City, for example, the expenditure on education amounts to more than 21 per cent of the total funds, while in the Central Provinces and Berar it is over 17 per cent.

District Boards—The duties and functions assigned to the municipalities in urban areas are in rural areas entrusted to district and local boards. In almost every district of British India save in the province of Assam, there is a board subordinate to which are two or more sub-district boards, while in Bengal, Madras and Bihar and Orissa, there are also Union Committees. Throughout India at large there are some 207 district boards with 582 sub-district boards besides 457 Union Panchayats in Madras. This machinery has jurisdiction over a population which was over 214 millions in 1929-30. Leaving aside the Union Committees and Union Boards or Panchayats the members of the Boards numbered a little over 10,000 in 1929-30, of whom 73 per cent were elected. As in the case of municipalities the tendency has been throughout India to increase the elected members at the expense of the nominated and the official members. The Boards are practically manned by Indians, who constitute 98 per cent of the whole membership. Only 11 per cent of the total members of all boards are officials of any kind. The total income of the Boards in 1929-30 amounted to Rs 10.37 crores, the average income of each board being Rs 2,00,000. The most important item of revenue is provincial

In the North West Frontier Province, the institution of local self-government is to be what of a forward growth. Certain of the municipal committees are still in the infancy of their responsibility and have not yet been able to perform their duties. The official members are gradually being trained to perform municipal administration. The Local Government reports that they have been able to take a very active part in the work of the municipalities and that they are able to contribute to the improvement of the municipalities. The Provincial Government is also working for the improvement of the municipalities and is working for the improvement of the municipalities.

Local Government Statistics

Municipalities—With this general introduction we can now turn to the statistical results of the working of Local Self-Government in the following table. Information as to the constitution of municipal committees, taxation, &c., in the chief provinces in 1920-20 —

| Province | Population within Municipal Limits | Number of Municipalities | Number of Members of Committees | Classification of Members | | Income | Incidence per Head of Population | | | | | | Expenditure |
|--------------------------------|------------------------------------|--------------------------|---------------------------------|---------------------------|--------------|--------------|----------------------------------|----|----|---|----|----|--------------|
| | | | | Official | Non-Official | | Rates and Taxes | | | Total Income (excluding Extraordinary and Debt) | | | |
| | | | | | | | Rs | a | p | Rs | a | p | |
| Presidential Provinces | | | | | | | | | | | | | |
| Calcutta | 1,077,264 | 1 | 90 | 1 | 89 | 3,75,57,628 | 17 | 14 | 9 | 23 | 0 | 8 | 3,40,73,158 |

(a) Includes 137 Union Panchayats with 1,911 elected and 1,221 r office and nominated members

Calcutta Improvement Trust.

The Calcutta Improvement Trust was instituted by Government in January, 1912, with a view to making provision for the improvement and expansion of Calcutta by opening up congested areas, laying out or altering streets, providing open spaces for purposes of ventilation or recreation, demolishing or constructing buildings and rehousing the poorer and working classes displaced by the execution of improvement schemes.

The origin of the Calcutta Improvement Trust must, as in the case of the corresponding Bombay body, upon which the Calcutta Trust was to a large extent modelled, be looked for in a medical enquiry which was instituted into the sanitary condition of the town in 1896, owing to the outbreak of plague. It was estimated that the Trust might in the ensuing 30 years have to provide for the housing of 225,000 persons. The population of Calcutta proper, which includes all the most crowded areas, was 649,995 in 1891, and increased to 801,251, or 67.25 per cent, by 1901. The corresponding figure according to the 1911 Census was 896,067 and this had increased by 1921 to 993,508.

The problem of expansion was difficult, because of the peculiar situation of Calcutta, which is shut in on one side by the Hooghly and on the other by the Salt Lakes.

Preliminary investigations continued for several years, so that it was only in 1910 that legislation was eventually introduced in the provincial legislature and the Trust instituted by it. The Bill provided for a large expenditure on improvement schemes and the provision of open spaces and for special local taxation to this end. It also provided for the appointment of a whole-time chairman of the Board of Trustees and the membership of the Trust was fixed at eleven.

The following constituted the Board of Trustees at 31st March 1931—Mr J A L Swan, C I E, I O S, Chairman, Mr J C Mukherjee, Bar-at-Law, Chief Executive Officer, Calcutta Corporation (*ex-officio*), Mr D J Cohen, elected by the Corporation of Calcutta under Section 7 (1) (a) of the Calcutta Improvement Act, 1911, Mr Prabhudoyal Himatsingh, elected by the elected councillors, Corporation of Calcutta, under Section 7 (1) (b) of the Calcutta Improvement Act, 1911, as modified by the Amendment Act of 1926, Mr Charu Chandra Biswas, C I E, elected by Councillors other than elected Councillors of the Corporation of Calcutta, under Section 7 (1) (c) of the Calcutta Improvement Act, 1911, as modified by the Amendment Act of 1926, Mr G Morgan, C I E, elected by the Bengal Chamber of Commerce, Sir Hari Sankar Paul, Kt, elected by the Bengal National Chamber of Commerce, Mr Unsud Dowla, Rai Badridas Goenka

Bahadur, C I E, Rai Bahadur Dr Haridhan Dut, appointed by the Local Government.

During the 10 years that it has now been at work, the Trust have decided, and partly or entirely carried through, several improvement schemes for opening up congested areas, laying out or widening streets and providing open spaces.

In Central Calcutta many highly insanitary *bustees* have been done away with and several roads of an improved type laid out, the most important of which is the Chittaranjan Avenue, 100 ft wide which at present extends from Beadon Street to Chowringhee, and will shortly be extended to Shambazar Street on the north. It is intended ultimately to extend it up to the Chitpur bridge. But at present there is the direct connection between Chitpur bridge and the Barrackpore Trunk Road, as Lackgate Road has been severed by the sidings of the Eastern Bengal Railway. In these circumstances the Board considered that traffic would be better served by postponing the extension to Chitpur Bridge and constructing a road to Shambazar which is the terminus of the Barrackpore Trunk Road and of the Dum-Dum-Jessore Road. A scheme known as Scheme No XXXVII has been published under Section 43 of the Calcutta Improvement Act which provides *inter alia* for the extension of Chittaranjan Avenue up to Raja Rajballab Street and for the construction of a new 84 feet road connecting it with Cornwallis Street. The section of Chittaranjan Avenue near the Chowringhee end is well placed for commerce and trade and is likely before long to gain increased importance by being linked up with Dalhousie Square by means of a new road 84 feet wide which the Trust proposes to construct between Mission Row and Mangoe Lane.

In the north of the City, two large and thirteen small parks have been constructed in different quarters. Of the two large parks one is named Chittaranjan Park and the other Cossipore Chitpore open space measuring 53 bighas and 156 bighas respectively. The Cossipore Chitpore Park has a small artificial lake and the layout of the area surrounding the lake has been taken in hand. Four football grounds have been provided for schools and clubs of North Calcutta. Some tennis courts are also being made. The Chittaranjan Park has also been provided with play grounds. Several wide roads have been driven through this highly congested area. The approaches to the City have also been adequately widened.

Some progress has also been made with that highly congested Area to the West of the City by opening up new roads and widening the existing ones. This Scheme is known as Maydapat, Scheme No XXXVII.

The most important work which the Trust has in hand at present is the construction of the main east and west thoroughfare, 84 feet wide across the centre of the city between Maniktala and Strand Road. The portion between Upper Circular Road and Chittaranjan Avenue has been completed, as also the section of this thoroughfare between Central Avenue and Upper Chitপুর Road.

The engineering works in the portion between Upper Chitপুর Road and Strand Road have made good progress and Calcutta will shortly have a wide thoroughfare extending from Strand Road to Maniktala Bridge and intersecting Chitপুর Road, Chittaranjan Avenue, Cornwallis Street and Circular Road. At the instance of the Corporation of Calcutta, a large storm water relief sewer, which will drain an area of about 163 acres, has been laid in this road from Chittaranjan Avenue westward to Strand Road. From there it will be carried to the river by the Corporation.

Of the other schemes in progress in the centre of the town the most important is the construction of a new 60 feet road connecting Darponiraj in Tagore Street with Pathurighat Street. Its importance lies in the fact that it is a portion of a new thoroughfare which will run through the middle of Burrabazar and connect Harrison Road with Nintallighat Street. The widening of Kalakar Street in Burrabazar, which forms the southern section of this road will be taken up at once if a Bill which was introduced in the Bengal Legislative Council in February 1931 is passed into law.

The Suburban Areas to the South and South East of Calcutta required greater attention and extensive development schemes were undertaken. Several open spaces and squares have been made in various parts. Insanitary tanks requiring approximately 2 crores Cu ft. of earth have been filled up. Russa Road which forms the southern approach to the town has been widened to 150 ft. for a length of one mile and 100 ft. for a length of another mile. It now gives a most pleasant drive from Chowringhee to Tollygunge. To improve the drainage of this area a 100 ft. wide East to West road, from Ballygunge Railway Station to Chetla Bridge, and for recreation an artificial lake of 167 bighas with adequate grounds has been completed.

Another small lake has also been completed and a road is being constructed round it to link up with the road surrounding the main lake. The road round the main lake has been surfaced with asphalt and lighted with electricity and is much frequented in the evenings. Sites for Club houses adjoining the main lake have been allotted to several clubs. Excavation has been continued in a new section of the lake which is to be attractively laid out with an island to which the public will have access by means of a footbridge. The Calcutta Tramways Co. Ltd. have now extended tram tracks from Russa Road along New Sewer Road to Ballygunge Station.

The Board of Trustees have framed a scheme for the extension southwards of Lansdowne Road which has received Government sanction and acquisition of land is in progress, the Board in pursuance of its policy of carrying out schemes in the centre of the town and in the suburbs simultaneously, so as to have an adequate supply of suburban sites for residential buildings to meet the needs of those displaced from overcrowded areas in the centre of the town has also framed a scheme known as Scheme No. XXXIII for the improvement of another section of the undeveloped area between Russa Road and the Lake District. This too has received sanction of Government and land acquisition is in progress.

To the east of the city, several new roads have been constructed in Scheme No. VIII (New Ballygunge Road Park Circus to Old Ballygunge Road). They are now open to traffic, and the majority of them are surfaced with asphalt. Arrangements have been made for lighting the roads with electricity. The development of Calcutta east of Lower Circular Road, between Park Circus and Middle Road (Lutally), is a pressing need, but the work can only proceed slowly in small sections. The Trust in the execution of this scheme cannot ignore the bustle dwellers, who are pushed further east, as the development from bustle conditions to blocks of masonry buildings proceeds. The utilisation of highly-improved lands for bustle purposes is not an economic proposition, but at the same time, it is necessary to provide the essentials of sanitation for the working classes.

The linking up of Amherst Street with London Street by a broad thoroughfare has commenced. The Trust is constructing a large park near Park Circus, Scheme No. VIII, known as Eastern Park, measuring 65 bighas. It will have a large playing field for football and tennis.

The public squares vested in the Calcutta Corporation in 1911 had a total area of about 96 acres. In 1912, Mr. Bompas, the first Chairman of the Trust, pointed out that in the ratio, viz., about 9 per cent. of its public open spaces which measured about 1,250 acres (including the Mallan, the Horticultural and the Zoological gardens) to its total acreage, Calcutta was almost on a par at that time with London possessing 6,675 acres of public parks or gardens, while its percentage exceeded that of New York, Berlin and Birmingham. But about 1,000 acres of Calcutta's 1,250 was accounted for in the Mallan and new open spaces in other parts of Calcutta were an urgent need. Up to date the Trust had added (including the new lake at Dhakuria)—another 250 acres.

Lastly for the housing of the displaced population the Trust has undertaken on a large scale the following schemes—

In the early stages three blocks of three storied tenement buildings containing 252 lettable rooms were built in Wards Institution Street for persons of the poorer classes. It was found, however, that the persons displaced preferred to take their compensation and migrate to some place where they could erect bachelors

their own, the class of structures they were accustomed to live in. These chawls were then filled with persons of limited means, e.g., school masters, poor students, clerks and persons of the artisan class. As many as 1,200 people are housed in these chawls, these buildings, including land, cost Rs 2,44,368 and are let at very low rents—ground floor rooms at Rs 5 per mensem and top floor rooms on Rs 6 per mensem, each room measuring 12' x 12' with a 4 ft verandah in front opening on to a central passage 7 ft wide. The total collection of rent during the year 1930-31 including previous year arrear was Rs 15,372.

As these chawls failed to attract the people for whom they were meant, the Board next tried an experiment in providing sites for bustees. Two sites with a lettable area of 16 bighas were acquired within the area of Maniktola Municipality, but they failed to attract because they were out of the way and were expensive.

KERBALA TANK LANT RE-HOUSING SCHEME—In this scheme 4 detached and 35 semi-detached houses were built. The detached houses were sold as this scheme never became popular with the class of tenants for whom they were originally intended. Owing to this unpopularity the Board further decided to throw open to tenants of all classes 18 out of the remaining 35 semi-detached houses. This change of policy, however, produced no effect on the letting.

Owing to want of suitable tenants the entire dwellings in Kerbala Tank Re-housing scheme had been sold by private sale shortly after the 1st March 1927.

BOW STREET RE-HOUSING SCHEME—Seven blocks of buildings containing one-roomed, two-roomed and three-roomed suites have been constructed to re-house Anglo-Indians displaced by the operations of the Trust. This scheme has proved a striking success. There are 132 suites for letting and the rent received from these suites during the year 1930-31, amounted to Rs 35,800.

PAIKPARA RT-HOUSING SCHEME—This scheme has an area of 36 bighas well laid out in 96 building sites. Further re-housing scheme has not been undertaken by the Trust but special facilities are offered to dishoused persons for securing land in various improved areas for reinstatement purposes.

BRIDGES—Some progress has been made in replacing the old bridges of Calcutta, which is hemmed in by canals and railway lines inadequately bridged, by modern and up-to-date bridges to suit the growing traffic requirements. The opportunity is being taken of widening the Maniktala, Narikeldanga and Bellaghata Bridge approaches on both sides—on the west (in the case of Maniktala and Narikeldanga Bridges) right up to Circular Road. The new bridges of the city, will in their traffic capacity compare favourably with those of London. The new Bridges at Maniktala, Bellaghata and at Shambazar have roadways of 37 feet, with two footpaths each 10 feet in width. The Chitpore Bridge for which estimates amounting to Rs 2,64,000 have been sanctioned is to have the same traffic capacity as the new Kidderpore Bridge, viz a roadway aggregating 60 feet in width with two footpaths each 10 feet wide. The Allpore Bridge, the reconstruction of which has been taken in hand, is to have a roadway of 30 feet (3 traffic widths) and 2 footpaths of 6 feet each, and these are also to be the probable widths of the Tollygunge and Hastings Bridges which need re-building. The Chelsea, Hammer Smith and Waterloo Bridges have all-over widths of 45, 39 and 42 feet, respectively, the roadways being 29, 27 and 28 feet, that is 3 traffic widths. Even London Bridge with an all-over width of 65 feet has only a 37-foot roadway (4 traffic widths) and Westminster Bridge which is 84 feet in width spares only 54 feet (i.e., 6 traffic widths, like the 60 feet of Kidderpore Bridges for wheeled traffic).

FINANCIAL—Capital charges during the year 1930-31 amounted to Rs 44.92 lakhs which included Rs 33.19 lakhs spent on land acquisition and Rs 9.50 lakhs on engineering works. The 10 year 6 per cent Debenture loan of 1920-21 of Rs 50 lakhs contracted for a term of 10 years with the Imperial Bank of India as collateral security for a cash credit was recalled during 1930-31. The gross expenditure of the Trust on Capital Works up to the end of the year 1930-31 was Rs 12,20,11,198. To meet this large expenditure, the Trust has borrowed Rs. 2,48,50,000, other Capital receipts (mainly from the sale of land and buildings) have yielded Rs 6,03,42,601 and the revenue fund from its annual surplus (after providing for the service of loans) has contributed Rs 3.68 crores to Capital Works.

BOMBAY IMPROVEMENT TRUST.

The transfer of the Trust to the Municipality has been effected by an Act of Legislature called 'The City of Bombay Improvement Trust Transfer Act, 1925 (Bombay Act No XVI of 1925)'. By virtue of this Act the powers and duties of the Trustees for the improvement of the City of Bombay have been transferred and the property and rights belonging to the said Trustees have now been vested in the Municipal Corporation for the City of Bombay which is referred to as the Board, the President of the Corporation being also the President of the Board.

The execution of the powers and the performance of the duties vested in the Board is entrusted to a committee called the 'Improvements Committee' subject to the general control of the Board. The Improvements Committee consists of eighteen members, that is to say, fourteen elected members and four nominated members. Of the elected members eleven are elected by the Board, one by the Bombay Chamber of Commerce, one by Indian Merchants' Chamber and one by the Millowners' Association out of their own bodies respectively. The nominated members are appointed by Government by notification, three of them being chosen from among the following—

- (i) The Director of Development, Bombay,
- (ii) the Chairman of the Bombay Port Trust,
- (iii) the Collector of Bombay, and
- (iv) the Executive Engineer, Presidency District,

and the fourth by Government to represent labour from among the members of the Board.

The Municipal Commissioner has the right of being present at a meeting of the Committee and of taking part in the discussions thereat but he shall not vote upon or make any proposition at the meeting. The Chief Officer, who is the Chief Executive Officer, is appointed by the Board subject to confirmation of Government. He has the same right of being present at a meeting of the Board and of the Committee and of taking part in the discussions thereat as a member of the said Board or Committee, but he must not vote upon or make any proposition at such meeting. He exercises general supervision and control over the acts and proceedings of all officers and servants of the Board in matters of executive administration and is directly responsible to the Board.

The specific duties of the Trust are to construct new and widen old streets, open out crowded localities, construct sanitary dwellings including those required for the Bombay City Police. The Trust derives its income from certain Government and Municipal lands vested in the Trust and the schemes it has undertaken. The Trust receives a contribution from Municipal

revenues amounting to a definite share in the general tax receipts—approximating to 2 per cent on assessments and subject to no maximum. Works are financed out of loans raised by the Board. By the close of 1930-31 the Board had raised Rs 10.30 lakhs by loans and their total capital receipts (including grants of Rs 54 lakhs received from Government) amounted to Rs 18.28 lakhs out of which they had spent Rs 12.4 lakhs on the improvement of Government and Municipal lands temporarily vested in the Trust and Rs 16.82 lakhs on their acquired estates and office buildings. The Trust have provided in their chawls accommodation for 45,000 persons.

The present Chairman and members of the Improvements Committee are as follows—

Mr Jafferbhoy Abdoolbhoy Lalljee, *Chairman*

Mr Ahmed F Currimbhoy

Mr C W L Arbuthnot, CIE, BE, BA
(VUI), JP

Mr B G Parulekar

Dr J A Collicoe, LM & S

Dr Alban J de Souza, BA, LM & S.

Mr E R Hirjibhedini

Mr G G Morarji

Mr K F Nariman, BA, LL B

Mr M A Karanjawala, MA, LL B

Mr Manu Subedar, BA, BSc (Econ),
Bar-at-Law

Mr Meyer Nissim, MA

Mr Mohamed Umer Abdul Rasul

Mr W R S Sharpe

Mr R H Parker

Rao Bahadur R S Asavle

Mr J W Smyth, ICS

Sir Vasantrao Anandrao Dabholkar, Kt,
CBE

Municipal Commissioner—Mr H K Kirpalani, MA (Bom), BA (Oxon), ICS

Chief Officer—Mr H B Shrivastani, MA
(Cantab), JP

Chief Accountant—Mr Narayan T Chawathay,
(on leave prior to retirement) Mr E B
Bharucha (acting)

Estate Agent—Mr H G W
A.M.E.

Executive Engineer—Mr D N.

The Indian Ports.

The administration of the affairs of the larger ports (*Calcutta, Bombay, Madras, Karachi, Rangoon and Chittagong*) is vested by law in bodies specially constituted for the purpose. They have wide powers, but their proceedings are subject in a greater degree than those of municipal bodies to the control of Government. At all the ports the European members constitute the majority and the Board for Rangoon consists mainly of European members.

Figures for 1929-30 relating to income, expenditure and capital debt of the six principal ports managed by Trusts (Aden is excluded from the tables) as obtainable from the Department of Commercial Intelligence and Statistics (India) are shown in the following table —

| | Income | Expenditure | Capital Debt |
|------------|-------------|-------------|--------------|
| | Rs | Rs | Rs. |
| Calcutta | 3,43,98,110 | 3,65,42,388 | 25,67,48,093 |
| Bombay | 2,99,31,018 | 2,96,09,025 | 22,21,13,077 |
| Madras | 45,31,021 | 45,33,938 | 1,72,80,036 |
| Karachi | 73,73,769 | 73,61,887 | 4,05,50,000 |
| Rangoon | 82,10,981 | 81,99,554 | 5,18,64,842 |
| Chittagong | 7,68,118 | 8,85,071 | 17,77,130* |

* Includes the first instalment of Rs 15 lakhs of a loan of Rs, 50 lakhs from the Government of Bengal

CALCUTTA.

The Commissioners for the Port of Calcutta are as follows —

Mr F H Lidderton, Chairman

Mr W A Burns, Deputy Chairman and Traffic Manager (on leave)

Elected by the Bengal Chamber of Commerce —
Mr P H Brown CBI, Mr G W Iveson Mr A McD Liddis (on leave), Mr K J Nicolson (Offg), Mr T W Dowding, Mr C deM Kellock (on leave), Mr S D Gladstone (Offg), Mr J Reid Kay

Elected by the Calcutta Trades Association —
Mr Mark Leslie

Elected by the Bengal National Chamber of Commerce — Mr S C Ghosh Mr Nallni Ranjan Sarkar, Dr Narendra Nath Law, M A, B L, FRS Ph D

Elected by the Indian Chamber of Commerce —
Mr G L Mehta

Elected by the Municipal Corporation of Calcutta — S K Roy Choudhury

Nominated by Government — Capt C A Scott DSO, RIM, Mr G L Colvin, OBE, O MG, DSO, Mr R D T Alexander, Mr N Pearce, Mr M Slade, ICS

The principal officers of the Trust are—

Traffic Manager — Mr W A Burns, (on leave), Col H H Hudson, DSO, MO (Offg)

Chief Accountant — Mr N G Park, CA, (on leave), Mr J Dand, CA (Offg)

Chief Engineer — Mr J. R. Rowley, AKC, M Inst CE

Deputy Conservator — Commander G. V J. Norcock, OBE, RN

Medical Officer — Lt-Col W L Harnet MB, FRC S, IMS

Consulting Engineer and London Agent — Mr J. Angus, M Inst CE

The traffic figures and the income of the Trust for the last fifteen years are as follows —

| Year | Docks | | | Jetties | Stream | | Nett tonnage of shipping entering the Port | Income. |
|---------|-----------------|--------------|-----------|-----------|-----------|-----------|--|-------------|
| | General Exports | Coal Exports | Imports | Imports | Exports | Imports | | |
| | Tons | Tons | Tons | Tons | Tons | Tons | Tons | Rs |
| 1914-15 | 920,000 | 2,633,800 | 700,133 | 917,978 | | | 3,714,344 | 1,44,50,340 |

The revenue of the Trust in 1930-31 amounted to Rs 2,49,26,731. The expenditure amounted to Rs 2,60,98,625. The result of the year's working was a deficit of Rs 12,71,414 under General Account which has been met from the Revenue Reserve Fund, and a surplus of Rs 99,520 under Pilotage Account which has been transferred to the vessels Replacement fund. The balance of the Revenue Reserve Fund at the close of the year amounted to Rs 70,82,740. The aggregate capital expenditure during the year was Rs 11,20,150. The total debt of the Trust at the end of the year amounted to Rs 22,00,74,000.

The trade of the Port of Bombay during the last official year aggregated 185 crores in value.

The following statement shows the number of steam and square rigged vessels which during recent years have entered the docks or been berthed at the harbour walls and paid dues excluding those which have remained for unloading and loading in the harbour stream —

| Year | Number | Tonnage
nett |
|---------|--------|-----------------|
| 1911-12 | 1,519 | 2,767,913 |
| 1912-13 | 1,566 | 2,926,506 |
| 1913-14 | 1,579 | 3,135,597 |
| 1914-15 | 1,880 | 4,417,035 |
| 1915-16 | 1,794 | 3,939,721 |
| 1916-17 | 2,112 | 5,031,572 |
| 1917-18 | 2,069 | 4,746,578 |
| 1918-19 | 2,058 | 4,526,846 |
| 1919-20 | 2,164 | 4,874,820 |
| 1920-21 | 2,029 | 4,589,627 |
| 1921-22 | 2,123 | 4,895,965 |
| 1922-23 | 1,907 | 4,429,203 |
| 1923-24 | 2,044 | 4,661,901 |
| 1924-25 | 1,890 | 4,500,630 |
| 1925-26 | 1,894 | 4,570,035 |
| 1926-27 | 1,842 | 4,386,312 |
| 1927-28 | 2,027 | 4,861,344 |
| 1928-29 | 1,966 | 4,823,375 |
| 1929-30 | 1,965 | 4,895,000 |
| 1930-31 | 1,970 | 4,773,462 |

The two dry docks were occupied during the year 1930-31 by 156 vessels the total tonnage amounting to 517,753 tons which was 100 tons less than the previous year by 44,721 tons.

KARACHI.

The members of the Board of Trustees of the Port of Karachi are as follows —

Chairman—*I. M. Duggan, B.Sc., M.Inst.C.E.*

Appointed by Government—*G. N. Bower, B.A., (Collector of Customs), C. C. T. Branton, A.P.I., (Divisional Superintendent, North Western Railway), Major A. G. Armstrong (D.A.A.) and O.M.G. Sind Independent Belgrade Area), Mir Asub Khan, Barrister at Law*

Elected by the Burmese Chamber of Commerce—U Thein Maung, B A, M M F, M L C

Elected by the Rangoon Municipal Corporation—M M Ohn Ghine, M L O

Principal Officers are—

Secretary—C Witcher

Chief Accountant—D H James, A O A

Chief Engineer—E C Niven, M Inst O E

Deputy Conservator—H N Gilbert

Traffic Manager—E J B Jeffery

Port Surveyor—Commander C M L Scott, R N (Retd)

The income and expenditure on revenue account for the Port of Rangoon in 1930-31 were—

| | Rs |
|-------------|-----------|
| Income | 80,72,444 |
| Expenditure | 80,95,416 |

The capital debt of the Port at the end of the year was Rs 5,51,61,169. The balance (including investments at cost) at the credit of the different sinking funds on 31st March 1931 was Rs 2,04,50,630.

The total sea-borne trade of Rangoon during the year 1930-31 was 5,240,004 tons of which 1,551,027 tons were imports, 3,671,005 tons exports and 18,932 tons transshipment. The tonnage of goods passed over the Commissioners' premises during the year amounted to 3,272,009 tons. The total number of vessels (excluding Government vessels) entering the Port was 1,799 with a total net registered tonnage of 4,414,462. The number of vessels being the same with a decrease of 86,301 tons in the net tonnage as compared with the previous year.

CHITTAGONG.

Chittagong in Eastern Bengal, lying on the right bank of the river Karnafuli at a distance of 12 miles from the sea, was already an important Port in the sixteenth century, when the Portuguese gave it the name of Porto Grande.

The construction of the Assam-Bengal Railway has facilitated the transport of trade with Assam and Eastern Bengal for which the Port of Chittagong is the natural outlet.

The chief exports are tea and jute and imports piece-goods, salt, oil and machinery.

| FOREIGN TRADE 1930-31 | Rs (in lakhs) |

PORT COMMISSIONERS

Chairman—A R Lelshman, C I E V D (on leave)

R L Bliss, V D (officiating)

Vice Chairman—A H Kenear, I O S

Commissioners—Lt Commander A R Rattray, R I M, M O Marchant, H S R Bajajian, I M Hooper, J A Olive, J Richardson, La Mohan Choudhury, Rai Upendra Lal Roy Bahadur, B L, Suresh Chandra Bauerjee, Hajee Nazoo Meab Sowdagar

Secretary to the Port Commissioners—Lt Commander A R Rattray, R I M

Port Engineer—F J Green, B Sc, A M I C E, M I M E, M I S t r u c t E

Vessels of 25 feet draught can be accommodated during the greater part of the year at four jetties which are fitted with modern equipment and capable of quick despatch.

Two additional jetty berths will shortly be constructed.

Considerable improvement in the depths of the navigable channels of the Karnafuli River has been effected by dredging operations and River training works. Further training works are now being carried out.

VIZAGAPATAM HARBOUR PROJECT

The question of creating a harbour at Vizagapatam to supply an outlet for a large area of fertile country adjacent to the east coast of India, hitherto undeveloped, with considerable mineral resources and without suitable access to the outside world, was first formulated by the Bengal-Nagpur Railway Company. That the creation of such a port would have beneficial influence on this area was unquestioned, for it is pointed out that Vizagapatam, lying as it does in front of the only practicable gap in the barrier of the Eastern Ghats, is formed by nature to be the outlet of the Central Provinces, from which a considerable amount of trade has taken this route in the past, even with the imperfect communications, hitherto available. A necessary complement of the scheme is the construction of the proposed railway from Parvatipuram to Raipur which, with the existing coastline of the Bengal Nagpur Railway would make a large and rich area tributary to the proposed port, and obviate the long and expensive circuit by Calcutta. A link would also be supplied in the most direct route to Rangoon from Europe by way of Bombay, while, from an imperial point of view, the possible provision of a fortified port on the long and almost unprotected stretch of coast between Colombo and Calcutta is held to be a consideration of great importance. The lofty projecting headland of the Dolphin's Nose would offer facilities for this purpose.

The Government of India with the approval of the Secretary of State and the Legislative Assembly, have sanctioned the construction of the new railway line from Raipur to Parvatipuram and the work is in progress. They have also decided to develop the port of Vizagapatam under their direct control and the port has accordingly been declared to be a Major Port.

The scheme for the construction and development of the harbour will be carried out by progressive stages according to the demands of trade. The first stage, which is now in process of construction, consists of a wharf containing three deep water steamer berths, each of 550 feet in length and dredged to a depth of 30 feet, one of which is being equipped for mechanical loading of manganese ore and the other two with transit sheds, and a passenger waiting room will be provided in the vicinity for the convenience of Rangoon passengers. In continuation of this wharf a lightering berth and deep water moorings for three additional steamers will be provided.

The estimated cost of the first section including equipment is about 309 lakhs and the time required to complete it will depend on the period

that dredging and reclamation work will take. It is anticipated, however, that it will be possible to berth ships in the new harbour sometime in 1933.

The work is being carried out by a staff of engineers under direct charge of an Engineer-in-Chief who comes under the administrative charge of an Administrative Officer for the development scheme, a post which is held *ex officio* by the Agent of the B N Railway. An advisory committee consisting of the above mentioned officers and representatives of the Local Government, the Vizagapatam port administration and the commercial interests concerned, has also been constituted to advise in the development of the harbour.

Excellent progress has been made with the scheme and a considerable area of the inner harbour has already been dredged to a depth of 30 feet. A large area of land has already been reclaimed and development roads have been constructed. The quay wall for the manganese berth and the produce berth is completed. The Railway facilities in consultation with the Harbour are in course of being provided. Arrangements have also been made with the Municipality for the supply of water to the harbour area during construction.

In addition to the Suction Dredger, a Rock Breaker and Dipper Dredger is at work in the Entrance Channel removing the rock and hard overlay, and a Dragline Dredger for dredging such areas as can be reached from the shore.

Although it is anticipated that the completion of the inner harbour and its approaches to the point where ocean going vessels can be admitted will not be until 1933, a sufficient depth of water has been available over the bar and right up to the quays since the end of 1930 thus permitting trade being transferred to the new quays of the inner harbour. Cargo is consequently being carried between the quays and steamers lying in the roads by means of lighters and tugs. The effect of this change is that proper quays, adequate storage and proper railway facilities are available in place of the meagre facilities previously in force on the old wharf while the carriage of cargo between steamer and shore is effected by means of lighters of approximately 50 tons capacity instead of by surf boats with a capacity of only 2½ tons per boat. It is therefore, apparent that the facilities available for trade during this intermediate stage are substantially greater than they have been in the past.

Education.

Indian education is unintelligible except through its history. Seen thus, it affords the spectacle of a growth which, while to one it will appear as a blunder based on an initial error easily avoided, to another it stands out as a symbol of sincerity and honest endeavour on the part of a far-sighted race of rulers whose aim has been to guide a people alien in sentiments and prejudices into the channels of thought and attitude best calculated to fit them for the needs of modern life and western ideals. There is to-day no subject in the whole area of administrative activity in India which presents greater complexities and differences of opinion than education. Government, local bodies and private persons of learning have in the past devoted their limited funds to meeting the demands of those who perceived the benefits of education, rather than to cultivating a desire for education where it did not exist. The result is that the structure has become top-heavy. The lower classes are largely illiterate, while the middle classes who constitute the bulk of the *intelligentsia* are in point of numbers at least educated to a pitch equal to that of countries whose economic conditions are more highly developed. As might be expected from this abnormal distribution of education, the form which it has eventually assumed contains corresponding defects. There have, however, in recent years been strong movements, leading to the passing of Primary Education Acts in several Provinces, in favour of the expansion of primary education among the masses.

The Introduction of Western Learning

In the early days of its dominion in India, the East India Company had little inclination for the doubtful experiment of introducing western learning into India. Warren Hastings, the dominating figure of the time, was a genuine admirer of the laws and literature of the East. His policy was to enable the ancient learning to revive and flourish under the protection of a stable government, and to interfere as little as possible with the habits and customs of the people. Even the Act of 1813 which set apart a lakh of rupees for the introduction and promotion of a knowledge of the sciences was interpreted as a scheme for the encouragement of Sanskrit and Arabic. In the following year the Court of Directors instructed the Governor-General to leave the Hindus "to the practice of usage, long established among them, of giving instruction in their own homes, and to encourage them in the exercise and cultivation of their talents by the stimulus of honorary marks of distinction and in some cases by grants of pecuniary assistance."

It was from sources other than Government that the desire for western knowledge arose in India. In 1816, David Hare, an English watchmaker in Calcutta, joined hands with the enlightened Brahmin, Mohan Roy, to institute the Hindu College for the promotion of western secular learning. The new institution was distrusted both by Christian missionaries and by orthodox Hindus, but its influence grew apace. Fifteen years later, the Committee of Public Instruction in Bengal reported

that a taste for English had been widely disseminated and that independent schools, conducted by young men reared in the Hindu College, were springing up in every direction. In Bombay, the Elphinstone Institution was founded in memory of the great ruler who left India in 1827. A still more remarkable innovation was made in 1835 by the establishment of the Calcutta Medical College, whose object was to teach "the principles and practice of medical science in strict accordance with the mode adopted in Europe." Many pronounced the failure of the undertaking to be inevitable, for, under the Hindu custom the higher castes were forbidden to touch the dead. This obstacle was surmounted by Madhusudan Gupta who, with a few courageous pupils, began the dissection of a human body. From that time onward Indians of the highest castes have devoted themselves with enthusiasm and with success to the study of medicine in all its branches.

Another impetus to the introduction of western learning was the devotion of **Christian missionaries**. The humanitarian spirit, which had been kindled in England by Wesley, Burke and Wilberforce, influenced action also in India. Carey, Marshman and Ward opened the first missionary College at Serampore in 1818, and twelve years later, Alexander Duff reversed the whole trend of missionary policy in India by his insistence on teaching rather than on preaching, and by the foundation of his school and College in Calcutta. In Madras, the missionaries had been still earlier in the field, for as early as in 1787 a small group of missionary schools were being directed by Mr Schwarz. The Madras Christian College was opened in 1837. In Bombay, the Wilson School (afterwards College) was founded in 1834.

Lord William Bentinck's minute of 1835 (based upon Mr. Jay's famous minute) marks the somewhat fatal change by Government of the new policy. The Court then determined while observing an enjoining religious authorities to devote its available efforts to the maintenance of secondary schools, the advantages of western learning to be taught through the medium of English. But this decision did not entail still less that the development of the vernaculars should be discouraged. Other changes powerfully contributed to the success of the new system. The freedom of the press was established in 1835, English was substituted for Persian as the language of the Courts in 1837 and in 1844 Sir Henry Hardinge ordained that preference in Government appointments should be given to those who had received a western education. In the following decade the new learning took firm root in India and, though the Muhammadans still held aloof, the demand for English schools outstripped the means of Government for providing them. Fortunately there has been of late a marked appreciation among Muslim leaders of the need of improving the instructional level of their co-religionists, and in many of the provinces of India a great impulse towards educational advance among the Muhammadan community is now noticeable.

GROWTH AND ORGANISATION OF ENGLISH EDUCATION

An epoch in Indian educational history is marked by Sir Charles Wood's despatch in 1854. Perhaps its most notable feature was the emphasis which it laid on the importance of primary education. The old idea that the education imparted to the higher classes of society would filter down to the lower classes was discarded. The new policy was boldly "to combat the ignorance of the people which may be considered the greatest curse of the country." For this purpose Departments of Public Instruction were created on lines which do not differ very materially from the Departments of the present day. The despatch also broke away from the practice followed since 1835 whereby most of the available public funds had been expended upon a few Government schools and colleges, and instituted a policy of grants-in-aid to private institutions. "Such a system as this placed in all its degrees under efficient inspection, beginning from the humblest elementary institution and ending with the university, test of a liberal education would impart life and energy to education in India, and lead to a gradual but steady extension of its benefits to all classes of people." Another feature of the despatch was an outline of a university system which resulted in the foundation of the Universities of Calcutta, Madras and Bombay three years later. The affiliating type of university then became the pivot of the Indian education system. It has undoubtedly been of value in several ways. It enabled Government to select recruits for its service on an impartial basis. It did much, through the agency of its Colleges to develop backward places, it accelerated the conversion of Indians to a zeal for western education, and it cost little at a time when money was scarce. On the other hand, the new universities were not corporations of scholars, but corporations of administrators. They did not deal directly with the training of men, but with the examination of candidates, they were not concerned with learning, except in so far as learning can be tested by examination. The colleges were fettered by examination requirements and by uniform courses, their teachers were denied that freedom which teachers should enjoy; and their students were encouraged not to value training for its own sake but as a means for obtaining marketable qualifications. In certain important respects the recommendations in the despatch were not followed. The Directors did not intend that university tests, as such, should become the sole tests qualifying for public posts, they also recommended the institution of civil service examinations. They did not desire the universities to be deprived of all teaching functions, they recommended the establishment of university chairs for advanced study. They were aware of the dangers of a too literary course of instruction, they hoped that the system of education would rouse the people of India to develop the vast resources of their country and gradually, but certainly, confer upon them all the advantages which accompany the healthy increase of wealth and commerce. The encouragement of the grant-in-aid system was

advocated to an even greater extent by the Education Commission of 1882, which favoured the policy of withdrawing higher education from the control of Government within certain limits and of stimulating private effort. In theory the decision was correct, but in practice it was irretrievably wrong. In its fatal desire to save money, Government deliberately accepted the mistaken belief that schools and colleges could be maintained on the low fees which the Indian parent could be expected to pay. And, in the course of time, an unworkable system of dual control grew up, whereby the Universities with no funds at their disposal were entrusted with the duty of granting recognition to schools and the Departments of Public Instruction were encouraged to cast a blind eye on the private institutions and to be content with the development of a few favoured Government institutions. There can be little wonder that, under such a system of neglect and short-sightedness, evils crept in which are now being removed gradually by the establishment of independent Boards of Intermediate Education charged with the administration of the high school and intermediate stages of education.

The Reforms of 1902-4

In 1902, the Universities Commission was appointed by Lord Curzon's Government, and its investigation was followed by the Universities Act of 1904. The main object of the Act was to tighten up control, on the part of Government over the universities, and on the part of the universities over the schools and colleges. The Chancellors of the Universities were empowered to nominate 80 per cent of the ordinary members of the Senates and to approve the election of the remainder, the Government retained the power of cancelling any appointment, and all university resolutions and proposals for the affiliation or disaffiliation of colleges were to be subject to Government sanction. The universities were given the responsibility of granting recognition to schools and of inspecting all schools and colleges, the inspection of schools being ordinarily conducted by the officers of the Department of Public Instruction. Permission was also given to the universities to undertake direct teaching functions and to make appointments, subject to Government sanction, for these objects but their scope was in practice limited to post-graduate work and research. The territorial limits of each university were defined, so that universities were precluded from any connexion with institutions lying outside those boundaries. Neither the Commission nor the Government discussed the fundamental problems of university organisation, but dealt only with the immediate difficulties of the Indian system. They did not inquire whether the affiliating system could be replaced by any other mode of organisation, nor whether all schools might be placed under some public authority which would be representative of the universities and of the departments. They assumed the permanent validity of the existing system, in its main features, and set themselves only to improve and to strengthen it.

Recent Developments.

Government of India Resolutions on Indian Educational Policy—The Indian Universities Act of 1904 was followed by two important resolutions of the Government of India on Indian Educational Policy—one in 1904 and the other in 1913. The resolution of 1904 was comprehensive in character and reviewed the state of education in all its departments. The following passage from it summarises the intentions of Government—"The progressive devolution of primary, secondary and collegiate education upon private enterprise and the continuous withdrawal of Government from competition therewith was recommended by the Educational Commission in 1883 and the advice has generally been acted upon. But while accepting this policy, the Government of India at the same time recognise the extreme importance of the principle that in each branch of education Government should maintain a limited number of institutions both as models for private enterprise to follow and in order to uphold a high standard of education. In withdrawing from direct management it is further essential that Government should retain a general control, by means of efficient inspection, over all public educational institutions." The comprehensive instructions contained in this resolution were followed in the next few years by the assignment to the provinces of large Imperial grants, mainly for University, technical and elementary education. The resolution of 1913 advocated, *inter alia*, the establishment of additional but smaller Universities of the teaching type, it reaffirmed the policy of reliance on private effort in secondary education, it recommended an increase in the salaries of teachers and an improvement in the amounts of grants-in-aid, and it insisted on proper attention being paid to the formation of character in the education given to scholars of all grades. It further discussed the desirability of imparting manual instructions and instruction in hygiene, the necessity for medical inspection, the provision of facilities for research, the need for the staffing of the girls' schools by women teachers and the expansion of facilities for the training of teachers. The policy outlined in 1913 materially accelerated progress in the provinces, but the educational developments foreshadowed were in many cases delayed owing to the effects of the Great War.

Department of Education, Health and Lands of the Government of India

—In 1910 a Department of Education was established in the Government of India with an office of its own and a Member to represent it in the Executive Council. The first Member was Sir Harcourt Butler. In 1923, the activities of the Department were widened, in the interests of economy, by absorption in it of the Department of Revenue and Agriculture. The enlarged Department has been designated the Department of Education, Health and Lands. Sir Fazl-i-Husain and Sir Frank Noyce are the present Member and Secretary, respectively. The Department possesses an educational adviser styled Educational Commissioner.

The present Educational Commissioner is Mr R Littlehales, C.I.E., M.A.

Calcutta University Commission—The Report of the Calcutta University Commission was published in August 1919 and in the following January the Government of India issued a Resolution summarising the main features of the Report and the recommendations of the Commissioners.

The Government of India drew special attention to the following points in the Report—

- (i) High schools fail to give that breadth of training which the developments of the country and new avenues of employment demand.
- (ii) The intermediate section of University education should be recognized as part of school education and should be separated from the University organisation.
- (iii) The defects of the present system of affiliated colleges may be mitigated by the establishment of a strong central teaching body, the incorporation of unitary universities (as occasion arises), a modification of the administrative machinery which will admit of fuller representation of local interests, and supervision of different classes of institutions by several appropriately constituted bodies.

The Commission gave detailed suggestions for the reorganisation of the Calcutta University, for the control of secondary and intermediate education in Bengal and for the establishment of a unitary teaching University in Dacca. These measures concerned only Bengal but it was generally recognised that some of the criticism made by the Commissioners admit of a wider application. Committees were consequently appointed by the Universities of Madras, Bombay, Patna and the Punjab to consider the findings of the Commission. In the United Provinces two committees were appointed, one to prepare a scheme for a unitary teaching University at Lucknow, the second to consider measures for the reorganisation of the Allahabad University and the creation of a Board to control secondary and intermediate education.

In Bengal the first outcome of the Commission's Report was the passing of the Dacca University Act in the Imperial Legislative Council in March 1920 mentioned in detail elsewhere. It is remarkable that the University which appears to have been least affected by the recommendations of the Calcutta University Commission has been the Calcutta University itself. In spite of many discussions and draft proposals by both the University and the Government the organisation of the Calcutta University has remained unaffected.

The Reforms Act—The Reforms Act of 1919 has altered the conditions of educational administration in India. Education is now a 'transferred' subject in the Governors' provinces and is, in each such Province, under the charge of a Minister. There are, however, some exceptions to this new order of things. The education of Europeans is a 'Provincial reserved' subject, *i.e.*, it is not within the charge

... of the Indian Educational Commission of 1912-16 the Indian Educational Service was divided into a superior educational service and a subordinate service. The superior service was generally open to Indian recruits and the subordinate service was generally open to European recruits. The superior service was divided into two branches—the Indian Educational Service and the Provincial Educational Service. The Indian Educational Service was staffed by persons recruited in England and the Provincial Educational Service was staffed by persons recruited in India. These two divisions were originally considered to be collateral and equal in status, though the pay of the European recruit was higher by approximately 50 per cent than the pay of the Indian recruit. Gradually, however, status came to be considered identical with pay and the Provincial Educational Service came to be regarded of inferior status to the Indian Educational Service. Later as a result

of the recommendations of the Indian Educational Commission of 1912-16 the Indian Educational Service was divided into a superior educational service and a subordinate service. The superior service was generally open to Indian recruits and the subordinate service was generally open to European recruits. The superior service was divided into two branches—the Indian Educational Service and the Provincial Educational Service. The Indian Educational Service was staffed by persons recruited in England and the Provincial Educational Service was staffed by persons recruited in India. These two divisions were originally considered to be collateral and equal in status, though the pay of the European recruit was higher by approximately 50 per cent than the pay of the Indian recruit. Gradually, however, status came to be considered identical with pay and the Provincial Educational Service came to be regarded of inferior status to the Indian Educational Service. Later as a result

In 1924 all recruitment to the Indian Educational Service was stopped as a result of the recommendations of the Royal Commission on the Superior Service in India. The Commission recommended that 'for the purposes of the Government no further recruitment should be made to the all India services which operate in transferred fields. The personnel required for the branch of administration should in future be recruited by local Governments'. The Commission further recommended in regard to the question of the future recruitment of Europeans that 'it will rest entirely with the local Governments to determine the number of Europeans who may in future be recruited. In this matter the discretion of local Governments must be unfettered but we express the hope that Ministry on the one hand will still seek to obtain the co-operation of Europeans in the principal departments and that qualified Europeans on the other hand may be no less willing to take service under local Governments than they were in the past to take service under the Secretary of State. As a result of the acceptance of these recommendations, the Indian Educational Service is dying out and with the gradual retirement of its existing members the history of the service which has had a brief but the record will be brought to an end. The present organisation of education in the provinces is largely the work of members of this service, while in the sphere of higher education, it has trained many men of more than ordinary attainments.

The new Provincial Educational Services, which function under provincial control as the superior educational services, have been constituted in most provinces. These schemes vary from province to province, but it may be generally remarked that, while the rates of pay are not uniform they consist of two main classes—class I into which the existing Indian Educational Service have been merged for the time being, and class II which may be said to represent the old Provincial Educational Service.

The existing Provincial and Subordinate Educational Services in the provinces have been affected, more in some provinces than others, by the changes which have taken place since 1919. Communal interests have influenced recruitment, and in some places they have influenced promotions also, in a direction which has not always tended towards service contentment. But these results are the natural consequences of the devolution of control of education and power of recruitment to provincial and local authorities and will for some time continue to affect the efficiency of the Education Departments in the provinces.

Educational Services.—Until recently, the educational organisation in India consisted mainly of three services—(i) the Indian Educational Service, (ii) the Provincial Educational Service, and (iii) the Subordinate Educational Service. The Indian Educational Service came into existence as a result of the recommendations made by the Public Service Commission of 1856, and in 1896 the Superior Educational Service in India was constituted with two divisions—the Indian Educational Service staffed by persons recruited in England and the Provincial Educational Service staffed by persons recruited in India. These two divisions were originally considered to be collateral and equal in status, though the pay of the European recruit was higher by approximately 50 per cent than the pay of the Indian recruit. Gradually, however, status came to be considered identical with pay and the Provincial Educational Service came to be regarded of inferior status to the Indian Educational Service. Later as a result

Statistical Progress

The two tables given below afford useful comparisons with previous years and serve to illustrate the growth and expansion of education in India

(a) STUDENTS.

| Year. | In Recognised Institutions | | | In All Institutions

(b) EXPENDITURE.

| Year | Total expenditure on
education in British India | |
|-------------------|--|-------------------|
| | Public Funds | Total. |
| 1901-02 | Rs
1,77,03,968 | Rs
4,01,21,462 |
| 1906-07 | 2,96,34,574 | 5,59,03,673 |
| 1911-12 | 4,05,23,072 | 7,85,92,605 |
| 1916-17 | 6,14,80,471 | 11,29,83,068 |
| 1921-22 | 11,49,61,173 | 18,37,52,969 |
| 1926-27 | 15,59,23,968 | 24,58,47,572 |
| 1927-28 | 16,45,80,915 | 25,82,78,819 |
| 1928-29 | 17,12,24,514 | 27,07,32,253 |
| 1929-30 | 17,50,03,644 | 27,42,82,018 |

In 1929-30, the total expenditure on education in British India amounted to Rs 27,42,82,018 of which 48.3 per cent came from Government funds, 15.5 per cent from District Board and Municipal funds, 22.0 per cent from fees and 14.2 per cent from all other sources.

The average annual cost per scholar amounted to Rs 23-0-10 as follows: to Government funds Rs 11-2-3, to local funds Rs 3-9-1, to fees Rs 5-1-4 and to other sources Rs 3-4-2.

The following table provides an interesting

and valuable comment on the state of education in India in 1926-27. Although the statistical returns show more than 11 millions of pupils at school, it will be seen that over 76 per cent of these are in the lower primary stage, and it may safely be deducted that over 80 per cent of those at school never become literate. Of course, the total number of pupils at school is not a safe criterion of the state of education, and a sounder standard of comparison would be that number multiplied by the average period spent at school.

| Grand total of all Institutions | 238,016 | 260,946 | 12,165,839 | 12,515,126 |

Primary Education—The primary schools are mainly under the direction of the local boards and municipalities. In 1911, the late Mr G K Gokhale pleaded in the Imperial Legislative Council for a modified system of compulsory primary education, but Government was unable to accept the proposal mainly for financial reasons. In recent years, eight provincial legislatures have passed Primary Education Acts authorising the introduction of compulsory education by local option. Bombay led the way in this matter by a private Bill which was passed into law in February 1918. The other private Bills which followed were those of Bihar and Orissa passed in February 1919, of Bengal passed in May 1919 and of the United Provinces, passed in June 1919. Of the Government measures, the Punjab Act was passed in April 1919, the Central Provinces Act in May 1920, the Madras Act in December 1920 and the Assam Act in 1925. The City of Bombay Primary Education Act of 1920 extends generally the provisions of the 1918 Act to the Bombay Corporation also enabling it to introduce free compulsory education ward by ward. Not content with this, the Bombay legislature passed a new Act in 1923 to provide for compulsory elementary education and to make better provision for the management and control of primary education in the Bombay Presidency. The Bombay and the United Provinces Acts apply only to municipalities, the Bengal Primary Education Act applies, in the first instance, to municipalities, but is capable of extension to rural areas. Boys only are included within the scope of the Punjab, Bihar and Orissa and Bengal Acts, while the Central Provinces Act is capable of extension to girls, and the remaining Acts are applicable to both sexes. The United Provinces legislature passed a second Primary Education Act in 1926, viz., the United Provinces District Boards Primary Education Act. It allows the District Boards to introduce compulsion within their areas. All the Acts are drafted on very similar lines. If a local body at a special meeting convened for the purpose decides by a two-thirds majority in favour of

the introduction of compulsion in any part of the area under its control, it may then submit to Government, for approval, a scheme to give effect to its decision. The scheme must be within the means of the local body to carry out with reasonable financial assistance from Government. Ordinarily the age limits of compulsion are from six to ten years though provision is made for prolonging the period. Provision is also made in all the Acts for the exemption of particular classes and communities and for special exemption from attendance in cases of bodily infirmity. Walking distance to a school is generally defined as one mile from the child's home. The employment of children, who should be at school, is strictly forbidden and a small fine is imposed for non-compliance with an attendance order. The Acts generally provide that, subject to the sanction of the local Government, education where compulsory shall be free. The Madras Elementary Education Act of 1920 contained such provision, but it has recently been amended so as to allow fees to be charged in schools under private management situated in areas where education is compulsory, reserving however a number of free places for poorer pupils in such schools in areas where there are no free schools. Such in brief are the ordinary provisions of the various provincial Education Acts. Local bodies have not however shewn as yet any great alacrity in availing themselves of the opportunity afforded them by these Acts.

Primary Education Committee—A Committee was appointed in 1920 to enquire into

- (i) The existing facilities for primary education for boys and girls in the N W F P, Ajmer Merwara and Delhi
- (ii) the possibility of expansion whether on voluntary or compulsory basis with special regard to the attitude and aptitude of the local population, and
- (iii) the necessity for providing special facilities for the community, generally known as "untouchables", and to make recommendations

This committee reported in 1930 and the Government of India passed their orders in 1931

The majority of these institutions are under the control of provincial department of education. The following table shows in summary form the number of such institutions and of students attending them.

| Type of Institution | 1920 | | 1929 | |
|---|--------------|----------|--------------|----------|
| | Institutions | Students | Institutions | Students |
| Training colleges and normal schools for teachers | 70 | 7,111 | 78 | 181 |
| Law colleges and schools | 16 | 7,777 | 16 | 7,777 |
| Medical colleges and schools | 41 | 11,111 | 41 | 10,170 |
| Engineering colleges and schools | 17 | 11,111 | 17 | 4,719 |
| Agricultural colleges and schools | 2 | 1,001 | 2 | 1,520 |

| Veterinary colleges | - | 125 | - | 404 |
| Technical and Industrial schools | 10 | 2,200 | 407 | 2,311 |
| Schools of Art | 1 | 1 | 16 | 2,206 |
| Total (Pratih India) | 125 | 94,887 | 1,819 | 97,101 |

Universities

There are now eighteen Universities in India of which two are situated in Indian States. All these Universities have been incorporated by law for the time being in force. The following statement gives the dates of the various University Acts and the territorial jurisdiction of the different Universities—

| No | University | Dates of Acts | Territorial jurisdiction |
|----|----------------|---------------------------|---|
| 1 | CALCUTTA .. | 1857, 1901, 1904 and 1921 | Benzal and Assam and certain adjacent Indian States |
| 2 | MADRAS . . | 1857, 1904, 1905 and 1923 | The Presidency of Madras (excluding certain parts of the Telugu country and Coorg, and certain Indian States) |
| 3 | BOMBAY .. | 1857, 1904, 1905 and 1923 | The Presidency of Bombay and certain Indian States (Baroda, etc.) |
| 4 | PUNJAB .. | 1882, 1904 & 1905 | The Punjab, the North-West Frontier Province, Baluchistan and adjacent Indian States (Kashmir, Patiala, etc.) |
| 5 | ALLAHABAD .. | 1887, 1904, 1905 and 1921 | Allahabad |
| 6 | BENARES HINDU | Oct 1915 .. | Benares District |
| 7 | MYSORE .. | July 1916 .. | Mysore State |
| 8 | PATNA . . | Sept 1917 and 1923 | Bihar & Orissa and adjacent Indian States |
| 9 | OSMANIA . . | 1918 .. | Hyderabad |
| 10 | DACCA . . | April 1920 .. | Radius of 5 miles |
| 11 | ALIGARH MUSLIM | Sept 1920 .. | Radius of 10 miles. |
| 12 | RANGOON . . | Oct 1920 and 1921 | Burma |
| 13 | LUCKNOW . . | Nov 1920 .. | Local |
| 14 | DELHI . . | March 1922 .. | Delhi |
| 15 | NAGPUR . . | June 1923 .. | The Central Provinces and Berar. |
| 16 | ANDHRA * | Jan 1926 | Parts of the Telugu Country of the Madras Presidency |
| 17 | AGRA . . | April 1927 | United Provinces (excluding the territorial jurisdictions of Allahabad, Benares, Aligarh and Lucknow Universities), Rajputana and Central India |
| 18 | ANNAMALAI . . | January 1929 | Radius of 10 miles |

* Actually established after 1925-26

The first University in India, that of Calcutta, was founded in 1857. Between 1857 and 1887 four new Universities, at Bombay, Madras, Lahore and Allahabad were added. These five universities were all of the affiliated type. They consisted of groups of colleges, situated in different parts of the country, and bound together by a locally constituted central authority, which determined the qualifications for admission, prescribed the courses of study and controlled the examinations and exercised a mild form of control over the affiliated colleges. There was nothing under the system to limit the number of institutions affiliated to a University, and for thirty years, i.e., from 1857 to 1917, the growing demand for university education was met, not by the creation of new universities, but by enlarging the size of the constituent colleges and by increasing their number. By 1917 this inflation had been carried on so far that the composition of the original five universities stood as follows—

| University | Colleges | Scholars |
|------------|----------|----------|
| Calcutta | 55 | 28,618 |
| Bombay | 17 | 8,001 |
| Madras | 53 | 10,216 |
| Punjab | 24 | 6,558 |
| Allahabad | 37 | 7,907 |

It had become obvious that further expansion on the same lines was no longer possible without a serious loss of efficiency and the Government of India had recognised in their resolution of 1913 the necessity of creating new local teaching and residential universities in addition to the existing affiliating universities. The development of this policy was accelerated by the strength of communal feeling and the growth of local and provincial patriotism, leading to the establishment of a number of teaching universities. The new type of universities has since been strongly advocated by the Calcutta University Commission which has offered constructive proposals as to the lines to be followed in university reform.

The Universities of Calcutta and the Punjab—These two Universities alone still retain their old form. On the 27th March 1921 an amending Act was passed by which the Governor General ceased to be the Chancellor of the Calcutta University and now the head of the provincial government is the Chancellor of each of the older universities. The Vice Chancellor is nominated by the Government concerned. The executive body is the Syndicate which is now organised so as to include a larger educational element. Over this body the Vice Chancellor presides, all other members being elected by the Faculties, except the Director of Public Instruction who is a member *ex-officio*. The secretarial work is under the direction of the Registrar. The legislative body is the Senate which consists of from 75 to 100 members, 80 percent of whom are nominated by the Chancellor, the rest being elected by the Senate, or by its Faculties, or by the body of registered graduates. The Senate

is divided into Faculties, which are in most cases those of arts, science, law, medicine, and engineering. There is an oriental faculty in the Punjab University alone. There are also Boards of Studies, whose duties are to recommend textbooks or books which represent the standard of knowledge required in the various examinations. The newer universities differ considerably from the older universities in constitution.

Post graduate work—Apart from the general tightening up of university control over its colleges, the chief feature of university development since the passing of the Act of 1904 has been participation by the universities in post-graduate teaching and research. In Madras a small number of university professors have been appointed, in the Punjab the services of a certain number of temporary professors from overseas have been engaged. In Bombay a certain number of college professors and others have delivered lectures to post graduate students under the auspices of the University. But the most notable advance has been made in Calcutta, owing to the energy of the late Sir Asutosh Mukherjee and to the liberality of Sir Tarak Nath Palit and of Sir Rash Behari Ghosh. In 1916, a committee was appointed to investigate the matter. In accordance with its report, new regulations have been passed by the Senate, whereby all post-graduate teaching and research in arts and science in Calcutta is now conducted directly by the University, though many of the college teachers have been invited to take part in the work. Post-graduate councils in arts and science have also been constituted, which comprise all the teachers engaged in the work and a very small number of additional numbers appointed by the Senate. A Committee was appointed by the Senate of the Calcutta University to consider a draft Bill for the reconstitution and reorganisation of the University but it had not submitted its final report at the close of the year 1920-30. Another Committee which was appointed to consider the question of the future of the post-graduate department and connected financial problems submitted its report in 1930.

The University of Madras—This is one of the older universities. It has recently been reconstituted. The reconstituted University while functioning as teaching and residential University in so far as the city of Madras is concerned, continues to exercise its jurisdiction over its mofussil colleges which remain affiliated to the administration of the University is in the hands of a Senate which has been so constituted as to include both those who are educationists and those who are connected with the actual business and commercial life. A large elective element has been introduced in its composition. Government control over the details of administration has been decentralised. The affairs of the University are managed by the Senate through a body called the Syndicate, while the Academic Council, another new body, has charge of the academic matters. The affiliated colleges have till recently been entrusted to the care of a new organisation called the Council of Affiliated Colleges which has been abolished by the Madras University Amendment Act of 1929. The Governor-General of India has been associated with the University as its Visitor with certain emergency

powers. The Governor of Madras continues to be a Chancellor. The Vice-Chancellor is an elected whole time officer.

The University of Bombay—A new Act was passed by the Legislative Council of the Bombay Presidency in 1928 to re-constitute the University of Bombay and to enable the University to provide greater facilities for higher education and to conduct post-graduate teaching and research in all branches of learning, including technology, while continuing to exercise due control over the teaching given by colleges affiliated to it from time to time. The old provisions of the Act are to extend the elective principle to the composition of the various bodies of the University and to entrust the greater part of the work to a newly constituted body, the Academic Council, which is composed entirely of persons connected directly with education. The Act also provides that Government shall hereafter make an annual grant of Rs. 1,17,000 to the University. The number of the Senate has been raised from 109 to 150 members (excluding donors and nominators of donors) of whom 95 are elected members. This Act was enforced in 1929.

The University of Allahabad—This is another old University which has undergone reorganisation. In 1921 an Act was passed with a view to establishing a university, teaching and residential University at Allahabad while enabling the University to continue to exercise due control over the quality and character of the teaching given in its name by colleges affiliated to the University at Allahabad. The Act and University has now relieved it of its affiliating function. The Governor General is Visitor, and the Governor of the United Provinces Chancellor. The Vice-Chancellor is a whole time officer. There is a Court, an Executive Council, an Academic Council, a Committee of Reference dealing with expenditure only, a Council of Associated Colleges, etc.

The University maintains a good reputation for research work carried out by staff and students.

The Mysore University was constituted under Regulation V of 1916, for the better encouragement and organisation of education in the State. His Highness the Maharaja is the Chancellor. The University is very similar in its constitution to the older Indian universities, having a Senate of not less than fifty and not more than sixty members, but, unlike the older universities, it gives seats on the Senate to the university professors *ex-officio*. It departs from existing practice by centralising university instruction in Mysore and Bangalore, and by conducting the work of the first year of the old college course in a few specially selected high schools. This University has been recognised by the Government of India as a University incorporated by law for the time being in force, that is to say its examinations and degrees have been accorded the status of the corresponding examinations and degrees of a University incorporated by law in British India.

The Patna University—Much thought has also been given to the evolution of a new type of university which will run abreast of the old Patna University, which was constituted in 1917, is in most of its features a university of the old type, but certain

innovations have been made. The Chancellor, who is the Governor of the province, may suspend any provision of the University which is not in conformity with the Act and the Regulations. In the Senate the application of the elective principle has been extended, by increasing both the proportion of the elected Fellows and the ratio of elected to elected bodies and the Senate include a representative of the teaching staff and of the graduate teachers of several schools. Further all colleges are given statutory representation on the Senate in the person of their principals. The Syndicate is the ultimate authority in academic matters, subject to the proviso that any six of its members have the power to refer such matters to the Senate for review. The Vice-Chancellor is appointed by the Local Government. In addition to other duties which he has the power to inspect all colleges of the University. The colleges of the University are of two kinds: colleges of the University whose buildings are situated within a specified area, and external colleges whose buildings are situated in one of the four following towns: Muzaffarpur, Bhagalpur, Cuttack and Hazaribagh. This distinction, however, is not a "color" of the University's internal and external colleges are considered as one and the Local Government have no right to interfere with it in the Local Legislative Council body as with it. The Syndicate has been reconstituted and now consists of the Vice-Chancellor, the Director of Public Instruction, nine teachers and seven non-teachers.

The Osmania University, Hyderabad—The Osmania University was established under a Charter promulgated with a *Firman* of His Exalted Highness the Nizam, dated the 22nd September 1918. The fundamental principle underlying the working of the University is that Urdu forms the medium of education, although a knowledge of English as a language is compulsory in the case of all students. There is a Bureau of Translation attached to the University which produces text books required for college classes. The constitution of the University consists of a Council, a Senate, a Syndicate, Faculties and Boards of Studies. There is a Chancellor and a Vice-Chancellor, both *ex-officio* officers. The executive government of the University including general supervision and control over colleges is vested in the Council which is the highest authority and which performs the function assigned to Government in the case of British Indian Universities. The University possesses at present only one constituent college, viz., the Osmania University College, which was opened in 1910. The Osmania University has been recognised by the Government of India as a University incorporated by law for the time being in force, that is to say its examination and degrees have been accorded the status of the corresponding examinations and degrees of a University established by law in British India.

The Hindu University, Benares—The creation of the Hindu University, Benares, forms a landmark in the history of the Indian university system. The university is not designed to meet the needs of one province alone, but to draw students from all parts of India.

The University of Rangoon—Plans for a university in Burma had been under consideration for some years. After his arrival in Burma the then Lieutenant-Governor Sir Harcourt Butler thought that, on general grounds and with some reference to the needs of the province, the Rangoon University might usefully be of a more practical type than any yet attempted in India with courses in arts and science, pure and applied, technology, medicine, engineering, agriculture, law, forestry, veterinary, science and training, commerce and architecture. It might perhaps combine with university instruction practical studies at the Chief Court, the Pasteur Institute and the hospitals; and also at the Museum which the local Government was committed to build as soon as funds were available. It is possible in Burma to a greater extent than in any of the older and more advanced provinces in India to concentrate the intellectual energies of the province in one immediate neighbourhood and to develop a really many-aided university. An Act to establish a teaching and residential college at Rangoon was passed on the 24th October 1920. The Act however did not find favour with a section of Burmese and was consequently amended in 1923. The amending Act introduced greater popular and representative elements in the composition of the Council and invested the reformed Council with greater discretionary powers in matters affecting public interest, such as the question of admitting affiliation of *mosque* colleges or of admitting more colleges to the status of constituent colleges. In short, it rendered the University more suited to the needs and aspirations of the province. The University authorities are the Chancellor, Vice-Chancellor, the Council (with an executive committee) and the Senate. The Council is the supreme administrative body while the Senate is an academic body with entire control of studies, examination and discipline. The Governor-General, as Visitor, has the right to cause inspection to be made. The University is building up an impressive record of research work.

The Lucknow University—The foundation of this University may primarily be ascribed to the patriotism of the people of Oudh. It is a unitary teaching and residential University incorporated by an Act passed in 1920. The University authorities are (1) the Court, with powers of making statutes, (2) the Executive Council, which administers the property of the University and appoints examiners, (3) the Academic Council, which controls the teaching and advises the Executive Council on all academic matters, (4) a Committee of Reference (a Sub-Committee of the Court) deals with items of new expenditure only. The Governor-General, as Visitor, has the same power as in the case of the Rangoon University and other new, or reorganised, universities. The chief need of the University is a Maternity Hospital for the Medical College Students have now to go to Madras for practical training in gynecology.

The Delhi University—The Delhi University was created by an Act passed in 1922. The University depends for its existence mainly on the generosity of the Government of India who occupy the position of a local Govern-

ment in relation to it. It is a unitary teaching and residential University, based on the model recommended by the Calcutta University Commission for the Dacca University, possessing at present three constituent colleges. The Act provides for two schemes—a provincial and a permanent one. Under the provisional scheme, which is in force at present, the constituent colleges remain with their hostels, etc. in their existing buildings. They also retain intermediate classes. But there have been instituted, so far as possible and desirable, common classes for graduate teaching. The matriculation examination of an Indian University, or an equivalent examination, is the admission test to the University courses. The permanent scheme contemplates that the existing colleges in Delhi City would become intermediate institutions and that degree classes would be conducted in new buildings to be built in Imperial Delhi. There would be halls and hostels where students would receive tutorial instruction. The intermediate examination of an Indian University or an equivalent examination, would become the admission test to the University. The Governor-General is the *ex officio* Chancellor. There is a Pro-Chancellor, a Vice-Chancellor and a Rector. The principal governing bodies of the University are a Court, an Executive Council and an Academic Council. A scheme for the reorganisation of the University is at present under the consideration of the Government of India.

The Nagpur University—This University was created by an Act passed in 1923. Its constitution follows the recommendations of the Calcutta University Commission and the provisions in other University Acts in so far as they are applicable to local conditions. In particular the recommendations of the Calcutta University Commission have been adopted in the matter of the appointment of the Chancellor and the Vice-Chancellor and of their powers and duties, the composition and functions of the Court, the Executive and Academic Councils, and the relations of the University with Government. The University Act provides in the first instance for a University of an examining and affiliating type in which the existence of the colleges is preserved as the unit of instruction both in the University centre of Nagpur and in other places which contain colleges admitted to the privileges of the University. The Act is so framed as to permit of a gradual development of the University into a managing and teaching body which may supplement, or entirely replace colleges by University instruction either by taking over the management of existing colleges or by instituting and maintaining its own colleges.

Andhra University—In January 1926, the Governor General accorded his assent to an Act, passed by the Madras Legislative Council, incorporating a new University in the Madras Presidency. The new University is called the Andhra University and is of an affiliating type and all colleges located in the Telugu country, whether first or second grade, professional or technical, have become affiliated colleges. The University endeavours to develop scientific and technical education with special reference to the industries of the Telugu

discipline its appointments its own teaching staff and with complete full control and maintain colleges, laboratories and hosts of its own. The Act confers also the possibility of a rapid development in the use of Telugu in the use of the vernacular as the medium of instruction and exaltation and also aims at the ultimate establishment of more than one unitary and residential University in the Telugu districts.

It has been estimated to provide for the payment to the University of a regular stipend amounting to Rs. 27 lakhs an annual block grant of Rs. 11 lakhs for the 2nd year, 10 lakhs for the 3rd year and a non-recurring grant of Rs. 11 lakhs for the 4th year and equipment. The headquarters of the University have been located at Alimnagar, Madras.

Agra University—The University was established in 1827 and incorporated by the Agra University Act, 1906 (United Provinces Act No. VIII of 1906). It is a purely affiliating University and has affiliated Allahabad University of its external jurisdiction. Its territorial jurisdiction embraces the United Provinces (excluding the territorial limits of the Mahatma Benares Hindu, Allahabad Muslim and Lucknow Universities), Rajasthan and Central India.

The Annamalai University, Chidambaram, Madras Presidency—This is a teaching and residential University incorporated by an Act of the Legislative Council of the Madras Presidency (Madras Act No. I of 1929). It owes its foundation largely to the generosity of Sir Annamalai Chettiyar who has handed over to the University certain institutions established and maintained by him at and near Chidambaram with all the properties attached thereto and has also given a sum of Rs. 20 lakhs towards the creation of an endowment fund. The aim of the University is to encourage higher education, and research in the Tamil districts of the Madras Presidency. The Administration of the University is in the hands of a Syndicate, a Senate, a Finance Committee and an Academic Council. The Act provides for a continuous connection with the University of Sir Annamalai Chettiyar and his successor, as the Founder of the University, with certain powers and privileges. The Governor General is the Visitor of the University. The Governor of Fort St. George is the Chancellor of the University and the Vice-Chancellor is appointed by the Chancellor from a panel of three persons recommended by the Founder.

Inter-University Board—The idea put forward by the Indian Universities Conference in May 1924 for the constitution of a central agency in India took practical shape and an Inter University Board came into being during 1925. Twelve out of fifteen universities joined the Board. Its functions are—

(a) to act as an inter university organisation and a bureau of information,

(b) to facilitate the exchange of professors,

(c) to serve as an authorised channel of communication and facilitate the co-ordination of university work,

(d) to assist Indian universities in obtaining recognition for their degrees, diplomas and examinations in other countries,

(e) to appoint or recommend, where necessary, a common representative or representatives of India at Imperial or International conferences on higher education,

(f) to act as an appointments bureau for Indian universities,

(g) to fulfil such other duties as may be assigned to it from time to time by the Indian Universities.

Each member University has to make a fixed annual contribution towards the expenses of the Board.

The meetings of the Board are held yearly. The Board consists of one representative of each of the member Universities and one representative of the Government of India.

The Board has not yet had much influence on University policy in India but it has done a considerable amount of useful work in collecting information and in stimulating thought regarding current University problems. It also put certain universities into touch with all distinguished teachers from abroad who were available for lecturing at University centres and arranged for two sectional conferences—the one of representatives of the five universities in the United Provinces and the other of representatives of the two universities in Bengal. In addition to the Hand book of Indian Universities, the Board has issued a pamphlet entitled "Facilities for Oriental Studies and Research at Indian Universities."

Education of Indian Women and Girls—There is still a leeway to be made good. All the influences which operate against the spread of education amongst the boys are reinforced in the case of women by the *purdah* system and the custom of early marriage.

Arts colleges, medical colleges, and the like admit students of both sexes, and a few girls attend them. The Lady Hardinge Medical College for Women at Delhi gives a full medical course for medical students. The Shreeamati Nathibhai Damodhar Thackersey Indian Women's University was started some ten years ago by Professor Karve. It is a private institution and is doing good pioneer work.

The All India Women's Conference on Educational Reform, which holds its meetings annually and has constituent conferences established all over the country, is also doing much useful work. Recently, an All India Women's Education Fund Association has been established in connection with this Conference. This association appointed in 1930 a special committee to enquire into the feasibility of establishing a central Teachers' Training College of a specialised Home Science character. This committee reported at the end of the year recommending the establishment of such a college "on absolutely new lines which would synthesise the work of existing provincial colleges by psychological research" and the Governing Body of the Association supported the proposal at the Annual General Meeting of the Association which has adopted it.

The comparative statement below shows the state of women's education during 1929-30 —

| | Institutions | | | Scholars | | |
|---------------------------|--------------|--------|----------------------|----------|----------|----------------------|
| | 1929 | 1930 | Increase or Decrease | 1929 | 1930 | Increase or Decrease |
| | 1 | 2 | 3 | 4 | 5 | 6 |
| <i>For Females</i> | | | | | | |
| Recognized Institutions — | | | | | | |
| Arts Colleges | 19 | 19 | | 1,510 | 1,764 | +254 |
| Professional Colleges | 8 | 7 | -1 | 20 | 227 | +207 |
| High Schools | 17 | 28 | +11 | 72,707 | 61,601 | -11,106 |
| Middle Schools | 77 | 77 | | 10,706 | 9,870 | -836 |
| Primary Schools | 1,408 | 1,408 | | 12,117 | 12,117 | |
| Special Schools | 1 | 89 | +88 | 1,227 | 14,611 | +13,384 |
| Unrecognized Institutions | 69 | 10 | -59 | 78,390 | 76,872 | -1,518 |
| Total | 1,601 | 15,161 | +13,560 | 1,47,567 | 1,38,561 | -9,006 |

Education in the Army—The Army in India undertakes the responsibility of the education of certain sections of the community. Its activities are directed into various channels with certain definite objects, which may be summarised as follows —

(i) The education of the soldier, British and Indian, in order to —

- develop his training facilities,
- improve him as a subject for military training and as a citizen of the Empire,
- enhance the prospects of remunerative employment on his return to civil life

(ii) The fulfilment of the obligations of the State to the children of soldiers, serving and ex-servicemen (British and Indian)

(iii) The provision, as far as possible, of training for the children of soldiers, who have died in the service of their country

(iv) The creation of a body of Indian gentlemen educated according to English public school traditions, which should provide suitable candidates for admission to the Royal Military College, Sandhurst

The Prince of Wales' Royal Indian Military College, Dehra Dun—A Royal Military College has been established at Dehra Dun. The aim of this institution is to provide education on the lines of an English public school for the sons of Indian gentlemen both civil and military, up to the standard required for the passing of the entrance examination of the Royal Military College, Sandhurst

Chiefs' Colleges—For the education of the sons and relatives of the Chiefs and Princes of India, whose families rule over one third of

the Indian continent, five Chiefs' Colleges are maintained, viz —

- Mayo College, Ajmer, for Rajputana Chiefs,
- Dule College, Indore, for Central India Chiefs,
- Alfred College, Lahore, for Punjab Chiefs,
- Raj Kumar College, Rajkot, for Kathiwar Chiefs, and
- Raj Kumar College, Rajpur, for Central Province and Bihar and Orissa Chiefs

In point of buildings, staffs and organisation these institutions approach English Public Schools. Students are prepared for a diploma examination conducted by the Government of India. The diploma is regarded as equivalent to the matriculation certificate of an Indian University. A further course of University standard called the Higher Diploma is conducted at the Mayo College. The examination for this Diploma is also held by the Government of India. Its standard is roughly equivalent to that of the B.A. diploma of an Indian University.

Indigenous Education—Of the 12,515,126 scholars being educated in India 610,524 are classed as attending 'private' or 'unrecognised' institutions. Some of these institutions are of importance. The Gurukula near Haridwar and Sir Rabinendra Nath Tagore's school at Bolpur have attained some fame, Mr Gandhi's school at Ahmedabad has attracted attention and the numerous monastery schools of Burma are well-known. Connected with every big Mosque in northern India there is some educational organisation and the schools attached to the Fatehpuri and Golden Mosques at Delhi and the Dar ul-Ulm, Deoband, are noted. These institutions generally have a religious or 'national' atmosphere and are possibly destined to play an important part in the future of India.

The following are the Indian students in the following countries:—
 1. In the United States of America—49
 2. In the United Kingdom—20
 3. In the United States of America—192
 4. In the United States of America—192
 5. In the United States of America—192

Indian students in foreign countries—
 The following table gives the number of Indian students in the following countries:—
 1. In the United States of America—49
 2. In the United Kingdom—20
 3. In the United States of America—192
 4. In the United States of America—192
 5. In the United States of America—192

| | No. of
Students |
|---|--------------------|
| 1. Oxford University | 52 |
| 2. Cambridge University | 105 |
| 3. Indian University and other
in London | 60 |
| 4. Oxford University and
other | 338 |
| 5. Cambridge University | 261 |
| 6. Indian University | 70 |
| 7. British India | 53 |
| Total | 2,402 |

As far as can be ascertained there were 25 Indian students at French Universities, 49 in German Universities and 20 in the Colleges and Universities in the United States of America in 1920-21. The last figure excludes a number of Indians of the student type who were employed in industrial and professional training of various kind but whose names are not recorded on the books of any University or College.

Hartog Committee on Education—The most notable event in recent years has been the appointment of the Auxiliary Committee to the Indian Statutory Commission, under the chairmanship of Sir Philip Hartog, to make enquiries into the growth of education in British India and to prepare a review of the growth of education with particular reference to its condition in British India and its relation to political and constitutional conditions and possibilities of progress. The report of the Committee has been published and constitutes a valuable document on the present state of education in India.

A Commission appointed by the International Missionary Council and presided over by Dr A. D. Lindsay, Master of Balliol College, Oxford, recently toured India with a view to investigating the various problems connected with the higher education provided by the various Missionary bodies working in India. They have now published their report.

The following table gives the latest available figures and other particulars about the Universities—

STATISTICS OF UNIVERSITIES IN INDIA, 1920

| University | Type | Original Date of Foundation | Faculties* | No. of Members of Teaching Staff | | No. of Students | | No. of Students who graduated in Arts and Science | REMARKS |
|-------------|--------------------------|-----------------------------|------------------|----------------------------------|------------------------|---------------------------|------------------------|---|--|
| | | | | In University Departments | In Affiliated Colleges | In University Departments | In Affiliated Colleges | | |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| 1. Calcutta | Teaching and Affiliating | 1857 | A, Sc, L, M, Eng | 201 | 1,311 | 1,142 | 27,555 | 1,984 | The University also awards degrees in Commerce and Education |
| 2. Bombay | Teaching and Affiliating | 1857 | A, Sc, L, M | 4 | 521 | 63 | 12,607 | 1,140 | The University was reconstituted in 1928. It also awards degrees in Commerce, Education, Agriculture and Engineering |

BOY SCOUTS.

The Boy Scouts movement, initiated in England by Lord Baden Powell (the Chief Scout), has spread widely in India both among Europeans and Indians. The Viceroy is Chief Scout of India and the heads of Provinces are Chief Scouts in their own areas. The aim of the Association is to develop good citizenship among boys by forming their character—training them in habits of observation, obedience and self reliance—inculcating loyalty and thoughtfulness for others—and teaching them services useful to the public and handicrafts useful to themselves.

It is confidently anticipated that in the Boy Scout Movement will be found a natural means of bridging the gulf between the different races existing in India. The movement is non-official, non-military, non political and non sectarian. Its attitude towards religion is to encourage every boy to follow the faith he professes. Every boy admitted as a Scout makes a three-fold promise to do his best (1) to be loyal to God, King and country, (2) to help others at all times and (3) to obey the Scout law. The law referred to runs down—

1. That a Scout's honour is to be trusted,
2. That he is loyal to God, King and country, his parents, teachers, employers, his comrades, his country and those under him,
3. That he is to be useful and to help others.
4. That he is a friend to all and a brother to every other scout, no matter to what social class the other belongs,
5. That he is courteous,
6. That he is a friend to animals,
7. That he obeys orders,
8. That he smiles and whistles under all difficulties,
9. That he is thrifty,
10. That he is clean in thought, word, and deed.

The Co-operative Movement.

The Need—More than seventy per cent of the vast population of India are dependent on agriculture and the majority of these millions generally live, under present conditions, from hand to mouth. The ryot occupation is healthy and productive, and he is proverbially honest and straightforward in his dealing, except when years of famine and hardship make him at times crafty and recalcitrant. Owing to his poverty, combined with want of education and consequent lack of foresight, he has to incur heavy debts to meet occasional expenses for current seasonal purposes, the improvement of his land or for ceremonial objects and he has therefore to seek the assistance of the local moneylender known as the Sowkar or the Mahajan. The rates of interest on such advances, though varying from province to province and even in different parts of a province, are generally very high. In addition to charging exorbitant rates, the Sowkar extorts money under various pretexts and often takes from the needy borrower bonds for amounts in excess of the actually advanced. One of the chief causes of the ryot's poverty is, that owing to the absence of security and his short-sightedness due to want of education, he did not in time of prosperity collect and lay by his savings but frittered away his small earnings in uneconomic investment on additional land, on the purchase of trinkets and ornaments, and in extravagant or unproductive expenditure on marriage and other ceremonies. Tradition says that in times past he hoarded coins under the ground with the likelihood that on his death the money was lost to his family for good. This absence of thrift and the habit of dependence, in case of difficulty, on the Government or on the Sowkar are the bane of his life. There is besides a general absence of ideals or desire for progress. A co-operative society changes all this inasmuch as it provides him with a suitable institution in which to lay by his savings and teaches him the valuable lesson of self-help through the sense of responsibility he feels in being its member. Thus the chronic poverty and indebtedness of the Indian agriculturist afford a very good field for the introduction of co-operative methods, especially as his work is of a productive character likely to enable him to earn a better living under circumstances more favourable than they are at present.

Genesis of the Movement—The question of improving rural credit by the establishment of agricultural banks was first taken up in the early nineties when Sir W. Wedderburn, with the assistance of Mr. Justice M. G. Ranade, prepared a scheme of agricultural banks which was approved of by Lord Ripon's Government but was not sanctioned by the Secretary of State. The matter was not again taken up until about fifteen years later when Lord Wenlock's Gov-

ernment in Madras appointed Mr. J. A. (now Sir) Lord Curzon to report on the advisability of starting agricultural banks in that Province for the improvement of the agricultural industry. There was in existence in Madras an excellent system of banking available for the use of small cultivators. This institution, called the Nidhi, was only in name a respect to the provision of fund and friendly societies in European countries. Thus in these Nidhis provision was made for a rural community and after the first of co-operation was lacking in them. Lord Curzon submitted an exhaustive report to Government stating that the formation of co-operative societies would afford an excellent means for relieving rural indebtedness. Unfortunately this report was not received favourably either by the non-official public or by the Government of Madras and no action was taken on the recommendations made in it. The next few years saw two of the worst famines from which India had ever suffered and in 1901 Lord Curzon appointed a Commission to report on the measures to be adopted in future to protect the ryot from the ravages of famines and to relieve distress. The Commission held that the proper working of the Agricultural Loans and the Land Improvement Loans Acts under which the advances are made by Government to cultivators. This system was also a long trial in the years previous to the great famines as well as during the years succeeding the 1899-1900 famine. But it is acknowledged on all hands that the system has not been successful in solving the problem of rural stagnation, as it is clear that it is not facility for obtaining cheap capital alone which will raise the agriculturist and relieve him from his debts, but the provision of capital combined with the inculcation of habits of thrift and self-help. This Commission also recommended that the principal means of resisting famines was by strengthening the moral backbone of the agriculturist and it expressed the view that the introduction of co-operation in rural areas might be useful in securing this end.

Co-operative Credit Societies Act—These recommendations induced Lord Curzon to appoint a Committee with Sir Edward Law at its head to investigate the question and a report was submitted to Government recommending that co-operative societies were worthy of every encouragement and of a prolonged trial. Individual Officers of Government were at the same time making experiments on similar lines in the United Provinces and the Punjab with satisfactory results. All these activities, however, took an organized shape only when Lord Curzon's Government introduced in the Imperial Legislative Council a Bill to provide for the constitution and control of co-operative credit societies. In the drawing up of the scheme of co-operative credit, Government had the assistance of the late M. Henry

deposits from members raised by a society. State aid in the form of gift of money does not agricultural credit societies has now become an exception rather than the rule, and this withdrawal in no way hampers their development. The movement on account of the rapid increase of co-operative financing agencies and the growth of public confidence in the institutions. Out of a total working capital of a little under 5 crores, 41 crores were share, 51 crores reserves, 12 crores deposits of members, 12 crore deposits from non-members and 21 crores, 1 crore loans from Government and 21 crore loans from central societies. In Bombay since 1921 Government annually place at the disposal of the Provincial Fund an amount for distribution as advances to agricultural under the Land Improvement Loans Act, such advances to be made through the primary societies and the central banks to which they are affiliated. The Royal Commission on Agriculture have recommended that where co-operative land mortage banks are established they provide suitable agency for the distribution of loans under the Land Improvement Loans Act.

Constitution of Agricultural Credit Societies—The typical agricultural credit society in India corresponds to the "Baikla" society, the management being fraternal, the profits indivisible, and the area of work limited. Where shares form an integral part of the system, the distribution as dividend of a portion of the profits after ten years working is permitted under certain restrictions although in the Punjab the tendency now is to make the profits wholly indivisible and the shares non-withdrawable. In several parts of the country there are villages where a few literate agriculturists may be found but many of these are hardly fit enough to undertake the responsible work of a secretary, being practically ignorant of account keeping. In such villages either the village schoolmaster or the village accountant is sometimes appointed secretary. In some places, where a suitable person is not available on the low pay a single society can afford, neighbouring societies are grouped together with a whole time well paid secretary. In the Central Provinces, especially and to a certain extent in Bihar and Orissa, Bengal and the United Provinces, the accounts are written up by group secretaries, clerks or Moharrirs, controlled more or less by the staff of central banks or unions to which societies are affiliated. In both the provinces however, attempts are being made with a certain measure of success to get the accounts written up by members specially trained for the purpose, and in the Punjab the highest classification is reserved for societies the accounts of which are maintained without outside assistance. As the work of societies develop, the need for trained secretaries is being felt more keenly, for it is now realized that the function of a secretary does not consist merely in writing the accounts correctly. With a view to meet the demand for trained secretaries, training classes have been organized in Bombay, in the Punjab, in Bengal and elsewhere during the last few years, and efforts have been made to provide education in co-operation through the new educational and propagandist associations which have been

started in most of the major provinces. Arrangements have also been devised in some provinces to educate the members of managing committees in the principles of the movement through proprietary instructors and courses of short lectures are delivered at central villages while the local unions have been utilized to promote such co-operative education among rural workers.

Internal Management of Societies—The managing committee of a society consists of five to nine members, the chairman being usually one of the leading persons in the village. The daily work is carried on by the secretary, but the managing committee supervises this and has alone the power to admit new members, to receive deposits, to arrange for outside loans, to grant loans to members and to take other decisions. The practice is now growing of fixing the normal allot of every member one or two in the year at a general meeting and the committee can sanction loans only within the limits so fixed. The accounts of the society are kept by the secretary and the necessary forms, papers and books are usually supplied from the Registrar's office or the central or voluntary referred to above to simplify the work of the secretary. The books are kept according to the rules framed by the local government and are open to inspection by the Registrar and his staff. The accounts are audited, at least once a year, by the auditors working under the Registrar of Co-operative Societies and the societies are inspected from time to time by honorary or paid inspectors. In Burma and Madras the supervision is carried out by unions, while in Bihar and Orissa and Bengal the responsibility for supervision rests mainly with the central banks. In the Central Provinces, the inspection was for some years controlled by the Provincial Federation working through the central banks. Recently the arrangements have been revised and a group system has been introduced under which groups of societies are looked after by full time officers working under local boards composed of representatives of the Co-operative Department, the central bank and the propagandist and educational institutes. The work is co-ordinated through and controlled by divisional representatives boards. In Bombay supervision is conducted partly by unions, partly by central banks and partly by honorary organizers. In the Punjab, while paid for by societies, the inspecting staff works under the direct orders of the Provincial Union with the Registrar as its President. Similar arrangements have now been devised in the United Provinces.

The supreme seat of authority in co-operative societies is the entire body of members assembled in general meetings at which every member has one vote and one only. At the annual general meeting held at the close of the co-operative year, the accounts are submitted, the balance-sheet passed, and the managing committees with the chairmen and secretaries are elected. The general meeting fixes in some provinces the borrowing limit of individual members, lays down the maximum amount up to which the managing committee may borrow during the ensuing year, dismisses members for misconduct or serious

Organization and Propaganda

banking system and an Apex Bank with central restricted sphere of operation covering an area not larger than a taluka. They banks and so forth a shareholder has been formed in each part of the provincial started, with power to issue debentures in organization in Burma and originally in the Bombay with interest guaranteed by Govt. Central Provinces and in one province serving as a link between primary societies and the have already been issued by Government. In provincial bank and in the other between per cent guarantee by Government of the primary societies and local banks in both have addition to the Provincial Bank as at the the next but by taken down having above, Asam has a Provincial Bank as at the the next but by taken down having Indian States of Mysore and Hyderabad.

The constitution of central banks may be uniform, but the existing banks may be classified under three general heads: (1) banks of which the membership is confined to individuals or where societies are admitted as members on exactly the same footing as individuals; (2) banks of which the membership is confined to societies; and (3) banks which include societies and individuals as their members and secure for the latter the same position on the board of directors as the former. The central banks are of the mixed type and are hardly any of them which are purely old capitalist constitution. The former are theoretically the constituents of the primary resources of the constituent primary societies the lack of personnel the different in the support of the urban middle class which combined to make the mixed type the most popular in almost all provinces. In the United Provinces and Bihar there has recently been a movement for a number of federal central banks which are to work well together in a very different way is much smaller than a provincial bank but they serve a compact group of well settled societies. Branches of banks central provincial have been tried with success only in Bombay.

Organization and Propaganda

It may be mentioned that in most of the provinces, the work of organizing and looking after the societies was in the early days done by the Registrar with the help of a staff of assistant registrars and other officers and a few honorary non-official workers. In Bihar and Orissa and the United Provinces where the central bank system has developed properly, the directors of the central banks either themselves or through a paid agency, organize their working apart from the number of honorary workers. It is steadily increasing and in some provinces there is a staff of specially appointed honoraries who regularly assist the Registrars. The activities of the honorary workers are often, however, spasmodic and in some provinces most of the major provinces the need has been felt for some co-operative institution which will co-ordinate and systematize the efforts of non-official workers, and place their activities on a responsible basis. The objective is to have the movement directed and controlled through self-governing representative bodies like organizations, societies or federations existing in Germany, England, Ireland and elsewhere. Such institutions carry on active educational propaganda, and through the agency of local committees and groups of workers, assist in their supervision new societies and attend to their carrying on the arrangements made for carrying on the audit of societies on payment of some fixed contribution. Finally, such federations may gradually manage to have the ultimate voice in the determination of policy, and subject to the statutory powers of the Registrar may hope to take over, in course of time, the entire control of the co-operative organization in a province. In the Central Provinces and Bihar, there functioned as a controlling body a federation of co-operative banks and societies which provided a regular and

Functions of Central Banks

The functions of central banks are to balance the funds of societies and to supply capital. But their duties are not limited to the provision of banking facilities only, but often include the inspection and development of societies. Hence in all the major provinces with the exception of the Punjab, Madras and Burma, central banks perform the functions of inspection and guidance of the societies affiliated to them and in some they also organize new societies and even take up the work of training and propaganda. In Madras, Bombay and Burma the unit of area for a central bank is fixed as co-terminous with the whole of a revenue district, as the personnel necessary for its successful working may be difficult to secure in a smaller area. However, in most of the provinces of Upper India and Bengal there are in existence central societies for talukas and occasionally for smaller tracts. An important class of institutions included under the statistics of central societies are unions. These may be described as federations of societies which are organized for supervision, either guarantee or not with the assessment or guarantee of loans to primary societies. They do not, however, undertake banking business, except in the Punjab, the unions in which save for the smallness of the area they cover, in no way differ from the pure type of central bank referred to above. These supervising unions have a very

efficient system of supervision audit and control, arranged for the training of the federation staff, attempted to secure uniformity of practice among co-operative institutions and to promote their interests and foster the spread of co-operation by active propaganda. A Committee of Inquiry appointed by the Local Government in 1922 proposed that this body should be dissolved, and replaced by separate educational institutes for the Central Provinces and Berar. Though the Federation has not been dissolved, institutes for education and propaganda have already been started in Berar and the Chhatesgarh Jubbulpore and Nerbudda Divisions. A Provincial Union is also in existence in Madras, whose objects are mainly educational and propagandist. Its activities comprise the issuing of co-operative journals, the organization of training classes and the holding of conferences. Its constitution and its line of work have now been revised so as to make it the central self-governing organization in the movement but its working has been considerably hampered by lack of funds and want of financial support from societies and from Government. A Central Institute to focus the efforts of co-operative workers and to carry on propagandist work was established in Bombay in 1918. The objects of this institution are to develop the co-operative movement in the Presidency by promoting the study of co-operation and by co-ordinating the activities of several existing propagandist and organization agencies. The Institute has no powers of control, though it is expected to ascertain and represent the views of co-operators on questions affecting the movement. The activities of the Institute in the mofussil are carried on through its divisional branches formed on a linguistic basis and local branches in all the revenue districts of the Presidency.

In Bengal, a similar propagandist organization has been started with identical aims. The Society has taken over some of the educational and propagandist work hitherto performed by the Co-operative Department, and has assisted in the organization of various non-credit activities, among which prominent mention may be made of the starting of co-operative societies for the sale of jute and paddy and the supply of agricultural requisites. It has also devised arrangements for the training of members of village societies and their secretaries as also for the grant of certificates for work in non-credit organizations. A federation with a constitution more or less similar to that of the Central Provinces Federation but having divisional boards to decentralize control is also in existence in Bihar and Orissa, and has appointed a special officer for propaganda and development. In the Punjab, a provincial union, with the Registrar as President, has been organized to conduct the audit and inspection of primary societies and to undertake general propagandist and educational work. The United Provinces have a standing committee serving as an advisory Board for the Registrar's Department and this committee has recently been converted into a statutorily recognized union. In Burma, the audit of primary societies is conducted by a Provincial Co-operative Council consisting of representatives

of co-operative institutions. This also assists in the organization of the provincial conference and acts as an advisory body to the Registrar. Organization, supervision and propaganda are furthered by district federations of unions of primary societies. Educational and propagandist bodies like the Institute in Bombay have been started in the States of Hyderabad, Mysore, Baroda and Travancore. These are all recent developments and it is still too early to forecast on what lines the transfer of work to representative co-operative agencies will be carried out. The Central Banking Inquiry hold that the present arrangements in respect of audit supervision and inspection are unsystematic and co-ordinated and they recommend that all the three duties should be performed by one agency. They propose the creation of district audit unions of conducting the threefold work. Such unions should be composed of societies as members and their management should be autonomous though the auditing staff should have licenses issued to them by the Provincial Registrars of Co-operative Societies. Arrangements are suggested for federating district audit unions in the separate apex provincial unions as their affiliation to the existing provincial institutes. This is suggested with a view to securing co-ordination and the audit of the higher types of co-operative institutions. The All-India Co-operative Institutes Association has endorsed these recommendations, but it is only in the Punjab and Bihar Orissa that all the audit staff works at present under provincial federations elsewhere, and it is largely conducted and controlled by the Co-operative Department.

All-India Associations—In the beginning of the year 1926, an informal Conference of all these institutes and federations was held in Bombay at which it was decided to convene an All-India Conference periodically and to establish closer contact among these bodies by the starting, if necessary, of an All-India Confederation of these bodies. At another conference held in September 1925, this idea was given a more definite shape and a scheme was drawn up thereafter for a central association which has secured the support of almost all the provincial organizations. The scheme was formally accepted by various provincial institute unions or federations and the All India Institutes Association was established in 1929. The first task the Association has undertaken is publication of an Indian Co-operative Year Book. The Association also contemplated opening a co-operative college for the superior staff of co-operative institutions and this project has needed the support of the India Central Banking Inquiry Committee which also recommends the establishment of co-operative educational institutions in each province, all the local institutions to be run by the provincial co-operative organizations though they might be assisted by Government by means of grants.

The Provincial Co-operative Institutes as well as similar organizations in other parts of India join in the celebration of the International Co-operators Day on the 15th of Saturday in July. As a result of the suitable for agricultural societies and co-operative

organization of demonstrations the celebrations are now held annually. In November. Public addresses, social gatherings, conventions, processions and mass meetings are arranged on this day in villages, towns and cities. Another Conference that deserves mention is the one at which representatives of Provincial Co-operative Banks in different provinces and Indian States meet together once in two years. To secure co-ordination in the working of existing provincial banks, to bring about closer touch and to convene periodical conferences an association of the provincial banks has been started. This Association has made a good beginning by educating public opinion on the place of co-operative banking. In the proposed scheme of a central bank and co-ordination of banking through the agency of a Reserve Bank of India. As a result of the efforts of the Joint Select Committee of the Indian Legislature, made provision in the Reserve Bank Bill, which has now been abandoned, for the appointment of a Director on the Board of the Reserve Bank to represent provincial co-operative banks and also for the negotiation of certain types of bills and securities presented by such banks. The Association was also able to secure for co-operative interest representation on the Central Banking Inquiry Committee as well as on the Provincial Committees.

Other forms of Co-operation—After the passing of the amended Co-operative Societies' Act in 1912, the application of co-operation to purposes other than credit was greatly extended, but it is only during the last few years that a general demand for producers and consumers' societies has arisen. The total number of non-agricultural non-credit societies at the close of the year 1929-30 was 1,803, 632 for purchase and sale, 11 for production, 1,218 for production and sales, and the remaining, 2,009 for other forms of co-operation. Before the year 1918-19, there were only a few stores societies all over the country. In all provinces, particularly in Madras, a beginning had been made in the direction of distributive co-operation among the middle classes, while in Bengal and the United Provinces some attention had been devoted to the starting of stores for students living in hostels attached to colleges. The movement obtained popular favour in view of the increasing prices of the daily necessities of life, and the profiteering which assumed serious proportions at the close of the War. Supply unions, store societies, and distributive departments attached to credit societies were organized in some provinces, while arrangements were contemplated for obtaining cheap, wholesale supplies for the various distributive organizations. The work of organizing co-operative distribution in rural areas was rushed ahead with a fair amount of success under official auspices in the Punjab and Madras but in both provinces a setback is now evident. Neither the supply unions nor the primary purchase and sale societies are in a flourishing condition. The consumers' movement in urban areas received particular attention in Bombay, Madras, Bengal, Burma, and a few other provinces, but with the disappearance of the special conditions which generated enthusiasm in the years immediately succeeding the close of the War,

station has set in, and only a few among the numerous store societies started in these provinces have firmly established their position and continue to enjoy the loyal support of their members. Attempts have been made in two or three provinces to revive the movement by the starting of central organizations for joint whole sale purchase, but the proposals have not yet taken definite shape. Apart from the 'Triple Store' in Madras which stands in a class by itself and a few other stores in Madras Presidency and Mysore State the only successful consumer societies are stores for college students, some communal hotels or boarding houses and a few agencies for supply of special requisites. Among other interesting attempts in action may be made of two stores for the sale of Swedish goods run with considerable success in the city of Bombay by groups of educated English and Danish women. The Labour Commission it may be added approves of trade union intervention in the furtherance of co-operative distribution and co-operative credit for their members.

In some provinces efforts have been made to revive the ancient handicrafts of the country and cottage industries by organizing co-operative societies for the cottage workers. Many of these societies merely provide cheap credit but in some places they undertake the supply of raw materials and the sale of manufactured goods. The most important industry which flourished in India before the introduction of machinery was handloom weaving and efforts have been made to strengthen and develop it by the formation of co-operative societies of handloom weavers. Most of the weavers' societies are merely credit societies, but some undertake the purchase of yarn for members, and others have store branches to sell the cloth produced by members. They have also been instrumental in introducing improved looms and methods among the conservative weaving classes. In Bengal and the Punjab, much success has attended the organization of central unions among weavers' societies, and similar intensive work in Bihar and Orissa and Bombay has also met with good results. Other industrial societies, to be found in very small numbers here and there are those for "gaolies" or milkmen, dyers, basket and brass workers in the Central Provinces, "Chamars" and "Dhows" in Bombay and the Punjab, lacquerware workers, carpenters, wood carvers, blacksmiths and potters in Mysore, where the State provides special facilities in the shape of loans and technical assistance for the development of artisans' societies. An offshoot of this movement is the starting of co-operative societies among skilled or unskilled labourers on the lines of the labour societies of Italy. The initiative came from Kashmir, while experimental societies were also started in Madras, and in Bombay. The object of these is to organize labourers to tender for contract for public or private works, to eliminate the middleman contractor, and to utilize the profit for the economist and social betterment of the labouring community. The Indian Industrial Commission in the course of their inquiries devoted some attention to the development of small and cottage industries and the possibility of reviving them by the introduction of co-operation. Their

[illegible][illegible]

The people of Burma was a pioneer in the matter of cattle insurance, and to support the village insurance societies which have been started in the province, there was organized a central re-insurance society, which received some financial backing from Government. In the other provinces where it has been introduced co-operative insurance for cattle has made only a little progress, and in them as also in Burma there has been a serious setback recently.

Agricultural Co operation—Co operative societies have, until recently, been organized only to supply cheap credit to their members, but there are various other fields of work to which they may extend their activities. The total number of agricultural non credit societies at the end of the year 1929-30 was 3602 of which 416 were societies for purchase and sale, 1140, for production, 1,271 for produc-

• Co-operative Societies for other forms of co-operation in India have, in some provinces, been started with advantage, receiving deposits in kind and allowing these to be available to be sold at profitable rates or distributed to the members in times of scarcity. Such banks have been started in Bihar and Orissa. Rural Mortgage and Co-operative Societies on a similar basis for the storage of fodder have been started in Punjab. Another direction in which the co-operative principle is being applied is the starting of societies for the purchase and distribution among members of pure and selected seed. A number of small societies for supply of seed and seedlings were organized in the Bombay Presidency and in the Central Provinces and Berar. Societies for the co-operative purchase and sale of manure will also prove a great boon, and a few such stores have been established in Madras, Punjab, Bihar and Orissa and Bombay. In the Punjab and in Madras, the supply of agricultural requisites has been undertaken collectively by the credit societies on the commission system or special supply unions are organized for bulk orders, making contracts, distributing goods, and collecting payments.

Let the sale of produce gets popular as co-operative credit thrives and agriculturists become less dependent on local traders. While Burma led the way by starting first steps for the joint sale of paddy, the most interesting developments in the direction have taken place in Bombay and Bengal. Steps for the sale of agricultural commodities, chiefly cotton and jaggery, have been started in these districts all over the Bombay Presidency. Co-operative marketing of cotton has recently made much progress in the Dhawad, Pravara and Surat districts where these have led to the starting of a few co-operative ginning factories controlled by cotton growers. This aspect of co-operation has lately attracted considerable attention and attempts similar to the same in Bombay have been made in Madras and with Central Provinces and Berar in the Punjab. In the last named province with considerable success at Jallpur and Montgomery. In Pongal, there was a move three years ago to organize the sale of jute and paddy on co-operative lines. A rigorous propaganda was undertaken for the purpose and a central depot was opened for the sale of jute principally in Calcutta. The Central Wholesale Society co-ordinates the work of the local Society, supplies a trained staff, gives necessary directions about working, arranges for finance and kept the cultivation. In touch with the Central market. Unfortunately owing to the heavy slump in the jute market the attempt received such a severe setback that the scheme had to be abandoned and the societies are now being wound up. Several of the Provincial Banking Inquiry Committee visualized a bright future for the organization of marketing of agricultural produce on co-operative lines, and the Central Committee appear to share this belief. They recommend the establishment of co-operative sale societies wherever there are reasonable chances of their successful working and suggest the grant of long term loan at concessional rates of interest to these institutions.

for construction of railways in approved centres. It will indeed be a great achievement if the efforts are successful and the cultivator obtains adequate returns for his produce. At present he buys in the distant market and sells in the cheapest. But if co-operative purchases and sale show good profit to his economic position will be much improved. Besides separate societies for the purpose of credit societies and central banks in a few parts of the country arrange for the joint supply of agricultural requisites. In some places credit societies undertake the joint purchase of agricultural implements for members while in others separate registered societies are started for the purpose of selling implements or supplying the labour. In some provinces in Upper India this work is performed by central banks for the societies affiliated to them. Apart from separately registered societies in Bombay the branches of the Provincial Bank helped considerably until recently in the distribution of seeds, manures and fertilizers, the supply of agricultural implements and the sale of produce particularly jaggery. As the work developed it was transferred to separate registered societies or unions.

Efforts have been made in various parts of the country to solve the problem of milk-supply—to reduce the price and increase the purity—by starting co-operative dairies composed either wholly of goats or milkmen or the producers and the consumers together. The most successful of these efforts has been the group of milk supply societies started in the neighbourhood of Calcutta which have federated themselves into a union. The union has with the help of the Calcutta Municipality and the expert officers of Government erected a well-equipped modern plant for pasteurizing milk, and while the milk supply it controls has been satisfactory to consumers it is interesting to note that by co-operation the producers have also considerably improved their economic position, having paid off debts, bought more cattle, put up decent cattle sheds and accumulated substantial sums in their local societies in the shape of shares and reserves. Similar experiments have recently been undertaken in Madras, and at Dacca in Eastern Bengal. Co-operative creameries and ghee producing societies have also been started in one or two provinces. Another interesting development is the starting of sheep breeding and cattle breeding societies in the Punjab and elsewhere. In a few provinces there are societies for rice hulling, the manufacture of jaggery and for joint irrigation. The latter is an interesting development of co-operation appears to have established itself in popular favour especially in the Burdwan Division of Bengal. This tract, once very flourishing, has been ravaged in recent years by frequent floods and famines, and the population had lost all initiative and sunk into poverty, while their lands deteriorated and malaria claimed a heavy toll. The starting of irrigation societies has opened a new chapter in the history of the tract and has revived the energy of the people and brought them together for common economic endeavour. Ginning on co-operative lines has also been attempted. An interesting experiment in agricultural co-operation is the starting in the Punjab of societies for

the consolidation of small and scattered holdings. These have arranged with very great success of success to regroup and re-allocate the small and scattered holdings of members and if voluntary action proves sufficient for the purpose in other provinces one of the great evils of modern India—scattered agriculture—will be solved without the aid of State help or legislation. The example of the Punjab has been followed by some other provinces and British States, though on a very limited scale. After the last floods that occurred four years ago in the central parts of the Madras Presidency co-operative societies were started to consolidate scattered holdings in their land by clearing away the layers of sand and rebuilding the soil. The societies received aid from Government both in the shape of loans, grants and facilities for transport of material. Similarly after the heavy flood of 1927 in North Gujarat and Western Sindh reconstruction societies were started in the devastated areas for the repair and rebuilding of houses. The Punjab has in fact now some societies for the clearance and reclamation of waste lands and Burma has followed the way in the colonization of newly developed lands on co-operative lines. A number of societies have recently been started in the Punjab to promote better farming, some of which merely call upon members to undertake certain improvements and introduce approved method of agriculture while others go a step further and employ a staff for local experimental research and demonstration work.

Agricultural Organization—Co-operation has already been successful to some extent in smothering the evil effects of money, but if the improvement in the agriculturists' economic condition is to be permanent it is essential that he should be prevailed upon to adopt improved methods of production. The Agricultural Departments in various provinces do undertake propagandist work with this object, but their efforts have not proved as successful as they ought to be. A co-operative society provides an effective agency for reaching the agriculturist, and in many places societies have been the means of bringing home to him the need for improved methods and have been made the centre for conducting the propagandist activities of the Agricultural Department and district Agricultural Associations. As a result, a few societies have been enterprising enough to purchase modern agricultural implements, and the machinery recommended by the Department and to use the proper manures and the certified varieties of seeds. "Whenever agriculture and co-operation have experienced the assistance which each can derive from association with the other they are fast developing a truly organic connection." To this end, joint efforts are being promoted in almost all provinces as both the Departments are in charge of one Minister. This co-ordination is secured by joint conferences, and joint boards of co-operation and agriculture and the starting of local agricultural associations registered under the Co-operative Societies Act. Several of these bodies have lately been started in Bihar and Orissa and in Bombay. In Bombay, the taluka development associations undertake active

propagandist work, hold demonstrations, and assist in the work of general economic improvement of the agriculturists. The subject of agricultural co-operation and of agricultural credit came under enquiry by the Royal Commission of Agriculture in India whose Report was published in 1925. The Commission describe the co-operative movement as the greatest hope for the salvation of the rural masses from their crushing burden of debt and look upon it as the natural basis for social, educational and economic development in India where the predominant industry is agriculture. They admit that there are defects in the present organization for rural credit, but are confident that under the influence of patient, persistent and systematic education of the members in the principles and meaning of co operation these defects are bound to disappear in course of time. The provision of this education in co-operation should, the Commission hold, be the principal care of provincial Co-operative Departments, and though the strengthening of the official staff is suggested the Commission also recommend the organization of supervising unions, federations and institutes and the grant to these bodies of financial support. Recommendations are also made for developing the joint marketing of agricultural produce on co-operative lines and for utilizing the agency of co operative organizations in the work of agricultural demonstration and propaganda, the supply of approved varieties of seeds, implements and manures, the consolidation of holdings and for social and educational betterment.

Committee on Co operation in India —

In July 1914, the Government of India issued a lengthy Resolution on Co-operation in India, surveying its progress in the country during the previous ten years. In October of the same year, Government appointed a Committee under Sir Edward Mclagan to examine whether the movement, especially in its higher stages, and in its financial aspect was progressing on sound lines and to suggest any measures of improvement which seemed to be required. The enquiry was to be directed primarily to an examination of such matters as the constitution and working of central and provincial banks, the financial connection between the various parts of the co operative organization, the audit, inspection, and management of all classes of societies, and the utilization of the reserve funds. In its Report, which was issued in September 1915, the Committee stated that it had not confined its enquiries to the subjects referred to it, for it had to recognise that the financial welfare of the higher stages of the co-operative system was largely based on the soundness of the foundation. The Government of India passed orders in 1918 on the recommendations in the light of the opinions of the Local Governments. It is more or less in accordance with the principles enunciated by this Committee that the movements being carried on in most of the Provinces of India.

Provincial Legislation—Under the Reforms, co operation has been made a provincial subject and also a transferred subject. The control of Co-operative Departments has been entrusted to Ministers and in some provinces

Bills were at sometime or other drawn up for enactment by the local Legislative Councils to take the place of the Co operative Societies Act. The Bombay Co operative Societies Bill was introduced in the Bombay Legislative Council in July 1924, and was finally passed into law in 1925. It reproduces, in the main, the framework of the Act of 1912 but introduces the following important modifications —

- (i) The adoption of a scientific system of classifying societies
- (ii) The improvement of the procedure for liquidation of cancelled societies
- (iii) The extension of summary powers of recovery to the awards of arbitrators
- (iv) The provision of penalties against specified offences

No other provincial Council except Burma where a Provincial Act was placed on the statute book in 1927 has yet enacted legislation on similar lines. A Bill for the enactment of a provincial law to replace the Indian Co-operative Societies Act of 1912, was introduced in the Madras Legislative Council during the year 1931 and is still under consideration. Its special feature with proposal to vest much wider powers in the Registration are employed by him at present.

Provincial Inquiries—In the Central Provinces, owing to the drying up of recoveries and the issue of large advances to agriculturists to tide over the bad season of 1920-21 the fluid resources of the movement were seriously depleted and the Apex Bank was able to meet its liabilities only with the financial assistance of Government. The fluid resources of the Provincial Bank were replenished and the Local Government, with the concurrence of the Government of India, placed credits at the disposal of the Provincial Bank and made advances direct to primary societies in the form of Tagavi loans. A Committee of Inquiry was appointed which made sweeping recommendations, the most important of which was a proposal to liquidate the Provincial Bank and to place central banks in direct touch with commercial banks. This recommendation was, however, subsequently turned down by the Local Government, although some other recommendations such as the division of agricultural finance into short-term crop loans and long-term non-crop loans met with a considerable measure of public support. In Bengal and the Punjab, the return of favourable seasons about fifteen years ago averted any breakdown of the system, which threatened to overtake the local co operative organizations when agricultural scarcity on a wide scale caused serious difficulties some years ago. The same may now be asserted of the United Provinces, where there appeared to be some danger of the strain not being quite successfully withstood. A Committee was appointed in that province in 1925 to hold a comprehensive inquiry and to suggest the lines of future development. The Report of the Committee contains numerous recommendations on matters of detailed administration and proposals for strengthening the official staff of the Co operative Department. The Committee recommended that central banks should be relieved of the work of supervision and

inspection which should be entrusted to a staff working under the direction of the Standing Committee of Co-operators. The Committee further suggested that a scheme might be made in the direction of constituting an apex bank for the province but their proposal has not so far found favour with the local Government though it has recently been endorsed by the Provincial Banking Inquiry Committee. Committees of Inquiry were also appointed in Bihar and Orissa and Mysore in the former to advise about financial organization and official control and in the latter to lay down a policy of development particularly in relation to hill finance, non-credit co-operation, agricultural improvement and the relief of indebtedness. In September 1927 on the recommendation of the Madras Legislative Council the Government of Madras appointed a Committee to enquire into the progress of the co-operative movement in the Presidency and to suggest suitable measures for effecting necessary improvements. The Report of the Committee was published in 1928 and deals exhaustively with the defects of the movement and sets forth in detail the suggested remedies. Prominent among these is the improvement and strengthening of the system of supervising unions and the linking up of these with the provincial unions through district federations. The provincial union and district federations are charged with the duty of providing education and training and a system of liberal grants in aid is proposed to the bodies. Central banks are advised to undertake the inspection of affiliated societies by appointing their own staff and at the time subsidising the federation for the work of supervision. Among other important recommendations are the separation of short term and long term finance in rural credit societies and the creation of a central land mortgage bank for the issue of debentures to finance local land mortgage banks. The Agricultural Commission were of opinion that similar inquiries could, with advantage, be undertaken in other provinces and pursuant to this suggestion the Government of Burma appointed a Committee of Inquiry, the report of which was published in 1929. The report indicates that both the primary societies and the financing agencies in Burma are not in a sound financial condition while the system of guaranteeing unions has failed altogether. Recommendations are made for the improvement of the arrangements for supervision, inspection and control and the Committee propose the winding up of the Provincial Bank and the creation of central banks for the districts. Government, however, have decided to reconstruct the Apex bank by granting to it a special credit of thirty lakhs of rupees.

Banking Inquiry.—In the year 1920, at the instance of the Central Legislature and in response to the demands of federations and Chambers of Commerce, both Indian and non-Indian, the Government of India ordered a comprehensive inquiry into the present position of banking in India and into the measures necessary for promoting banking development, strengthening the organization of credit facilities for agriculture and industries, co-ordinating the work of various credit and banking agencies and linking up banking with the financial

machinery of Government. For conducting local inquiry particularly into the system of agricultural credit the branches of marketing and internal trade, the provision of funds for industrial development and other co-operative matter committees of seven members each were appointed in all the provinces. The Provincial Committee for Bihar co-operative expert in addition to other members interested in co-operation and explained the possibility of further developing the co-operative movement for provision of agricultural credit on an organized basis. From the recently published report of the provincial committee it appears that a majority of the Committee held the view that the solution of the problem of a rural credit bank in the improvement of the co-operative credit system and its expansion on a national basis. Several Committees have also approved of facilities for the marketing of agricultural produce being developed on co-operative lines and on the whole favour the idea of rural economic life being organized co-operatively. The report of the provincial committee is further considered by the Indian Central Banking Inquiry Committee which has on its two representative of the Co-operative movement and being a nominee of the All India Provincial Banks Association. In their examination of the problem the Central Committee have the assistance of a group of foreign experts some of whom have been selected because of their study and practical experience of co-operative banking in other countries. The report of the Committee was published in the latter part of the year and contains a special chapter devoted to rural co-operative credit in addition to detail description of the system of co-operative marketing of land mortgage credit and of urban and industrial societies. The most important of the Committee's recommendations relates to the arrangements proposed for linking up the co-operative banks of the country with the Reserve Bank of India when started, in order to ensure the supply of cheap and adequate credit for agriculture through co-operative agency. The Committee recommend that provincial co-operative banks should be included in the list of member banks and be entitled to rediscount facilities from the Reserve Bank. They propose that the Reserve Bank should be authorized to rediscount Agricultural bills with a currency of nine months and further to make advances for periods not exceeding ninety days on the security of agricultural paper endorsed by provincial co-operative banks, as also to grant loans against moveables pledged to it by such banks. The Committee approve of co-operative banks undertaking inland exchange business and deem them the most suitable agency for the extension of remittance facilities to rural areas. For this purpose Co-operative Banks should, the Committee recommend enjoy the same privileges as Joint Stock Banks. Lastly, the Committee recommend that when Provincial Government is satisfied that for meeting the needs of the co-operative movement in exceptional circumstances or for the development of the agricultural industry it is necessary to make loanable capital available to the co-operative banks, the Provincial Government should with the concurrence of its legislature, place at the disposal of the provincial co-operative bank

such loans as may be necessary to meet the requirements of central banks and primary societies

Effect of Crises on Co operation—It is hardly possible without any close and scientific inquiry, such as has not yet been carried out, to appreciate accurately the effects of the co-operative movement in enabling agriculturists to resist the rigours of a famine as also to judge the reaction of the latter of the co-operative organisation as there is an interplay of various economic forces affecting the life and industry of agriculturists the proportionate value of which cannot be estimated easily. The agricultural crisis of last year caused by an unprecedented drop in the prices of agricultural produce, however, put the co-operative organisation in most provinces to a very severe strain and reports indicate that in most parts of the country repayments by members of societies were affected very seriously. It will take some time for agriculturists to adjust their economic life to the new level of prices and in the meantime the affairs of co-operative institutions will require cautious and sympathetic handling. Proposals were made for assistance in organizing arrangements for the orderly marketing of agricultural produce on co-operative lines but no special action was taken in this direction in any province.

Social Reform—Co operation has in some places stimulated the desire for education and members of rural societies have been known, even at advanced ages, to receive the elements of education to enable them to put their signature on their societies' papers, and to take a lively interest in the internal work of their institutions. In Bombay, night schools for adults were started with the aid of a splendid donation made by the late Sir Vithaldas D. Thackersey, while in the Punjab, Bihar, Bengal and elsewhere such expenditure on education is incurred by co-operative institutions themselves. In the Punjab separate rural societies have been registered to conduct night schools and also to insist on compulsory education for the children of members. The Punjab also possess a number of societies for the promotion of better living the members of which societies lay down a social code for themselves, breach of this code involves punishment by fines. Similar societies are being started in the United Provinces, and some other parts of the country. The Madras Presidency has taken the lead in undertaking the work of rural reconstruction on a comprehensive basis in several districts, through the agency of local co-operative organizations, financing the programme with the help of the central and provincial banks and co-ordinating it under theegis of the provincial co-operative union. In Bengal, attempts have been made to fight the scourge of malaria and to promote village sani-

tation by starting anti malaria co operative societies. The societies are federated into a central union in Calcutta which supplements the local funds, co ordinates the working of the societies, issues literature on hygiene and sanitation, and arranges with local doctors for the provision of free medical relief to members. There are not a few cases where a society has set its face against drunkenness, expelled members notorious for their intemperate habits and has insisted on good moral conduct and attempted to improve the standard of life. Societies have occasionally condemned excessive expenditure on marriages, and have thus indirectly trained members to habits of thrift. The liquidation of old debts again has been rendered possible to a great extent and many an agriculturist who was formerly in a state of chronic indebtedness has been relieved of all his debts and as a result of the practice of thrift freed from the necessity of incurring new ones. Credit has been much cheapened and it is now possible for the agriculturist to borrow at 9 to 18 per cent. what he could not borrow at less than 20 to 75 per cent for merely. It has been calculated that in interest alone the agriculturists of India, by taking loans from co-operative credit societies instead of from the village money-lenders, are even now saving themselves from an unnecessary burden of over three crores of rupees. The village rates of interest have naturally gone down considerably. And the Sowhar is, in most places, not the terror and the force that he was. Business habits have been inculcated with the beneficial result that the agriculturist has learnt to conduct his own work more efficiently. Thrift has been encouraged and the value of savings better appreciated. Special societies are started in the Punjab to promote thrift, while in Bombay, Bengal and Bihar & Orissa, the savings of members are attracted to the village credit societies and either special facilities are provided or special propaganda is conducted to induce members to save and deposit voluntarily. Association in a public institution for common good has brought home to the people the blessings of unity and litigation has often decreased in villages with co operative societies. In the Punjab, a number of societies have been started in rural areas whose members agree to refer all disputes to arbitration by their elected committees and to abide by the awards of arbitrators. Participation in the management of societies has instilled among members the important lessons of self-help and self-reliance, but the most important achievement of co operation has been the development of a sense of communal life—a feeling of 'all for each and each for all'—among members of village societies and the gradual revival of the corporate instincts which made Indian rural organization famous in the world's history.

The following statements show the progress of the co operative movement in different provinces, and contain some information about their detailed working till the end of the official year 1929-30 —

Prasad, M.A. (Cantab), D.Sc., *Secretary* Prof. Chandi Prasad, M.A., D.Sc., *Treasurer* Prof. Pashupati Prasad, M.A., D.Sc.

BHANDARKAR ORIENTAL RESEARCH INSTITUTE, POONA—The Institute was inaugurated on the 6th of July 1917, the 80th birthday of late Sir R. G. Bhandarkar, at the hands of H. E. Lord Willingdon, who became its first President. Its objects are to publish critical editions of texts and original works bearing on Oriental Antiquities, to provide an up-to-date Oriental Library, to train students in the methods of research and to act as an information bureau on all points connected with Oriental Studies. The valuable library of the late Dr. Sir R. G. Bhandarkar, which he

had bequeathed already to the Institute, was handed over after his death by his executors to the Institute and is now located in the Central Hall of the Institute. Since the 1st of April 1918 the Government of Bombay have transferred to the custody of the Institute the unique collection of nearly 20,000 manuscripts formerly in charge of the Deccan College, together with a maintenance grant of Rs. 5,000 a year. Government have likewise entrusted to the Institute a grant of Rs. 12,000 a year for the publication of the Government Oriental Series. The Institute has undertaken to edit the *Mañu Smṛiti* critically at the request of the Chief of Annals who has promised a grant of Rs. 5,000 annually for that purpose. Grants are being received from the Government of India (Rs. 5,000 annually), the University of Bombay, (Rs. 1,000 a year) and the Governments of Bombay, (Rs. 1,000 a year), Burma, Baroda, Mysore and Madras as well as several Southern Mahratta States. The Institute has a Journal called "Annals of the Bhandarkar Institute" published four times a year. It also held under its auspices the First Oriental Conference on the 5th, 6th and 7th of November 1919 under the patronage of H. J. Sir George Lloyd and the presidency of Sir R. G. Bhandarkar. Thanks to liberal donations from the Tatas and the Jain community, supplemented by grants in aid from the Government of Bombay, the Institute is housed in a fine building near the hills behind the Home of the Servants of India Society. Since August 1927 the Institute has been conducting regular M.A. classes in Sanskrit, Pali, Ardhamaagadh and Ancient Indian Culture, where at present over 70 students, paying Rs. 30 per term, are attending. It is intended shortly to affiliate this class to the Bombay University. Minimum membership dues Rs. 10 a year or Rs. 100 compounded for life. Members can, subject to certain conditions, borrow books from the library and get the Journal free and other publications (a list covering about 100 names sent free upon request) at concession rates. *Secretary* Dr. S. K. Belvalkar, M.A., Ph.D. (Harvard), 111 S.

Offices 6, Apollo Street, Bombay.

hygiene generally, and of the prevention of the spread of disease amongst all classes of people by means of lectures, leaflets and practical demonstrations and, if possible, by holding classes and examinations, (c) to promote sanitary science by giving prizes, rewards or medals to those who may by diligent application add to our knowledge in sanitary science by original research or otherwise, (d) to arrange for homely talk or simple practical lectures for mothers and girls in the various localities and different chawls, provided the people in such localities or chawls give facilities. The Sanitary Institute Building in Princess Street, which has lately been built by the Association, at a cost of nearly Rs 1,00,000 the foundation stone of which was laid by Lady Willingdon in March 1914, and opened in March, 1915, is a large and handsome structure with a large Lecture Hall, Library, Museum, etc. and also provides accommodation for King George V Anti-Tuberculosis League Dispensary transferred to the Municipality in 1924 and Museum and the office of the Assistant Health Officer, (C and D Wards and the Vaccination Station) Hon. Secretary, Dr J S Nerurker, BSC, LMC & S, DPH (Cantab), Executive Health Officer, Bombay.

BRITISH AND FOREIGN BIBLE SOCIETY—Since 1811 the British and Foreign Bible Society has been at work in this country. It has 6 Auxiliaries in India and an Agency in Burma. The first Auxiliary was established in Calcutta, in 1811, then followed the Bombay Auxiliary in 1813, the Madras Auxiliary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1863, the Bangalore Auxiliary in 1875, while the Burma Agency was founded in 1899. The Bible or some portion of it is now to be had in nearly 100 different Indian languages and dialects and the circulation throughout India and Burma reached nearly 1,133,287 issues in 1930. The Bibles, Testaments, and Portions in the various vernaculars are sold at rates which the very poorest can pay, and at considerable loss to the Society. Grants of English Scriptures are made to Students who pass University examinations, as under—

The New Testament and Psalms to Matriculates and the Bible to Graduates

Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Women's work. Besides the British and Foreign Bible Society, there is Bible work carried on in India, and Burma in a much smaller way by the Bible Translation Society—which is connected with the Baptist Missionary Society—the National Bible Society of Scotland, the American Bible Society and the Tranquebar Tamil Bible Society.

BOMBAY SANITARY ASSOCIATION—Founded to create an educated public opinion with regard to sanitary matters in general, (b) to diffuse the knowledge of sanitation and

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India and Burma :—

TABLE OF CIRCULATION OF THE B.B.S. IN INDIA

L. J.*, Mr. J. J. Jajoo; *Secretary*, Mr. P. K. Chatterjee; *Office*, 11, Simla, Mansion, 11, Floor, Calcutta.

INDIA SUNDAY SCHOOL UNION—The India Sunday School Union is an interdenominational organization having for its object the strengthening of religious and moral education throughout the Indian Empire. It embraces a score of Auxiliaries, which are generally associated with language areas. There is a number of full-time workers, European and Indian, but much help is given in all parts of the organisation by honorary helpers.

The I S S U was founded in Allahabad in 1870. Its general committee is made up of representatives from the National Christian Council of India, from the Auxiliaries, and from other sources. Funds for the carrying on of the work are partially found in India, but the major part is still provided by The World's Sunday School Association. The headquarters of the Union is at Coonoor in the Nilgiri Hills, where besides the office and well-stocked book shop there is The St. Andrew Teacher Training Institution. In this Institution leaders in religious education from all parts of India are trained for their duties.

Besides the central training college the chief activities of the Union are the providing of literature for the religious educational needs of India, good literature for teachers and for children, extension courses of lectures delivered in English or vernaculars in all parts of the Empire, the arranging of teachers' conventions and conferences, the arrangement of examinations in Scripture for teachers and scholars in the Sunday Schools.

The following journals and quarterlies are published by the I S S U—
The India Sunday School Journal,
The Senior Lesson Quarterly.

Approximately a million scholars in Sunday Schools and Day Schools are touched by the activities of the Union, and 60,000 to 70,000 teachers.

The officers of the I S S U are—*President*—The Bishop of Lucknow; *Treasurer*—W. H. Warren, Madras; *General Secretary*—E. A. Annett, Coonoor; *Assistant Secretary*—Rev. N. Franklin, Coonoor.

INSTITUTION OF ENGINEERS (INDIA)—The organisation of the Institution began in 1910 and it was inaugurated by H. E. Lord Chelmsford early in 1921. Its object is to pro-

mote and advance the science, practice and by the use of engineering in India on the same basis as are adopted by the Institutions of Civil, Mechanical and Electrical Engineers in the United Kingdom. There are excellent work-rooms apparatus and reading room at the Society's Headquarters at 229, Lower Circular Road, Calcutta *Hon. Secretary*—A. Hearn, 229, Lower Circular Road, Calcutta

POONA SEVA SADAN SOCIETY—This Institution was started in 1909 by the late Mrs. Ramrati Ranade, Mr. G. K. Devadhar and a few other ladies and gentlemen in Poona and registered in 1917. It is now working independently though for a few years in the beginning it was conducted as a branch of the Bombay Seva Sadan. Its main object is to make women self-reliant and to train them for missionary work undertaking educational and medical activities for their sisters and brethren, especially the former in backward areas and working on a non-sectarian basis. Nominal fees are now being charged for instruction, except for the Music Classes, for Special Classes in English, and for High School classes, etc. There are eight different departments subdivided into 60 classes. Arrangements are made for training Nurses and Midwives and women Sub-Assistant Surgeons at the Sassoon Hospital, Poona, and a hostel is maintained for the former and two for those attending the Sub-Assistant Surgeons' Classes. There is a Public Health School affiliated to the Lady Chelmsford League for Maternity and Child Welfare, Delhi. The number in the three hostels is now about 85. The hostels are a full-fledged Training College named after Lady Morley Wedd with about 46 students including those in the V. I. Class for being trained as Midwives for Vernacular schools. The College is probably the only one of its kind

maintained by a non-official non-Christian missionary body teaching the full course. The results of the Certificate Examinations held in the year 1927-28 under the authority of the local Government Training College for Women were as follows: 1 year senior 12. The total number of certificates granted so far is 347 now. The Practising School for little girls attached to the Training College has now eleven classes with 265 students reading up to the Marathi VI Standard, English being taught in the V standard class. Primary classes for grown up women teaching up to the Marathi V Standard are attended by about 105 women. It is here that poor women are recruited for training as a teacher, nurse, midwife, or doctor. Special classes for teaching English, First Aid, Home Nursing were attended by about 93 students, the Music Classes by 112 students, and the Work room Classes for teaching Sewing, Embroidery, Hosiery and Weaving by 153 women. Thus, the total number of pupils is 934 to-day. There are two branches of the Society started at Satara and Baramati which are named after Lady Vithaldas Thakarsee, the wife of the greatest helper of the Society so far the late Sir Vithaldas D. Thakarsee. Besides there are branches started at Bombay (Dadar and Girgaum), Sholapur Ahmednagar Alibag, Nasik, Napur, Gwalior and Madras for either educational or medical work or for both. Thus the total number of women and girls including about 150 duplications on the rolls at these various Centres of the Society is over 1500. There are in Poona six hostels, three of which are located at the headquarters and the other three in the Raste's Path and the Somwar Peth for Nurses, etc., under training at the Sassoon Hospital. The number of resident students is above 260 in these six hostels. One of the three hostels at the headquarter is intended for women of depressed class. The number of these women at present is 7. In connection with the medical branch a Committee has been formed in England, which will enable the Society to send fully qualified Nurses there to undergo further training. Two fully qualified Nurses have so far been sent by the Society for their post-graduate course in Public Health Nursing at Belford College for Women in London with the partial help of a scholarship of the League of Red Cross Societies, India. There is an active Infant Welfare Centre and ante-natal clinics with the average daily attendance of 50 extending up to the 10th month. The Society has extended its medical activities in Bombay by uniting with the help of two charitable Trusts to work out the scheme of Maternity and Child Welfare and General Nursing for the women and children of the Indian Community in the port of Bombay. The Devalia, the largest of the islands, has a school class, a Maternity Hospital, a Home, and three Infant Welfare Centres. Besides the Maternity Home and Nursing Home at Ahmednagar, the Society has also a branch at the Sassoon Hospital, Poona. The Sassoon Hospital, Poona, is a full-fledged Training College for Nurses and Midwives. The results of the Certificate Examinations held in the year 1927-28 under the authority of the local Government Training College for Women were as follows: 1 year senior 12. The total number of certificates granted so far is 347 now. The Practising School for little girls attached to the Training College has now eleven classes with 265 students reading up to the Marathi VI Standard, English being taught in the V standard class. Two fully qualified Nurses have so far been sent by the Society for their post-graduate course in Public Health Nursing at Belford College for Women in London with the partial help of a scholarship of the League of Red Cross Societies, India.

In the field of social economic and educational work, the Society's activities are equally varied. Some of its members are practically the founders of such institutions as the Poona Seva Sadan Bombay and Madras Social Service League the P. P. Seva Samiti the Bhili Seva Mandal catering for the needs and uplift of the aboriginal tribes in Gujarat. The Seva Sadan has been a model institution for the education of women which gives training to over 1,500 girls and women in all useful directions. It has many branches in different parts of India carrying on social and educational work. The Social Service League has done good co-operative, education and welfare work for the mill workers Bombay by starting Co-operative Schools at night and technical schools. A number of conducting welfare centres in Upper India is an unique organization in which the Society is doing service to the pilgrims going to religious places such as Harwar and Benares, and working in times of epidemics. Its Boy Scout organization is a well knit body recognised by the public and Government. Mr Choudhary the Bhingini Samaj for social education conducts the Bhingini ladies. The Society has been conducting a model Depressed Mission in Mangalore and the Devadhar Mission in Mangalore. Trust activities at Calcutta Reconstruction Trust activities at Calcutta the Co-operative movement in the Bombay and the pioneering work in the Bombay and presidencies. During natural calamities as floods, famines and epidemics, the Society has done relief work in every part of India. Its work in the Moplah rebellion, the Malabar become a household name in Madras. Mr Vasari was for many years a member of the Madras University Senate. Mr Kulkarni member of the Allahabad and Benar

SEVA SADAN.—The Seva Sadan Society was started on the 11th of July 1908, by the late Mr. B. M. Malabari. It is the pioneer Indian ladies' society for training Indian sisters ministrant and serving (through them) the poor, the sick and the distressed. To spread its Gospel far and wide, the first branch was opened at Poona as early as 1909. The Society has its headquarters in Gamdevi, Bombay. The Society maintains the following departments of work:—(1) Home for the Homeless, (2) Ashrams (Training Homes), (3) Marathi Normal Classes, (4) Home Education Classes, (5) Industrial Department including a work-room, Sewing, Cutting, Hosiery, Cookery, and Fancy Embroidery are among the chief

Industrial, etc. Total number of women in the different classes is nearly 400.
Secretary, Miss B. A. Engineer, No. 1, 11 B, Hill, J. I.

CONSUMPTIVES' HOME SOCIETY—This Society was started by the late Mr. B. M. Malabar and Mr. Dayaram Gaddimal on the 1st of June 1909. It was registered under Act XXI of 1880. Mr. Malabar secured a large grant of land in a Himalayan pine forest in Dharampur (Simla Hills) from H. H. the Maharaja of Patiala, for a Sanatorium for Consumptives. His Highness also gave a donation of Rs. one lakh. In 1911 by special permission the Sanatorium was named The King Edward VII Sanatorium. The Sanatorium has its special water works known as the Lady Harlowe Water Works, presented by the late Sir Chund Lal Madhavlal Bhat of Ahmedabad. The Sanatorium has a Guest House. The Sanatorium has a Guest House for Dharampur. It has accommodation for 90 patients including the special Punjab Block built from a grant of the Punjab Government and received for European patients. Most of the huts and cottages are built by Parsis. The Sanatorium has its own dairy and is called the Pirojhal R. H. Patuck Dairy. The Recreation Hall is called The Sir Bhupinder Singh Recreation Hall after the name of the Maharaja of Patiala. Mr. Malabar collected an Endowment Fund of about Rs. 67,000 to be used with the Treasury Charitable Endowments under Act VI of 1880. Nearly Rs. 2,00,000 have been spent on laying out the site, buildings, etc., and the current annual expenditure is about Rs. 40,000. The Senior and Junior Medical Officers are in charge of the Sanatorium. The Office of this Society is situated at the Seva Sadan Buildings, Gamdevi, Bombay. Mr. S. P. Wadia is the Hon. Secretary and Dilwan Bahadur K. M. Jhaveri is the Hon. Treasurer.

SOCIETY FOR THE PROTECTION OF CHILDREN IN WESTERN INDIA—Office and Homes at King's Circle, Matunga.

Founded—To prevent the public and private wrongs of children and the corruption of their morals, to take action for the enforcement of the laws for their protection, and, if necessary, to suggest new laws or amendments of the existing laws, to provide and maintain an organization for these objects, to promote education, and to do all other lawful things incidental or conducive to the attainment of the foregoing objects. Subscription for Life Membership, Rs. 100. For Life Membership, Rs. 10. President—Dr. Sir Temulji B. Nariman, Kt.

Honorary Secretaries—Dr. Mrs. D. A. De Monto and Mrs. R. P. Masani, Hon. Treasurer—Khan Bahadur H. S. Katrak.

WESTERN INDIA NATIONAL LIBERAL ASSOCIATION—(Founded in 1910)—The Association was formed in pursuance of clause (b) of Resolution XI of the First Session of the All-India Conference of the Moderate Party, with a view—to do sustained work for the political progress and the moral and material welfare of the people—to give expression from time to time to the considered opinion of the Party on matters of public interest, and to inform and educate public opinion in this pre-eminence in support of its views, policy and methods.

The objects of the Association are the attainment by constitutional means of full Dominion Status for India at the earliest possible date. For the promotion of the objects, the Association shall adopt constitutional methods of action and work and shall foster a spirit of liberalized liberalism based on principles of liberty, equality and fraternity among the different races and communities of the people. For the fulfilment of the objects the Association shall carry on educational and propagandist work by means of (a) reports, pamphlets and other publications, (b) meetings or conferences, (c) Government and all other methods as may be deemed practicable and expedient to advance public opinion, and (d) for advancing the interests of the Liberal Party by circulating and influencing the Liberal Party, the Liberal Party, Central and Provincial to Municipalities and District Local Boards.

The affairs of the Association are conducted by a Council consisting of 16 members who are elected every two years.

President—Sir Chund Lal H. Setalvad, Kt. C. I. E. Vice President—The Hon. Sir Chund Lal H. Setalvad, Kt. C. I. E. Hon. Secretaries—Mr. Kazi Khabiruddin, Mr. J. K. B. Jeejeebhoy, Mr. D. G. Dalvi and Mr. A. D. Shroff. Assistant Secretary—Mr. V. R. Bhonde. Office—Alicia Building, Hornby Road Fort, Bombay.

WOMEN'S INDIAN ASSOCIATION—This Association was started in Adyar, Madras, in 1917, with aims of service to women similar to those of the Seva Sadan in Bombay. It has 70 branches and over 7,000 members. It establishes programmes for places, and regular lecture programmes for women in each of these branches. Each branch is autonomous and works according to the need of the locality. Classes are held to teach the vernaculars, English, needle-work, plain and fancy—first-aid, rattan work, spinning, weaving and music and child welfare centres are conducted. Weekly lectures are given on subjects of general interest relating to women, such as health, education, religion, civic responsibilities, woman suffrage, etc. Though started entirely as an educational institution, the movement for the Reform Bill proved that a most necessary part of work for the advancement of women was propaganda in support of the suffrage. Accordingly the gaining of the vote for women was added to the objects of the Association and the Association specializes on woman suffrage and the removal of sex discrimination from all franchises and candidature for local boards, municipal and legislative councils. Valuable

work along these lines has been done by the Association as this is the only woman suffrage organization in India. The Association publishes a monthly magazine, *Sri-Dharma* edited by Shrimati Malati Patwardhan, B.A., in English with Hindi, Tamil and Telugu articles (Rs 4 to non-members, Rs 2 to members). It is an all-India Association. Its largest branch is in Bombay, its greatest number of branches in South India, but yearly additional branches are being started in other provinces, and there are flourishing branches as far north as Kashmir and Lashkar. The prospects of rapid growth for the Association are very bright as it has been found that women everywhere welcome the self development which the establishment of these branches brings. The Association is affiliated with the International Woman Suffrage Alliance and the International Women's League for Peace and Freedom.

Objects —

To present to women their responsibility as daughters of India,

To band women into groups for the purpose of self-development, education, and the definite service of others.

To gain compulsory primary education for every boy and girl in India.

To secure the abolition of child-marriage and child-parenthood.

To help women to realise that the future of India lies largely in their hands, for as wives and mothers, they have the task of training and guiding and forming the character of the future rulers of India.

To secure for women the vote for Municipal and Legislative Councils as it is or may be granted to men.

To secure for women the right to be elected as members on all Municipal and Legislative Councils.

Headquarters — Adyar, Madras. **President** — Dr Annie Besant **Vice Presidents** — Dr Muthulakshmi, M.L.C. Mrs Jinarajadasa **Hon. General Secretary** — Mrs M. E. Cousins **Hon. Treasurer** — Shrimati Ammu Swaminadhan.

YOUNG MEN'S CHRISTIAN ASSOCIATION —

This Association, which was founded by the late Sir George Williams in 1844, is now a world-wide movement, well established in almost every country in both the hemispheres. The aim of the Association is, through its religious, social, educational, and physical work to answer the fourfold—spiritual, social, mental and physical—needs of young men and boys.

The Young Men's Christian Association, though relatively new to India, is spreading rapidly. The local Associations are autonomous and governed by local Boards of Directors. These Associations in Convention elect a National Council which is responsible for the supervision and expansion of all forms of the Association work in India, Burma and Ceylon.

There are now over 60 Associations affiliated to the National Union and many other village Associations with many thousands of members of all races and creeds. The following Associations own one or more buildings which serve as the local headquarters — Allahabad, Alleppey,

Bangalore, Bombay, Calcutta, Calicut, Coimbatore, Colombo, Delhi, Galle, Hyderabad, Jubbulpore, Kandy, Karachi, Kunnarakulam, Kottayam, Lahore, Madras, Madura, Murree, Nagpur, Naini Tal, Ootacamund, Poona, Rangoon, Risalpur, Secunderabad, Simla, Trivandrum, Wellington. The others use rented or rent-free buildings.

The work of the National Council and of the local Association is carried on by numerous voluntary workers and Committees, assisted by 25 specially trained full-time Secretaries. A feature of the Y.M.C.A. in India is the international character of its Secretariat. It is made up of 12 Americans, 2 Canadians, 13 Englishmen, 2 Scotchmen, 1 Irish, 1 Swiss, 1 Swedish, 3 Anglo-Indians, 1 Dane, 4 Austrians and 55 Indians and Ceylonese.

The classes of people reached by the Indian Y.M.C.A. and the lines of service it attempts to do for them may be stated as follows —

Generally — 1. Literature — Publication of original works and reprints. Four series: 'Heritage of India', 'Religious Quest of India', 'Religious Life of India', 'Makers of Modern India', 'Education of India'.

2. Lecture Bureau — Many thousands of slides on a wide variety of educational and recreational topics serving a clientele in over 700 centres in India.

3. Physical — Training Physical Directors for schools and colleges, fostering playground movement, Olympics.

Boys — Scouting, Boys' Clubs, Camps, etc.
Students — Hostels and Institutes in most University Centres.

Indian Students in Britain — Specially in London, Edinburgh and Glasgow.

'Citizens' — (i.e., English-educated Indians, Ceylonese and Burmese). Reading Rooms, Libraries, Lectures, Group Conferences, Study-Circles, handling many subjects of vital interest—social, intellectual and religious.

Soldiers — Institutes and Holiday Homes for British Soldiers in a number of centres including the N.W. Frontiers.

Anglo-Indians — Hostels, Institutes, Employment Bureaux.

Europeans — Hostels, Institutes, Employment Bureaux.

Laborers in Mills — "Welfare" Work.
Rural Communities — "Rural Reconstruction" work embracing Co-operative Banking, Distribution, Cattle Insurance and Arbitration, Cottage Industries, and Adult Education in four selected centres.

A monthly magazine, the *YOUNG MEN OF INDIA*, is issued at Rs. 5 per annum, including postage.

The work of the National Council (excluding that of the 50 local Y.M.C.As) called for a Budget of Rs. 1,70,048 2 0 in 1927. Of this sum Rs. 57,000 had to be raised from the public in India.

Societies: Literary, Scientific and Social

The Head quarters of the National Council is 5, Burdett Street, Calcutta. The officers are—
President—The Earl of Darnley
Vice-President—The Earl of Darnley
Secretary—The Earl of Darnley
Treasurer—The Earl of Darnley
General Secretary—The Earl of Darnley

The National Council is a body of 100 members, elected by the various Provincial Councils. The Provincial Councils are—
 Bengal, Bihar, Bombay, Central Provinces, Madras, Mysore, Orissa, Punjab, Sind, South India, and the United Provinces.
 The National Council meets annually in Calcutta, and its business is to co-ordinate the work of the Provincial Councils and to represent the Indian people in the various international conferences.

The Bombay Association is a body of 100 members, elected by the various Provincial Councils. The Provincial Councils are—
 Bengal, Bihar, Bombay, Central Provinces, Madras, Mysore, Orissa, Punjab, Sind, South India, and the United Provinces.
 The Bombay Association meets annually in Bombay, and its business is to co-ordinate the work of the Provincial Councils and to represent the Indian people in the various international conferences.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA.—This Association was organized nationally in 1870. The aim of the Association is to promote the physical, intellectual, social and spiritual welfare of young women and girls in India. This is done by the establishment of local branches in different centres. At present there are 76 local branches in different cities and towns. The Association has a large membership, including most classes of the community. The needs of girls are met by physical drill, recreation, clubs and classes, lectures, commercial classes and meetings for social intercourse. Hostels, some of them holding as many as 70 girls, are established where there is a demand for them and the Association, at present, owns 21 including 8 holiday homes in the hills. These hostels accommodate

day working girls, teachers, nurses, students and apprentices. The rates vary according to the students' salaries and accommodation though all equally comfortable. The benefits of a comfortable home, good food and wholesome surroundings. The holiday homes provide cheap holidays in healthy surroundings and also a comfortable girls who work in the hills during the hot season. In addition to holiday homes, summer conferences are held annually at Anandabhai Chaudhary and are conducted by the Association in Cochin and in the North Indian Centre. Special girls' camps are arranged from time to time in many centres.

Travel is all work is done in the large ports, especially Calcutta, and a large number of translators and visitors are accommodated in the homes in the centres. The Association also runs employment bureaus through the various of which many girls find positions. The commercial schools train girls for office and business life. These larger associations are manned by a staff of trained secretaries, some of whom come from Great Britain, America, Australia, New Zealand and Canada. The others are found and trained in India. In many of the smaller branches where the work is of a simpler nature it is carried on by voluntary workers who render faithful service year by year. The majority of the Indian branches are also carried on in this way. The Student Christian Fellowship is affiliated to the World's Student Christian Federation and has 13 branches in the various Schools and Colleges.

The Association which is affiliated to the World's Young Women's Christian Association is international and interdenominational. Full membership is confined to members of the Christian Church, but Associate membership is open to any girl or woman of good character, no matter what her religion may be. The National Headquarters are situated in Calcutta and business is conducted by the National Committee which has a representative membership in all parts of India, Burma and Ceylon. The Patroness of the Association is H. E. Lady Irwin.

Copies of the annual reports and other printed matter can be obtained from the National Office which is at 11, Harrington Mansions, Calcutta. The official organ of the Association is the "Woman's Outlook," an illustrated monthly magazine which supplies women living in India with a good magazine at the price of Rs. 2.00 post free, per annum.

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects are—
 (1) To facilitate intercommunication and co-operation between women belonging to the universities of the United Kingdom, resident in India.
 (2) To provide a means of keeping in touch with the universities of the United Kingdom, who hold degrees in any university in the United Kingdom, and otherwise as may seem expedient.
 (3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women.
 Membership is open only to those women who hold degrees in any university in the United Kingdom.

United Kingdom, or hold Oxford or Cambridge Honours Certificates, but Associate Membership is open to women who have studied at a British University for two years and each Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has four branches. The addresses of the Honorary Secretaries are as follows —

Hon General Secretary — Mrs D F Hingeley, c/o P O B 535, Bombay

Hony Local Secretaries

| | |
|----------|---|
| Bombay | Mrs. Blair, Arthur House, Coopers, Bombay |
| Calcutta | Hon Secretary c/o Miss Cornelia Sorabji, 25, Chowringhee Calcutta |
| Delhi | Mrs Blomfield, Aurinzel Rd., Rajpura, Delhi |
| Punjab | Mrs Irving, 16, Davis Road, Lahore |

The Delhi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc., and have supplied, through the International Federation of University Women, information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products.

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has, through a special sub-committee, organized public meeting for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of Women's Employment Bureau in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council, the Calcutta Bureau has ceased to exist.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

Federation of University Women in India

This is an organization concerned to unite for service and fellowship all University Women of whatever race or University who may be resident in India. Units representing British Universities, Indian Universities and American Universities severally have existed since 1913 (Britain) and 1920 (India and America) respectively.

These Units are now fused together into one body and are as such affiliated to the International Federation of University Women which embraces 31 countries of the world and has its headquarters at Crosby Hall, Cheyne Walk, London.

This International Federation is then a kind of League of Nations in which the University is the Unit and the opportunities it affords for better understanding for world-friendship, and world service, will easily be imagined.

As forming one Family, its Members help the common cause of women: they help one another by inspiration and interchange of service; they help the country for which as individual Units they stand, inasmuch as that country is swept forthwith by reason of its place within the International Federation alone into world statistics and the dignity of recognition by the League of Nations at Geneva.

The benefit to Members individually also is great. The Club Houses of the Federation all over the world are open to them. Equally so are all Scholarships and Fellowships offered by the Federation.

During 1929 these last have included Scholarships from Great Britain and America which gave free tuition, board and residence at certain Colleges to students for a degree; residential scholarships at Crosby Hall, valuable Fellowships and Prizes offered chiefly for Medical or Scientific research by Australia and America.

A special scholarship was offered in 1929 by Barnard College, Columbia University to under graduates from India.

Membership is open to Women Graduates of any University through the Unit representing that University. Colonial Graduates are at present attached to the British Unit.

| | |
|------------------------------|-------------|
| Subscriptions — British Unit | Rs 3 a year |
| Indian Unit | Rs 3 a year |
| American Unit | Rs 2 a year |

The Federation has Branches in Bombay, Calcutta, Lahore, Madras, Kodalkanal. Each Branch has its local Committee. But as a whole the Federation is under a Central Committee with Headquarters at Calcutta for the years 1929 and 1929. Headquarters are at Bombay for 1930-31.

OFFICE BRAPEPS, CENTRAL COMMITTEE

President—Miss McDougall

LOCAL REPRESENTATIVES

| | |
|----------|-----------------------|
| Bombay | Miss Phipper |
| | Miss Kanga |
| Calcutta | Miss Cornelia Sorabji |
| Punjab | Mrs Skemp |
| | Miss Zutsi |
| Madras | Miss P Seetha |

Honorary General Secretary, Mrs Doctor, Hirji Mansions, Bombay

Applications for membership should be made to the Honorary General Secretary who will forward the same to the Local Secretary to whose Unit it may appertain.

ROTARY IN INDIA

ROTARY CLUBS IN MIDDLE ASIA
REGION

T. I. Jume, Honorary Chairman, Center Middle Asia Region, 200, Mount Road, Madras
INDIA

BOMBAY (1909) Pres. Dr. W. Numan, Hon. Secy. H. W. Evans, A. M. C. A. Wadhwa, *Peacock*. Every Tuesday, 1.30 p.m. Monday in *Le Tourant*.

CALCUTTA (1920) Pres. D. G. Ghose, 27 Dalhousie Circle, Kailash, Bowbazar, Hon. Secy. C. Warren Boulton, Stephen House, Dalhousie Square. Every Friday, 1.00 p.m. *Palatis Restaurant*.

LAHORE (1927) Pres. J. B. G. Smith, P. W. D. Secretariat, Hon. Secy. H. Peterou, 44 The Mall. Every Tuesday, 1.30 p.m. *Nedous Hotel*.

MADRAS (1920) Pres. Major W. S. I. Money, M. & S. M. R. V. Fort Town, Hon. Secy. I. G. King Morgan & Co., 311 Fingert Chetty St., Every Friday, 1.30 p.m., Gymkhana Club.

BURMA

RANGOON (1920) Pres. U. Maung Set, c/o Rotary Club, Hon. Secy. U. Malha, c/o Polson Manufacturing Co., 91, Indian Larkiel Street, Ringoon. Every Tuesday, 1 p.m., Strand Hotel.

THAYETMYE, Rev. I. Carroll Condict, President, Rotarians Saw Ba Hlin and U. Pom Ya, Hon. Secretaries.

CEYLON

COLOMBO Rotarians T. A. Hines and I. J. Thompson, succeed Rotarian G. P. Wishard as Hon. Secretaries from January 1st to July 1st. Address: Post Box 345, Colombo.

SIRAIT'S SLEPILIMINIS

SINGAPORE (1930) Pres. Roland Braddell, c/o Rotary Club, Hon. Secy. A. L. Gilmore, c/o Victoria Theatre. Every Friday, 1 p.m., Raffles Hotel.

PINANG (1930) Pres. Hon. Mr. Lim Cheng Ian, c/o Rotary Club, Hon. Secy. C. M. Merdick, Every Tuesday, 1 p.m., L & O Hotel.

MALACCA (1930) Pres. D. A. L. Bell, c/o Hongkong Shanghai Banking Corporation, Hon. Secy. D. C. Martin, c/o Sime Darby & Co., Ltd., Every Tuesday, 1 p.m., Masonic Hall.

FEDERATED MALAY STATES

KUALA LUMPUR (1930) Pres. The Hon'ble Mr. S. Veeraswamy, Hon. Secy. Capt. L. D. Gumman, P. O. Box 203. Every Friday, 1 p.m., Station Hotel and Last Friday, 8 p.m.

HONGKONG Pres. Dr. K. I. Kham, c/o Pottery Club, Hon. Secy. J. H. Saunders, 112 and 114, 116 H. Street. Every Wednesday, 1 p.m., Grand Hotel.

SINGAPORE (1920) Pres. Chan Sui Ton, c/o Rotary Club, Hon. Joint Secretaries, J. Taylor N. J. (Cooper) and J. A. Edmund. First Thursday, 6.0 p.m., and Third Thursday, 8 p.m., Halls Club.

KLANG AND COAST (1920) Pres. Dr. W. Ansley, Young Station St., Hon. Secy. Dr. H. J. Law, 300 Main St. First Saturday, 8 p.m., Mayone Hall. Second, Third, and Fourth Fridays, 5 p.m., Chinese Merchants Club.

JAVA

BATAVIA (1930) Pres. C. I. J. Quarles van Ufford, c/o Stoomvaart Mij. Nederland, Hon. Secy. C. A. de Vries, c/o Antea Press Agency. Every Wednesday, 8.00 p.m., Restaurant, Verdoek.

BAPOENGA Rotarians d. Koek van Leeuwen, Honorary Secretary J. Visser, Assistant Honorary Secretary.

BOGORJA RTA Rotarians P. H. W. Sitsen, President, A. P. C. Nelson, Honorary Secretary, A. W. A. Jacometti, Assistant Honorary Secretary.

MAJANG (1930) Pres. Col. H. G. Van Vierssen, Second Regiment Artillery, Hon. Secy. Jan W. Wijsman, c/o Kewstraat 21, Every Wednesday, 8 p.m., Eldorado Restaurant.

SOURABAYA (1930) Pres. R. MacGillivray, c/o Royal Dutch Oil Co., Hon. Secy. C. Noome, c/o Waterkrachtbedrijven. First and Third Mondays, 8 p.m., Sumping Club.

SAMARANG (1930) Pres. A. J. W. Vorster, c/o Nederlands Indische Railway, Hon. Secy. H. A. A. C. Reijnders, c/o Cultuur Mij. der Voostenlanden. Every Tuesday, 1 p.m., Societeit 'Harmonie'.

SUMATRA

MEDAN (1930) Pres. Dr. J. G. Geurlings, President of High Court, Hon. Secy. J. Reuvers, c/o Gouvernementskantoor. First and Third Mondays, 8 p.m., Hotel de Boer.

SIAM

BANGKOK H. R. H. Prince Parachuttra, President, Rotarians H. W. W. Huber, Vice President, Luang Thavil, Honorary Secretary, Panom Dobhastin, Assistant Honorary Secretary.

The Church.

The Church of England in India became on March 1, 1930, a self governing branch of the Anglican Communion. Until that date it had been an integral part of the Church of England and its bishops were considered to be suffragans of the Archdiocese of Canterbury. This legal bond was severed by the passing of the Indian Church Act and Measure in 1927, and from the date of severance appointed under the Act, the Church of India, Burma and Ceylon has been free to manage its own affairs, although, as it states in the Preamble to its Constitution, it has no intention or desire "to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuity with its past and destroy its spiritual identity."

Like all the other branches of the Anglican communion the Church of India Burma and Ceylon is Episcopal. It is composed of fourteen sees, Calcutta, Madras, Bombay, Colombo, Lahore, Rangoon, Travancore and Cochin, Chota Nagpur, Lucknow, Assam and Nasik. Of these the first to be erected was Calcutta in 1814 and the last was Nasik in 1930. Vacancies on the Episcopal Bench are filled by election each diocese electing its own bishop. The Bishops rule the Church and to them is reserved the final word in all matters of faith and order, but they rule in conjunction with a system of Councils which has been framed so as to give the greatest possible amount of representation to the whole body of the faithful. The foundation of which the Parish Priest is the Council of which the Parish Priest is the convenor and chairman. Every baptised and confirmed member of the Church residing in the parochial area who contributes, in some recognised way, to the financial support of the Church, is a member of the Parochial Council of the ecclesiastical area in which he resides and is called a Qualified Elector.

Above the Parochial Councils come the Diocesan Councils. All Priests holding the Bishop's license are members of the Diocesan Council and to it are sent Lay Representatives elected by the Qualified Electors of every Parochial Council. The Diocesan Councils manage all purely domestic matters and have the right of petitioning the General Council about any subject of wider importance which may interest them. They elect a given number of priests and laymen to be their representatives on the General Council. General Councils are held not less than every three years and usually at Calcutta. They consist of three Houses, Bishops, Priests and Laymen. Every Diocesan Bishop has a place in the House of Bishops. The other two Houses are formed by the elected representatives of the Diocesan Councils. The three Houses usually sit and vote together,

but any House has the right to meet alone if it desires to do so in order to formulate its policy or classify its opinions. A "Canon" of the Church is a Resolution passed with additional precautions ensuring due consideration by all three Houses. In all questions touching faith or Order the position of the episcopate is the divinely authorised teacher of the Church is most carefully safeguarded and the Bishops alone, without the concurrence of the other Houses, can issue Determinations about both subjects. But no Determination of the Bishops can be the subject of disciplinary action until it has become a Canon.

Every priest before being licensed to work in the Church of India, Burma and Ceylon takes an oath of obedience to the Canons.

The Ecclesiastical Establishment—At the time of the passing of the Indian Church Act and Measure the Government of India acknowledged that it was responsible for providing for the spiritual needs of the Soldiers and Civilians whom it brought out to India. These responsibilities it discharges by maintaining an establishment of chaplains and churches for the four principal denominations of Christians—Anglican, Presbyterian, Roman Catholic and the Free Churches. The Chaplains of the two first named groups are appointed by the Secretary of State for India, the Anglicans on the recommendation of a Selection Committee of which the Archbishop of Canterbury is the Chairman. They are paid by Government and pensioned after a covenanted period of service. Although they form a definite Department of Government they are not subject to the orders of anyone save their own ecclesiastical superiors. The Presbyterian Chaplains are sometimes appointed to stations and sometimes to regiments. The Anglican chaplains are always chaplains of stations and have the pastoral care of all the inhabitants of the station who do not deliberately withdraw themselves from their ministrations, but when troops are included in the number of their parishioners Government orders that they shall have the first claim on their services. The chaplains and their congregations are members of the Church of India Burma and Ceylon during their residence in India and have full rights of representation in the Councils of the Church. Their right to the use in worship of the Prayer Book of the Church of England is not only acknowledged in the Constitution of the Church but is also safeguarded by clauses in the Indian Church Act.

Government gives to the Metropolitan an annual block grant which is divided between the seven bishops whom Government recognises as having jurisdiction over the Establishment Chaplains and their congregations. These are the Bishops of Calcutta, Madras, Bombay, Lahore, Lucknow, Rangoon and Nagpur.

Before 1910 they formed part of the Establishment. One of the difficulties with the Church is facing is that the Government Black Grant is not large enough to provide for all the needs of these bishops. In consequence the Church is struggling to raise money in Government funds to make up deficits. Moreover, it is still, however, in the situation I might about by the action of Government in 1921 when in pursuance of a general policy of economy necessitated by post-war conditions it cut down the number of its chaplains by sixty. This set the floor on a very difficult task. It became necessary suddenly to provide the salary of Diocesan Chaplains and to furnish funds for the upkeep of the churches of many civil stations previously maintained by Government. Reducing the magnitude of this burden Government needed to help for a period of a year or two by means of a very generous Black Grant. The question of the reduction of this grant is now under consideration. If the grant is considerably reduced the situation in most dioceses will be very serious. Either the Church must raise and devote to its European work a greatly increased sum of money or many of the churches in up-country stations will have to be closed. The chief sufferers will be the Anglo-Indian and Domilled communities which on account of "Indianisation" is unable than ever to carry the burden which it seems must inevitably be laid upon it. The difficulty of raising funds for the education of the children of this community and of obtaining priests to work for it become greater year by year. Nevertheless the Domilled Community is the backbone of the Church in India and it is through this community that the conversion of India must come.

The Churches in India have not been wholly blind to these facts and have made desperate attempts to cope with the needs of the community in spite of lack of real support from home. The education of its children is very largely in the hands of the Christian denominations though there are a few institutions such as the La Martiniere schools, on a non-denominational basis, but they are exceptional. In all the large centres there exist schools of various grades as well as orphanages, for the education of Europeans and Anglo-Indians under the control of various Christian bodies. The Roman Catholic Church is honourably distinguished by much activity and financial generosity in this respect. Her schools are to be found throughout the length and breadth of the Indian Empire, and they maintain a high standard of efficiency. The Anglican Church comes next, and the American Methodists have established some excellent schools in the larger hill-stations. The Presbyterians are also well represented in this field, particularly by the admirable institution for destitute children at Kalimpong, near Darjeeling. Schools of all denominations receive liberal grants-in-aid from Government, and are regularly inspected by the Education Departments of the various provinces. Thanks to the free operation of the denominational principle and its frank recognition by Government, there is no "religious difficulty" in the schools of the European and Anglo-Indian communities.

Christian Missions

The tradition that St. Thomas the Apostle was the first Christian missionary in India is by no means improbable. History, however, carries us no further back than the sixth century, when a community of Christians is known to have existed in Malabar. Since then the so-called Syrian Church in south-west India has had a continuous life. Except in its infancy this Church (or rather these Churches or the Syrian Christians are now divided into four communities) has displayed little of the missionary spirit until quite recent times. Western Christianity was first introduced into India by the Portuguese who established their hierarchy throughout their sphere of influence, they being the metropolitan see of the India. St. Francis Xavier a Spaniard by race, took full advantage of the Portuguese power in Western India to carry on his Christian propaganda. His almost superhuman zeal was rewarded with much success, but many of the fruits of his labour were lost with the shrinkage of the Portuguese Empire. It is really to the work of the missionaries of the Propaganda in the 17th century that the Papacy owes its large and powerful following in India today. The Roman Catholics in India number 1,523,000, of whom 312,000 were added during the decade 1911-1921. The total of "Syrian" Christians (exclusive of those who while using the Syrian liturgy, are of the Roman obedience) is 315,000, as against 567,000 in 1901. Protestant Christians (the term throughout this article includes Anglicans) number 2,950,000, an increase of 547,000 since 1911. Thus the total number of Christians of all denominations in India is now close on five millions. In fact it probably exceeds that figure at the present moment, as these statistics are taken from the Census Report of 1911, and the rate of increase during the previous decade was nearly 100,000 per annum.

The Protestant Churches made no serious attempt to evangelise India till 1813. They have thus been at work in the Indian mission field for over 110 years, and the statistical results of their efforts are given above. It is now, however, generally recognized that Christian missions are producing indirect effects in India which lend themselves only incompletely to any sort of tabulation. The main agency of this more diffusive influence of Christianity is the missionary school and college. The Protestant missions fill a considerable part in the elementary education of the country. According to the 1921 Report of the National Christian Council for India they are teaching 420,255 children in 12,600 elementary schools, mostly situated in villages. The majority (243,895) of children in these schools are non-Christians. The same is true also of the secondary schools and in a still greater degree of the colleges. The former number 623 with 70,254 male and 25,303 female pupils. There are 40 colleges affiliated to Universities, containing 20,082 male and 1,309 female students. Of these as many as 14,148 are non-Christians. From the standpoint of missionary policy much importance is attached to these agencies for the indirect propagation of the Christian faith. The

statesman and the publicist are chiefly interested in the excellent moral effect produced by these institutions amongst the educated classes, and the higher educational ideals maintained by their staffs. The principal **University colleges** under Protestant auspices are the **Madras Christian College**, the **Duff College**, **Calcutta**, the **Wilson College**, **Bombay**, the **Forman College**, **Lahore**, and three women's colleges—the **Women's Christian College** at **Madras**, the **Isabella Thoburn College** at **Lucknow**, and the **Women's Christian Medical College** at **Ludhiana**. The **Roman Catholics** have a large number of educational institutions, ranging from small village schools to great colleges preparing students for University degrees. But the proportion of Christian students in their institutions is very much larger than in those of the Protestant bodies. The proportion of literates amongst native **Roman Catholics** is probably lower than amongst the Protestant converts, but compared with **Hindus** and **Mahomedans** it is conspicuously higher. The **Roman Catholics** have some 3,000 elementary schools in which 98,000 boys and 41,000 girls are receiving instruction. In middle and high schools they have 143,000 boys and 73,000 girls and in University colleges about 5,000 students of both sexes. These figures, however, include a large proportion of Europeans and Eurasians, who are an almost negligible quantity in Protestant mission schools and colleges.

More recent, but producing even more wider spread results, is the **philanthropic work** of Christian missions. Before the great famine of 1878, missionaries confined themselves almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with one kind of organisation or method. A great stimulus was also given to medical missions. Hospitals and dispensaries have sprung up in all parts of the mission field, and leper asylums are almost a monopoly of Christian missionary effort. In 1911 the total number of medical missionaries working under Protestant societies in India was 118 men and 217 women, the majority of the former being also ordained ministers of religion. There are 184 industrial institutions in which 59 different arts and crafts are taught, ranging from agriculture to type-writing. In this department the **Salvation Army** hold a prominent place, and the confidence of Government in their methods has been shown by their being officially entrusted with the difficult work of winning over certain criminal tribes to a life of industry. The indirect effect of all this philanthropic activity under missionary auspices has been most marked. It has awakened the social conscience of the non-Christian public, and such movements as "The Servants of India" and the mission to the Depressed Classes are merely the outward and visible sign of a great stirring of the philanthropic spirit far beyond the sphere of Christian missionary operations.

Reunion—For many years Indian Christians have shown that they felt such

more acutely than Europeans the scandal and disadvantage of the divisions of Christendom. These divisions are due to a very much greater extent than is always recognized to political causes, and in the political conflicts of the sixteenth and seventeenth centuries, when they became crystallised, India had no part. Even those differences amongst Christians which have a purely religious origin and foundation seem to be of very little account to Indian converts. For them the great dividing line is that between Christ and Mahammed or Shiva and Vishnu. Standing before a background of paganism they are conscious of a real fundamental unity in Christ. Compared with the greatness of the gulf which separates Christian from non-Christian, the differences of "confession" and "order" which separate Christian from Christian seem to be wholly artificial and negligible. In consequence the reunion movement, which is noticeable all over the world, is nowhere so strong as in India. In South India it has already resulted in the formation of the **South India United Church**, which is a group union of five of the principal Protestant communions, and as these bodies are in communion individually with all, or almost all, the other Protestant bodies at work in India the Union may be regarded as a Pan-Protestant Union. The S.I.U.C. is at present negotiating with the Anglican Church. If as seems probable the negotiations are successful the result will amount to a union of all the Christian bodies in South India, except the **Roman Catholics**, on the basis of the last Lambeth encyclical. This will mean that a real National Indian Church will come into being. Although it will be tolerant of almost every expression of Evangelical opinion and will retain the freedom of development characteristic of Protestantism, by its acceptance of the Catholic creeds and the historic Episcopate, it will be linked up with the Catholic tradition of the Anglican Church.

Anglican Missionary Societies

The Church Missionary Society carries on work in India in seven different missions—the United Provinces, South India, Travancore and Cochin, Bengal, Western India, Punjab and Sind and the Central Provinces and Rajputana. The names are in order of seniority. Work was begun in what are now called the United Provinces in 1813, in Bombay in 1820, in the Punjab in 1851, and in the Central Provinces in 1864. The Society has always kept its standards as high as the force, but it also has important medical missions, especially on the N.W. Frontier, and many schools of the primary, middle and high standards. The Church of India and Zenana Missionary Society was founded in 1862. C.M.S. controlled the work of 162 missionaries and 1,000 native workers in 1911. The number of ordained missionaries of the C.M.S. in India was 1,169. European laymen numbered 1,000 and women 218. The same year the total adult community of 2,217,000 of whom 1,000,000 were Christians.

Society for the propagation of the Gospel—The Society for the propagation of the Gospel in India was founded in 1800. It was the first of the missionary societies in India. It was founded by the Rev. John Wilson, D.D., of the University of Cambridge. It was the first of the missionary societies in India. It was founded by the Rev. John Wilson, D.D., of the University of Cambridge.

entirely controlled by the Diocesan authorities. The best known of the S. P. G. missions is that at Delhi, commonly called the Cambridge Mission to Delhi carrying on educational work at St. Stephen's College and School. At the College there are about 200 students under instruction, and at the High School 800. The College hosts and accommodates 100 students. Missions to the depressed classes exist in Burma, in the Ahmdayar District and in several parts of South India, especially in the Diocese of Tinnevely Madurai. The S. P. G. also maintains an important Central Jail Settlement at Huddi, in the Central Provinces. There are 110,000 Indian Christians under the aegis of the S. P. G. It operates 1,100 missions and 98 European lady workers.

Other Anglican Societies.—The Oxford Mission to Calcutta was started in 1850. It works in the poorest parts of Calcutta and also at Barisal. There are 11 mission priests of this Society and 16 Sisters. In addition to its work amongst the poor the Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called *Epiphany*, which is known all over India.

The Society of St. John the Evangelist (commonly known as the Cowley Fathers) has houses at Bombay and Poona, and small stations in the Bombay Konkan. In Bombay its missionaries work centres upon the Church of Holy Cross, Umakhadi, where there is a school and a dispensary. The Christians are chiefly drawn from the very poorest classes of the Bombay

population. At Poona the Society co-operates with the Waverley Sisters and in Bombay with the All Saint Sisters. Other Anglican sisterhoods represented in India are the Clerical Sisters at Calcutta and the Sisters of the Church (Kilburn) at Madras. The St. Hilda's Deaconesses Association of Lahore carries on important educational work (chiefly amongst the domiciled community) in the Punjab. The mission of the Scottish Episcopal Church at Nagpur, the Dublin Fatherly Mission at Hazaribagh and the Mission of the Church of England in Canada working at Kangra and Jalampur (Punjab) should also be mentioned under the head of Anglican Missions.

An important development has lately taken place in the Anglican communion. In 1922 the Dominions were held of a new Fellowship community called the Christ's Servants or the Society of the Servants of Christ. The aim of this society is to enable Indians and Europeans to live together a common life based upon the threefold vows of poverty, chastity and obedience, and by helping to develop the Fellowship Mission. It is particularly suited to India. Indians appreciate fully the value of renunciation. The Society hopes to commend Christianity to Indian people by presenting it with a concrete illustration of Christian asceticism. The first Ashram of the Brotherhood was consecrated by Dr. Palmer Bishop of Bombay, in 1925. It is situated in Poona and it contained at the time of consecration 15 Brothers, of whom 6 were Indians and 9 Europeans. It shows every sign of life and growth.

THE ROMAN CATHOLIC CHURCH.

With regard to numbers, the *Catholic Directory of India* gives the following table —

| | 1911 | 1921 | 1931 |
|---|-----------|-----------|-----------|
| 1. <i>British India and Indian States —</i> | | | |
| (a) Latin Rite | 1,614,600 | 1,821,403 | 2,164,918 |
| (b) Syrian Rite | 264,666 | 440,484 | 549,081 |
| 2. <i>French India</i> | 25,918 | 2,480 | 25,462 |
| <i>Portuguese India</i> | 129,148 | 184,741 | 326,690 |
| Total, India | 2,034,332 | 2,448,117 | 3,067,051 |
| 3. <i>Ceylon</i> | 722,103 | 753,386 | 791,093 |
| Total India and Ceylon | 2,756,435 | 3,201,503 | 3,858,144 |

NOTE (1). In 1800 the total in India and Ceylon was 1,108,841. In 1850 it had risen to 1,610,267, and in 1900 to 2,034,332.

NOTE (2). In 1800 there were 1,504 priests. In 1921 there were 7,156. In 1931 there were 9,025.

The Catholic community as thus existing is comprised of the following elements —

- (1) The Syrian Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1509 and placed first under Jesuit bishops and then under Carmelite Vicars Apostolic. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syrian rite.
- (2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.
- (3) European immigrants at all times, including British troops.
- (4) Modern converts from Hinduism and Animism in recent mission centres.
- (5) Converts from the Jacobite community in Malabar, of which 2 Bishops, 40 priests and 5,350 laity have been "united" to the Catholic Church in the last 15 months.

The Portuguese mission enterprise, starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "Padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886 (amended by the Agreement of 1928, abolishing "double jurisdiction"). At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows —

Of the Portuguese Jurisdiction —

The archbishopric of Goa (having some extension into British territory) with suffragan bishoprics at Cochín and Mylapore (both in British territory)

of the Propaganda Jurisdiction —

The archbishopric of Agra with suffragan bishoprics of Allahabad and Ajmer.

The archbishopric of Bombay with suffragan bishoprics of Poona, Mangalore, Calcutt, Trichinopoly and Tuticorin.

The archbishopric of Calcutta with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur and Patna and the Prefecture Apostolic of Assam and Sikkim.

The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Vizagapatam and Nagpur and the Missions of Cuttack and Bellary.

The archbishopric of Pondicherry (French) with suffragan bishoprics of Mysore, Coimbatore, Kumbakonam and Salem.

The archbishopric of Simla with suffragan bishopric of Lahore and the Prefecture Apostolic of Kashmir.

The archbishopric of Colombo (Ceylon) with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.

The archbishopric of Verapoly, with suffragan bishoprics of Quilon, Kottar and Vijayapuram.

One archbishopric and three bishoprics of the Syrian rite for the Syrian Christians of Malabar.

One archbishopric and one bishopric of the Melankara Syrian (Ex-Jacobite) Church.

Three Vicariates Apostolic and one Prefecture Apostolic of Burma.

The European clergy engaged in India almost all belong to religious orders, congregation or mission seminaries, and in the great majority are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number about 1,800 besides which there is a body of secular clergy mostly native to the

The Church

country, numbering about 2,200 and probably about 2,000 nuns. The first work of the clergy is parochial ministration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people, their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education amounted in 1904 to 143,051 boys and 73,164 girls, later figures being unavailable. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Chota Nagpur, Krishnagar, Gujerat, the Ahmednagar district and the Telugu coasts may be

mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplains are derived mainly from Europe, that is, from the collections of the *Society for the Propagation of the Faith* and of the *Holy Childhood*, helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Archbishop Kierkels, D.D., appointed in 1931.

THE CHURCH OF SCOTLAND.

The Church of Scotland and the United Free Church have become one. The Union, effected in October 1929, has already exerted a profound influence upon the life of the Church of Scotland in India. The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated Calcutta 1914, Bombay, 1919, Madras, 1921. Since 1903 there have been eighteen chaplains on the staff, of whom nine belong to the Bengal Presidency, five to Bombay, and four to Madras. These minister both to the Scottish troops and to the civil population of the towns where they are stationed, but when there is a Scottish regiment the chaplain is attached to the regiment, instead of being posted to the station where the regiment happens to be placed and as a rule moves with the regiment. There are three Presidency senior Chaplains in charge of Bengal, Bombay, and Madras respectively. There are churches in the chief towns of the Presidencies, and churches have also been built in all considerable military stations, e.g., Chakrata, Lucknow, Peshawar, Ranikhet, Rawalpindi, Sialkot, Umballa and Jubulpore. In addition to the regular chaplains sent out by the Colonial Committee of the Church of Scotland, and these are serving in such stations as Rawalpindi, Lahore, Cawnpore, Meerut, Ahow and Quetta. The Additional Clergy Societies in India contribute towards the cost of this additional establishment. In other places such as Sialkot, Murree, Dalhousie and Darjeeling, regular services are provided by Scottish Missionaries. Simla has a minister of its own sent out from Scotland.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium for instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. Educational work is still an important branch of the mission work of the Church, but the Bombay College was closed in 1919 and in 1907 the College in Calcutta was united with the College of the United Free Churches of Scotland, to form the Scottish Churches College. In the Punjab Evangelistic work is being carried on from eight centres under seventeen missionaries. The baptised Christian community now numbers over 14,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 8,000. In the five mission districts of Calcutta, the Eastern Himalayas, Madras, Poona, and the Punjab there were at the end of 1919 over 24,787 baptised Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service in school, medical and zenana work, having in India 41 European missionaries, 163 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India. Its two Churches in Bombay have six representatives on the governing body of the Anglo-Scottish Education Society, and the two churches exercise pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St.

Andrew's High School, and both in Bangalore and in Madras the local congregation supports the school for poor children. The Ayrcliff Girls' Boarding and High School is under the care of the Kirk Session of St. Andrew's Church, Simla. The now well-known St. Andrew's Colonial Homes at Kallimpong, Bengal, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now twenty cottages, and about 600 children in residence. Further information may be found in "Reports of the Session of the Church of Scotland," Blackwood & Sons. "The Church of Scotland Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

Though the former Churches of the United Free Church now belong to the Church of Scotland they remain independent of its establishment recognised by Government. They have only three purely European congregations in India, two in Calcutta, and one in Bombay.

The Church carries on Mission work in seven different areas. They are Benar (Calcutta, Kanna and Chinsura), the Santal Parganas, with five stations, Western India (Bombay, Poona and Aithag), Hyderabad State (Jalna,

Bethel and Parthani), Madras (Madras City, Chingleput, Selpurambudur and Cojocaram), the Central Province (Nagpur, Bhandara, Wardha and Amraoti), Rajputana, where the extensive work initiated by the United Presbyterian Church in 1910 is now carried on from eleven centres.

The work falls into the main divisions, evangelistic, medical, and educational. The Christian community has been organised in all the old centres into congregations which form part of the Indian Presbyterian Church, and this Church is keen to take an increasing share in the work of evangelism. There are nineteen Mission Hospitals, among which are four excellently equipped and staffed Women's Hospitals in Madras, Nagpur, Ajmer, and Jaipur. From the days of Duff in Calcutta and Wilson in Bombay the Mission has given a prominent place to education. It has many schools in all parts of its field and it has also made a large contribution to the work of higher education. Through four Christian Colleges, The Scottish Church College, Calcutta, is well known. The Madras Christian College, which owes so much to the work of Dr. William Miller, is now under the direction of a Board representing several Mission Societies. Other Colleges are Wilson College, Bombay and Hill College, Nagpur.

BAPTIST SOCIETIES

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN—Organised in 1702, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar and Orissa, the United Provinces, the Punjab and Ceylon. The Baptist Zenana Mission and the Bible Translation Society have been united with this Society. The staff of the united Mission in India and Ceylon numbers 193 missionaries and about 1,202 Indian and Singhalese workers. Connected with the Society are 377 Indian and Singhalese Churches, 311 Primary Day Schools, 23 Middle and High Schools, and 4 Theological Training Colleges. The Church membership at the close of 1930 stood at 21,148 and the Christian community at 60,386. The membership during the past ten years has increased by about 53 per cent and the community by 50 per cent. In the same period amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack and Delhi, where hostels have been erected for the prosecution of this form of work.

EDUCATIONAL WORK—Ranges from Primary School to Colleges. Serampore College, the only College in India able to bestow a theological degree granted under Royal Charter by His Danish Majesty in 1827, confirmed by the British Government in the Treaty of purchase of the Settlement of Serampore in

1845, and placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary Educational operations, Arts and Theological. It was affiliated in 1857 to the newly-formed Calcutta University, reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an inter-denominational basis for the granting of Theological Degree to qualified students of all Churches.

As the only College in India granting a Theological Degree a large number of students are now resident in the College. In Arts, the College prepares for the Calcutta Arts Examinations. Principal Rev G. H. C. Angus, M.A., D.D.

There is a vernacular institute also at Cuttack for the training of Indian preachers and Bible schools in several centres.

There are 9 or 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations. Medical work connected with the Society is carried on in 8 Hospitals, and 5 Dispensaries. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Secretary of the Mission is the Rev D. Scott Wells, 48, Ripon Street, Calcutta.

The Headquarters of the Mission are at 19, Farnival Street, Holborn, London. The total expenditure of the Society for 1930 amounted to £190,073.

THE CANADIAN BAPTIST MISSION—Was commenced in 1873, and is located in the Telugu Country to the north of Madras, in the Kistna, Godavari, Vizagapatnam and Ganjam Districts. There are 22 stations and 420 out-stations with a staff of 108 missionaries including 8 qualified physicians, and 1,278 Indian workers, with Gospel preaching in 1,438 villages. Organized Churches number 109, communicants 23,188 and adherents 22,000 for the past year. Twenty-two Churches are entirely self-supporting. In the Educational department are 579 village day schools, with 18,271 children, 13 boarding schools, 2 High schools, a Normal Training school, a Bible Training School for Women, a Theological Seminary providing in all for 1,000 pupils, and an Industrial school. There are 6 Hospitals, two leper asylums and an Orphanage. The Mission publishes a Telugu newspaper. Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. During the last decade membership has increased by 55 per cent, the Christian community by 40 per cent, and scholars by 75 per cent. Indian Secretary is the Rev A Arthur Scott, Tunli, East Godavari.

AMERICAN BAPTIST FOREIGN MISSION SOCIETY, organized in 1814, has Missions in Burma begun 1813, Assam 1836, Bengal and Orissa 1836, South India 1840. It owes its rise to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 33 main stations in Burma, 13 in Assam, 10 in Bengal Orissa, 29 in South India, besides many outstations. All forms of missionary enterprise come within the scope of the Society.

The great work of the Mission continues to be evangelistic and the training of the native preachers and Bible-Women, and extends to many races and languages, the most important of which, in Burma, has been the practical transformation of the Karens, whose language has been reduced to writing by the Mission. The work in Assam embraces 9 different languages and large efforts are made amongst the employees of the tea plantations. The Mission Press at Rangoon is the largest and finest in Burma.

Last year the field staff numbered 314 missionaries, 7,064 Native workers. There were 1,892 Churches of which 1,272 were self-supporting. Church members number 1,27,823. In the 2,107 Sunday Schools were enrolled 9,60,000 pupils. The Mission conducted 2,741 schools of all grades with 91,091 students enrolled. 14 Hospitals and 34 Dispensaries treated 6,364 in-patients and 1,05,879 out-patients. Indian Christians contributed over Rs 6,74,000 for this religious and benevolent work during the year.

THE AMERICAN BAPTIST ASSAM MISSION was opened in 1836 and has 13 main stations staffed by about 50 missionaries. There are 785 native workers, 414 organized churches, 45,526 baptised members, 377 schools of all grades including 1 High, 2 Normal, 3 Bible and 13 station schools. 3 Hospitals and 7 Dispensaries treated 1,338 in-patients and 25,191 out-patients during the year. Mission work is carried in 10 different languages.

Treasurer and Corresponding Secretary—Miss Marion G Burnham, Gauhati, Assam.

AMERICAN BAPTIST, BENGAL-ORISSA MISSION commenced in 1836. Area of operation Midnapore district of Lower Bengal, Balasore district of Orissa and Jamshedpur. Mission staff 39, Indian workers 329. Two English Churches and 31 Vernacular Churches, Christian Community 5,000. Two dispensaries. Educational One Theological and two Boys' High Schools and two Girls' High Schools and 118 Elementary Schools, pupils 3,600. One Industrial School for carpentering, iron work and motor mechanics. The Vernacular Press of this mission printed the first literature in the Santali language.

Secretary—Mr W S Dunn, Bhudrak, Orissa.

THE AMERICAN BAPTIST TELUGU MISSION—Was commenced in the year 1836, and covers large parts of Nellore, Guntur, Kistna, and Kurnool Districts, parts of the Deccan and an important work in Madras and the surrounding vicinity. Its main work is evangelism, but there are also Educational and Medical Institutions of importance. Industrial Settlement work for the Erukalas is carried on at Kavali and vicinity. Industrial departments are maintained also in connection with the Mission. High Schools at Nellore, Ongole and Kurnool. Organized Telugu Churches number 289, with 100,521 baptized communicants. There are 102 missionaries, and 2,720 Indian workers. The mission maintains a Theological Seminary at Ramapatnam for the training of Indian preachers. A Bible Training School for the training of Telugu women is located in Nellore. A total of 33,923 receive instruction in 1,270 primary schools, 16 secondary schools and 4 high schools. In Medical work 8 Hospitals and 12 Dispensaries report 4,303 in-patients, 95,108 out-patients, and 115,073 treatments during the year.

Secretary—Rev F Kurtz, D.D., 39, Oxford Street, Secunderabad, Deccan.

THE AUSTRALIAN BAPTIST MISSION—*Missionary-in-charge* Rev T C Kelly, (on leave).

Rev A J Grace (Acting) Mission House, Serajunge.

THE AUSTRALIAN BAPTIST FOREIGN MISSION—(Incorporated) Embracing the societies representing the Baptist Churches of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 42 Australian workers. There are 2,763 communicants and a Christian community of 4,936.

Secretary, Field Council Rev A J Grace, Pabna, E B.

THE STRICT BAPTIST MISSION—Has 18 European Missionaries, and 219 Indian workers in Madras, Chingleput, Salem, Ramnad and Tinnevely Districts. Communicants number 1,427, organized churches 43, elementary schools 75, with 3,334 pupils.

Treasurer and Secretary Rev L Walts, Kilpauk, Madras.

PRESBYTERIAN SOCIETIES.

THE HINDU PREBYTERIAN CHURCH MISSION.
Operates in Gujarat and Kathiawar with a staff of 14 Missionaries of whom 10 are clerical, 11 Educationalists, 8 are Doctors and 3 Nurses. The Indian staff numbers 19, of whom 14 are Pastors, 91 Evangelists, 1 Colporteur, 10 Bible women and 342 are Teachers. There are 12 Organised Churches, a communicant roll of 1,925, and a Christian Community of 7,281. In Medical work there are 4 Hospitals and several Dispensaries, with 1,191 in-patients, 13,769 new cases and a total attendance of 51,911. The Mission conducts 1 High School, 2 Anglo-Vernacular Schools, 1 Preparatory School at Parantij and 124 Vernacular schools affording instruction for 6,874 pupils, also 1 Catechetical Dispensary, an Industrial School at Luvad, 4 Teachers Training College for Women at Bouda, a Divinity College at Ahmedabad and a Mission Press at Surat. The Mission has made a speciality of Farm Colonies, of which there are about a score in connection with it, most of them thriving.

The Jungle Tribes Mission with 6 Missionaries is a branch of the activities of the above, working in the Panch Mahals and Rewa Kantha districts with 1 Farm Colony attached.

Secretary Rev. James Brodie, M.A., Parantij.

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA. The Sialkot Mission of this Church was established at Sialkot in the Punjab in 1855. It is now carrying on work in ten civil districts in the Punjab and two in the North-West Frontier Province. Its missionaries number 157 including married ladies and its Indian workers 785. Its educational work comprises one Theological Seminary, one College, four High Schools, one Industrial school, eight Middle schools and 143 Primary schools. The enrolment in all schools in 1930 was 12,006. Medical work is carried on through five Hospitals and seven Dispensaries. The communicant membership of the Church which has been established was 15,002 in 1930 and the total Christian community, 96,203.

General Secretary Rev. Robert Maxwell, Gujranwala, Panjab.

THE AMERICAN PRESBYTERIAN MISSION operates in 3 main sections known as the Punjab, North India and Western India Missions. The American Staff (including women) numbers 200 and the Indian Staff 1,352. There are 35 main stations and about 240 out-stations. Organized churches number 82, 25 of which are self supporting. There are 11,085 communicants and a total baptized community of 82,000. Ladies' Societies.

ZENANA LITERARY AND MEDICAL MISSION—This is an inter-denominational society, with headquarters, 73, Surrey Street, London working among women and girls in 6 stations in the Bombay Presidency, 10 in United Provinces, and 7 in the Punjab. There are 75 European Missionaries, 217 Indian teachers and nurses and 45 Bible women. During 1930 there were 1,519 in-patients in the three hospitals supported by the Society (Nasik, Lucknow and Patna), but the Victoria Hospital, Benares, and Jaunpur were closed. There were 28,925 out-patients, 70,724 attendances at the Dispensaries. In the 10 schools were 2,711 pupils and there is a University Department at Lahore. The evangelistic side of the work is largely done by house to house visitations and teaching the women in Zenana, 1,195 women were regularly taught and 1,271 houses were visited. The 45 Bible women visited 531 villages, the number of houses was 819, major operations 720, minor operations 470. Total expenditure £50,585 7 8.

Hon. Treasurer The Lord Meston of Dunottar.

Secretaries Rev. Dr. Carter, Rev. L. S. Carr, M.A. (Hon.), and Miss L. Murriner.

WOMEN'S CHRISTIAN MEDICAL COLLEGE, WITH WHICH IS INCORPORATED THE PUNJAB MEDICAL SCHOOL FOR WOMEN—In 1894 the North India School of Medicine for Christian Women was opened in Ludhiana in order to give a Medical Education under Christian influences to Indian Women. Doctor Edith Brown, M.A., M.D., was its Founder and Principal. The School was Inter-denominational, and trained students for various Missionary Societies.

Clinical work was at first given at the Charlotte Hospital which belonged to the Ludhiana Zenana and Medical Mission. The Memorial

Hospital was opened in 1900 and has now 200 beds. In 1913 non-Christian Students were also admitted for training, and the name was modified to its present title given above.

In 37 years, 212 Medical Students have qualified as doctors, besides 122 as Compounders, 147 as Nurses and 306 as Dais and Midwives.

At present 232 are in training—118 as Medical Students, 16 as Compounders, 50 as Nurses, and 80 as Nurse Dais.

New laboratories have been built for Clinical Pathology, for Physiology, and for Chemistry and Physics. New quarters for Sisters, Nurses, Assistant staff and also a new Babies' Ward. The new Dispensary for out patients has now become very popular.

THE MISSIONARY SETTLEMENT FOR UNIVERSITY WOMEN was founded in Bombay in 1896. Its work is religious, social and educational. The Settlement supplies a hostel for University students of all nationalities and a few Indian professional women. Classes for educated girls are provided and teaching is also given in pupils' homes. The Settlement staff take part in many of the organised activities for women's work in the city. The Social Training Centre is located at the Settlement. The course, lasting a year, includes both theoretical and practical work.

Warden—Miss R. Navalkar, B. A., Reynolds Road, Baculla, Bombay.

THE RAMABAI MUKTI MISSION (affiliated with the Christian and Missionary Alliance Mission in 1925) the well known work of the late Pandita Ramabai, shelters about 600 deserted wives, widows and orphans, educating and fitting them to earn their living. The Mission is worked on Indian lines and carried on by Indian and European workers. Evangelistic work is carried on in the surrounding villages of Kedgaon, Poona District.

Miss M. Lissa Hurtle, *Corresponding Secretary*

Disciple Societies

The India Mission Disciples of Christ, under the United Christian Missionary Society, Indianapolis, Indiana, U.S.A., began work in India in 1882. It works in the Central Provinces and South United Provinces. There are 68 missionaries, including missionaries wives, and 270 Indian workers. There are 16 organized churches with the membership of 2,225. There is a Christian community of 4,700. There are 5 hospitals and 10 dispensaries, in which 1,600 in-patients, and 45,261 out-patients were treated last year, with a total of 217,098 treatments. There is an orphanage for children under 8 years of age, with the older orphans provided for in the boarding schools and hostels. A boarding school for girls and one for boys, with 2 hostels for boys and one for girls show 632 inmates. There is one Leper Asylum with 120 inmates. A Tuberculosis Sanatorium admitted 99 patients during the year. An Industrial School is conducted at Dymoh in connection with which a 400 acre farm is used for practical work. In the Training Home for women at Kulpahar, needlework, gardening, etc., are taught in connection with which a large business is done

each year. The Mission Press at Jubbulpore printed about 3,000,000 pages of Christian Literature. 1 Normal, 2 Industrial Schools, 2 High Schools also 5 Middle Schools and 15 Primary Schools, with about 1,786 under instruction.

The Australian Branch has 3 Mission Stations in the Poona District. The Great Britain and Ireland Branch in Mirzapur District of U.P. and Palamau District in Orissa. These two have no organised connection with the India Mission Disciples of Christ.

Secretary and Treasurer W. B. Alexander, Jubbulpore, C.P.

Undenominational Missions

THE CENTRAL ASIAN MISSION Objective: Salvation of Central Asia, from Afghanistan to Tibet (including N.E. portion of Peshawar District), North Kashmir, etc. Protestant Evangelical, Inter-denominational Headquarters in India, Mardan, N.W.F.P., in London 52, Lincoln's Inn Fields, Branch Stations, Bandapur, and Kargil N. Kashmir, Shigars and Khapalu Baltistan, Kashmir. Seven European Missionaries on field and two on furlough. Founded and managed chiefly by officers who have served in Frontier parts.

THE L. U. C. MISSION—European staff, 14, Schools 10, Teaching staff, 96, Pupils Boys 1,217, Girls 693.

President—Senator I. Frollich, D. D., Mayavaram.

INSTITUTIONS COMMON TO BOTH MISSIONS—Schools 2, Teaching staff, 29, Pupils Boys, 72, Girls 320.

TAMIL EVANGELICAL LUTHERAN CHURCH—Organized churches 47. Ordained Indian Ministers 34. Other Indian workers, 120, Baptized membership 25,110. Baptized membership Schools 265. Teaching staff, 468, Pupils, 11,273 (boys 9,022, girls 2,251).

President—The Rt. Rev. Bishop D. Baxell, Trichinopoly.

MISSOURI EVANGELICAL LUTHERAN INDIA MISSION, (MIINT)—Is located in North Arcot (Ambur, Vanivambadi), Salem (Krishtnagiri), Tanjore (Tanjore Negapatnam), Madurai (Madurai, Vellagulam), Tinnevely (Vallioor, Vadakkangulam) Districts in Mysore (Kolar Gold Fields), Travancore (Nagercoil, Travancore, Alleppey). There are 42 Missionaries (7 of these on furlough in America), 1 lady doctor (American), 1 male doctor (Indian), 1 nurse, 1 deaconess nurse, 1 American teacher in charge of a School home for the children of the missionaries of this mission only, and 1 lady educationalist. Besides one training institute for teacher catechists,

there are 2 complete high schools, and among 108 other schools there are 6 complete vernacular middle schools. In addition to evangelistic and educational work the Mission runs an up-to-date Dispensary and Living in Hospital with 16 beds in Ambur. *Statistics, November 1930* Souls, 11,520, Baptized 7,170, Catechumens and adherents, 4,350. 3 Indian pastors, 7 evangelists, 71 catechists, 150 teachers belonging to the Mission, 68 outside teachers, 8 boarding schools.

General Secretary—The Rev. George C. Schroeder, Nagercoil, Travancore, South India.

THE DANISH MISSIONARY SOCIETY—Established 1863 in South Arcot, working there and in North Arcot, on the Shevaroy Hills and in Madras, has a total staff of 386 Indian and 69 European workers, Communicants 2,162, Christian community 5,357, 1 High School, 3, one Bible School for women, Boarding Schools, 3 Industrial Schools, 1 Orphanage, Hostel and 120 Elementary schools, and 2 Hospitals, total scholars 6,274.

tees will in due course transfer the undertakings and properties to a missionary society to be selected by them with the approval of the Governor-General in Council.

Methodist Societies

The Methodist Episcopal Church is the organization in the United States of America which grew out of the Wesleyan revival in England and her American colonies during the latter part of the eighteenth century. This Church began its work in India in 1836, at first confining its activities to what is now the United Provinces. From that centre it spread until the outposts of its work were found in Baluchistan, Burma, Malacca, Netherlands India and the Philippine Islands. In 1920 a rearrangement of the mission field of the Church separated India, Burma and Baluchistan into what is now known as the Southern Asia division. Within this present field the Church now has a total baptized Christian community of over half a million of whom approximately 20,000 were baptized the year ending 1926.

General Conference, and resident as follows: Bishop Frank W. Warner, Banar, Bishop John W. Robinson, Delhi, Bishop Frederick B. Fisher, Calcutta, and Bishop Brenton T. Bradley, Bombay.

THE AMERICAN WESLEYAN METHODIST MISSION, Sanjan, Thana District Headquarters Stations with missionaries, Danda, Marol, Nagol, Thana District Vakil (Daman Road Station), Surat District. Parli, Surat District. Eight missionaries on field. Two on furlough. One under appointment. Four main stations. Two boarding schools. One Industrial school. One Bible school. Six village schools. Superintendent C. B. Hart, Sanjan Thana District.

THE REFORMED EPISCOPAL CHURCH OF AMERICA at Jaitpur and Lucknow, 1 P. M. Missionaries, 1 Outstations, 1 Hospital, 2 Orphanages and a membership of nearly 100.

The Methodist Protestant Mission began work in India in 1919, has a staff of seven missionaries, and one under appointment. The work is confined to Dhulla Taluka with one Main station Dhulla. Then two boarding schools, district evangelistic work and medical work. Secretary Miss Mildred Miskimen, Dhulla, West Khandesh.

THE WESLEYAN METHODIST MISSIONARY SOCIETY commenced work in India in 1817 (Ceylon in 1814). The Mission in India, apart from Ceylon, is organised into 7 District Synods with 2 Provincial Synods. There is a large English work connected with the Society, 20 ministers giving their whole time to Military work and English churches.

The Districts occupied include 68 main stations in Bengal, Madras, Mysore, Bombay, Punjab, Central Provinces, Hyderabad (Nizam).

Dominions, United Provinces and Burma. The Burma Synod has recently been attached to the Ceylon Provincial Synod for purposes of administration. Its statistics are no longer included in this statement. The European staff numbers 100 with 75 Indian Ministers and 791 Indian workers. Communicants 18,512 and total Christian community 101,215. There are 7 large numbers of organized Churches many of which are self-supporting.

Instructional work comprises 6 Christian College students, 2,073 Theological Institutions students, 207 High Schools pupils, 3,427, 14 Industrial schools pupils 100, 92, 11 elementary schools, with 25,120 scholars. In Medical work there are 2 hospitals, 12 dispensaries, 1,127 in patients and 65,431 out patients.

The Women's Auxiliary carry on an extensive work in the places occupied by the W. M. S. There are 97 women workers from abroad of whom 16 are qualified doctors. The Indian women workers number 282. There are 10 girls' day schools with 17,577 pupils and 28 boarding schools with 1,971 boarders. There are several philanthropic institutions for the rescue and training of women. The Women's Auxiliary manage 12 hospitals and 9 dispensaries, which had 8,041 in patients and 1,07,533 out patients. The cost of the work to the Women's Auxiliary in 1925 was nearly £25,000.

THE FREE METHODIST MISSION of North America—Established at Yeotmal, 1822, operates in Berar with a staff of 11 Missionaries and 51 Indian workers. Organized churches 11 Theological school, 2 Anglo-Vernacular schools, 13 Elementary schools, 1 Dispensary and 6 centres for Clinical work.

Secretary: Percie M. Phipps, Yeotmal, Berar.

THE SALVATION ARMY

The work of the Salvation Army in India and Ceylon was commenced in 1882 by the late Commissioner Booth-Tucker, and was for many years under his control, with Headquarters in India. For some time now, the areas occupied have been divided for administrative purposes into 5 Territories, each under a Territorial Commander, and two smaller Commands.

Northern Territory, with Headquarters at Lahore.

Western Territory, with Headquarters at Bombay.

Madras and Telugu Territory, with Headquarters at Madras.

Southern Territory, with Headquarters at Trivandrum, in Travancore State.

Ceylon Territory, with Headquarters at Colombo.

Eastern Command, with Headquarters at Calcutta.

Burmah Command, with Headquarters at Rangoon.

The Commanders are directly responsible to the International Headquarters in London.

Northern Territory—The area in this Territory is the Salvation Army work in the Punjab, Delhi and United Provinces. The Territory is controlled from Lahore.

Evangelistic work, especially among the "depressed classes," is extensively carried on, both in the Punjab and the U. P.

A number of Settlements for the reformation of "Criminal Tribes" are under the control of the Salvation Army in the United Provinces (where this important reformatory work was commenced), and also in the Punjab, great progress has been made. A special Settlement has also been opened in the Andamans during the last few years.

A land colony 2,000 acres in extent is in existence in the Multan District, where a population of 1,800 has been settled. The land will ultimately become the property of the holders.

Medical work is carried on in two Hospitals, one of which is in the Punjab and the other in the United Provinces, and also in a number of Dispensaries.

Other institutions include Day and Boarding Schools, Weaving Schools, Agricultural and Fruit Farms, a Home for Stranded Europeans and for British Military Soldiers.

Village centres at which the S. A. Works
Officers and Employees 1,731
Social Institutions 688
22

Territorial Headquarters 32, Ferozepur Road, Lahore, Punjab

Territorial Commander Lt. Commissioner N. Muthiah

Chief Secretary—Lt. Colonel N. L. Madsen

Western India—The Western India Territory comprises Bombay, Gujerat, Panch Mahals and the Malabarashtra.

Besides the distinctly evangelistic operations there are established a large General Hospital—Imam Memorial Anand—and several Dispensaries, at which during the year about 22,000 patients are treated, 200 Day Schools, 4 Boarding Schools, a Home for Juvenile Criminals, an Industrial and Rescue Home for Women, a conditionally Released Prisoners' Home, the management of the Bombay Helpless Beggars' Camp, Weaving Schools, a Factory for the making of Weaving, Warming and Reeling Machines, and a Land Colony having a population of about 300 Salvationists.

Corps, 274, Outposts, 448, Societies, 510, Officers and Cadets, 660 of whom 584 are Indian, Employees and Teachers 105 Social Institutions, 16

Territorial Headquarters The Salvation Army, Morland Road, Bvculia, Bombay, S

Territorial Commander Colonel Gnana Dasen (Alfred H. Barnett)

Madras and Telugu Territory—This Territory comprises the city of Madras and work situated in the Nellore, Guntur, Kistna and West Godavari Districts of the Northern Circars of the Madras Presidency, also Bangalore.

There are the following agencies at work—286 Corps and Outposts, viz., places in which work is systematically done

121 Village Primary Schools, 3 Settlements for Criminal Tribes with a total population of 3,200, 1 Reformatory School for children of Criminal Tribes, 1 Rescue Home, 2 Institutions for the training of Officers and one Boarding School for Boys and 1 for Girls

1 Leper Colony at Bapatla (newly taken over by us) Present number of lepers in the Colony is 105

1 Trade Department, where cloth, leather goods, furniture, carpets, silk, lace, etc., the products of Industrial Institutions, are disposed of

Territorial Headquarters The Salvation Army, Broadway, Madras

Territorial Commander Colonel Collidge

General Secretary Major H. H. Rawson

The South Indian Territory—The South Indian Territory embraces the native states of Travancore, Cochin and the Tinnevely District of British India. Work is being carried on at more than 1,200 centres, among six castes.

During the past year considerable advances have been made in all parts of the Territory, but there are still great opportunities for extension, there being many unoccupied localities, particularly in Central and Northern Travancore and Tinnevely District of British India from which repeated appeals have been received for the opening up of Army work.

A number of Village Halls and Officers' Quarters have been erected during the past year. The Divisional Headquarters and the Central Hall at Valluvor form one of the finest properties in the Southern Territory.

In this Command there are upwards of 300 well conducted Day schools wherein nearly 8,500 boys and girls receive religious and secular instruction.

There are three Boarding Schools, two at Nagercoil and one at Trivandrum mothering a total number of 140 children. Besides there is a Hostel at Nagercoil wherein 20 bright and intelligent young men are being admitted.

A new Division has been formed this year with the Divisional Headquarters at Adoor. This makes a total of 11 Divisions in the Territory.

The Jail Meetings are conducted in the Central Prison every Sunday afternoon, which prove a great blessing to the convicts.

An important event this year was the decision of the Cochin Government to entrust the management of the new Leper Asylum at Adoor to the Salvation Army. Lt. Colonel Pritchard, the Agent to the Governor-General, Madras, performed the opening ceremony. The Settlement covers 100 acres of land on which are erected fifteen blocks. There are also five wells, a septic tank and two small halls for religious worship.

An epidemic of small-pox, which prevailed in the Territory, caused considerable havoc. Our Officers did valiant service in administering the remedy during this time.

The Medical Department in this Territory is very proud to have its first qualified Indian Medical Officer. Three more have been sent out this year for training.

Territorial Headquarters—The Salvation Army, Kuravanconam, Trivandrum

Territorial Commander—Lieut.-Commissioner Priva (Mrs. A. Trounce)

Chief Secretary—Colonel Yesudasan Sanjivi

Assistant Chief Secretary—Brigadier Anand Singh (Bower)

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780 by which Parliament declared that as against a Hindu the Hindu law and usage and against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829, the Indian Slavery Act, 1843, the Caste Disabilities Removal Act of 1850, the Hindu Widows' Remarriage Act, 1856, and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects, but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated."

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Indian Penal Code has from time to time been amended

The Code of Civil Procedure was remodelled in 1904 and the Code of Criminal Procedure in 1898. These Codes are now in force.

Statute Law Revision

In October, 1921, a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman, F.C.S., to deal with the question of statute law revision. The functions of the Committee are to prepare for the consideration of Government such a series of consolidation and classification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue and it is suggested that the preparation of a Bill for consolidating the existing law relating to merchant shipping, with such amendments that in as far as possible or indeed desirable by the enactment of the English statutes since 1801 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed constitution increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also Justices of the peace, and by Judges of the Sessions Courts, but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India") "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884, by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains, but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This

provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans. Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered. Since 1836 no distinctions of race have been recognised in the civil courts throughout India.

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted — 'That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals.' As a result of the recommendations of the Racial Distinctions Committee, the law on the subject was further modified and by the Criminal Law Amendment Act XII of 1921, in place of the old Chapter XXXIII (35443-463) the new Chapter XXXIII (35443-449) with certain supplementary provisions were substituted. This has in some measure reduced the differences between the trials of Europeans and of Indians under the Code.

High Courts

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown, they hold office during the pleasure of the Sovereign, at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for the appointment of Indian lawyers. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Burma there is a Chief Court, with three or more judges, in the other provinces the chief appellate authority is an officer called the Judicial Commissioner. In Sind the Judicial Commissioner is termed Judge of the Sudder Court and has two colleagues.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all

the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistance if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates, in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions, on juries the opinion of the majority prevails. If accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district as District Judge he presides in its principal civil court of original jurisdiction, his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs 500. In the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners

Legal practitioners in India are divided into Barristers at Law, Advocates of the High Courts, Vakils and Attorneys (Solicitors) of High Courts, and Pleaders, Muktadars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts, and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Court. Attorneys are required to qualify, before being allowed to practise in much the same way as in England. The rule that a collector must enter his name on the original side of certain of the High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Court.

Organisation of the Bar

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, ex officio, by the Advocate-General. This body is elected by the barristers practising in each High Court, and its functions are to watch the interest of the Bar and to regulate its discipline. At Allahabad, Lahore, Nagpur, and Benares, on a similar Bar Committee exists, but the electorate is extended to include the vakils or native pleaders, and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts, an organisation representing the Bar is usually to be found, and in the subordinate Courts, including the Revenue Courts, similar machinery is generally in use. Pending an opportunity of detailed inquiries in India, these general descriptions must suffice. The recommendations of the Indian Bar Committee of 1923 relating to the constitution of Bar Councils for the several High Courts in India have been recently adopted by the Indian Bar Courts Act, XXXVIII of 1926.

Composition of the Bar

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the *Times* (May 25, 1914) indicates the character and incidence of this development: "During the last forty years, a striking change has taken place in the professional class. The bulk of practice has largely passed from British to Indian hands, while, at the same time, the profession has grown to an enormous extent. One typical illustration may be quoted. Attached to the Bombay High Court in 1871 there were 38 solicitors, of whom 10 were Indian and 28 English, and 24 advocates, of whom 7 were Indian and 17 English. In 1911, attached to the same High Court, there were 150 solicitors, of whom more than 130 were Indian and the remainder English, and 250 advocates, of whom 16 only were English and the remainder Indian."

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the

Legal Bar, and is always nominated a member of the Imperial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the District Counsel. There are also the General and District Solicitors for Punjab and Madras, and in Bombay there is an Assistant Solicitor. The Government of Bengal appoints the General Advocate-General, the Standing Counsel of the Government, Solicitor and District and a Local Member (as Civil Secretary) and a Deputy Legal Member (as District Solicitor). The United Provinces appoints a Deputy Civil Legal Member, an Assistant Deputy Civil Legal Member, an Assistant Advocate and Assistant Government Advocate. The Punjab has a Legal Member, a Government Advocate and a Junior Government Advocate, and Burma a Government Advocate and a Secretary to the Local Legislative Council.

Advocates are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from the officials of the Bar, the detailed work being done by deputy clerks, who are officers of the Court.

Law Reports

The Indian Law Reports are now published in several places—Calcutta, Madras, Bombay, Allahabad, Lahore, and Rangoon under the authority of the Governor-General in Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

Legislative Power

The supreme power of Parliament to legislate for the whole of India cannot be questioned in practice, however, this power is little used, there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1909—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame, regardless of the opinion of the Indian authorities. Legislative Councils have been established both for the whole of India and for the principal provinces. Their constitution and functions are fully described in detailing the powers of the Imperial and Provincial Councils (q.v.). To meet emergencies the Governor-General is vested with the power of issuing ordinances, having the same force as Acts of the Legislature, but they can remain in force for only six months. The power is very little used. The Governor-General-in-Council is also empowered to make regulations, having all the cogency of Acts, for the more backward parts of the country, the object being to bar the operation of the general law and permit the application of certain enactments only.

(a) Excludes 3 suits of Supreme Court.

(b) Excludes 43 cases transferred to Settlement Courts.

(c) Includes 2 suits instituted in the court of one Hon. Judge.

THE INDIAN POLICE.

Origins—Cornwallis was the first Indian administrator to take the burden of policing the country off the zemindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint stipendiary thanadars (Police Station Officers) and subordinates.

In Madras in 1816 Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Presidency.

In Khandesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police, and Sir George Clerk, Governor of Bombay in 1848, applied the lesson by appointing full time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that 3 Collectors had no time for real police superintendence, in 1859 the principle of full-time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861, "An Act for the Regulation of Police", which still governs police working everywhere in India except Madras and Bombay, which has its own Police Act (IV of 1890).

Working—Strictly speaking there is no Indian Police. With the doubtful exceptions of the Delhi Imperial Area Police, and the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 1861 Act is a provincialised police, administered by the Local Government concerned, subject only "to the general control" of the Governor General.

Within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary, and Police Station Officers may also be dismissed by the D S P.

The D S P is subject to dual control. The force he commands is placed at the disposal of the District Magistrate for the enforcement of law and the maintenance of order in the District. But the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector General of Police, Inspector-General of Police, and Home Department. Generally speaking the D S P has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C I D—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as **Criminal Investigation Departments** and work under a Deputy Inspector General. They collate information about crime, edit the *Crime Gazette*, take over from the District Police crimes with ramifications into several jurisdictions and they control the working of such scientific police developments as the Finger Print Identification Bureau.

Headquarters and Armed Police—At the chief town of each District the D S P has his office and also his Headquarter Police Lines and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accoutrements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the D S P are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarter Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District, and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with 303 service rifles. At most head quarters but by no means all, there is also a reserve of mounted and armed police.

Thanas and Thanadars—Almost throughout India the popular terms for Police Station and Police Station Officer are 'Thana' and 'Thanadar'. It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a mofussil hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers, the Thanadar who like police of all ranks, is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure, and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are 'cognisable by the police'. The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, investigated and investigated. A non-cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors—The complainant in a cognisable case not only has his complaint recorded but investigated without payment of fee. If the thanadar succeeds in establishing a *prima facie* case against the person, the prosecution in court is conducted for him by a police prosecutor, who is generally a junior pleader, engaged by Government to conduct police cases in the lower courts. Cases of non-

to the Sessions are conducted by the Public Prosecutor or one of his Assistants, and the reports of the officers and the comments of the Judge are a means for the D. S. J. to know whether his thanadars are doing their work properly.

Out Posts.—When the Police Commission of 1860 drew the plan of police that still holds the field they laid down two criteria of the number required. One was one policeman per square mile, the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the neighbourhood there is very often fifty miles distant from the station of its jurisdiction. It is in such cases probable to detach a portion of the police station strength under a head constable to man an out-post. A case completed can be received and the attention begun without the injured party having to undertake a long journey to the distant station. The secret of good mobile police working in normal time is discipline. A head policeman, however junior, represents the rule of law and is an agent of Government.

The Chain of Promotion.—Ordinarily the constable may aspire to become a Jamadar or with ability and luck a Police Station Officer or even Inspector. The directly recruited matriculate who comes in through the Police Training School as a thanadar may ordinarily become an Inspector or a Deputy Superintendent, or exceptionally a Superintendent. The direct Deputy, an office reserved for Indians, has a good chance of becoming Superintendent, and perhaps Deputy Inspector General. The direct Assistant Superintendent, whether from England, or from India, is sure of a Superintendentship and has chances of D. I. G. after 25 years' service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension his pension dies with him, and all his dependents get his provident fund.

Presidency Police.—In the Presidency Towns there is unified police control for the Police Commissioner is responsible for both law and order and for departmental training and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector General of Police and is directly in touch with the Government. Just as the Provincial Magistrate deals directly with the High Court, the Criminal Procedure Code of India is applied in the Presidency Towns by special police officers, which is all police procedure. In the criminal cases in the Presidency Towns some what more has to be said, not only from this view, but also from the financial point of view. It can give up to six months or £1,200 for suitably, or a special formal record of proceedings, and if only a simple record up to £1,200 is inflicted there is still no even any statement of revenue for the collection.

Round Figures. The force of metropolitan London and a French metropolis on a small scale, annual administrative reports for the ten major provinces and four minor administrative agencies are available, and there are no uniform statistics for the police of India and Burma. The following figures are therefore merely to be regarded as approximations, giving a general idea of the number of police and the volume of work put through the force. There are about 20,000 Military Police, chiefly in Burma, Assam and Punjab, and the cost about one and a half crores. The maintenance of the military department from the principal laid down by the 1860 Commission and the 1861 Act.

Provincial Police, including Burma total about 200,000 and cost ten and a half crores or an average of about one crore per major Province.

There are about 10,000 Thanas or Police Stations which annually have there from five to six thousand murders, four thousand dacoities, twenty-five thousand cattle thefts, one hundred and seventy thousand ordinary thefts and as many burglaries. They place on trial every year about three quarters of a million persons, of whom about half a million or more are convicted. The jail population of India, which is over a hundred thousand, consists of many habituals who on release proceed to prey on the public until such time as the police again secure their conviction and incarceration.

STATISTICS OF POLICE WORK

The unliability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions, both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas, but they cannot properly be used as a test of comparison even for larger areas without taking

into account the differences in the conditions under which the police work, and, it may be added, they can at the best indicate only very faintly the degree of success with which the police carry out that important branch of their duty which consists in the prevention of crime. The recommendations have been emphasised in recent orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon the police and of the wide differences between the conditions and the statistical results in different provinces. JAILS

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules framed under it by the Government of India and the local governments. The punishments authorized by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under trial prisoners.

The origin of all jail improvement in India in recent years was the Jail Commission of 1880. The report of the Commission, which consisted of only two members, both officials serving under the Government of India, is extremely long, and dealt with the whole question of jail organization and administration in the undivided India. In most matters the Commission's recommendations have been accepted and adopted by local governments, but in various matters, mainly of a minor character, their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworthy after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails. In the first place, large central jails for convicts sentenced to more than one year's imprisonment, secondly, district jails at the head quarters of districts, and, thirdly, subsidiary jails and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector General, who is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A Press Note issued by the Bombay Government in October, 1916, says—"The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

The Jails Committee.—Since the introduction of the reformed constitution the maintenance of the Indian Prisons falls within the sphere of provincial Governments and is subject

to all India legislation. The obvious advisability of proceeding along certain general lines of uniform application led lately to the appointment of a Jails Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Since its fall by the Committee upon the necessity of improving and increasing existing jail accommodation, of securing a better class of staff, of providing education for prisoners, and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders, the adoption of the English system of release on license in the case of adolescents, and the creation of children's courts. The Committee found that the reformatory side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners, the provision of separate accommodation for prisoners under trial, the institution of the starry system, and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extra-mural employment on a large scale is sometimes allowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles, the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1880. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid

warders and convict warders are employed. With this is bound up the question of a special class of well behaved prisoners which was tried from 1903 onwards in the Thana Jail.

Juvenile Prisoners.—As regards "youthful offenders"—i.e., those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years but not beyond the age of 15, discharge after admonition, delivery to the parent or guardian or the latter executing a bond to be responsible for the good behaviour of the culprit, and whipping by way of school discipline.

The question of the treatment of "young adult" prisoners has in recent years received much attention. Under the Prisons Act, prisoners below the age of 15 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 15, and therefore ineligible for admission to the reformatory school, has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal, and considerable progress has been made in this direction. In 1915, a special class for selected juveniles and young adults was established at the Dharwar Jail in Bombay, in 1908 a special juvenile jail was opened at Alipore in Bengal, in 1909 the Melkita jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and "juvenile adult" convicts was opened at Bareilly in the United Provinces, and in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District Jail, which is now worked on Borstal lines. Other measures had previously been taken in some cases, a special reformatory system for "juvenile adults" had, for example, been in force in two central jails in the Punjab since the early years of the decade and "Borstal enclosures" had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of Prisoners' Aid Societies except in Bombay and Calcutta, though even in those cities much remains to be done.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report published in 1921, was summarised in the

Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences.—The sentence of every long term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—If any fresh attempt at colonisation is made, it should be in an entirely new locality. A fresh attempt at colonisation in the Middle Andaman is not recommended. The retention of the settlement at Port Blair on the present lines is not recommended. The entire abandonment of the Andamans as a place of deportation is not recommended. Deportation to the Andamans should cease, except in regard to specially dangerous prisoners and any others whose removal from Indian jails is considered by the Government to be in the public interests. The existing restrictions as to age and physical condition of prisoners sentenced to transportation to the Andamans should, unless special medical grounds exist in any particular case, cease to apply. The Indian Penal Code should be amended by the substitution of rigorous imprisonment for transportation. In provinces where the available prison accommodation will not permit of the immediate cessation of deportation of all but selected prisoners, the Star class should be the first, and the habitual the last, to be detained in Indian jails. No female should in future be deported to the Andamans, and those now there should be brought back to India and distributed among the Provinces to which they belong. In those Provinces where the jails are insufficient to detain prisoners now deported, additional accommodation should be provided as soon as possible.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic

comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first as-

certaining whether there is work for them. Commitment to settlements should as far as possible, be by, gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

The variations of the jail population in British India during the five years ending 1929 are shown in the following table —

| | 1924 | 1925 | 1926 | 1927 | 1928 |
|---|---------|----------|---------|---------|---------|
| Jail population of all classes on 1st January | 140,142 | 1,64,424 | 132,253 | 122,753 | 143,314 |
| Admissions during the year | 94,573 | 53,506 | 74,243 | 55,097 | 50,219 |
| Aggregate | 234,715 | 2,17,930 | 206,496 | 177,850 | 193,533 |
| Discharged during the year from all causes | 101,581 | 581,512 | 57,065 | 552,624 | 531,779 |
| Jail population on 31st December | 137,123 | 140,118 | 136,411 | 132,256 | 122,751 |
| Convict population on 1st January | 118,970 | 116,161 | 112,501 | 111,393 | 110,310 |
| Admissions during the year | 107,697 | 107,013 | 160,430 | 162,772 | 158,339 |
| Aggregate | 226,667 | 223,174 | 272,931 | 274,165 | 268,649 |
| Released during the year | 163,796 | 169,373 | 102,623 | 157,563 | 157,007 |
| Transported beyond seas | 1,821 | 500 | 1,701 | 743 | 614 |
| Casualties, &c. | 2,514 | 2,497 | 2,469 | 2,246 | 2,089 |
| Convict population on 31st December | 116,187 | 118,706 | 116,161 | 112,274 | 111,393 |

More than one half of the total number of convicts received in jails during 1929 came from the classes engaged in agriculture and cattle tending, about 136,000 out of 168,000 are returned as illiterate.

The percentage of previously convicted prisoners was 20.54 in the same as in 1928 while the number of youthful offenders rose from 24.2 to 37.7. The following table shows the nature and length of sentences of convicts admitted to jails in 1927 to 1929 —

| Nature and Length of Sentence | 1929 | 1928 | 1927 |
|--|--------|--------|--------|
| Not exceeding one month | 29,888 | 29,778 | 31,122 |
| Above one month and not exceeding six months | 67,325 | 64,271 | 67,356 |
| " six months one year | 34,235 | 34,603 | 35,420 |
| " one year five years | 28,630 | 27,280 | 28,714 |
| " five years ten | 4,502 | 3,753 | 3,980 |
| Exceeding ten years | 515 | 406 | 485 |
| Transportation beyond seas— | | | |
| (a) for life | 1,637 | 1,735 | 1,575 |
| (b) for a term | 81 | 42 | 89 |
| Sentenced to death | 1,175 | 1,158 | 1,112 |

The total daily average population for 1929 was 116,008, the total offences dealt with by criminal courts was 282, and by Superintendents 135,977. The corresponding figures for 1928 were 116,501, 350 and 132,406, respectively.

The total number of corporal punishments showed a decrease, viz, from 236 to 221. The total number of cases in which penal diet (with and without cellular confinement) was prescribed was 6,229 as compared with 6,106 in the preceding year.

Total expenditure increased from Rs 1,81,80,045 to Rs 1,85,15,674 while total cash earnings decreased from Rs 22,37,704 to Rs 22,13,746, there was consequently an increase of Rs 4,50,882 in the net cost to Government.

The death rate increased from 12.68 per mille in 1928 to 13.63 in 1929. The admissions to hospital were higher, and the daily average number of sick rose from 20.32 to 21.26.

The Laws of 1931

BY

RATANLAL RANCHHODDAS, *Advocate, High Court,*

AND

MANHAR R VAKIL, *Barrister-at-Law*

1 The Punjab Criminal Procedure Amendment (Supplementary) Act—The

Criminal Procedure (Punjab Amendment) Act, 1930, enables the Local Government to appoint Commissioners for the trial of certain specified offences. The present Act provides for an appeal to the High Court by any person convicted on a trial held by Commissioners under the above Act, and for the submission to the High Court for confirmation of any sentence of death passed by the Commissioners.

2 The Steel Industry (Protection)

Act—This Act gives effect to the recommendations of the Tariff Board regarding certain railway materials made of steel. A specific duty of Rs 2.40 per cwt is imposed on fish bolts and nuts and dogspikes and of Rs 2 per cwt on rivets, gibs, cotters and keys. Cromesteel switches and crossings are also brought under the protective tariff. Stretcher bars which form part of switches and crossings are liable to the same duty as switches and crossings whether imported with the latter or separately.

3 The Gold Thread Industry (Protection) Act—

Pursuant to the recommendation of the Tariff Board a duty of 50 per cent *ad valorem* is levied by the present Act for a period of ten years on silver thread and wire (including so called gold thread and wire mainly made of silver), silver leaf, imitation gold and silver wire and thread, lametta and articles of a like nature. The duty on silver plate, and silver manufactures, all sorts not otherwise specified, is restored to 30 per cent *ad valorem*. In item No 131 of the second schedule to the Indian Tariff Act, 1894, the words "gold thread and wire" are omitted.

4 The Indian Income-Tax (Amendment)

Act—Under subsection (1) (e) of s 58 C of the Indian Income-tax Act, 1922, a private provident fund must be vested in two or more trustees. The present Act enables the Official Trustee to be appointed sole trustee of the fund should those concerned desire to appoint him.

5 The Indian Territorial Force (Amendment) Act—

The Indian Territorial Force Act, 1920, does not empower the Governor-General in Council to prescribe extra (voluntary) training for persons enrolled under the Act. The effect of this is that such persons, not being officers, are not subject to the Indian Army Act, 1911. The present Act makes good this omission by substituting incl (d) of sub sec (2) of s 13 of the original Act, the words "preliminary and periodical military training, compulsory and voluntary, for for the words 'the preliminary and periodical training to be undergone by

6 The Auxiliary Force (Amendment)

Act—Under cl (f) of sub sec (2) of s 30 of the Auxiliary Force Act, 1920, the Governor-General in Council is empowered to make rules for the grant of pay and allowances to persons liable to perform military service under the Act. The present Act empowers the Governor-General in Council to make rules for the grant of pay and allowances to persons who may be required to undergo military training under the Act but are not liable to perform military service. The words "enrolled persons" are substituted for the words "persons liable to perform military service under this Act", in clause (f) of sub-sec (2) of s 30 of the original Act.

7 The Cantonments (Amendment) Act—

This Act removes certain minor defects from the Cantonments Act, 1924. A proviso is added to sub sec (1) of sec 39 of the original Act which allows a quorum of four to a nominated board (s 2). In sub sec (1) of s 52 of the original Act certain words are omitted which enable the officer commanding-in-chief, the Command, to intervene promptly when he considers it necessary to do so (s 3). Sections 4 and 5 of the present Act remove verbal flaws from ss 75 and 77 A of the original Act. Under s 99 A of the original Act the Local Government may only exempt property or goods or class or property or goods belonging to the Secretary of State for India in Council from payment of tax. Section 6 of the present Act provides for the exemption from taxation of property which does not belong to the Secretary of State for India in Council. Under s 236, prosecutions for the offences of loitering for the purpose of prostitution, etc., can be instituted on the complaint of police-officers not below the rank of Sub-Inspector employed in the cantonment. Section 7 of the present Act enables a sergeant of police to institute such prosecutions. A new section is added which enables Assistant Secretaries to pass routine orders on behalf of the Executive Officer during the latter's absence from the cantonment (s 8).

8 Indian Naval Armament (Amendment)

Act—The London Naval Treaty, 1930, was signed on behalf of His Majesty and certain Powers in order to prevent the dangers and reduce the burdens inherent in competitive armaments, and to carry forward the work begun by the Washington Naval Conference and to facilitate the progressive realisation of general limitation and reduction of armaments. This treaty prescribes further limitations relating to the displacement of armament of aircraft carriers and submarines. The present Act gives effect to the London Naval Treaty 1930 so far as British India is concerned, by securing the observance of the restrictions prescribed therein.

9 The Indian Merchant Shipping (Amendment) Act—The International Labour Conference at its session held between 1920 and 1926 adopted several draft Conventions and Recommendations relating to seamen. The action to be taken on these draft Conventions and Recommendations was decided in consultation with the Indian Legislature. The present Act embodies the provisions of the draft Conventions and Recommendations in so far as it was possible to give effect to them in India.

Section 4 of the Act embodies the principle of the draft Convention relating to the employment of young persons and children at sea. It prevents the employment of young persons under fourteen years of age at sea except (a) in school ship or training ship, or (b) in a ship in which all persons employed are members of one family, or (c) in a bona fide ship of a burden not exceeding three hundred tons, or (d) when having no ports to be employed on nominal wages and will be in the charge of his father or other adult next of kin. Subject to certain exceptions it prevents the employment of young persons under 18 years of age to work as trimmer or stoker. It provides for the compulsory medical examination of children and young persons employed at sea by preventing the employment of such persons in any ship unless a certificate has been delivered to the master. A certificate granted by a prescribed authority that the young person is physically fit to be employed in that capacity. A certificate of such nature remains in force for one year only from the date on which it is granted. It further provides for the maintenance of a register of young persons employed on a ship or a list of them in the articles of Agreement. Penalties are provided for the contravention of any of the above provisions. The Governor General in Council is authorized to make rules for all matters mentioned above.

Section 5 provides that the master of every ship shall sign and give to a seaman discharged from his ship in British India, either on his discharge or on payment of his wages, a certificate stating the quality of the work of the seaman or whether the seaman has fulfilled his obligations under the agreement with the crew.

Section 6 provides that any Indian seaman whose service is terminated before the period contemplated in his agreement by reason of the wreck or loss of his ship is entitled (1) to his wages until he is repatriated to the port of his departure from India and (2) to compensation for the loss of his personal effects up to one month's wages. He is, however, not entitled to receive wages under clause (1) in respect of any period during which (a) he was or could have been suitably employed, or (b) he negligently failed to apply to the proper authority for relief as a distressed or destitute lascar.

Sections 7 and 8 provide for the inspection of the conditions of work of seamen entitling the master or three or more of the crew to call for inspection in respect of provisions, water, medicines and appliances, weights, and measures and accommodation.

10 The Vizagapatam Port Act—The port of Visakhapatnam has been declared under Item 9 of part I of Schedule I to the Declaration that it be a major port and is under the direct administration of the Government of India. In Council the Statutory powers relating to the port in the Indian Ports Act, 1908, and the Vizagapatam Harbour and Shipping Fees Act, 1913, have been still vested in the Government of Madras. The present Act transfers the powers from the Local Government to the Government of India in Council except the articles (1) (i) & 17, & 19 and & 20 of the Indian Port Act, 1908, concerning the port health administration at the port of Visakhapatnam.

11 The Indian Ports (Amendment) Act—The Act prohibits the employment of children under the age of twelve years in the handling of cargo at any of the Indian ports to which the Vizagapatam Harbour and Shipping Fees Act, 1913, applies. In section 6 (1A) of the Indian Ports Act, 1908, for the words "at the port" the words "wharves, quays, docks, basins, and sheds" the words "the port" subject to this Act are added.

The Indian Finance Act—This act continues certain provisions of the Indian Finance Act, 1913, and provides for additional resources. Sections 2, 3 and 4 provide for the continuance for a further period of one year of the existing postal rates, selling and dutiable postage rates, and the credit to revenue of interest on securities. Section 5 provides for the increase of the customs duty on the articles mentioned in Schedule I to this Act. Some of the articles are Al, beer, etc., denatured spirit, spirits including brandy, gin, whisky, liqueurs, drugs and medicines containing spirits, perfumed spirits, etc., wine, sugar and olive, bullion and coin. Section 4 levies additional duties on the articles mentioned in Schedule II to the present Act. Some of which are High class cigarettes, kerosene, motor spirit, mineral oil, motor cars, artificial silk yarn and thread, silk mixtures, Portland cement and cotton piece goods. Sections 6, 8 and 10 respectively provide for increases in the excise duties on motor spirit, kerosene and silver, corresponding to the increases in the customs duties on the same articles. Section 7 provides for the continuance, for another year, of the levy of income tax and super tax with certain alterations as to rates set forth in Schedule IV of the present Act.

12 The Indian Reserve Forces (Amendment) Act—Under clause (a) of sub-section (1) of s. 6 of the Indian Reserve Forces Act, 1888, the offences referred to in clauses (a), (b) and (c) of that sub-section are triable by a Magistrate of the First Class only. Section 5 of the present Act empowers a Presidency Magistrate also to try such offences. Section 7 of the original Act is repealed.

13 The Indian Factories (Amendment) Act—The Indian Factories Act, 1911, contains no specific provision empowering Local Governments to frame rules to provide for the prevention of fires in factories. The present Act inserts a new clause in sub-section (2) of s. 37 of the original Act specifically empowering Local Governments to frame such rules.

There are available many illustrations of these principles being followed in practice. India has given a step to pursue in the League of Nations an independent line of action within very wide limits even though she has no control in some instances. It being her intention to work with His Majesty's Government. In 1919, for example, at the conference on Opium and Drugs, India concluded that the British delegation had to obtain fresh instructions from His Majesty's Government which resulted in India settling the question of Indian hemp to her own liking. In the event of such conflict within the British the Secretary of State acts. If he acts at all as head of the Government of India rather than as a representative of His Majesty's Government. He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates. But rather with the consent of his own Government, he stands with all other representatives of India to settle the India-British Delegation controversy. In controversy with the Delegation of Great Britain, India has participated in all the Assemblies of the League. In the annual session of the International Labour Conference, where because of her high vital importance, he plays a very prominent part, and in numerous conferences on special subjects held under the auspices of the League, as well as in some important non-League International Conferences, in Berlin, the Washington Conference on Naval Armaments in 1921, in Genoa Economic Conference in 1922, and the International Naval Conference held in London in 1930. India is also represented on several permanent League bodies, e.g., the governing body of the International Labour Office, the Advisory Committee on Opium and Drugs, the Economic Committee, the Health Committee and the Committee of Intellectual Co-operation. It is interesting to note that since 1921 Sir Atul Chatterjee has been acting as Deputy Commissioner of the Governing Body of the International Labour Office and it is understood that this position is preliminary to his being elected Chairman in 1932.

The Personnel of the Indian Delegation has from the outset largely been Indian in race, though owing to the constitutional organization of the Indian administration it has frequently been necessary for her to be represented by Englishmen. This has especially been the case when specialized experts were required. The Indian character of the personnel has as rapidly as possible been increased and in 1920 the Indian Delegation to the annual Assembly of the League was for the first time led by an Indian (The Hon'ble Sir Mohammed Habibullah,

Minister for Education, Health and Land in the Executive Council of His Excellency the Viceroy and Governor General). In the following year the delegation was led by the Maharaja of Bikaner. While the delegation to the International Labour Conference is almost entirely Indian in personnel, the workers' delegation always have been Indian. This is merely an extension of the general policy of the Secretary of State that an increasing number of Indians should be given the opportunity of being trained in the international field. An example of the increase in participation played by Indians in League work occurred in 1930 when during the Assembly of that year and at the instance of Sir John Dillabough member of the Indian Delegation an important resolution was passed in reference to the need for an inquiry into world depression.

The Secretary of State in his Memorandum to the Statutory Consultation Party wrote — "It is a privilege of the Viceroy to have had the work of establishing her national self-consciousness and has laid the foundations of an informed public opinion in international affairs."

Indian representatives have not confined their loyalty to the rule of spontaneity but have played a prominent part in many of the resolutions which they have attended. She has fully justified her position as a separate Member of the League by her cooperation in the economic and social spheres which form a large part of her activities.

But in certain questions where special Indian interests are involved the Indian Delegation can and does take an independent line, and may even find itself in opposition to other parts of the Empire.

But sometimes on non-political questions the British and Indian Delegations have remained in opposite camps. On such questions when special Indian interests are at stake India might of independent action extends to speaking and voting against the view advanced on behalf of His Majesty's Government. Lord Peel, in a note at the end of his Ministry, stated his conclusion that the system of consultation between the Secretary of State and the Government of India had worked satisfactorily and that the Government of India without any definition of its problematical rights, already in practice obtained all the advantages which it might claim.

The year 1932 has seen the opening of a League of Nations bureau in Bombay in response to the demands of successive delegations to Geneva. Its purpose will be to keep in touch with representative Indian opinion so that Geneva and India may be brought closer together.

Labour in India.

During previous years very little authentic information was available regarding Labour in India, and the sections dealing with this question in *The Indian Year Book* were more or less confined to a description of the main Acts in Labour Legislation in India and to such information as could be gleaned from the official Reports of the administration of these Acts and from the Reports published of Enquiries conducted by the Labour Office of the Government of Bombay. With the appointment of a Royal Commission on Labour in India all Provincial Governments and Railways, and many of the larger labour-employing organisations and Associations of such organisations have made enquiries into labour conditions in their respective territories and jurisdictions, and have compiled fairly comprehensive Memoranda for

submission to the Royal Commission. Many of these Memoranda have been published, and contain a fund of the most valuable information possible. No use could, of course, be made of such information as the Governments and others submitting these Memoranda desire to keep confidential. But, where descriptions are given of existing conditions which must be known to large bodies of persons in the respective localities concerned and which could easily be obtained by any person enquiring into them, use has been made of them and every endeavour has been made to make this section as complete as possible by the presentation of essential facts. The Editors of *The Indian Year Book* gratefully acknowledge the sources which have been made use of in the compilation of this note.

GROWTH OF THE LABOUR PROBLEM.

India is and has always been a pre-eminently and predominantly agricultural country and 72.98 per cent of her people are dependent on the soil for their livelihood. Except in a comparatively few cases there is no settled and permanent labour force in most industrial centres in India. The vast majority of industries draw the labour they require from the village—labour which seldom breaks its contact with village life and periodically returns to renew its associations with it. This fact cannot be too strongly emphasised. If it is lost sight of it would be most difficult to understand how large bodies of comparatively low-paid men and women can afford to participate in strikes involving complete stoppage of work and loss in wages for periods of half a year. Such strikes would be impossible if Indian industrial labour did not have agriculture to fall back upon as a subsidiary occupation during periods of prolonged industrial disputes.

The emergence of Indian industrial labour as such may be considered to be associated with the year 1880. Its growth and development since that date may be divided, for purposes of broad generalisation, into four periods: (1) from 1880 to 1915, (2) from 1916 to 1921, (3), from 1922 to 1927, and (4) from 1928 to the present day. The first period marks the growth of factory development with a slow but steady decline in cottage industries. The total number of cotton mills in India rose from 58 to 264 and the number of persons employed from 40,000 to 260,000. The total number of jute mills rose from 22 to 65 and the number of persons employed from 27,000 to 216,000. There was a vast expansion in railways and many new industries were established. Labour was immobile, earnings in agricultural pursuits were extremely low, commodities were comparatively cheap, and industrialists were able to get all the labour they wanted by tapping the adjacent villages at any rates of wages they liked to offer so long as they were higher than those which could be earned by work in the fields. Both the men and the women employed were considered to be a part of the plant of the factory, child labour was exploited, and little thought was given to the human element in the worker. Hours of work were excessive, no amenities were provided because the only thing

that the worker was expected to do was to work, eat and sleep. The provision of housing was a necessary evil which had to be provided where factories were situated away from towns. The Factories Act was modelled more on the lines of providing against loss of life due to accident rather than from the grinding work which a factory worker was expected to do. The humanitarian employer was considered to be a pest who would ruin industry and all that industrialists thought of was the greatest return which could be obtained from the capital invested.

The second period emerged soon after the outbreak of war. Large contingents of Indian troops were sent overseas, and had to be supplied with adequate clothing and the munitions of war. Imports of manufactured articles into India were restricted owing to the bulk of the available British tonnage in ships having been commandeered for transport of men and material to the various seats of war. Heavy demands were made by the belligerent countries for raw products. India secured the opportunity for which she had been looking for generations. Her credit expanded, her industries thrived and the returns on capital invested in every branch of trade and industry became phenomenal. Prices soared high. Owing to the influx of large bodies of persons to the towns, housing became hopelessly inadequate and rents rose to such an extent as to call for legislative restrictions. But nobody thought of those who were mainly responsible for the creation of the added wealth of India. Labour was still considered to be that inarticulate part of the plant of the factory which it had always been. The end of the War brought visions of an India, a free commercial and industrial enterprise was floated. Agricultural prices were soaring, high prices for their produce. Labour was in great demand not only in agriculture but also in commerce and industry. The situation with labour met with during the war had created an increase in rates of wages and a demand for further increases which had been met in the case of living. Wages were granted a 50 per cent increase. In the epidemic of 1918-19 there was a great increase in the population of the country and the capital available for investment was enormous. All these factors combined to create a situation

were successful owing partly to the Government for speeding up production and partly to the shortage in the available supply of labour.

The gradual demobilisation of the Armies of the War and the closing up of the War Munitions Works disarmed millions of men and women who rapidly spent the earnings secured during the War. The post-war industries in the betterment countries could not be reopened at once. The spectre of unemployment loomed large. Credit fell. With the fall in credit the demand for manufactured articles declined and prices began to show a marked downward tendency. The year 1922 may be considered as the beginning of this period of reaction and depression. At the beginning of the third period in the history of Indian industrial labour, labour all over the world demanded an improvement in the conditions of life and work. It was the era of an International Organisation to deal with all questions connected with labour from an international point of view and the Government of India, as one of the signatories to the Treaty of Versailles, to the ratification and acceptance as far as possible of the Convention and Recommendation adopted by the International Labour Conference have made it obligatory for her to fall into line with the other industrial countries of the world in ameliorating the conditions of labour. The beginning of this period therefore saw a radical revision of the existing Factory Law by an Amending Act passed early in 1922. The existing Indian Mines Act was replaced by another Act of 1922 during which year a Workmen's Compensation Act was also passed for the first time. A Trade Union Act was passed in 1926.

The depression in trade and industry which set in in 1922 has continued ever since. Various attempts have been made by all classes of industrialists to reduce the wages of labour in order to reduce costs of production. Co-ordinated action taken by the Ahmedabad Mill owners' Association to reduce the wages of operatives in the Ahmedabad cotton mills by 20 per cent with effect from the 1st April 1923 was successful to the extent of an eventual cut of 15.625 per cent being agreed to after a general strike lasting more than two months. A similar attempt made by the Bombay Mill owners' Association in 1925 to reduce wages by 11½ per cent was, however, frustrated by a strike lasting for nearly three months which was eventually settled on the removal of the Excise Duty of 3½ per cent on cotton manufactures in India by a Special Ordinance issued by the Governor-General in Council. Similar attempts made in individual concerns in the Districts succeeded mainly for want of effective combination among the workers. No other organised attempts were made to effect reductions in wages. There were several reasons for this. The most important reason was that after the period of the decline in prices had set in after 1920, real wages, in comparison with the standard of life of the year 1914, began to improve and labour was determined not to let go the advantage gained in the struggles immediately following the end of the War. This period was one in which a considerable number of Acts in connection with labour were placed on the Statute Book. In addition to these, the Government of India had asked Provincial

Governments to consider proposals for better times with regard to prompt payment of wages. The enquiry which in 1926-27 into the question of Industrial Peace War-time Payments in respect of the Industrial Revolution on the lines of the Trade Union Acts. It was becoming obvious to the Indian industrial employer that Government workers were anxious to do all they could to improve labour conditions in India. The employer, as a whole, therefore did not desire to precipitate matters by insisting on reduction in wages. It was imperative, however, that some things should be done and done quickly to bring the cost of production down. The only way to do this without paying the wages was to take advantage of the employees to ask the worker to do more work during the existing hours of employment so as to enable the employer to dispense with a number of workers and thus to reduce the wage bill.

The fourth period beginning with the year 1928 therefore saw the advent of Rationalisation of the efficient method of working. This was particularly the case in Bombay city where it was found necessary to install more machines in the form of a compound story loom. In wages too, advanced types of cotton mill machinery were introduced, various efficiency measures in the mill. The introduction of the measure introduced reforms in the number employed. The beginning of this period coincided with the entry of the Communist into the Trade Union movement in India.

When the so-called Labour Group of the Indian National Congress failed to obtain acceptance of their ideas by the Congress, they formed in January 1927 a **Workers and Peasants Party** one of whose objects was 'to promote the organisation of trade unions and to wrest them from their alien control'. Communist end views were put out to India by the Third International to further war against imperialism, the destruction of capital and the cry of revolution. The Workers and Peasants Party started a paper called the 'Krant' (Revolution) in May 1927 which however had to cease publication at the end of the year owing to financial difficulties. The members of the Party took an active part in the strike of the operatives in the cotton mills in the Sassoon group early in 1928 but their attempts to bring about a general strike in the cotton mills in Bombay failed owing to the opposition of the Bombay Textile Labour Union which had been formed by Mr. N. M. Joshi in January, 1928. When another great group of mills in Bombay under the agency of Messrs. Currimbhoy Ibrahim and Sons sought to introduce efficient methods of work, the Communists saw their opportunity. All the operatives of the Currimbhoy group were brought out on the 16th April 1928, and the Communists, with the help of the turbulent elements in the industry brought about a complete stoppage of work by picketing, intimidation and stone throwing in all other mills in Bombay (except two mills at Colaba) by the 26th April. Owing to internal dissensions in another Union of cotton mill workers called the Girni Kamgar Mahamandal, they secured the support of Mr. A. A. Alwe, its President, and formed a new Union called the Bombay **Girni Kamgar Union** on the executive of which several prominent Communists were appointed. The Communists revived the publi-

cation of their paper the "Krantī" and they were successful, by holding almost daily meetings at which revolutionary speeches were delivered and by the publication of hand-bills. In capturing the imagination of the workers and keeping the strike going for a period of nearly six months. They also took an active part in the prolonged strikes of the same year in the Tata Iron and Steel Works at Jamshedpur and in the workshops of the Bengal-Nagpur Railway at Kharagpur. They actively associated themselves with the strike on the South Indian Railway and they secured an entry into several Unions connected with Municipalities, Port Trusts and other Public Utility Services. After the calling off of the General Strike in the Bombay Mills on the 6th October, 1928, they endeavoured to paralyse the cotton mill industry in Bombay by calling several lightning strikes in individual mills on the flimsiest of pretexts, even though the terms of the settlement of that strike required that all disputes between the employers and employed on the interpretation of the terms of agreement should be referred to the Bombay Strike Enquiry Committee which had been appointed by the Government of Bombay to express opinions on the matters in contention.

Bombay has seen few riots and disturbances of the type which broke out in the City on the 3rd February 1929 and which resulted in the death of 149 persons and the destruction of property. The Riots Enquiry Committee appointed by the Government of Bombay found that the origin of the riots was the series of inflammatory speeches delivered by certain leaders of the Girni Kamgar Union during the General Mill Strike of 1928 and again during the Bombay Oil Strike which lasted from the 7th December 1928 till after the date of the riots.

In 1929 the Girni Kamgar Union succeeded in calling another General Strike in the Bombay Mills on questions connected with dismissals which they interpreted as a direct attack by the Millowners to undermine the Union. The strike, although not so complete in character as the strike of 1928, nevertheless lasted from 26th April to 18th September, 1929, and was called off only when the Court of Enquiry appointed by the Government of Bombay under the Trade Disputes Act had reported in unequivocal terms that the whole blame for this strike lay with the Bombay Girni Kamgar Union. But the Communist group was able to capture the Indian Trade Union Congress at the 11th Session held in Nagpur and to force the moderate elements, consisting of Messrs Diwan Chaman Lal, N. M. Joshi, B. Shiva Rao, V. V. Giri, R. R. Bakhale, etc., to secede from the Congress on that body passing resolutions boycotting the Royal Commission on Labour in India and the International Labour Conference, by appointing the Workmen's Welfare League, a Communist organisation in England, as their Agents for Great Britain, and the declaration of Independence and the establishment of a Socialist Republican Government of the Working Classes in India.

It is of importance to lay stress on the problems connected with the Communist menace in India. The object of the Communists is not so much the welfare of labour as the spread of revolution. Their ultimate aim is the destruc-

tion of capital and the replacement of the established Government by a dictatorship of the proletariat. The manner in which they can achieve this is by penetrating trade unions, by calling strikes in industries, by unduly prolonging them by putting up strings of preposterous and absurd demands by refusing conciliation or arbitration, and by sending masses of workers seething with discontent into the districts to preach their gospels of class hatred and class war to the ignorant masses in the villages of India. Fortunately for the industry many of the avowed Communists are awaiting their trial at Meerut or are in jail. Some of them have now been released from jail and are making frantic efforts to regain their hold on labour unions. But luckily the good sense of the workers has now begun to prevail and they are allowing little or one quarter to them.

Royal Commission on Indian Labour

The British Government, in consultation with the Government of India, appointed on 24th May, 1929, a Royal Commission 'to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India, on health, efficiency and standard of living of workers and on relations between employers and employed, and to make recommendations.' The Royal Commission consisted of the Right Honourable Mr. J. H. Whitley as Chairman with the Rt. Hon. Mr. Srinivasa Sastri, P.C., Sir Alexander Murray, Kt., C.B.E., Sir Ibrahim Rahimtoolah, Kt., K.C.S.I., C.I.E., Sir Victor Sassoon, Bart., Dewan Chaman Lal, M.L.A., Miss Beryl M. Le Power Power, Deputy Chief Inspector, Trade Boards, England, and Messrs. N. M. Joshi, M.L.A., A. G. Clow, C.I.E., I.C.S., G. D. Birla, M.L.A., Kabeer-ud-din Ahmed, M.L.A., and John Cliff, Assistant General Secretary, Transport and Railway Workers Union, England, as members, and with Messrs. S. Lal, I.C.S., and A. Dibdin from the India Office, London, as Joint Secretaries. Mr. J. H. Green, M.B.E., as Assistant Secretary. Lt.-Col. A. T. H. Russell, C.B.E., I.M.S., was subsequently appointed as a Medical Assessor and Mr. S. R. Deshpande, B. Litt. (Oxon), Senior Investigator of the Labour Office, Government of Bombay, was appointed as a Statistician to the Commission. The Commission arrived in India on the 11th October 1929 and after visiting several places in India and examining several representatives of the Central and Provincial Governments, the Railways and Associations of Employers and Employed left for England on the 22nd March 1930. The Commission returned on the 11th of October 1930 and after touring Ceylon and Burma went to Delhi in November.

The Report of the Commission was published in June 1931 and is a document of first rate importance which will be the text book of social legislation and labour welfare for many years to come. Moreover, the value of its recommendations is enhanced by the fact that they are practically unanimous and represent the considered opinion of employers, workers, legislators and officials, all of whom were represented on the Commission. Every aspect of the labour problem in India has been considered and discussed and the recommendations number many hundreds and cover a very wide field.

We give below some of the principal recommendations of the commission classified according to the subjects with which they deal, as we think that will be a more acceptable form in

which to present them, than if they were separately dealt with under the various headings into which this chapter is divided

SUMMARY OF RECOMMENDATIONS

Migration and the Factory worker

In present circumstances, the aim should be to maintain the factory worker's link with the village and, as far as possible, to regularise it

The Employment of the Factory worker

(a) Jobbers should be excluded from the engagement and dismissal of labour

(b) Wherever the scale of the factory permits it, a labour officer should be appointed directly under the General Manager. His main functions should be in regard to engagements, dismissals and discharge

(c) Where it is not possible to employ a whole-time labour officer, the manager or some responsible officer should retain complete control of engagements and dismissals

(d) Employers' associations in co-operation with trade unions should adopt a common policy to stamp out bribery

Where women are engaged in substantial numbers, at least one educated woman should be appointed in charge of their welfare and supervision throughout the factory

Workers should be encouraged to apply for definite periods of leave and should go with a promise that on their return at the proper time they will be able to resume their old work

Wherever possible, an allowance should be given to the worker who goes on leave after approved service

Where any comprehensive scheme for reducing staff is contemplated in an industry, the introduction of a joint scheme of unemployment insurance, *e.g.*, the one outlined by the Fawcett Committee of 1928-29, should be considered

Government should examine the possibilities of making preparations to deal with unemployment when it arises, and of taking action where it is now required, on the lines of the system devised to deal with famine in rural areas

Hours in Factories

The weekly limit of hours for perennial factories should be reduced to 54 and the daily limit to 10

Factories working on continuous processes or supplying daily necessities may be allowed a 56 hour week, subject to an average week of 54 hours for the operative and to conformity with the provisions in respect of holidays

The statutory intervals should ordinarily amount to not less than an hour in the aggregate. Employers should be at liberty to distribute this hour in such periods as they think best after consultation with the operatives and subject to the sanction of the Chief Inspector of Factories

The maximum daily hours for children should be limited to 5

Employers should arrange to give children at least one rest interval

The minimum rate for overtime should be $1\frac{1}{2}$ times the normal rate where work exceeds 54 hours a week, and $1\frac{1}{4}$ times the normal rate for work in excess of 60 hours a week

A week of 60 hours should be a limit to be exceeded only in most exceptional circumstances

Working conditions in Factories

The powers conferred on inspectors by sec 10 of the Factories Act for the reduction of dust should be more extensively used

Rules under sec 37 of the Factories Act requiring factories to be cleaned annually should be made, where they do not exist, and strictly enforced in all cases

Every factory should be compelled to maintain separate and sufficient latrine accommodation for males and females and adequate staff to keep them clean

Employers should study methods of reducing temperature

Where a Chief Inspector is of opinion that (a) the cooling power in a factory is so deficient as to cause serious discomfort or danger to the health of the operatives, and (b) it can be appreciably increased by methods which do not involve unreasonable expense, he should be empowered to serve on the owner an order requiring the adoption of specified measures within a given time. An appeal to lie to a tribunal of three appointed by the local Government

Advance might be made along the lines of the Safety First movement in all branches of industry

A certificate of stability should be required before work is begun in larger factories, with power to local Governments to demand such certificates from smaller factories

A similar procedure should be followed where important structural alterations are made

Inspectors should be empowered to secure structural tests and to obtain plans and information for the measurement of the safety of buildings

Local Governments should be empowered under the Factories Act to issue welfare orders to classes or groups of factories, disputes as to reasonableness to be laid before a referee

First-aid boxes should be provided in all factories using power and in departments of factories employing over 250 persons

The provision of water and places for washing should be obligatory for workers in dirty processes

Creches should be provided for children up to the age of 6 years where considerable numbers of women are employed. This requirement should be statutory for places employing 250 women or more. The Factories Act should embody this with discretionary power to Governments in regard to factories with fewer women. The organisation of factory creches should be the duty of the woman inspector.

The provision of shelter for rest and refreshment is in many cases necessary, and the possibilities of workers' canteens should be examined with a view to their wider adoption.

Greater rigour should be shown in the enforcement of the Factories Act in Bihar and Orissa.

An officer with medical qualifications should be appointed as an Inspector of Factories in every province, part or full time according to the requirements of the province. Certifying Surgeons should be empowered as Inspectors.

Women Factory Inspectors are desirable in every province.

Seasonal Factories

The law should establish standards for seasonal factories not necessarily identical with those for perennial factories, but enforced with equal rigour.

The present limits of maximum hours, 11 per day and 60 per week, may remain for seasonal factories but the exigencies of seasonal industries do not justify any extension of those hours for the individual.

The 'seasonal' list should include in all provinces cotton-ginning factories, lac factories, indigo factories, coffee factories, rubber factories, jute presses and, in North India, tea factories.

Other groups may be included with reference to particular provinces.

Where overworking of women is prevalent, local Governments should have power to prohibit in any particular group or class of factory the employment of women outside such hours, not less than 11 in the aggregate, as they may specify.

Before plans submitted under Sec 9 (1) of the Cotton Ginning and Pressing Factories Act are approved, the prescribed authority should be satisfied that adequate ventilation will be secured.

Owners of existing tea factories should be required to install efficient dust-extracting machinery within a specified period and new factories should not be allowed to be built without it.

In new rice mills steps should be taken to compel the installation of necessary protective machinery against the dissemination of dust, and freer use should be made of the power of inspectors to demand its installation in existing mills.

Where women are employed in any process creating an impure atmosphere, the owner should be required to set up some temporary shelter in the compound for their infants.

Local Governments should have power for any or all classes of factories, to prescribe standards of height for children, employment of those under standard being made illegal.

The inspection of cotton-ginning factories and other seasonal factories should be largely carried out by part-time inspectors. Officers of the grade of Industrial Surveyors should not be employed for this purpose. Selected revenue officers of suitable grade should be given a short course of instruction under the Chief Inspector with a view to their employment in districts where such factories are found. This system should not apply to tea factories in Bengal and Assam. Regular forms should be prepared by the Factory Inspection Department for issue to part-time inspectors and a copy of the report of each inspection should be submitted to the Chief Inspectors of Factories.

Unregulated Factories

A—Small Factories using power—In the case of factories using power and employing less than 20 but not less than 10 persons, only the following sections of the Factories Act should apply automatically—

Section 5, Chapter III (excluding sections 12 and 15), sec 37 and the appropriate parts of Chapter VIII with sec 50. Local Governments should retain the power of applying the whole Act by notification, and should be given power to apply selected sections to any such factory.

Local Governments should be given power to apply the sections specified above to similar places employing less than 10 persons where conditions are dangerous.

The "number employed" for this purpose should be the aggregate number employed for any part of the 24 hours.

B—Factories not using power—A separate Act, brief and simple, should be passed to apply to factories, without power machinery, employing 50 or more persons during any part of the year.

The starting age for children under this Act should be 10 years in the first instance, and protection in the matter of hours should be confined to children between 10 and 14 years.

Hours of children should fall within limits to be specified by local Governments, but in no case should the working hours exceed seven nor should they fall outside a period of nine hours, with a rest interval of at least one hour. The overriding maxima should be embodied in the Act.

No child who has been employed full time in a factory should be allowed to work overtime or to take work home after factory hours.

The expediency of penalising the giving of advances to secure the labour of children and the execution of bonds pledging such labour should be examined by Government. In any case a bond pledging the labour of a person under 15 years executed for or on account of any consideration should be void.

Every factory of this class should be entirely closed on one day of the week to be specified beforehand by the local Government. Subject to particular exemptions the closing day should be the same for all factories in the same district.

Local Government should have power to extend any of the provisions of this Act to factories employing less than 50 persons. This should be done forthwith in the case of offensive trades, the power should also be exercised in the case of industries, classes of establishments and individual establishments employing an appreciable number of young children or where larger places have been broken up to escape regulation.

The policy of gradualness which underlies the proposals made for legislation should also influence its enforcement.

Mines

In the Mangnese Mines in the Central Provinces, steps should be taken to apprise the workers of the repeal of the Workmen's Breach of Contract Act.

At Khewra —

(a) The employment of ticket-of-leave men should be re examined

(b) Workers and hours should be effectively checked, and numbers controlled

(c) Committee should be elected to represent the workers

(d) The sanitary condition of the workings and the settlement should be brought up to a reasonable standard

(e) Latrine accommodation should be provided near the entrance of the mine and improved latrines underground

(f) Sanitary staff should be provided and placed under the Medical Officer

(g) Engagement of fresh women workers should be discontinued

At Namtu and Bawdwin —

(a) A labour officer should be appointed and should direct his attention to the formation of works committees

(b) Government should frame regulations for the prevention of lead poisoning

(c) The omission of certain sections of the Factories and Mines Acts as applied to the Shan States should be reconsidered

In the oil fields statutory regulation of rest days, hours, health and safety should be undertaken. Government should consider whether this can be achieved by the application of appropriate sections of the Mines Act or by separate legislation

The coal industry should aim at eliminating recruiting costs

On land away from the collieries new tenancies with colliery service as a condition should be made illegal and existing tenancies examined by Government to see whether they can be equitably converted to rent holdings

The raising contractor in coal mines should be gradually superseded by direct or sarkari working

A Labour Officer should be appointed in each important mine

Permissible loads for women should be prescribed in quarries where depth and lead exceed a certain standard. Both load and standard of depth and lead should be fixed by the Mining Board

No child under the age of 14 years should be permitted to work in or about the mines

Workers should have the same number of nominees on the Mining Boards as employers, and they should be chosen after consultation with the workers' organisations where these exist

The Chief Inspector should confer with representatives of employers and workers when the law is substantially changed

Compulsory primary education should be introduced in the coalfields

Railways

Registers should be kept of all workers appointed to the engineering department, appointments and dismissals being reported for entry. The registers should be examined regularly by administrative and personnel officers

A similar procedure should be adopted for the transportation and commercial departments

The system of selection boards or committees should be used for selecting firemen, shunters and drivers for appointment and promotion, and should be put in to force on all railways for both recruitment and promotion of categories classed as literate and those in which employees start as apprentices

Sons and near relations of railway servants have a special claim to enter the service and wherever possible facilities for suitable education and training should be afforded them

In mechanical workshops the system of recruitment through labour bureaux is capable of development and together with the system of selection boards or committees would go far to remove grounds of complaint of favouritism and bribery in regard to recruitment and promotion

All new entrants should be handed a printed statement of their duties and rights in the service, with a specific warning as to bribery

Workers required, after confirmation, to undergo a further medical examination should have the right to be examined, if they desire, by an independent specialist

Should a worker be adjudged medically unfit for a particular post, every effort should be made to find him other work

In regard to racial discrimination, definite steps should now be taken which will lead in a specified term of years to the progressive elimination of any form of discrimination as regards both appointments and promotions to all grades and classes

The whole subject of the leave rules should continue to be examined in consultation with representatives of the workers

The Administration should endeavour to maintain leave reserves adequate to meet requirements spread over the year

The claims of low-paid workers to improved wage standards should continue to receive careful consideration from the Railway Board and the Administrations

After 12 months' continuous service, all employees should be monthly rated and as soon as possible made eligible for all service privileges which that carries

On completion of one year's continuous service, all employees should be eligible to join a provident fund, membership being optional for those drawing under Rs 20, compulsory for those drawing Rs 20 or over per mensem

The weekly rest of not less than 24 hours provided under the Act of 1930 should be granted subject to usual emergency exceptions to all continuous workers as soon as necessary arrangements can be made

A hospital of any size should have a woman doctor on its staff who should be in charge of all activities dealing with the health and welfare of women and children

In the larger jute and cotton industrial areas, mills and factories should organise in groups, each establishment having its own welfare centre and health visitor under the supervision of a woman doctor employed by the group

In the larger industrial areas Government, local authorities and industrial management should co-operate in the development of child welfare centres and women's clinics. Government should give percentage grants for approved schemes

Trained midwives should be obtained for work in welfare and maternity centres

Maternity benefit legislation should be enacted throughout India on the lines of the schemes operating in Bombay and the Central Provinces

(a) Legislation should be confined to women employed full time in perennial factories covered by the Factories Act

(b) The scheme should be non-contributory. In the first instance the entire cost of benefit should be borne by the employer

(c) Government should have the power to exempt individual firms, whose existing schemes are at least as liberal as those contained in the Act

(d) In the event of any general scheme of social insurance being adopted, maternity benefits should be incorporated and the cost shared by the state, the employer and the worker

(e) The rate of benefit given by the Central Provinces Act is suitable for general application

(f) The maximum benefit period should be four weeks before and four weeks after childbirth

(g) The qualifying period should in no case be less than nine months and might be fixed at 12 months

(h) The more closely benefit can be linked with treatment the better. Probably the best method is to give benefit in any case and to add a confinement bonus only if a trained midwife or hospital treatment is utilised. Failure to use existing facilities should not disqualify the applicant, but bonus and benefit together should not exceed the amount laid down in the Act

All methods should be explored that may lead to the alleviation of existing hardship arising from the need of provision for sickness

(a) Material should first be collected for the framing of an estimate of the incidence of sickness among workers, special statistical enquiries being instituted in selected centres as soon as possible

Pursuing the line of building on existing foundations the Commission commend for examination the outline of a tentative scheme based on separate medical provision, possibly by Government and financial benefits in the form of paid sick leave given through employers on the basis of contributions by themselves and by the workers

Housing of the Industrial Worker

More attention should be given to housing, water supply, drainage and latrines in metalliferous mining areas

Quarters for "single" workers on the oilfields should in future be constructed in the form of rooms for not more than four to six individuals

The scheme of the Tata Iron and Steel Co., and of the Tinplate Company at Jamshedpur whereby loans are advanced to workers to enable them to build their own houses under supervision should be more widely adopted

Railway housing increased provision of houses should be arranged for as rapidly as possible and more regard should be paid to Indian preferences in design

The psychological effects of segregation should be taken into consideration in planning future developments of the kind at Jamshedpur and Khargpur

Government should give continued consideration to the problems created in special areas such as Jamshedpur with a view to devising a system whereby the principles of local self-government may be applied

(a) Provincial Governments should make a survey of urban and industrial areas to ascertain their needs in regard to housing

Recommendations for Government action —

(a) Minimum standards in regard to floor and cubic space ventilation and lighting should be laid down and should be incorporated by all local authorities in their bye laws

(b) Water supplies, drainage systems and latrines for working class dwellings should also be governed by regulations drawn up by the Ministry

(c) Government should insist on the adoption within a specified period and with modifications necessitated by local conditions of model bye-laws prepared and issued by them

(d) Type-plans of working class houses with costs should be prepared by Public Health Departments. Such plans should provide for a small room for cooking and storing utensils, and a front verandah is also desirable

(e) Plans of approved types of latrines should be made available

(a) The provision of working class housing should be a statutory obligation on every Improvement Trust

Condemnation of all insanitary chawls in the mill areas of Bombay should be considered

An Improvement Trust should be established for Howrah

All Improvement Trusts should be placed in a position to recoup themselves from the enhancement of land values resulting from their activities

Every effort should be made to evolve cheaper types of houses. Government might consider the possibility of offering prizes for plans and specifications of working class houses costing not more than a fixed amount

Co-operative building societies and similar activities should be encouraged

Schemes for the erection by workers of their own houses should be encouraged but a certain degree of supervision is essential.

Municipal Council should undertake preliminary work without waiting for additional legislation.

(a) Qualified health officer should be appointed and municipal health organisations should be improved and strengthened.

(b) Byelaws dealing with health, housing and sanitation should be revised and brought up to date.

(c) Health officers should see that all byelaws are impartially and vigorously applied.

(d) Applications for permission to erect new buildings or to alter existing ones should be closely scrutinised in order to ensure that the grant of permission will not result in increased congestion.

(e) Plans should be prepared for the extension and improvement of areas set apart for housing schemes.

Workmen's Compensation—The Workmen's Compensation Act should now be extended to cover as completely as possible the workers in organised industry, whether their occupations are hazardous or not and there should be a gradual extension to workers in less organised employment, beginning with those who are subject to most risk.

The following classes of workmen should now be included—

(a) Workmen employed in factories using power and employing not less than 10 persons, and in factories not using power employing not less than 50 persons.

(b) Workmen in all mines except open quarries in which less than 50 persons are employed and no explosives are used.

(c) All workmen employed in docks.

(d) All workmen employed in work on oilfields.

(e) Seamen on Indian registered ships of not less than 50 tons and on all inland vessels propelled by steam or motor engines and persons employed on the more important public ferries not so propelled.

(f) Workmen employed on Government plantations and on tea, coffee or rubber plantations employing not less than 50 persons.

(g) Workmen employed in the operation of mechanically propelled vehicles which are maintained for the transport of passengers or for commercial purposes.

(h) Workmen engaged in the construction, maintenance or demolition of canals, sewers, public roads, tunnels, aerial rope-ways and pipe lines, and of dams, embankments or excavations 20 or more feet in height, and of all permanent bridges.

(i) Workmen engaged in building work as in the existing clause, but the reference in this clause to industrial and commercial purposes should be omitted.

(j) Workmen employed in connection with the generation and distribution of electrical energy.

The question of the inclusion of persons employed by the larger agricultural employers and of those employed in reserve forests deserves examination.

(a) Steps should be taken to insure that the agreement to pay compensation in

accordance with the Indian Act is obligatory on all shipowners engaging Indian seamen and that dependents are capable of enforcing this agreement.

(b) The possibilities of giving Indian seamen the right to compensation whilst serving on ships registered outside India should be further explored by the Government of India and the Home Office. Special attention should be given to the possibility of extending the Act to Indian seamen whilst serving on all ships within India's territorial waters and on British ships engaged in the coastal trade of India.

The limitation of the benefits of the Act to workmen in receipt of not more than Rs 300 a month should be generally applied and the exception relating to the armed forces of the Crown should be modified, if this is necessary, in order to include persons who are genuinely industrial workers.

Widowed sisters and widowed daughters should be added to the list of dependents.

For adults in receipt of not more than Rs 30 a month, payments for temporary disablement should be based on two thirds of wages and for minors on the full wage rate. The scale should be subject to a minimum of Rs 5 for each half monthly payment, but the rate of compensation should not exceed the rate of wages. No person receiving more than Rs 30 a month should receive less compensation than he would have got if his wages had been Rs 30.

The minimum compensation for death in the case of adults should be Rs 600 and for complete permanent disablement Rs 840. The minimum for partial disablement should be correspondingly raised.

The maximum half-monthly payment should be raised from Rs 15 to Rs 30 and the present maxima for death and permanent disablement should be abolished.

The waiting period should be reduced from ten days to seven.

The exceptions in the second proviso to section 3 (1) should not apply where death or a permanent loss of 50 per cent or more of earning capacity result from the accident.

The following additions should be made to Schedule III (List of occupational diseases)—

(i) Poisoning by benzene and its homologues or sequelae, and

(ii) Chronic ulceration or its sequelae.

The administration of the Act should be entrusted, as far as possible, to specially qualified commissioners (not necessarily a whole-time officer), and there should be at least one such officer in every major province. The appointment should not be linked with one in which transfers are frequent and it should be possible to appoint more than one commissioner for the same area.

Pamphlets summarising the provisions of the Workmen's Compensation Act should be made available to workmen and, if the Act is substantially amended, steps should be taken to diffuse information of the amended law.

(a) Notice to the Commissioner should be compulsory in the case of all fatal accidents occurring to employees while they are on the employers' premises or while they are on duty elsewhere.

(b) The Commissioner should have the power to call upon the employer to show cause why he should not deposit compensation and to inform the dependants that it is open to them to make a claim

Trade Unions

Every employers' organisation should set up a special committee for the purpose of giving continuous consideration to the improvement of the well-being and efficiency of the workers in establishments controlled by its members

"Recognition" should mean that a union has the right to negotiate with the employer in respect of matters affecting either the common or individual interest of its members

The fact that a union consists only of a minority of employees or the existence of rival unions are not sufficient grounds for refusing recognition

Government should take the lead, in the case of their industrial employees, in a making recognition of unions easy and in encouraging them to secure registration

Union leaders should endeavour to give as many members as possible some share in the work of the union

(a) Trade union organisers should endeavour to find suitable men within the union to act as officials and should train them for the position

(b) The training should commence before the selected man leaves his employment and he should be assisted to improve his general education

The Trade Unions Act should be re examined in not more than three years' time, all limitations imposed on the activities of registered unions and their officers and members should be re-considered so as to ensure that the conditions attached to registration are not such as to prevent any well conducted *bona fide* union from applying for registration

All unions should be able to secure free of charge the conduct of their audit by officials of Government. The reports of the official auditor on trade union audits and investigations should be made available for the public as well as for the union

Section 22 of the Trade Unions Act should be amended so as to provide that ordinarily not less than two thirds of the officers of a registered trade union shall be actually engaged or employed in an industry with which the union is concerned

A registered trade union should not be precluded from the initiating and conducting co-operative credit or supply societies

Industrial Disputes

The Employers and Workmen (Disputes) Act of 1860 should be repealed

Works committees —

(a) Where there is a trade union, the employer should seek its collaboration and co-operation in the establishment and working of works committees which should not be regarded or used as rivals to its influence

(b) The workers' representatives should have facilities for separate as well as for joint meetings, and such meetings should ordinarily count as working time

(c) The range of subjects should be as wide as possible

(d) The management must be in sympathy with the idea and determined to make the committee a success. The services of a labour officer, where one exists, should be utilised in the working of the committee but he should not act as a spokesman of employers

In many centres the organisation of joint machinery would go far to develop a sense of responsibility in trade unions. The organisation should include not only some joint committee or council within the individual establishment but also a larger body of representatives of both sides of the industry in the centre concerned

Some statutory machinery will be permanently required to deal with trade disputes and it will be necessary to consider the form which such machinery should take before the Trade Disputes Act expires in 1934

In the remaining period for which the present Act will be in operation, Governments should lose no opportunity of utilising their power to appoint Boards or Courts when they believe that this section will serve some useful purpose

The question of providing means for the impartial examination of disputes in public utility services should be considered.

The possibility of establishing permanent courts in place of *ad hoc* tribunals under the Act should be examined

Section 13 of the Trade Disputes Act should be amended so as to provide that no prosecution or suit shall be maintainable on account of any breach of the section or any damage caused thereby, except with the previous sanction of the Government which appointed the tribunal

Every provincial Government should have an officer or officers whose duty it would be to undertake the work of conciliation and to bring the parties privately to agreement

Recruitment for Assam

The power conferred by Section 3 of the Assam Labour and Emigration Act (Act VI of 1901) to prohibit recruitment for Assam in particular localities should be withdrawn immediately and no barrier should be set up to prevent free movement of labour from one part of India to another

The Assam Labour and Emigration Act should be repealed and a new measure should be enacted in its place

Where control is required, it should be exercised over the forwarding of recruits to the Assam plantations. All special restrictions on the agencies for obtaining recruits for Assam should be withdrawn

The new Act should provide—

(a) That no assisted emigrant from controlled areas should be forwarded to the Assam tea gardens except through a depot maintained by the industry or suitable groups of employers and approved by the local Government or by such authority as it may appoint

(b) That local agents should maintain registers of recruits in the prescribed form

(c) That minors unaccompanied by a parent or guardian should not be forwarded, and

(d) That the depot and its register should be open to inspection by officers appointed by the provincial Government for this purpose

The Assam Labour Board should be abolished

(a) The Government of India should appoint a Protector of Immigrants in Assam to look after the interest of emigrants from other provinces who have not yet settled in Assam. This officer should also be entrusted with responsibility for emigrants during the journey.

(b) The cost of the Protector of Immigrants and his staff should be defrayed by a cess on emigrants.

(c) The tea industry should give publicity to the advantages which the plantations have to offer to the inhabitants of other provinces.

(d) The emigrants should be encouraged to maintain touch with his own people by means of correspondence.

Repatriation

Every future assisted emigrant to an Assam tea garden, whether from an area of free or controlled recruiting should have the right after the first three years to be repatriated at his employer's expense.

The Protector should be empowered to repatriate a garden worker, at the expense of his employer, within the one year of his arrival in Assam if this is necessary on the ground of health, the unsuitability of the work to his capacity, unjust treatment by the employer or for other sufficient reason, and at any time before the expiry of three years if he is satisfied that the immigrant is unable with due diligence to secure a normal wage and desires to be repatriated.

A worker dismissed before the expiry of the three years should be entitled to repatriation at the expense of the employer dismissing him, unless it is established that the dismissal was due to wilful misconduct.

Wages on Plantations.

Wage fixing machinery in the Assam plantations—

(a) The establishment of statutory wage-fixing machinery in the Assam plantations, if practicable, is desirable, and, there are reasons for believing that if proper methods are adopted, a practicable scheme can be devised.

(b) Before legislation is undertaken, an enquiry should be instituted as to the most suitable form of machinery, the actual rates paid and the variations in these rates between district and district and between garden and garden. The tea industry should be invited to co-operate in this enquiry.

Health and Welfare in Plantations

On all plantations managers should be required to maintain birth and death registers, and by inspection Government should ensure that these are reasonably accurate.

Where possible, garden managers should make a more generous allocation to workers of land for grazing and for vegetable cultivation.

A more active policy should be adopted by all plantation managements in regard to anti-malarial work carried out under skilled advice and supervision.

Wherever conditions are suitable, tube wells should be constructed. Where possible, piped water supplies should be provided.

Workers' houses should be suitably spaced out and not built back to back. They should be in blocks of two rooms, and wherever possible on high ground.

Women doctors should be employed by each medical group organisation for confinements in hospital, for the training and supervision of midwives and dais, and for child welfare work.

The practice of giving free food to indoor patients should be adopted in all plantation hospitals.

Maternity benefits should be provided for by legislation.

The practice of feeding non-working children without charge should be generally adopted.

Plantation managers should assist in organising suitable recreation for their workers and should provide playing fields for general recreational purposes.

When young children become orphaned and have no relations settled on the estate, the district magistrate or some suitable authority should invariably be approached to get into touch with any existing relations and, if a desire is expressed for the return of the child, arrangements should be made for repatriation.

The employment either directly or with their parents, of children before the age of 10 years should be prohibited by law.

Boards of Health and Welfare should be established under statute for convenient planting areas.

Burma and India.

The general recommendations in other parts of the Report are intended for Burma as well as India and are designed to meet the needs of Burmese labour in Burma as of Indian labour in India.

The Protector of Immigrants should work in co-operation with the Government of Burma but should be solely responsible to the Government of India.

Government should approach employers with a view to securing direct payment of wages without legislation. If this fails, the question of legislation for direct payment in certain sections of industry should be taken up.

If any other industry finds it necessary to recruit in India, it should repatriate the recruited worker as soon as it ceases to pay him his normal wages.

A policy of decasualisation for dock labour in Rangoon is urgently needed.

For a sound immigration policy, further statistical information regarding immigrant labour is urgently required. Accurate figures should be obtained bearing on the extent of employment available at different seasons and the movements of immigrant labour in search of work.

Whatever steps are taken to regulate immigration, satisfactory conditions of life and work should be maintained for the immigrant populations.

Government employers and all concerned should accept a much greater measure of responsibility for the immigrant.

Statistics and Administration

Statistics and Intelligence—An examination should be made of the causes of delay in the

publication of labour statistics with a view to devising a method which will ensure more prompt publication

Legislation should be adopted, preferably by the Central Legislature, enabling the competent authority to collect information from employers regarding the remuneration, attendance and living conditions (including housing) of industrial labour, from merchants regarding prices, from money-lenders regarding loans to workers and from landlords regarding rentals

Whenever possible, investigators engaged on family budget enquiries should receive a course of training with the Bombay Labour Office or some other office which has conducted a successful enquiry

The possibility of making enquiries and investigation into labour conditions an obligatory part of courses in economics should be considered by the university authorities in all provinces

The possibilities of experimental work with a view to discovering means of improving output and efficiency should be considered by large individual employers and by associations of employers

A labour bureau on a scale not smaller than that represented by the Bombay Labour Office should be established in Bengal.

Thorough family budget enquiries should be undertaken in Delhi, Madras, Cawnpore, Jamshedpur and a centre in the Jharla coalfields

Administration—(a) A Labour Commissioner responsible for the administration of all labour subjects should be appointed in every province except Assam

(b) He should be a selected officer and should hold the appointment for a comparatively long period

(c) He should be responsible for the publication of labour statistics, should have the right to enter all industrial establishments, should be generally accessible both to employers and labour and should act as a conciliation officer

(d) The headquarters of the Labour Commissioner should be in the chief industrial centre of the province

(e) In provinces where part-time appointments have to be made, a combination of the functions of the Director of Industries and of the Labour Commissioner should be avoided

A Labour Commissioner should be appointed for the Central Government

Labour and the Constitution

Legislative powers in respect of labour should continue with the Central Legislature and the provincial legislatures should also have power to legislate. Labour legislation undertaken in the provinces should not be allowed to impair or infringe the legislation of the centre, or its administration

If special constituencies are to remain a feature of the Indian constitution, labour should be given adequate representation in the Central and provincial legislatures

The method which is most likely to be effective in securing the best representatives of labour

is that of election by registered trade unions. A special tribunal should be set up in each province to determine before election the weight which should be given to each registered trade union

INDUSTRIAL COUNCIL

(a) In the frame work of the future constitution, provision should be made for an organisation (the Industrial Council), which would enable representatives of employers, of labour and of Government to meet regularly in conference to discuss labour measures and labour policy

(b) The Council should be sufficiently representative but not too large. The representatives of labour should be elected by registered trade unions, and where there are no registered trade unions of any size they should be nominated by Government. The employers' representatives should also be elected by associations of employers whose voting power should be approximately proportionate to the number of workers which their members employ

(c) The Council should meet annually and its president should be elected at each annual session. The Secretary of the Council should be a permanent official responsible to it for the current business throughout the year

(d) Functions of the Council

(i) to examine proposals for labour legislation referred to it and also to initiate such proposals

(ii) to promote a spirit of co-operation and understanding among those concerned with labour policy and to provide an opportunity for an interchange of information regarding experiments in labour matters

(iii) to advise the Central and provincial Governments on the framing of rules and regulations

(iv) to advise regarding the collection of labour statistics and the co-ordination and development of economic research

If labour legislation is central, the authority finally responsible for such legislation must be the Central Legislature. If labour legislation is to be decentralised, some co-ordinating body will be necessary. The decisions of the Council could not be given mandatory power, but in certain circumstances it might be made obligatory for provincial Governments within a specified time to submit proposals for legislation to their respective legislatures for a decision as to their adoption or rejection

Where there is the danger of establishments being transferred to Indian States in order to escape regulation, an effort should be made to obtain the co-operation of the adjoining States

The possibility of making labour legislation both a federal and a provincial subject should be considered

If federal legislation is not practicable, efforts should be directed to securing that, as early as possible, the whole of India participates in making progress in labour matters

Industrial Workers in India

In 1922 India obtained recognition by the League of Nations as one of the eight chief industrial States in the world. The grounds on which this claim was put forward in the Memorandum prepared by the India Office which gave the following figures to illustrate the industrial importance of the country —

25,000,000 in agricultural work (excluding peasant proprietors), 141,000 maritime workers, 15,000,000 in other work, and only to that for the United Kingdom, over 20,000,000 workers in industries, including cotton, industries, mines and

transport, railway mileage in excess of that in every country except the United States."

It is impossible to say how far and to what extent the figures given above hold good to-day. The Railways of India alone offer employment to very nearly a million workers. The number of workers employed in Plantations according to the 1921 Census amounted to over three quarters of a million. The latest figures for the numbers employed in factories are those available in the All-India Report for Factories for 1929, which are reproduced in Summary Form in the tables given below —

Growth of Factories

| Year | Number of Factories | Average Daily Number of Persons Employed |
|------|---------------------|--|
| 1922 | 5,144 | 1,361,002 |
| 1923 | 5,985 | 1,409,173 |
| 1924 | 6,406 | 1,455,592 |
| 1925 | 6,926 | 1,494,958 |
| 1926 | 7,251 | 1,518,391 |
| 1927 | 7,515 | 1,533,382 |
| 1928 | 7,861 | 1,520,315 |
| 1929 | 8,129 | 1,553,169 |

Age and Sex Distribution of Factory Labour

| Year | Men | Women | Children | Total |
|------|-----------|---------|----------|-----------|
| 1922 | 1,086,457 | 206,887 | 67,658 | 1,361,002 |
| 1923 | 1,113,508 | 221,045 | 74,620 | 1,409,173 |
| 1924 | 1,147,729 | 235,332 | 72,531 | 1,455,592 |
| 1925 | 1,178,719 | 247,514 | 68,725 | 1,494,958 |
| 1926 | 1,208,628 | 249,669 | 60,094 | 1,518,391 |
| 1927 | 1,222,662 | 253,158 | 57,562 | 1,533,382 |
| 1928 | 1,216,471 | 252,933 | 50,911 | 1,520,315 |
| 1929 | 1,219,165 | 257,161 | 46,843 | 1,553,169 |

Statistics for 1929

| Province | Number of Factories | Average Daily Number of Persons Employed |
|------------------------------|---------------------|--|
| Madras | 1,530 | 143,217 |
| Bombay | 1,543 | 366,029 |
| Bengal | 1,393 | 589,860 |
| United Provinces | 310 | 91,188 |
| Punjab | 521 | 49,875 |
| Burma | 978 | 98,077 |
| Bihar and Orissa | 284 | 68,726 |
| Central Provinces and Berar | 769 | 69,291 |
| Assam | 610 | 45,884 |
| North West Frontier Province | 29 | 1,207 |
| Baluchistan | 6 | 1,255 |
| Ajmer-Merwara | 38 | 15,456 |
| Delhi | 55 | 10,109 |
| Bangalore and Coorg | 27 | 2,095 |
| Total | 8,129 | 1,553,169 |

MIGRATION.

The industrial centres in India are not able to supply the necessary labour that is required for industrial undertakings and there is consequently a considerable amount of migration from other parts of India to such centres. The extent of this migration is given in detail in Chapter III, Vol. I, Report of the Census of India for 1921, as follows—"The labour reserves are found chiefly among the lower classes of the centre and south of the country. The centre supplies the tea plantations and mining industries of the Eastern provinces, the south meets the southern industrial demand, and the bulk of the Burmah and overseas demand, while the more technical industries in the cities of the Western provinces are supplied chiefly from the neighbouring agricultural tracts."

Among those provinces and States which attract a larger number of emigrants from other provinces and States are Assam, Bengal, Burma, Bombay, Mysore, Central Provinces and Berar, and Punjab and Delhi. According to the 1921 Census there were nearly a million and a quarter immigrants in Assam as against 75,000 emigrants. In Bengal there were more than a million and three-fourths immigrants as against about a quarter of a million emigrants. Bombay gained a little over a million but sent out 568,000 to the other provinces. The population figures for Central Provinces and Berar and Punjab and Delhi shows a number of immigrants amounting to more than 600,000 in each case. The number of emigrants from the Central Provinces and Berar amounted to a little more than 400,000 and from Punjab and Delhi to half a million. In all these cases industrial and other employers were not able to recruit their requirements from their own territories. The position, however, is vastly different in the case of Bihar and Orissa, the United Provinces, Madras, Rajputana and to a small extent Hyderabad (Deccan). The number of emigrants from Bihar and Orissa amounted to nearly two million as against 387,000 immigrants with a net loss of over a million and a half to the province. In the case of the United Provinces there were 1,400,000 emigrants as against a little over 400,000 immigrants with a net loss of nearly a million. Madras lost nearly a quarter of a million and Rajputana 625,000.

Within the Provinces—It is neither necessary nor feasible to deal with the various streams of migration between district and district of the same province or within a district. These movements vary according to times and seasons, but it may be useful to show the extent to which and the source from which some of the more important industrial centres draw their labour force.

In Bombay, according to the Census Report for the year 1921 the percentage of the total population which had actually been born in the City has steadily declined at each census. In 1872 the percentage of the persons born in Bombay to total population was 31.1, in 1891

25, in 1911 10.6 and in 1921, 16. An important point, however, to remember in considering these figures is the fact that, whenever possible, workmen send their wives to their native places for purposes of confinement. Many of those returned in the Census as having been born outside the city are not really fresh immigrants in the strictest sense of the term because they are the off-spring of the parents already residing in the city. According to the figures given in the 1921 Census Report for the numbers of immigrants into Bombay city it is seen that 235,566 or 20 per cent of a total population of 1,175,914 came from the Ratnagiri District. Poona district supplied 89,231, Kathiawar 72,435 and Satara 65,953. Among the provinces which contribute to the population of Bombay City the United Provinces comes first with 70,911. The sex ratio is only 525 females to 1,000 males as compared with a ratio in the Presidency as a whole of 919 females to 1,000 males. The figure of 525 for Bombay City may be compared with the big non industrial city of Poona where the figure is 912. In a recent enquiry made by the Labour Office into the length of service of mill workers which covered 1,400 millhands it was found that not one of them had been born in Bombay City, 63 per cent were born in the Konkan and 27 per cent in the Deccan, the remainder coming from different parts of the country.

Certain figures regarding birthplaces of the workers in Ahmedabad were obtained during the Family Budget Investigation conducted there by the Labour Office in the year 1926. These figures together with those obtained at the Census of 1921 and enquiries made from Mill Officers and the Labour Union officials at Ahmedabad show that the cotton mill workers of Ahmedabad come from different places in the proportion of 20 per cent from the City itself, 25 per cent from the Ahmedabad district excluding the City, 20 per cent from Baroda State, 10 per cent from Rajputana, 10 per cent from the Gujarat Division excluding the above, 5 per cent each from Kathiawar, the Deccan and the Konkan combined, and from other places including the United Provinces, the Central Provinces, Madras, etc.

In Sholapur the labour force is mainly local and it is immigrant to a very small extent. The figures collected as a result of the Family Budget Enquiry conducted by the Labour Office of the Government of Bombay in that centre in the year 1925 show that 60 per cent of cotton mill workers in the City were born in Sholapur, 32 per cent in the Deccan and about 8 per cent in the rest of India.

Calcutta, like Bombay, relies on imported labour. But the imported labour there does not come from the same province as in Bombay but from other provinces. This is mainly due to three reasons. Firstly, the fertility of the land in Bengal, secondly the immobility of labour and lastly the aversion of the average Bengalee to factory work.

1. Pattern of movement of population

In the 24 years of the last century appeared the first signs of the great exodus of labour from the villages to the towns. It was not until the 1880s that it became a permanent feature. The first step was the migration of labour from the villages to the towns. This was followed by the migration of labour from the towns to the industrial centres. The first step was the migration of labour from the villages to the towns. This was followed by the migration of labour from the towns to the industrial centres.

Lahore, the principal industrial town of the United Provinces, is in a very curious position. It not only imports labour for the textile industries which are to be found there, but also exports it to surrounding districts and to other provinces. Any shortage of labour that it experiences is satisfied from the densely populated districts which surround the city.

The mobility of Indian labour is of considerable advantage to the agricultural population as it helps to relieve the increasing pressure on the land. In India the movement of labour

In the first three years the emigrants invariably return to their villages. In the fourth and fifth years the majority of workers return for a short visit after two or three years, but there is a considerable minority which has settled down at the industrial centres in which they have worked. This is however, overlook India that owing to the home loving character of the Indian worker he seldom or never loses his contact with his village home. The number of workmen of rural origin who have severed their connexion with their village and with agriculture is very small and is usually confined to such skilled workers as have left their homes permanently to settle in the important centres of factory industry. As the large majority of workers return home annually or biennially there is little disturbance of family life, except in the case of Assam where the system of recruitment now in force directly encourages the importation of families, and women are almost as numerous as men in the residential labour population on the tea estates.

RECRUITMENT OF LABOUR

The methods adopted for the recruitment of labour in India have received general condemnation even from employers and the Whitley Commission has much to say on the subject

Recruitment except in the case of special apprentices and higher paid workers employed on railways, is effected either through Sardars (Recruiters) or Contractors, or direct at the mill or factory gates. The difficulties in connexion with recruitment are due (1) to the want of a stable labour force at any particular town or centre, (2) to the general illiteracy of the Indian labourer, and (3) to the inherent attachment of the worker taking up industrial employment to his village life and home

The contractor is sent out to overcome the innate conservatism of the Indian peasant. He is helped in his work by the poverty and indebtedness of the peasant and also by occasional bad harvests, but in addition he not infrequently indulges in fraud and misrepresentation by painting a rosy picture of the future that awaits the peasant in a town with its crowded bazaars and other amusements, which are absent in the village. The essence of the system is the payment of an advance to the prospective labourer in order to enable him to free himself from his pecuniary difficulties. The contractor retains some form of control over his recruits and takes good care to recover the amount of the advance together with the interest, which is generally calculated at an exorbitant rate. Generally, the employers do not deal directly with the labourers recruited by a contractor. The latter is paid a lump sum from which he pays his men and retains a portion for himself. In the Central Provinces, however, it is reported that labour is actually purchased from private contractors at so much per head. The system of recruitment by contractors is most in use in Burma owing to the scarcity of labour in that province and the necessity of recruitment from distant places.

The method of recruitment through Sardars is also dependent on the payment of advances, which however are made at the cost of the employer. The Sardar is an operative already at work in the mill or plantation and is sent out to recruit labour from among his relations, acquaintances or neighbours. He is drawn therefore from the same class as the recruits themselves and can therefore be relied on to deal more fairly with them. Another advantage of this system of recruitment is that the men recruited are insured against unemployment and find work waiting for them at their destination. On the other hand, it does not infrequently happen especially in the Tea Gardens in Assam that the Sardar recruits persons who are lured away from their homes by prospects of a bright future and who, on arrival find that conditions of work and wages are not so bright as they imagined. It is, however, only in plantations that this form of recruitment has been used to any appreciable extent.

The recruitment of labour at the mill-gate or at the surface of mines is the form of recruitment which is gradually gaining in importance over the other two methods. The news of the very

much higher rates of wages paid in towns (which to the villager sounds fabulous as he has no idea of the higher cost of living) spreads throughout the countryside and draws large crowds of would-be workers. They are to be found at convenient gathering places on the thoroughfares waiting to be picked up for employment. The older hands also return from their village with groups of friends, relations and neighbours who come in the hope of finding employment in the mills. But the ignorance, simplicity and poverty of the Indian peasant render his exploitation an easy matter. The employer does not recruit himself the men required for his establishment but holds the overseer, jobber or mukadam responsible for the adequate supply of labour in the department. The latter takes the place of the contractor and exacts bribes from the new recruits. He also acts as a money-lender and thereby reaps a double harvest from the needy labourer. It would appear therefore that education and organisation are the only means by which Indian workers can escape from the clutches of intermediaries who like harpies are ever ready to prey on them.

In the coalfields in Bihar and Orissa unskilled labour is recruited by means of Sardars. The Sardar visits villages and brings the labour with him, and the labour brought by him forms his gang. He has to pay the labour *buckheesh*, *khora*, and travelling expenses, and for this purpose he frequently receives advances either from the contractor or from the Company concerned. At the Bhowra colliery advances varying from Rs 3 to Rs 10 are paid to the recruits in addition to their travelling allowances and food. Such advances are seldom recovered and never if the gang maintains good attendance at work. The Sardar obtains remuneration for his services in various ways. Sometimes he is paid a commission and a salary, but generally he is paid a certain amount on each ton of coal raised by miners working in his gang. Independent recruiters are paid at 9 pies per tub raised. In the Central Provinces the recruiters or mukadams as they are called receive 3 pies per head per week from the individual labourers whom they recruit and wages from the employers.

The Tata Iron and Steel Company at Jamshedpur maintain an Employment Bureau where skilled and unskilled workers are registered and employed. Applicants for work assemble in a yard and daily requirements are selected by the officer in charge. No outside recruitment is done in the literal sense of the word, but in the event of special qualifications being required and no applicants being available, the post is advertised in a few leading newspapers.

The methods adopted by different Indian railways for the recruitment of unskilled labour are generally the same as those which obtain in other industries. In the case of workshop men, a trade test is generally given and in every case a medical examination has to be gone through. Special apprentices for the higher grades are engaged by all Railways. The terms and conditions attached to apprenticeship in most cases are similar.

Recruitment for Assam—It has already been stated that the Assam tea industry is the only industry which is controlled in its recruitment of Indian Labour. Other industries, and even the tea industry in the Duars, Darjeeling and Madras Presidency are free from Governmental control. There is a considerable body of opinion in favour of freeing the Assam tea industry from control, but the Indian Tea Association is not only not in favour of this but has definitely urged that Government control should continue. The Association contend that if recruiting were free, abuses would arise as they did in the past from the competitive spending of money to secure labour. There appears little doubt that if control were removed, all the abuses which were associated with the *Arbati* system of recruitment would be revived.

The present system of recruitment is controlled by Act VI of 1901 called the Assam Labour and Immigration Act 1901, as amended by Act XI of 1903, Act VIII of 1915, Act XI of 1915, Act XXXVIII of 1920 (Devolution Act) and Act XXXI of 1927. The Act extends to the Provinces of Bengal, Bihar and Orissa, United Provinces, Central Provinces, Madras and Assam. In the Bombay Presidency Act No VI of 1901 is not enforced. There the Government of Bombay have allowed recruitment provided the emigrants are produced before a Magistrate. The most important provision of the Amending Act of 1915 is the abolition of the system of recruitment by contractors, and their recruiters, commonly known as *Arbatis*. In all recruiting areas, where the provisions of Act VI of 1901 are in operation, except the local areas in which recruitment is prohibited by notification under section 3, recruitment is carried out only through the medium of garden sirdars, under the provisions of Chapter IV, working under a local agent duly licensed under section 61 of the Act. The only recruiter now recognised is the sirdar who must himself engage the coolies. Any arrangement for the direct supply of coolies to a tea estate by a contractor or for the supply to sirdars of coolies collected through the agency of a contractor or *arbati* would be illegal and would render every person who is a party to such an arrangement liable to prosecution and punishment under section 164 of the Act. Even an

employer cannot himself legally engage labour in a recruiting district, he must do so through the agency of his garden sirdars. In the Bombay Presidency, agents other than garden sirdars are allowed.

Latest Statistics—The Annual Report on the working of the Assam Labour Board during the year ending the 30th June 1931 has been published. The Report shows that the total number of persons recruited during the year was 50,555 as against 58,150 in the previous year. The average of advances to garden sirdars for each adult recruit fell in 24 and rose in 9 agencies as compared with the preceding year. No cases occurred in which the local Agents were found to be extravagant or indiscreet in the matter of giving advances to sirdars. The total number of garden sirdars prosecuted for offences in connexion with recruitment was 69 as compared with 107 in the previous year. The rate of cess on garden sirdars and emigrants was one Rupee per head during 1929-30. The actual receipts from the cess amounted to Rs 69,119.

Reforms in the Bombay Cotton Mill Industry—In a circular letter dated the 8th January 1930 the Bombay Millowners' Association have instructed all mills affiliated to the Association to introduce, wherever possible, a policy of direct recruitment of labour instead of the existing practice of recruitment through jobbers. The introduction of a system for providing Discharge Certificates to operatives leaving service has also been recommended. The certificates are to contain a record of the service of the operative concerned and in all cases of recruitment, the men presenting themselves for employment will be asked to produce their Discharge Certificates. Notices are to be posted at all mills stating (a) that all persons will be engaged by the Manager or by the head of the department concerned, and (b) that any heads of departments, assistants or jobbers accepting bribes from the workpeople will be instantly dismissed.

Several groups of mills are considering the possibility of employing labour officers who will be responsible for the direct recruitment of labour and for welfare work generally.

ABSENTEEISM AND LABOUR TURNOVER

Though there is meagre statistical information available on this subject, it may be stated with a fair amount of accuracy that the Indian worker is more habituated to absent himself from work than his prototype in other countries. He has yet to get himself thoroughly adapted to the industrial environment in which he finds himself. The reasons for his absence are not always connected with his love of rest but in many cases absence is due to causes beyond his control such as sickness, domestic difficulties, etc. The effects which poor and indifferent housing have on his work have been dealt with in the Section on Industrial Housing.

The Factory Labour Commission of 1907 made an inquiry into the number of absent workers and came to the conclusion that the average worker took 2 days off every month and a further holiday of from 3 to 7 weeks every year. In addition, he receives the weekly

holiday and from 4 to 10 Indian holidays during the year. The question of absenteeism received the attention of the Indian Tariff Board (Cotton Textile Industry) and it was urged in evidence before them that the efficiency of labour in Bombay was greatly reduced by the high percentage of absenteeism among the operatives. The Board came to the conclusion that Ahmedabad had a great advantage over Bombay in the matter of absenteeism, both in respect of a low rate throughout the year and also of the absence of the wide seasonal variations which were apparent in other centres of the textile industry. They therefore recommended that in order to minimise the effect of absenteeism there should be a general adoption of a system already in force in a few mills in Bombay under which a certain number of spare hands are entertained in each department, except the weaving. The Board "The percentage of

extra men in each department is not necessarily the same, but we were given to understand that spread over the whole of the mill, it usually worked out at about 10 per cent."

The Labour Office of the Government of Bombay publishes in the *Labour Gazette* every month statistics of absenteeism in the textile mills at the important centres of the cotton

industry in the Bombay Presidency and in Engineering workshops of the Bombay and Karachi Port Trusts. If figures of absenteeism for each day during any month are examined it is found that they are higher on days immediately following pay day. The following two tables give the figures for percentage absenteeism for the first 11 months of the year 1931

PERCENTAGE ABSENTEEISM IN THE TEXTILE INDUSTRY

| Month | Bombay | Ahmedabad | Sholapur | Broach |
|-----------|--------|-----------|----------|--------|
| January | 10 57 | 4 01 | 15 80 | † |
| February | 9 68 | 4 30 | 10 38 | 6 18 |
| March | 9 24 | 4 76 | 18 30 | 6 15 |
| April | 9 53 | 4 39 | 17 66 | 6 60 |
| May | 9 38 | 4 63 | 18 91 | 8 47 |
| June | 8 98 | 3 97 | 15 12 | 8 04 |
| July | 8 79 | 3 84 | 13 61 | 8 13 |
| August | 8 88 | 4 32 | 20 69 | 10 62 |
| September | 9 33 | 4 40 | 15 00 | 10 69 |
| October | 11 11 | 4 66 | 15 87 | † |
| November | 1 21 | 4 90 | 16 12 | † |

† Information not available

In the Electrical and Mechanical Departments of Railways, absenteeism generally amounts from 10 to 11 per cent. As in cotton mills, absenteeism is greater immediately after pay day. In Railways in Burma, absenteeism is lower and roughly amounts to 2.50 per cent.

Labour Turnover—A charge is very often levelled against the Indian worker that owing to his migratory character, he changes his place of employment very frequently and that this results in a high rate of labour turnover. There is, however, very little information available regarding the average period of service or the rates of turnover at important industrial centres in India. In the case of the Empress Mills at Nagpur, it has been estimated that since 1908, the average period of continuous service of the employees amounted to 7.89 years. In another cotton mill in the Central Provinces the average duration of employment worked out at about 40 months while in the case of other factories it roughly amounted to about 30 months. Out of a total number of 3,700 workers engaged in the Pench Valley Coal Mines it was found that 1,550 workers were in employment for less than a year, 650 from 1 to 2 years, 700 from 2 to 3 years and 800 workers had more than 3 years' continuous service to their credit. In the manganese mines in the Central Provinces the average duration of employment comes to about 9 to 10 months for the whole of the labour force in any one year. One to two years is on

an average the period of employment of workers in the Tata Iron and Steel Works. The total labour turnover during normal working for the three years 1925, 1926 and 1927, in the same Works amounted to 36.6 per cent, 31.3 per cent and 24.1 per cent respectively. In the Indian Cable and Company in Bihar and Orissa, however, skilled labour has remained practically unchanged during the last five years but the unskilled workers recruited from the aboriginal class had changed to the extent of about 30 per cent annually. In one of the mills at Cawnpore the average period of continuous service amounted to 8.87 years.

The Labour Office conducted a special enquiry into the length of service of cotton mill workers in Bombay City in 1927-28. A sample of 1 in 10 tenements was decided upon and the information was collected on suitable schedules by the Lady Investigators of the Labour Office from the inmates of such tenements who were reported to be cotton mill workers. Only the predominant working class localities were visited for the purposes of the enquiry and the total number of schedules accepted for final tabulation was 1,348.

Of the 1,348 workers, 988 or 73.29 per cent were men and 360 or 26.71 per cent were women.

Nearly 21 per cent of the operatives began work in the mills before the 15th year, 38 per cent between the 15th and the 20th year, 32

per cent between the 20th and the 30th year and the remaining 9 per cent joined the first mill after they had attained the age of 30

Sixty three per cent of the workers were born in the Konkan and 27 per cent in the Deccan while the rest came from different parts of the country. Not a single worker gave his place of origin as Bombay City.

About 48 per cent of the workers covered by the sample continued in the employment of the same mill without change, 34 per cent served in two or three mills and 18 per cent had served in 4 or more mills. The highest number of mills served by an individual was 15. The cause of leaving the mills was "for going to native place" in 26 per cent cases, "low wages and for bettering prospects" in 21 per cent cases, "absence due to illness" in 14 per cent cases and "retrenchment" in 10 per cent cases. Other causes for leaving mills were unsuitable conditions of work, dismissal, strike, resignation, etc.

The approximate period of total service (including the period of non attendance) was reported to be less than 5 years in 37.54 per cent cases, 5 to 10 years in 23.37 per cent cases, 10 to 15

years in 15.89 per cent cases, 15 to 20 years in 9.13 per cent cases and more than 20 years in 14.08 per cent cases. The percentages of workers who had not changed mills was 67 in the case of operatives with less than 5 years' service and 42 for workers with 5 to 10 years' service. In the other service groups, the percentage of operatives working in the same mill varied between 25 and 45.

The actual active service was reported to be less than 5 years in 46.51 per cent cases, 5 to 10 years in 24.26 per cent cases, 10 to 15 years in 13.95 per cent cases and 15 to 20 years in 7.20 per cent cases. In the remaining 8.08 per cent cases the actual service was more than 20 years.

A large number of workers in the age groups 15-20 and 20-25 had served for a period of less than 5 years while the most common period of service in the age group 25-30 was between 5 and 10 years. In the age group 30-35 about 30 per cent of the workers had served for less than 5 years and 19 per cent for a period of 5 to 10 years. Among workers of 35 to 40 years of age, the number of those filling in each of the first five service groups was between 16 and 20 per cent.

LABOUR IN FACTORIES

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1881, as amended in 1891. Under the chief provisions of the amended Act Local Governments were empowered to appoint Inspectors of Factories and Certifying Surgeons to testify as to the age of children. A mid-day stoppage of work was prescribed in all factories, except those worked on an approved system of shifts, and Sunday labour was prohibited subject to certain exceptions. The hours of employment for women were limited to 11, with intervals of rest amounting to at least an hour and a half, their employment between 8 p.m. and 5 a.m. was prohibited, as a general rule, except in factories worked by shifts. The hours of work for children (defined as persons below the age of 14) were limited to 7 and their employment at night-time was forbidden, children below the age of 9 were not to be employed. Provision was made for fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of overcrowding, etc.

The next Factory Act to be passed into law was Act XII of 1911. This Act extended the definition of 'factory' so as to include seasonal factories working for less than 4 months in the year, shortened the hours within which children, and, as a general rule, women might be employed and further restricted the employment of women by night by allowing it only in the case of cotton spinning and pressing factories. It also contained a number of new provisions for securing the health and safety of the operatives, making inspection more effective and securing generally the better administration of the Act. The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. The Act, for the first time, applied a statutory restriction to the hours of employment of adult males by laying down that, subject to certain

exceptions, "no person shall be employed in any textile factory for more than 12 hours in any one day." It also provided in the case of textile factories that no child may be employed for more than six hours in any one day and that (subject to certain exceptions, which were factories worked in accordance with an approved system of shifts) no person may be employed before 5.30 a.m. or after 7 p.m. (the new limits laid down generally for the employment of women and children).

The Acts now in force—The ratification by India of the Conventions adopted by the International Labour Conference held in Washington in 1919 necessitated radical revision of the Indian Factories Act of 1911. This was undertaken during 1921 and the Indian Factories Amendment Act, 1922, introduced a series of important reforms including the adoption of a 60-hours week, the raising of the minimum age of children from 9 to 12, the prohibition of night work for women, the extension of the Act to a large number of small factories, drastic restriction of the exempting provisions, etc. The principal object of the amending Act of 1922 was the removal of a difficulty which had arisen in connection with the law relating to the weekly holiday. The experience gained during the three years which immediately followed the revision of the Act in 1922 indicated that the amending Act had worked smoothly and that the main principles followed in 1922 commanded general acceptance. It was not considered necessary, therefore, to modify any of the main principles of the Act, but several administrative difficulties had arisen in connection with some sections of the Act—one such difficulty relating to Section 21 which provided for intervals. Local Governments were asked in June 1923 to consider a possible solution of the difficulty and to bring to the notice of the Government of India any difficulties which might have arisen in connection with other provisions. On receipt of their replies, a conference of Chief

Labour in Factories

Inspectors of Factories was convened. The conference recommended a number of alterations designed by allowing greater elasticity in some directions and by increasing control in others to make for smoother working. The Factories Amendment Act of 1926 was, therefore, passed on the recommendations of that conference and on the opinions received from the Local Governments. The more important alterations effected include the widening of the definition of "factories" so as to bring within the control of the Act such establishments as Electrical Generating Stations, water works, etc. the prevention of the issue of age certificates by Certifying Surgeons to children who are not fit for employment, the prevention of cleaning machinery in motion, even by men in cases where Local Governments were of opinion that the work is attended by danger to the operatives a clearer definition of the periods prescribed for intervals of rest, and, while still preventing the employment of children in two factories on the same day, the permitting of women to work in two factories on the same day provided that the limits for hours of work were not exceeded.

Hours of Work—The Indian Factories Act prescribes a daily as well as a weekly limit to the hours of work in factories and provides for rest intervals and for a weekly holiday. Section 28 of the Act provides that no person shall be employed in any factory for more than 11 hours in any one day, and Section 27 provides that no person shall be employed in a factory for more than 60 hours in any one week. Section 21 of the Act makes it obligatory for the occupier of a factory to provide for each person employed a rest period of at least one hour at intervals not exceeding 6 hours, or at the request of the employees concerned two rest periods of half an hour each, at intervals not exceeding 5 hours, the total duration of the periods of rest on that day not being less than one hour for each period of 6 hours worked generally. With the previous sanction of the Local Government and at the request of the employees concerned and at interval may also be reduced to half an hour for each male person provided that he is not employed for more than 8½ hours on each working day and is not required to work for more than five hours continuously. For children, Section 23 (c) provides that no child shall be employed in a factory for more than 6 hours in any one day. Section 21 (b) provides that for each child working more than 5½ hours in any one day a period of rest of not less than half an hour shall be given and the period of rest has to be so fixed that no child shall be required to work continuously for more than 4 hours. Sections 23 (b) and 24 (a) further provide that no child or woman may be employed in any factory before half past five o'clock in the morning or after 7 o'clock in the evening. Under Section 25 a child cannot be employed in two factories on the same day but adults may be so employed in such circumstances as may be prescribed. Under the provisions of Section 26 every Manager of a factory has to fix specified hours for the employment of each person employed in such factory and no person is allowed to be employed except during such specified hours. The Governments of Madras, Bombay, the United Provinces, the Punjab and the Central Provinces are the only Local Governments which have prescribed the circumstances under which adults may be employed in more than one factory on the same day. The rule framed by these Local Governments invests the Inspector of Factories with the power to sanction such employment if he is satisfied that the adults concerned are not employed for more than 10 hours on any one day and that they received the weekly holiday prescribed by Section 22 of the Act. In addition to the notice of hours of work for particular period, every factory has to maintain a register of all persons employed in a factory in the form prescribed by the Local Government showing their hours of work and the nature of their respective employment.

The latest statistics available in connection with the administration of the Indian Factories Act are for 1929. The data published in connection with the normal weekly hours of work show that for the whole of British India men were required to work for more than 54 hours a week in 4,791 factories, above 48 and not above 54 in 1,008 factories, and not above 48 hours per week in 2,164 factories. In the case of those factories employing women 3,067 required female workers to work for more than 54 hours per week whereas 1,723 fixed their hours at below 48 but not above 54. Out of the 314 factories employing children 452 had hours below 30 for children and 802 above 30 but not above 36—the maximum permitted by the Act. The details in connection with the various provinces will be found in summary form in the All India Factories Reports or in a more detailed form in the Provincial Reports themselves. The statistics of factories do not show the hours of work in particular industries.

All railway workshops come under the Indian Factories Act. Hours of work in railway workshops in all provinces are generally average 8 per day and 48 per week. In most cases the hours are so arranged as to provide for a half day off on Saturday provided that a total of 48 hours is worked during any particular week.

Employment of Children—By the Amendment Act of 1926 the maximum age of children was raised from 14 to 15 years and the minimum age from 9 to 12. Section 23 of the Act provides that no child shall be employed in any factory unless he is in possession of a certificate granted by a Certifying Surgeon showing that he is not less than 12 years of age and is fit for employment in a factory and while at work carries either the certificate itself or a token giving reference to such certificate. Further, no child is allowed to be employed in any factory before half past five o'clock in the morning or after seven o'clock in the evening and no child is to be employed for more than six hours in any one day. The number of children employed in factories during the years 1921 to 1929 is shown in the following table—

| Year | Total |
|------|--------|
| 1922 | |
| 1923 | |
| 1924 | 67,658 |
| 1925 | 74,620 |
| 1926 | 72,531 |
| 1927 | 68,725 |
| 1928 | 60,094 |
| 1929 | 57,562 |
| | 50,911 |
| | 46,843 |

The sex distribution of the persons employed in mines during the years 1926 to 1929 was as shown below —

| Year | Number of males employed | | | Number of females employed | | |
|------|--------------------------|------------------|----------------|----------------------------|------------------|----------------|
| | Underground | In open workings | On the surface | Underground | In open workings | On the surface |
| 1926 | 86,343 | 43,306 | 51,967 | 31,889 | 27,833 | 18,775 |
| 1927 | 86,766 | 50,028 | 53,903 | 31,850 | 27,697 | 19,046 |
| 1928 | 86,155 | 51,005 | 52,430 | 31,785 | 28,453 | 17,843 |
| 1929 | 92,856 | 51,235 | 51,054 | 24,089 | 28,728 | 17,839 |

Labour on Railways—All railway workshops come under the administration of the Factories Act. The Indian railways employ nearly a quarter of a million workers in other occupations for which no provisions regarding control of hours of work, etc., have yet been made by legislation.

The Conventions adopted by the International Labour Conference in 1919 and 1921 prescribed a 60 hour week and a weekly rest of not less than 24 consecutive hours for all workers in British India employed in factories, in mines and in such branches of railway work as may be specified for this purpose by the competent authority. The Indian Factories Act which was amended in 1922 to give effect to the Conventions limited the hours of work in factories to 11 in any one day and to 60 in any one week. Provisions were also made for intervals of rest and a weekly holiday. Similar limitations were imposed under the Indian Mines Act of 1923 in respect of colliery staff. Both these restrictions apply to factories and mines controlled by railway administrations. The application of the Conventions to other departments of railway organisation has been found to be a problem beset with many difficulties and has been a subject of prolonged investigations. Orders were issued by the Railway Board in 1921 that the 60 hour week should be adopted for station staff not employed in connection with the working of trains. The Indian Railway Conference Association drew up a set of rules in 1927 and these received the general approval not only of the Railway Board but also of the Boards of

Directors of the lines managed by companies. Subsequently, however, it was found that these rules while they aim at applying the spirit of the Conventions do not adequately fulfil the statutory obligations imposed upon Government by the ratification of the Conventions. The whole question was therefore again exhaustively reviewed and a Bill amending the Indian Railways Act with the object of empowering the Governor General in Council to make rules on the subject was introduced in the Legislative Assembly in the autumn session of 1929 and was referred for consideration to a Select Committee.

Working of overtime on Indian railways is more prevalent on construction than on the open line due to (1) the working season in the monsoon areas being confined to eight months in the year, (2) special measures taken to speed up all heavy work to avoid the locking up of capital and (3) wet foundation work in bridges which necessitate continuous work. Usually overtime in such cases is paid at a rate fixed beforehand.

Seamen—The Indian Merchant Shipping Act, 1923, provides that no seaman shall be "signed on" for service on a ship unless he enters into a contract in the manner specified with the Master of the ship. All agreements entered into between Masters and Seamen for service on foreign-going ships have to be signed in the presence of a Shipping Master. The agreement forms contain the rules and regulations provided for under the Act for maintaining discipline and for the fines which may be inflicted for the breach thereof.

CONTRACT LABOUR.

In most industrial concerns in India work in connection with building, loading and unloading, carting, receiving, and despatching of goods and work involving the employment of unskilled labour over which supervision is either difficult or costly is given out on contract. In the textile mills industry work in connection with bleaching and dyeing is also generally done on contract at all centres. In the cotton mills in Ahmedabad work in the Mixing and Waste Room and the Yarn Bundling and Baling Department, in the Drawing in Department and Beam Carrying is given out on contract in various mills. In most cases no supervision is exercised over the labour engaged by the contractor to whom the contract is given. Perhaps the most efficient method of control and supervision over contract labour is that which obtains on several railways. This will be dealt with separately lower down. Exceptions to the general remarks made above are as follows.

In the coal mines in Bihar and Orissa contrac

tors are employed by a large number of collieries to provide the labour required for cutting the coal and loading it on wagons. The contractors are paid at a fixed rate per ton for all coal loaded on wagons. In some cases, however, the rate paid per ton is increased either because coal is being extracted from difficult places in the mine or because the contractor has difficulties in maintaining his labour supply. The extent to which contractors are employed is considerable and probably more than half the coal raised in the Jharia coal fields is raised on the contract system. Definite figures are not available but the Indian Mining Association reports that 90 per cent of the coal raised in the mines belonging to that Association in the Jharia coal fields is raised by contract labour. In some cases contractors are only employed to provide the labour for cutting the coal. The contractor is generally responsible only for raising the coal while the colliery supervising staff is responsible for seeing that the mines are run safely.

[illegible]

spread over all the Indian labourers and rates of interest are such when he finds that the value of the land in his native place is not sufficient to maintain all the members of his family. A certain percentage of the workers employed in India temporarily give up their employment during the sowing, transplanting and harvesting season. During periods of depression in trade and industry, industrial workers released from employment fall back upon agriculture, and thus add to the existing pressure of the population on the land. If the depression in trade and industry synchronizes with the failure of the monsoon, the amount of unemployment becomes considerable and the resulting distress is enormous. Various States have devised schemes of Employment Exchanges for the purpose of studying the problems in connexion with the demand and supply of labour to control the movements of labour and to place it where it is required. The Government of India and the various Provincial Governments have considered the question of creating Employment Exchanges in India several times during the last ten years, but opinion is unanimous that owing to the preponderantly agricultural character of

India is a State Member of the International Labour Conference and as such she is bound according to the terms of the Treaty of Peace, to ratify and adopt wherever possible, any Convention or Recommendation adopted by the International Labour Conference. The consideration of Industrial unemployment was taken up by the Government of India by the Weiler Convention which was adopted by the first International Labour Conference held in Washington in 1910. Each Member ratifying this Convention was required—

- (ii) to communicate to the International Labour Office all information, statistical or other, concerning unemployment including reports on measures taken or contemplated to combat unemployment
- (iii) to establish a system of free public employment agencies under the control of the central authority, and to appoint Committees, including representatives of employers and workers to advise on matters concerning the operation of the agencies

from where systems of insurance against unemployment have been established, to make arrangements, upon terms to be agreed upon between the members concerned, whereby work is taken up by one Member and working in the territory of another shall be admitted to the same rates of benefit of such insurance as those of the latter.

In addition to this Convention the first International Labour Conference also adopted a Recommendation which advocated—

- (a) the abolition of employment agencies, which charge fees or which carry on their business for profit
- (b) the establishment of an effective system of unemployment insurance, and
- (c) the execution of public works as far as practicable during periods of unemployment and in districts most affected by it

The draft Convention was ratified by India but in communicating this ratification to the International Labour Organisation at Geneva, the Secretary of State for India found it necessary 'in order to avoid subsequent misunderstanding' to explain at some length the peculiar position of India in this matter and to emphasise the difficulties connected with a complete ratification by India owing to the predominantly agricultural character of the country. The Government of India, in addressing the local Governments on the question arising out of the draft Convention and Recommendation adopted by the International Labour Conference, invited views on the following points—

- (1) Advisability of creating Public Employment Agencies in congested areas to facilitate

the migration of surplus labour to industrial areas where there is a shortage of labour

(ii) Advisability of utilising Public Employment Agencies in connexion with recruitment for Assam

(iii) Advisability of establishing Public Employment Agencies for the dissemination of information regarding employment during times of famine and scarcity to those in search of employment

(iv) Advisability of appointing Committees representing employers and workers to advise on matters concerning the operation of Public Employment Agencies

(v) Advisability of abolishing or controlling Employment Agencies which charge fees or which carry on their business for profit. The replies of the local Governments indicated that in most provinces the demand for labour exceeded the supply, that, even in provinces from which there was a large migration of labour, no difficulty had been experienced in obtaining information with regard to the areas where labour was in demand, that the establishment of public employment agencies would serve no useful purpose, and that such agencies might excite suspicion and be liable to be misunderstood by the people. With regard to the recruitment of labour for Assam, the local governments concerned were agreed that any experiment on the lines suggested would be risky. On the question of the abolition of control of employment agencies which charge fees or which carry on their business for profit, the replies of the local Governments indicated that employment agencies of this character were practically unknown in India. In the circumstances, the Government of India decided to take no further action on the draft Convention or Recommendation concerning unemployment

Middle-class unemployment—In recent years unemployment among the educated middle classes has been assuming alarming proportions and has attracted widespread public attention. In January 1926, a Resolution was passed by the Legislative Assembly in the following terms —

“ This Assembly recommends to the Governor General in Council that he may be pleased to appoint a Committee with a non-official majority to investigate into the problem of unemployment in general, and among the educated classes in particular, and devise suitable remedies, whether by a system of industrial and technical education, or by a revision of the existing system of education, or by offering encouragement to the starting of new industries, or by opening new avenues of employment, or by the establishment of employment bureaux, or by all these or any other means, and that the said Committee do make a report on the latter problem as early as possible ”

Similar Resolutions were also passed in some of the local Legislative Councils. The Government of India did not consider that the appointment of a Central Committee would serve any useful purpose, but in a circular letter drew the attention of the local Governments to the gravity of the problem of middle class unemployment in India. As a result of the Resolutions passed by the local Councils, Committees were appointed by some of the local Governments. The reports of most of these Committees refer almost exclusively to middle-class unemployment, but the Punjab and the Bengal Committees also dealt with general unemployment. The Punjab Committee came to the conclusion that “ there was no unemployment worthy of mention among the uneducated classes ”, whilst the Bengal Committee observed as follows —

“ The labourer, if we may use the term, has not yet been divorced completely from the land, and he frequently possesses or has an interest in a small plot of land in his native place on the cultivation of which he can fall back in times of depression. Added to this, is the fact that industrial labour is still comparatively scarce in Bengal and in fact had to be imported from other provinces. The effect therefore of trade depressions on the industrial labourer in Bengal is so far very small.”

Jute and Cotton Mill Industries—In the jute mill industry in Bengal a large number of mills have, during the last two or three years, changed over from the multiple to the single shift system. It is estimated that on the single shift about 25 to 33 per cent less labour force is required than on the multiple shift, but in spite of the changes no trouble has been reported with regard to unemployment. In the Bombay cotton mill industry, out of about 140,000 workers employed, approximately 10,000 have been thrown out of employment on account of the introduction of efficiency methods of work whereby spinners are required to mind two sides of a spinning frame instead of one and where the ordinary two loom weaver is required to tend three looms. The Bombay Strike Enquiry Committee dealt with this aspect of the question in their report and they recommended the creation of an Out-of-Work Donation Fund. This has been dealt with in the summary given with regard to the findings of this Committee in the Section on Conciliation and Arbitration. Owing to depression in trade several cotton mills were being compelled either to close down completely or to work with partial complements. Owing to the Boycott movement, however, since October 1930 the cotton industry is again showing signs of considerable improvement and many of the mills which had closed down during the year have again started working with full complements. Not only are the mills working with full complements but many are working a night shift. In October 1931, 22 mills in Bombay were working a night shift and 15 in Ahmedabad.

The Director of Public Health has appointed two Divisional Inspectors under the Health and Sanitary sections of the Act. Their reports are sent to the Chief Inspector who reports on the same. Local Magistrates in the districts have ex-officio powers under the Employment sections of the Act.

Factory Inspection.—The Inspector of Factories is appointed to each province. Where there are no factories, the Inspector is appointed to the nearest factory. In the Bombay Presidency, the Inspector of Factories is the Inspector of the Factories, and the Women Inspector. The Chief Inspector of Factories and two Assistants have their headquarters in Bombay City. An Inspector and an Assistant are posted in Ahmedabad. The Women Inspector has her headquarters in Bombay but has jurisdiction over the whole Presidency. She deals with problems mainly affecting women. The Bombay Presidency is the only province in India which has a Lady Inspector of Factories. Full-time Certifying Surgeons are stationed in Bombay and Ahmedabad. They have been appointed as Divisional Inspectors with powers under the Health and Sanitary sections of the Factories Act. They have also been granted powers under the provisions of the Bombay Maternity Benefit Act. The Director

of Public Health has appointed two Divisional Inspectors under the Health and Sanitary sections of the Act. Their reports are sent to the Chief Inspector who reports on the same. Local Magistrates in the districts have ex-officio powers under the Employment sections of the Act.

Reporting of accidents.—Section 31 of the Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All cases of accidents namely, fatal, serious, or accidents which prevent a person returning to work for 21 days or more, and minor, are to be reported to the Inspector of Factories and to the District Magistrate and, in case of any accident resulting in death to the officer in charge of the Police Station. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a Local Government, even though no injury may have resulted therefrom to any person. So far notifications have been issued under this section only in Bombay, Bengal and Burma.

Accident Prevention—The chief influences in the prevention of accidents are (a) the powers of Inspectors under the Factories Act to compel managers to erect adequate fencing and to take precautions against accidents, (b) the voluntary interest of managers in safety measures and safety precautions, and (c) the interest of insurance companies as a result of the operation of the Workmen's Compensation Act. In many provinces the existing rules made under the Factories Act cover "Safety First" measures such as compelling certain classes of workers to wear tightly fitting clothes, to prohibit children from entering into certain parts of factories, etc. but no serious attempt has been made in the shape of a "Safety-First" campaign except in the case of a few solitary instances. In some provinces the first three resolutions adopted by the eleventh Session of the International Labour Conference have been communicated to all industrial concerns. In the Bombay Presidency the Millowners Mutual Insurance Association have recognised the value of safety posters as an aid in the reduction of accidents and have undertaken the preparation of some posters for the textile industry. The posters illustrate the danger of carding machines at the front plate either during or after the shifting process, dangers at the underside of the lickers-in, dangers of wearing unsuitable clothing and the danger from careless sweeping under ring frames.

The railways are of course pioneers in the introduction and the continuance of active propaganda in "Safety-First" work in all departments. These activities cover railway workshops (which come under the Indian Factories Act) as well. In order to present a complete picture of this work on railways the work done for railway workshops will be dealt with under Railways. Perhaps the best known instance where first class "Safety-First" work is being carried on in India is that done by the Tata Iron and Steel Company at Jamshedpur. The Company has since 1920 subscribed to the British Industrial Safety-First Association and has installed notice boards all over the plant exhibiting the posters supplied by that Association. The literature received from the Association has also been circulated broadcast throughout the works.

First-Aid and Medical Relief—Some of the Local Governments have framed rules requiring the provision, under the charge of responsible persons and in readily accessible positions, of first-aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories employing 500 and more operatives. Most of the factories are situated within easy reach of Government hospitals or hospitals maintained by Local Authorities but many of the larger and enlightened employers are already maintaining their own medical staff and equipment which are easily available in cases of accidents. In the Tata Iron and Steel Works at Jamshedpur boxes with first-aid supplies are maintained in each department and two first-aid hospitals in different parts of the plant are staffed with doctors and compounders in readiness to render first-aid to injured persons.

Mines—The Indian Mines Act of 1923 empowers the Governor-General in Council to

frame regulations for the safety of persons employed in mines (Section 29, clauses (k) to (p)). Local Governments are also empowered to frame rules under the Act to ensure the proper fencing of a mine for the protection of the public. In addition, the Chief Inspector of Mines may call upon the owner, agent or manager of a mine to frame bye-laws which are not inconsistent with the provisions of the Act, regulations or rules to prevent accidents and to provide for the safety, convenience and discipline of the persons employed in the mine (Section 32). The bye-laws, when approved by the Local Government, have effect as enacted under the Act. Further, Section 19 of the Act gives special powers to the Inspector of Mines to take action when any danger is apprehended which is not expressly provided for by the Act, regulations, rules and the bye-laws. The Governor-General in Council has framed two sets of regulations, namely, the Indian Coal Mines Regulations, 1926, which apply only to coal mines and the Indian Metalliferous Mines Regulations, 1926, which apply to all other mines. These regulations provide for the proper maintenance of shafts and outlets, roads and working places, haulage arrangements, fencing and gates, for the restrictions which have to be observed in raising or lowering persons or materials, for the precautions to be taken in the use of explosives, and for adequate ventilation and lighting.

Railways—The Railway Department conducts an intensive "Safety-First" propaganda every year which embraces the following among other activities—

- (1) Safety posters and safeguards are put up on prominent points both in English and in the vernacular. Some of these, e.g., on the Bombay, Baroda and Central India Railway, are prepared from actual photographs of safe and unsafe methods of working in selected branches of manufacture and maintenance work in the railway workshops.
- (2) An illustrated booklet was compiled by the Great Indian Peninsula Railway during the year 1926-27 which has been translated into a number of vernacular languages and distributed throughout the line on certain railways.
- (3) Photographs and special articles are published in the Railway magazines for the instruction of the staff.
- (4) Inspecting subordinates are instructed to take the opportunity, while visiting stations, of addressing the staff on "Safety-First".
- (5) Coloured pictures showing the right and wrong way of doing a job are posted at various places for the benefit of the illiterate staff.
- (6) A "Safety-First" film was prepared by the Central Publicity Bureau during the year 1927-28 and copies distributed to railways. The film is displayed weekly by the travelling cinemas of the railways.
- (7) A "Safety-First" pamphlet has been prepared by the Central Publicity Bureau and is being issued to all railway administrations.

WORKMEN'S COMPENSATION

The Workmen's Compensation Act of 1923 came into force on July 1st, 1924. The Act as passed by the Legislature covers ten classes of workmen. Some of these, such as members of fire brigade, telegraph and telephone linemen, sewage workers and tramway-men are small, and as the definition of seamen is limited to those employed on certain inland vessels, only a very small proportion of Indian seamen come under the Act. Compensation for seamen, however, has been secured by agreement between the Government of India and their foreign steamship companies, under which the latter agree to the insertion in the ships' articles of a clause whereby the companies agree to pay compensation to injured Indian seamen on the same basis as if they were covered by the Act and all questions as to compensation are decided by Commissioners of Workmen's Compensation in India. An Indian seaman employed on a British ship legally comes under the English Act and the insertion of the clause referred to above does away with the practical difficulties which would arise if Indian seamen had to claim compensation in the English or other foreign courts. The five important classes covered are the workers in factories, mines, docks and on railways, practically all of whom are included and those engaged in certain types of building work, notably the construction of industrial and commercial buildings and any other buildings which run to more than one storey. The most important classes excluded altogether are agricultural workers and domestic servants. Non-manual labourers getting more than Rs 300 a month are excluded, except on the railways. Power is taken to include other hazardous occupations by notification from time to time. All occupations involving blasting operations were thus declared by the Governor-General in Council, as hazardous occupations. Compensation is to be given as in the English Act, for personal injury by accident arising out of and in the course of employment. It is also to be given for diseases in certain cases. The provisions for diseases have been so framed that if a certain class of workmen contracts a scheduled disease, it will usually be extremely difficult for the employer to defeat a claim for compensation. On the other hand, other workmen will find it equally difficult to get compensation for disease, as they will have to prove that the disease arises "solely and directly" from the employment. The diseases scheduled at present are anthrax, lead poisoning and phosphorous poisoning. Whether compensation can be claimed for diseases other than those scheduled is doubtful, but the list is made capable of extension. Mercury poisoning was thus added to Schedule III by notification, dated 28th September 1920.

In order to bring the Indian law into conformity with the provisions of the Draft Convention concerning Workmen's Compensation for occupational diseases adopted at the Seventh International Labour Conference held at Geneva in 1925, which has been ratified by India,

necessary changes were made in sub-section (2) of section 3 and in the list of occupational diseases given in Schedule III of the Act. Certain occupations in connection with operations for winning natural petroleum or natural gas and in connection with the loading, unloading and fuelling of a ship in and harbour, roadstead or navigable water were also brought within the purview of the Act by notification issued by the Governor General in Council in exercise of the powers conferred by sub-section (3) of section 2 of the Act.

The Amending Act of 1929—With a view to revise the Act so as to amend those Sections or parts of Sections which were admittedly defective and to introduce changes which were likely to raise no important controversial questions and which would be generally recognised as improvements, the Government of India introduced into the Legislative Assembly on 21st September 1928, a Bill further to amend the Workmen's Compensation Act, 1923. The main features of this Amending Act are (1) that the discriminating restrictions placed on workmen employed in the construction, repair or demolition of a building or bridge, with regard to their ineligibility for compensation except in the case of death or permanent total disablement has been removed, (2) that all payments to dependants of the deceased workmen (except advances to the extent of Rs 50 for funeral expenses of the deceased workman and to the extent of a hundred rupees on account of compensation to any dependent) and any lump sums payable to minors should be paid through the Commissioner, (3) deposits of trivial amounts, i.e., less than Rs 10 have been done away with, (4) provision is made for the protection of lump sums payable to a woman or a person under legal disability by empowering the Commissioner to invest, apply or otherwise deal with them for the benefit of the woman, or of such person during his disability, (5) powers are vested in the Commissioner to recover any amount obtained by any person by fraud, impersonation or other improper means and (6) the benefits of the Act are extended to (a) any person employed for the purpose of loading, unloading, fuelling, constructing, repairing, demolishing, cleaning or painting any ship of which he is not the master or a member of the crew, or (b) employed on a railway as defined in Sections 3 (4) and 143 (1) of the Indian Railways Act, 1890, by a person fulfilling a contract with a railway administration or (c) employed as an inspector, mail guard, sorter or van peon in the Railway Mail Service, or (d) employed in connexion with operations for winning natural petroleum or natural gas as a rig-builder, driller, drillers helper, oil-well puller or bailing or cleaning oil wells or putting in and taking out casings or drill pipes in oil wells or (e) employed in any occupation involving blasting operations.

In February 1931 the Act was further extended to cover workmen engaged in the construction etc of aerial ropeways.

Statistics—The statistics regarding cases disposed of under the Act have been collected and published since 1st July 1924 on which date the Act came into force. These statistics relate to the more important classes of workers, i.e., workers in factories, mines and docks and on railways and tramways. The total amount

of compensation paid to these classes of workers was about 6½ lakhs of rupees in 1925, 8½ lakhs in 1926 and 11 lakhs each in 1927 and in 1928 and 12½ lakhs in 1929. The following table shows the number of cases, classified by nature of injuries, and the amounts of compensation paid in each year since 1924 —

| Year | Number of Cases | | | Amount of Compensation paid for | | |
|---------|-----------------|-----------|--------|---------------------------------|-----------------|-----------|
| | Fatal | Non-Fatal | Total | Fatal Cases | Non-Fatal Cases | All Cases |
| 1924 *— | | | | Rs | Rs | Rs |
| Adults | 249 | 3,898 | 4,147 | 82,085 | 66,248 | 1,48,333 |
| Minors | 2 | 19 | 21 | 375 | 1,516 | 1,891 |
| 1925— | | | | | | |
| Adults | 583 | 10,751 | 11,334 | 3,45,995 | 2,95,535 | 6,41,530 |
| Minors | 7 | 30 | 37 | 200 | 2,391 | 2,591 |
| 1926— | | | | | | |
| Adults | 631 | 13,387 | 14,018 | 4,25,935 | 3,94,385 | 8,20,320 |
| Minors | 3 | 45 | 48 | 400 | 695 | 1,155 |
| 1927— | | | | | | |
| Adults | 777 | 14,397 | 15,174 | 5,81,400 | 5,27,984 | 11,09,384 |
| Minors | 6 | 36 | 42 | 840 | 1,030 | 1,870 |
| 1928— | | | | | | |
| Adults | 819 | 15,898 | 16,717 | 5,21,510 | 5,69,741 | 10,91,251 |
| Minors | 9 | 42 | 51 | 2,494 | 1,985 | 4,479 |
| 1929— | | | | | | |
| Adults | 886 | 17,942 | 18,829 | 5,87,190 | 6,70,573 | 12,57,763 |
| Minors | 2 | 34 | 36 | 200 | 2,201 | 2,401 |

* The figures for 1924 relate to only the six months from 1st July to 31st December

The following tables set out the proportion of contested cases out of the total number of applications received by the Commissioners in each year —

| Year | No of Applications disposed of | Number of contested Cases | Percentage of contested cases to total disposed of |
|------|--------------------------------|---------------------------|--|
| 1924 | 92 | 14 | 15.2 |
| 1925 | 539 | 100 | 18.6 |
| 1926 | 835 | 198 | 23.7 |
| 1927 | 1,223 | 281 | 22.9 |
| 1928 | 1,306 | 309 | 23.7 |
| 1929 | 1,107 | 278 | 25.27 |

The details of agreements (i) disposed of, (ii) registered as filed and (iii) rejected on account of inadequacy are given below for each year —

| Year | Number of Agreements | | | |
|------|----------------------|---------------------|-------------------------------|--|
| | Disposed of | Registered as filed | Registered after modification | Not registered on account of inadequacy, etc |
| 1924 | 41 | 33 | 1 | 7 |
| 1925 | 399 | 390 | 3 | 6 |
| 1926 | 591 | 583 | 5 | 3 |
| 1927 | 701 | 682 | 12 | 7 |
| 1928 | 887 | 855 | 25 | 7 |
| 1929 | 949 | 931 | 11 | 7 |

Effect on Industry—A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal (*vide* para 39 of the Report of the Indian Coal Committee, 1925). However, the owners of many of the small coal mines have been compelled to close down their mines due mainly to the severe depression with which the industry has been faced. In the Punjab the proprietors of the coal mines in the Jhelum District are reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them

have had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance. Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureaux in Calcutta, and Madras. In these provinces and in Bombay insurance is widely resorted to by the employers but in the other Provinces accident insurance does not appear to have made much progress.

INDUSTRIAL HOUSING.

One of the most vital problems facing industrial employers in India to-day is that connected with the housing of the labour which they employ. The importance and the urgency of providing decent housing cannot be sufficiently emphasized.

The conditions of industrial housing in India are, in many cases, appalling and the majority of buildings, tenements or huts in which industrial labourers are housed are insanitary and more or less uninhabitable from Western points of view. Provincial Governments, Municipalities, Improvement Trusts and the larger employers have done a great deal to mitigate the evils resulting from an insufficiency of decent sanitary housing for labour, but a considerable amount still remains to be done before this question can be considered to have been satisfactorily solved.

Several commissions and committees of inquiry appointed by the Government of India and the Provincial Governments in connection with various subjects have dealt with the question of industrial housing. The Industrial Commission in 1918 urged that, in addition to the scheme followed by the Improvement Trust in Bombay, other measures should be adopted such as the refusal of permission with a few exceptions, to fresh industrial concerns to be established, the setting up of a special area for industrial development, the removal of the existing railway workshops from the city, supply of housing accommodation to the employees by railways, Government departments and public bodies, improved communications with a view to creating industrial suburbs, and a definite programme of construction to be taken up by local authorities. The findings of other commissions and committees with regard to this question follow similar lines.

Bombay Presidency—The first attempt to improve housing conditions in Bombay City was made after the plague of 1896 when the heavy mortality and the great exodus that followed paralysed the trade and industry of Bombay. The Bombay Improvement Trust was established in 1898 "for the work of making new streets, opening out crowded localities, reclaiming lands from the sea to provide room for the expansion of the city and constructing

sanitary dwellings for the poor and the police." Owing to its limited powers and the various difficulties which it encountered the Trust had to content itself for the first few years of its existence with "slum patching," the development of a few building sites, the construction of a few chawls and the development of main roads. In more recent years, however, the Trust has been able to do considerable good work in the direction of industrial housing and has built over 1,300 tenements for housing its own labour and 99 chawls containing 8,806 tenements in all for housing labour in general. The Bombay Port Trust which engages on an average about 8,300 manual workers in all its departments has provided accommodation for a little over 3,000 of its workers. The Bombay Municipality has provided a large number of chawls for its employees as will be evidenced by the fact that 5,538 out of 7,537 scavengers employed are provided with quarters. Varying proportions of the numbers of employees in the other departments of the Municipality are also provided with adequate housing. According to the information collected by the Bombay Labour Office in 1925, 28 out of the 76 textile mills in Bombay City which furnished information for the enquiry had provided housing for their operatives. 7 out of these mills provided residential accommodation only for employees in the Watch and Ward Department and the rooms provided were given free of rent. In the 22 mills which provide partial housing for all classes of operatives, the number of workers who lived in the tenements provided amounted to 12,149 out of 64,720 employed. The G. I. P. Railway owns 20 chawls containing 841 one room tenements and the B. & C. I. Railway owns 303 one-room tenements for housing their employees.

No action was taken by the Local Government in Bombay City for housing general industrial labour till after the end of the war. A broad and comprehensive policy was drawn up just after the end of the war by the Government of Bombay under the personal inspiration of Lord Lloyd, then Governor of Bombay for dealing with the problem. A Development Directorate was formed in 1920 to co-ordinate the various housing activities of Government, the Municipality, the Improvement Trust and the larger labour employing organisations. The

original intention of the Directorate was to construct 625 chawls located in 3 industrial centres and to comprise of 50,000 tenements for working classes, within a period of 9 years from 1921 to 1929. The original estimated cost was 5½ crores of rupees and a "town duty" of a rupee per bale of cotton on all cotton entering Bombay was imposed under the City of Bombay Municipal and Improvement Act of 1920. The scheme was launched at a time when the industrial prosperity of the country was at its zenith and labour conditions in the City were abnormal. By the end of 1927, 207 chawls with 16,524 tenements were constructed but only 123 chawls with 8,234 rooms were occupied. These chawls did not attract industrial labour in Bombay to live in them, the reasons attributed to the failure being the distance of the chawls from the mills, the absence of travelling facilities and other amenities of city life. The average economic rent per tenement worked out at Rs 16 per month but the actual rents charged were fixed, on an average at barely 50 per cent of the economic rent and accommodation can now be had in the chawls at Worli at Rs 5 per room on all floors. The rents in the Nalgum and Sewri chawls are Rs 7 per room on all floors and for those in the chawls at DeLisle Road Rs 8 per room per month on all floors. One rupee extra is charged for certain corner rooms. The rents charged prior to 1st April 1929 were, however, higher for all centres. The figure of the number of rooms occupied on the 31st December 1927, namely, 8,234 was the highest ever recorded. Frequent strikes in the cotton textile mills and general industrial unrest in Bombay City have been largely responsible for the non-occupation of the rooms in the chawls of the Development Department during the last two years and the figure for the number of tenements occupied on the 31st March 1931 was only 7,800 out of 16,211 rooms available.

Ahmedabad City—Probably in no other industrial centre in India is the condition of the housing of the working classes so bad as it is in Ahmedabad. The Textile Labour Union at Ahmedabad recently published a pamphlet entitled "A plea for Municipal Housing for the Working Classes in the City of Ahmedabad" for submission to the Ahmedabad Municipality. In this pamphlet the Union deals with 23,700 tenements observed and studied by it. The Union reports that there is absolutely no provision of water in the case of 5,609 tenements, 3,117 tenements have a supply of some sort from wells. Even those which are supposed to possess the advantage of Municipal water have a hopelessly inadequate arrangement in this respect—a tap or two in a compound for a group of 200 or more families. Bathing and washing accommodation has not been thought of except in one or two chawls erected by mills. 5,360 tenements have no latrine accommodation. In most of the remaining tenements the Union reports that the arrangements are miserable in quality and grossly insufficient in quantity and that urinals are conspicuous by their absence. Only a few tenements are provided with any sort of drainage. No other drainage arrangement exists.

The evils of bad housing in Ahmedabad were considerably aggravated as a result of the flood

of July 1927 in Gujarat which destroyed over seven thousand houses in the City of Ahmedabad. The bulk of these houses belonged to the working classes. The Union in the pamphlet referred to, reports that the situation which had arisen in consequence of the flood was grave beyond words. Of the thousands who had been unhoused many came to share with their relatives and friends the accommodation that was already heavily overcrowded. Hundreds were altogether without shelter. The relief operations that were then carried out included the construction of huts intended to provide temporary accommodation to a number of those who could make no arrangement of their own. The Relief Committee set up by the leading citizens of Ahmedabad for reconstruction work recommended that the Municipality should take as early steps as possible to construct 5,000 sanitary tenements by raising a loan for the purpose.

In the opinion of the Labour Union the solution of the question of housing constitutes one of the obligatory duties of the Municipality and a growing appreciation of this aspect of the housing question on the part of the authorities has led to the incorporation in the City Municipalities Act (1925) under section 71, of a provision permitting City Municipalities to undertake provision of sanitary dwellings for the poorer classes. Owing mainly to the efforts of Mr. Guzarilal Nanda, Secretary of the Ahmedabad Labour Union, the Ahmedabad Municipality has recently decided to construct model dwellings for the working classes.

A Census taken by the Bombay Labour office in the early part of 1931 showed that of 69 mills working in Ahmedabad, 34 provided housing accommodation for about 18 per cent. of their employees, the total number of tenements being 3,708 of which 3,057 are one roomed mostly 144 square yards in area with a cubic space of 1,592 cubic feet the average rent of which was Rs 3-5-8 per month.

Bengal Presidency—Housing is generally provided in Bengal by employers but the extent and quality of the housing depend on the cheapness and availability of land. In the more congested areas in Calcutta, Howrah and the nearer neighbourhood housing facilities are not provided on so big or so good a scale as in other areas. Most jute mills provide for their workers rooms constructed in the neighbourhood of the mills at rents varying from annas 8 to Re 1 per room per month. The sizes of the rooms vary from 8'×8' to 10'×10' and in some cases to 12'×10'. In nearly all cases the rooms are constructed back to back and in most pucca floors and tiled roofs have been provided with narrow verandahs generally 4' wide used for cooking purposes. Very often the rooms are dark and in none of them can sun light penetrate through. Ventilation is unsatisfactory owing to the method of construction and the only openings in the rooms are the doors. If windows are provided they are kept shut. No chimneys or openings are provided for the escape of smoke in the majority of the houses. Recent enquiries made into the condition of housing in Bengal show that drainage, water

supply and conservancy arrangements in *bastis* are abominable. Government and other public agencies do not provide housing, as in Bombay, for industrial purposes but some Government and public concerns do provide quarters for their own employees.

Madras Presidency—As a result of the exertions of the Labour Department of the Government of Madras and the Co-operative Building Societies and a number of local authorities some houses have been built for poor workmen in Madras City. Out of 1,530 registered factories 211 factories are reported to have provided housing for a small number of their employees. Almost all plantation estates in the Nilgiris, Malabar and Coimbatore provide "lines" for the cool labour employed.

United Provinces—Out of 330 regulated factories 83 make some provision for the housing of workmen and their families. Altogether about 5,400 single room and 1,045 double room tenements are provided by the employers. The McRobertsganj, Allenganj and the Jubbettlements of the British India Corporation at Cawnpore are about the only important examples of housing provided by employers for their workmen in that city. A scheme has however been launched by some of the owners of factories in Cawnpore for providing housing for some twenty thousand workmen and their families but it is still under discussion. Except as employers the Government of the United Provinces has done nothing in connection with industrial housing. The Improvement Trust of Cawnpore has put up some temporary housing and the Improvement Trust of Lucknow has put up a model barrack in the area set apart as an industrial area. In the *bastis* or *hatas* where housing is provided by private landlords the type of tenement available is usually a small mud hut with a room at the back and a room or a verandah in front. The size and height vary. The usual size is 10 x 8'. The normal height is 6' to 8'. The only outlet for ventilation is the small main door. Even such tenements are reported to be shared by 2, 3 or even 4 families and as many as 10 persons may be found as inmates.

Central Provinces—Housing is provided for about 7,500 workers by some of the larger factories and mills in the Central Provinces. Nineteen per cent. of textile labour and 7.5 per cent. of the labour employed in minor industries is housed. The Pulgaon Cotton Mill maintains a settlement covering an area of 15 acres on which the millhands are allowed to build their own houses on payment of a nominal ground rent of annas 4 per annum per 100 sq. ft. Probably the most magnificent scheme of industrial housing conceived in India is that launched by the Empress Mills under the agency of Messrs. Tata Sons Limited at Nagpur. These mills have leased a plot of 200 acres at Indora, a suburb of Nagpur, two miles from the mills. The scheme is based on a desire to establish a model village. The idea is to build houses of the bungalow type standing on their own ground in plots measuring 30 x 53 with the limitation that building will not be allowed on more than one-third of the space provided. The houses are let to the workers on the hire

purchase system and it is expected that many of the workers will ultimately own them.

Bihar and Orissa—All the collieries in the Jharia coal field are amply and efficiently equipped with approved types of houses. Their design, construction, ventilation and general amenities are governed by the Jharia Mines Board of Health Workers recruited from villages within five miles from the mine frequently prefer to live in their own villages and walk backwards and forwards to their work. In five collieries employing about ten thousand workers 4,775 houses are provided, five of the worst equipped mines employing 424 workers provide 156 houses and five normally equipped mines employing 3,084 workers provide 1,162 houses. In many cases more than one employee is accommodated in one *dhokra* or house. Very frequently a man and his wife and his family all of whom may be recorded as separate labourers in the figures of the mining population occupy one house. Every house must be licensed. Licenses are not given unless the standards are complied with. If labourers are found in occupation of unlicensed premises the management is liable to prosecution. No rent is however charged and subletting is not known.

The Tata Iron and Steel Works at Jamshedpur have built 4,521 residential buildings. Of these, 301 are rented at over Rs. 20 per month. Sixteen are rated as hotels. The accommodation provided at present is insufficient and one of the problems the Company will have to face is the provision of a larger amount of housing.

Assam—Free quarters are provided for all residential employees on tea estates. Such non-resident labour as is employed is casual labour which comes from the adjoining villages and lives in its own houses. In the mines and oil fields free quarters are provided for the labour force employed. A Committee of Inquiry appointed in 1921-22 recommended that endeavours should be made to house immigrants from different provinces together in hamlets instead of putting workers from all provinces indiscriminately into barracks or lines. The main objection to this recommendation is the want of land as all available land is under tea. The housing conditions in the coal and oil fields are reported as being quite satisfactory. In Assam the tea estates are regularly inspected by District and Sub-Divisional officers. Although the legal powers of interference have been curtailed by the abolition of indentured labour and the repeal of so much of Act VI of 1901 as related to such labour, still in practice the inspecting officers do invariably report on the condition of the lines. They call attention to the need of improvement and the management is generally ready to effect such improvements as are considered necessary.

Other Provinces—No special remarks are necessary in connection with the question of industrial housing in other provinces. Generally speaking, no industrial slums as such or any big urban insanitation due to the presence of agglomerations of factory or other workers is particularly noticeable and the housing of

labour is not to be differentiated from the ordinary poor citizen. Except in those cases where Government action has been definitely indicated, the governments of the various other provinces in India have done nothing for the improvement of industrial housing.

Railways—The general policy on railways is to provide residential quarters where it is necessary for special reasons to provide accommodation for certain classes close to their work and where conditions are such that private enterprise does not adequately meet the demand for housing the staff. The total expenditure incurred on housing provided by the principal railways since the commencement of operations amounts to Rs 22 41 crores while the expenditure incurred during the last four years exceeds four and a half crores. The programme for the next two years contemplates a further expenditure of Rs 1 87 crores. Notwithstanding this expenditure there is, at present, a considerable dearth of quarters on most railways. Endeavours are, however, continuously made to construct new houses in accordance with an annually pre arranged programme as funds permit.

Acquisition of Land for Workers' Houses.—Except the Railways, which can obtain land

under the Land Acquisition Act for railway purposes which include building quarters for necessary maintenance of the staff, no other industry in India is covered by that Act. Considerable difficulty has been experienced by collieries in the Jharia coal fields for acquiring land for purposes of housing schemes. In 1920 the Coal Fields Committee suggested that every facility should be offered to a Colliery Company or proprietor to acquire land under the Land Acquisition Act for the housing of labour. In considering the amendment of the Land Acquisition Act in 1922, the Government of Bihar and Orissa suggested that some amendment might be made in order to give facilities for the acquisition of land for colliery housing purposes. The Government of India, however, did not include any such amendment in their amending Act. The matter has again been before the Local Government in connection with the revision of Sections 49 and 50 of the Chota Nagpur Tenancy Act and a Bill was introduced and passed in the winter session of the local Legislative Council in 1920. Slight alterations were found necessary in the Bill to improve its working and these changes have recently been passed by the Legislative Council.

HEALTH

No serious attempt has so far been made to keep any satisfactory statistics regarding health conditions of industrial workers, *e.g.*, morbidity rates among the workers, their average weight, height, etc., and in the absence of any statistical information it is not possible to generalise about these matters. Health conditions in the important industrial centres in India cannot however be said to be very satisfactory. This is due to many causes such as poor diet, overcrowded and insanitary dwellings, want of open air and exercise, etc. But the main cause of ill health particularly among the workers in Bombay and Bengal, appears to be the prevalence of malaria in the localities in which they live. Major Covell, the Special Officer appointed by the Government of Bombay to enquire into Malarial conditions in Bombay City who submitted his report in 1928, says "It (Malaria) is still present in certain quarters of the southern portion of the City to a serious extent, but the most intense malaria at the present time exists in the vicinity of the mills, more especially in Worli and Parel sections. In the northernmost portion of Worli section, malaria is also slight, but as soon as the edge of the mill area is reached the incidence of the disease rises abruptly and extends over the greater part of Worli and Parel. The correlation between the intensity of Malaria and the proximity of mills was most striking,

especially in certain cases where a single isolated mill happened to be present, *e.g.*, the Victoria Mill in Chowpaty and the Colaba Land Mill in Colaba. The vast majority of the mills in Bombay are situated in the highly malarious area."

In the mines in the Madras Presidency, Malaria prevails in the Cuddapah district and at every change of season there is a prevalence of widespread fever. Malaria also prevails in the Thummaragudi mines throughout the year and the cold winds during the rainy season from Sandur Hills affect the health of the labourers in the mines of Tanasgeri. Tuberculosis prevails among industrial workers in the United Provinces and Bihar and Orissa, and *Kala Azar* is common among workers in certain tracts like Bihar and Orissa.

The following table gives the birth and death rates and the rate of infant mortality per thousand of the population for some of the important industrial centres. The figures, however, relate to the whole population in most cases and as such are not likely to give an adequate idea regarding mortality, etc., among industrial workers. Besides, in certain cities like Bombay, it is customary for married working class women to leave the city for their confinement and register births in the mofussil.

A table showing (a) Birth-rate and (b) Death-rate per thousand of population and (c) Infant mortality for 1,000 registered births for certain important industrial centres

| Centre | Period | Birth-rate
per 1,000
of
population | Death rate
per 1,000
of
population | Infant mortality
per 1,000
registered
births |
|-----------|--------|---|---|---|
| Bombay | 1930 | 21.5 | 21.2 | 296.00 |
| Ahmedabad | 1929 | 47.02 | 49.90 | 331.65 |
| Sholapur | " | 44.03 | 34.53 | 228.73 |
| Karachi | " | 55.83 | 30.97 | 230.55 |
| Nagpur | " | 50.63 | 52.24 | 290.77 |
| Amraoti | " | 59.60 | 49.14 | 330.91 |
| Akola | " | 41.73 | 35.36 | 251.27 |
| Cawnpore | " | 36.94 | 52.70 | 420.34 |
| Lucknow | " | 43.98 | 7.81 | 469.22 |
| Allahabad | " | 46.31 | 38.44 | 258.79 |

The relation between overcrowding and infant mortality is brought out in the following table extracted from the annual report of the Municipal Commissioner for Bombay City —

Infant Mortality by the Number of Rooms occupied in 1930

| Number of rooms | Births | | Deaths in Infants | | Infant mortality
per 1,000 births
registered | |
|------------------------------|--------|------------|-------------------|------------|--|------|
| | Number | Percentage | Number | Percentage | 1929 | 1930 |
| 1 Room and under | 10,945 | 43.2 | 5,497 | 73.2 | 502 | 487 |
| 2 Rooms | 1,500 | 7.15 | 550 | 7.3 | 306 | 368 |
| 3 Rooms | 749 | 3.0 | 202 | 2.7 | 270 | 297 |
| 4 or more rooms | 404 | 1.6 | 74 | 1.0 | 183 | 185 |
| Hospitals | 11,394 | 45.0 | 1,154 | 15.4 | 101 | 85 |
| Homeless and not
recorded | 37 | 0.1 | 27 | 0.4 | | |
| Total | 25,220 | 100.0 | 7,225 | 100.0 | 296 | 298 |

Working conditions—In the Bombay Presidency the working conditions in the factories are usually considerably in advance of the conditions in the homes of the workers. The Factories Department has recently effected an appreciable improvement in the development of ventilation in factories. The working conditions in the average Cotton Mill in the U. P. are reported to be not very satisfactory and those in the Central Provinces and Berar leave plenty of scope for improvement especially in ventilation, maintenance of suitable temperature, suitable flooring, proper spacing of machinery and provision of places for meals. Considerable improvements are required in the seasonal factories for alleviating the dust nuisance and for proper lighting. In the Jute mills in Bengal, especially in the sorting and carding section there are no adequate arrangements for taking off the dust and the workers get a particular kind of rash all over their bodies in the beginning of their employment. Women are mostly employed in this Department and they bring their infants and children who live in that dust laden and hot atmosphere during working hours. Working conditions are however, generally satisfactory in jute mills and other large industrial concerns.

Extent of Medical Facilities provided—The result of the enquiry into Welfare work conducted by the Labour Office in 1926 shows that the provision of facilities for medical attendance and the supply of medicines is fairly general in all the larger labour employing organisations in the Bombay Presidency. The Textile Labour Union in Ahmedabad is the only association of employees which provides medical facilities for its members. There are also Government Municipal or charitable hospitals and dispensaries which are open to the public and which are used by the labouring classes. In the United Provinces many of the larger employers maintain dispensaries but no hospitals. The Dufferin Fund a private organisation aided by grants from Government and local bodies maintains female hospital at the most important towns. The Lady Thelma Maternity and Child Welfare League maintains a number of centres for child welfare and the treatment of maternity case. Many of the employers in the Central Provinces and Berar have provided well-equipped dispensaries and medical facilities are within easy reach of the workers in almost all the factories and in important mining areas in the Province. Some of the larger concerns in Bihar and Orissa and in

the Punjab also provide medical facilities for their employees. In Madras only a few large factories provide dispensaries. Medical facilities in the plantations are fairly good. All the jute mills in the neighbourhood of Calcutta provide dispensaries but most of the doctors in charge are not registered medical graduates. In all the tea gardens in Assam and in Bengal medical attendance and medicine are provided for all classes of employees. The medical arrangements in a large number of estates are supervised by European medical officers. Well-equipped hospitals are also provided for the labour force in the mines and oil-fields in Assam. Part-time medical attendance and medicines are provided by the employers in the Asansol Mines Board Area. Medical facilities are also provided in the mines in Madras. In the Jharia Mining Settlement eight hospitals are maintained by employers, the number of beds varying from 6 to 12 in each ward.

Maternity Benefits

In September 1924, Mr N. M. Joshi made the first attempt in the Legislative Assembly to introduce a Bill to make provision for the payment of maternity benefits in certain industries. Under this Bill, the Local Governments were to be asked to establish a Maternity Benefit Fund and to make payments out of this Fund. The Bill, after circulating, was thrown out by the Assembly in August 1925.

The first Province in India to pass a Maternity Benefit Act was Bombay. The Act came into force on 1st July 1929. According to this Act, the payment of maternity benefits is an obligation which is imposed directly on the employer. The second annual Report on the administration of this Act shows there were 10 06

claims paid per 100 women employed and the total amount of maternity benefit paid under the act was Rs 1,21,325. The Bombay Municipalities has started since February 1928, a maternity benefit scheme by which benefit is given to halalkhore and scavenging women in the form of leave with full pay not exceeding 42 consecutive days including the date of confinement, as certified by the Executive Health Officer, if the birth takes place in Bombay, and by a Police Patel or by hospital authorities if it takes place out of Bombay.

An Act was passed by the Central Provinces Council in 1930 on the same lines as that in Bombay.

In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain, at work, they are put on light work on full rates of pay. During the period of advanced pregnancy and after childbirth leave on half pay is usually granted and in some cases full pay is allowed and a bonus at childbirth is often granted in addition. The bonus is in some cases conditional on the child being healthy. The Assam Railways and Trading Company the next largest employers of labour in Assam, grants six months' leave on half pay provided the women have been examined by the medical officers and attend hospital once a week. The Assam Oil Company grants leave on half pay for three months. On some estates in Coimbatore District female coolies are fed free for a month before and a month after confinement. On other estates maternity benefit ranging from Rs 3 to Rs 5 is paid and in some other estates free feeding of the women for two weeks before and three weeks after confinement is arranged.

WELFARE WORK

(Excluding Health and Housing)

In 1926, the Government of India requested all Provincial Governments to collect full and comprehensive information with regard to the measures undertaken and the efforts made to ameliorate the conditions under which the workers live when they are not actually employed. The enquiry originated as the result of the Recommendation adopted by the Sixth Session of the International Labour Conference in connexion with the development of facilities for the utilisation of workers' spare time. The results of this enquiry, which the Government of India hope to publish in due course, will be of considerable interest. The Labour Office conducted an enquiry in the Bombay Presidency, the results of which were published in the issue of the *Labour Gazette* for January 1927.

Apart from the few individual employers who have organised welfare work on modern lines, the first organised attempt to introduce welfare activities of a particular type was taken by the Bombay Millowners' Association early last year. In a circular letter dated

8th January, 1930, addressed to the mills affiliated to the Bombay Millowners' Association, this Association requested all mills in Bombay City to give their wholehearted co-operation to their efforts for devising machinery for the improvement of the relations between the management and labour by giving immediate effect, wherever it is possible, among other things, to those classes of welfare work which have been uniformly successful, *e.g.*, (a) periodical social gatherings of workpeople, (b) provision of free mill dispensaries as soon as financial considerations permit and (c) the establishment of creches at all mills.

Employment of Welfare Officers and Workers—The All-India Industrial Welfare Conference of 1922 passed a resolution that social service organisations should be asked to take up the work of training welfare workers. The establishments of workers' committees in all industrial establishment was also urged but very little progress appears to have been made so far in this direction.

RAILWAYS

Recreation—Railways as a group are the largest employers of labour in India and their welfare work is therefore being dealt with separately. All Railways provide facilities for recreation for their employees and their children. The number of recreational clubs or institutes provided on each railway are shown in the following table —

| Name of Railway | NUMBER OF INSTITUTES FOR | |
|--|-----------------------------|------------------------------|
| | Europeans and Anglo Indians | Indians |
| North-Western Railway | 32 | 19 |
| East Indian Railway | 33 | 26 |
| Eastern Bengal Railway | 11 | 14 |
| Burma Railways | 15 in all | |
| Great Indian Peninsula Railway | 27 | 29 (2 for all nationalities) |
| Bombay, Baroda and Central India Railway | 17 | 12 |
| Bengal Nagpur Railway | 14 | 19 |
| Madras and Southern Maharatta Railway | 24 | 7 |
| South Indian Railway | 19 in all | |

Each institute is regarded as a club provided by the Railway free of rent. The institutes provide a reading room, indoor and outdoor games, etc., and are generally self-supporting although grants are made from fine funds to meet the recurring expenses in deserving cases. The railways also undertake to recover the subscriptions of the members through the paysheets and to remit them to the manager of the institute. The membership of the institutes is compulsory on some railways.
